SICKNESS.—See DISEASE AND MEDICINE.

SIDGWICK (HENRY).—I. Life.—Henry Sidgwick was born in 1838 at Skipton in Yorkshire, where his father, the Rev. William Sidgwick, was headmaster of the Grammar School. He came of Yorkshire stock, and there is a tradition that in the last generation one might hear this family referred to in the neighbourhood of Skipton as 'the good and great Sidgwicks.' William Sidgwick's wife was Miss Mary Crofts, also of Yorkshire descent, and it is told of her that she was a beauty and a wit. Her third son, Henry, the subject of this article, was three years old when his father died. Henry's sister, Mary, became the wife of her cousin, E. W. Benson, afterwards archbishop of Canterbury, and his youngest brother Arthur, a brilliant classical scholar, was Reader in Greek in the University of Oxford. Henry Sidgwick's life is most admirably set before us by his brother and his wife, Arthur Sidgwick and Eleanor Mildred Sidgwick, in *Henry Sidgwick: a Memoir by A. S. and E. M. S.*

In Sept. 1852 Henry Sidgwick went to Rugby, and from there, in Oct. 1855, to Trinity College, Cambridge. He won the Bell and Craven Scholarships—the latter the 'blue ribbon' among Classical scholarships at Cambridge—and in Jan. 1859, having taken both the Classical and Mathematical Triposes, he came out 33rd Wrangler and Senior Classic, and also won the first Chancellor's Medal. In October of the same year he was elected a Fellow of Trinity. Henry Sidgwick felt at that time no difficulty in making the declaration required from all Fellows of Colleges on admission, that he was a member of the Church of England, and he was appointed an assistant tutor in Classics, being then a little over 21 years of age. Thus began that life of academic teaching which he carried on for over forty years.

In an autobiographical fragment dictated in his last illness, which is included in the *Memoir*, Sidgwick, referring to his membership of 'The Apostles,' says:

'In the Michaelmas term of my second year an event occurred which had more effect on my intellectual life than any one thing that happened to me afterwards: I became a member of a discussion society—old and possessing historical traditions—which went by the name of "The Apostles" . . . [The spirit of this Society] "gradually absorbed and dominated me. I can only describe it as the spirit of the pursuit of truth with absolute devotion and unswerving by a group of illustrious friends, who were perfectly frank with each other. . . . Absolute candour was the only duty that the tradition of the society enforced." I came to deem to me that no part of my life at Cambridge

was so real to me as the Saturday evenings on which the apostolic debates were held; and the tie of attachment to the society is much the strongest corporate bond which I have known in life. I think, then, that my admission into this society and the enthusiastic way in which I came to identify it really determined or revealed that the deepest bent of my nature was towards the life of thought—thought exercised on the central problems of human life. Not many years elapsed before the consciousness of this led me to embrace the study of philosophy as my life's work.¹ In the same fragment he describes the 'central and fundamental aim' of his life as 'the solution, or contribution to the solution, of the deepest problems of human life. The peculiarity of my career has been that I have sought light on these problems, and that not casually but systematically and laboriously, from very various sources and by very diverse methods.'²

In 1869 Sidgwick had come to feel that he could no longer honestly declare himself to be a member of the Church of England. His secession from the Church was perhaps a foregone conclusion, but his future life seemed only the more deeply devoted to an unwavering passionate allegiance to truth. He resigned his Fellowship. His reasons for doing so were recognized and respected, and he retained the post of college lecturer. It was considered that this action of Sidgwick's was one of the influences which led to the removal of religious tests in the University in 1871.

In 1885 he was re-admitted a Fellow of his college, having been elected to the Knightbridge Professorship of Moral Philosophy two years previously. In 1876 Sidgwick had married Miss Eleanor Mildred Balfour, sister of Mr. A. J. Balfour.

To attempt to give here anything like an adequate list of Sidgwick's occupations and activities would be out of place, but three main directions of sustained and fruitful activity—in addition to his philosophic or moral sciences work—must be mentioned, each of which would in itself have made a good life's record. These are (1) his work for the education of women, chiefly in connexion with Newnham College—work crowned with most signal success; to him women's education in Cambridge owes an immeasurable debt; (2) his work in University matters generally; he was, as has been said, one who led the leaders; and he took his full share of ordinary business. It may be noted how excellent his work in this connexion was—how accurate, able, and thorough. He was one who 'sought peace and amed it,' but he always stood up for the right and strove valiantly for it, and in this

¹ His strength was as the strength of ten
Because his heart was pure.

(3) His interest in psychical research must also be referred to. There is perhaps no part of Sidgwick's work which shows in a more marked measure the initiative and courage which were so characteristic of him. His was a brave and candid spirit—in bondage to no fears, no weaknesses, no hypocrisies. Psychical research was, as Sidgwick indicates, to some extent connected with that search after enlightenment, that study of the central problems of human life, to which he had deliberately chosen to consecrate his chief effort. To this choice he remained true, with an unwavering devotion, an inexhaustible patience.

We must regard as an important part of this study and devotion the labour which he bestowed upon the affairs of the Moral Sciences Tripos and all connected with it. Philosophy was his main interest; and among philosophical subjects it was ethics that had the first place in his thought, and in ethics that his most successful and influential work was accomplished.

In May 1900, in the full vigour of mental power, with so much accomplished, yet so much still to do, with life so full of interest, happiness, and promise, Sidgwick received his death-warrant from his physician—with grief and pain indeed, but with

an indomitable sweetness and unselfishness and 'a most moving courage.'

² For nearly a fortnight he told no one but his wife. It was easier to carry on life in a normal manner when no one knew. But he began to let his affairs in order.³

He wrote for the Oxford Philosophical Society a promised paper on T. H. Green, which, said one of those who heard it read on 19th May, was 'the most lucid, sincere, and impressive piece of philosophic criticism it had ever been my privilege to hear.'⁴ And so, fulfilling his ordinary engagements, doing what he could to prepare against the contingency of an unfavourable result of the operation which he decided to undergo, comforting his friends, he bore the suffering and weakness of the last stage of life with 'unbroken patience and the simplest unselfish fortitude.'⁵ He died on 28th Aug. 1900 at Terling Place, Essex, and was buried in the village churchyard at Terling.

2. **Writings and philosophy.**—We may begin our account of Sidgwick's main ethical doctrines and conclusions with a summary in his own words of the scope of the subject:

'The subject of Ethics, most comprehensively understood, includes (1) an investigation of the constituents and conditions of the Good or Wellbeing of men considered individually, which chiefly takes the form of an examination into the general and particular species of (a) Virtue or (b) Pleasure, and the chief means of realizing these ends; (2) an investigation of the principles and most important details of Duty or the Moral Law so far as this is distinguished from Virtue; (3) some inquiry into the nature and origin of the Faculty by which duty is recognized and, more generally, into the part taken by Intellect in human action, and its relation to various kinds of Desire and Aversion; (4) some examination of the question of human Free Will. It is connected with Theology, in so far as a Universal Good is recognised, indicative of Human Good, or analogous to it; and again, so far as morality is regarded as a Code of Divine Appointment. It is connected with Politics, so far as the wellbeing of any individual man is bound up with the wellbeing of his society; and again with Jurisprudence—if this is separated from Politics—so far as morality is identified with Natural Law. Finally, almost every branch of ethical discussion belongs at least in part to Psychology.'⁶

In his great work, *The Methods of Ethics* (1874), Sidgwick has given us a full and lucid discussion of these topics, and has gathered up the results of previous ethical thought; and both in that book and in the *History of Ethics* we have a dispassionate, penetrating account of the work of earlier moralists, from the pre-Socratics down to Herbert Spencer, T. H. Green, and Germain post-Kantians. This critical history, brief as it is, is unique and invaluable. But it is to *The Methods of Ethics* that we must go if we are to learn, as fully as we can, the doctrine of this great English moralist.

Of the three questions, (1) What ought I to do?, (2) How do I know what I ought to do?, (3) Why should I do what I see to be right?, it is as an answer to the second that Sidgwick has laid out his scheme of treatment in *The Methods of Ethics*; hence the title of the book.

'My object,' he says, 'in the present work is to expound as clearly and as fully as my limits will allow the different methods of Ethics that I find implicit in our common moral reasoning; to point to their mutual relations; and where they seem to conflict, to define the issues as much as possible.'⁷

In his view, until the logical question, the question of method, is answered, it is not possible to offer a reasoned answer to the primary question, What ought I to do?

'In deciding what they ought to do,' he says, 'men naturally proceed on different principles, and by different methods. There are two *prima facie* rational Ends, Happiness or Perfection and Happiness. . . . It is also commonly thought that certain Rules are prescribed without reference to ulterior consequences. The Methods corresponding to these different principles reduce themselves in the main to three, Egoism, Intuitionism, Utilitarianism. These methods we are to examine separately, abstracting them from ordinary thought, where we find them in

confused combination, and developing them as precisely and consistently as possible.¹ The end of egoism is the happiness of the agent; the end of utilitarianism is the general happiness. The method which proceeds on the assumption that 'certain rules are prescribed without reference to ulterior consequences' is called intuitionism—more precisely, dogmatic intuitionism.

It is this common-sense ethics—the dogmatic intuitionism of popular morality—that Sidgwick examines in bk. iii., in ch. xi. of which he sums up his results, and concludes that the maxims of common sense do not possess the characteristics required in scientific axioms; for they are sometimes tautologous, sometimes vague, sometimes inconsistent with one another—to every rule, or almost every rule, exceptions are allowed.

'The maxims of Wisdom and Self-control are only self-evident in so far as they are tautologous; nor can we state any clear, absolute, universally-admitted axioms for determining the duties of the Affections; and as for the group of principles that were extracted from the common notion of Justice, we cannot define each singly in a satisfactory manner, still less reconcile them; and even the duty of Good Faith, when we consider the numerous qualifications of it more or less doubtfully admitted by Common Sense, seems more like a subordinate rule than an Independent First Principle. . . . Similarly with other virtues. . . . The common moral maxims are adequate for practical guidance, but do not admit of being elevated into scientific axioms.'²

The search for rules which can be accepted as scientific axioms, for 'some deeper explanation why . . . conduct commonly judged to be right is so, for 'some rational synthesis' of commonly accepted precepts, leads the inquirer from dogmatic intuitionism to that phase of intuitionism called philosophical—

a method which, 'while accepting the morality of common sense as the main sound, still attempts to find for it a philosophic basis which it does not itself offer; to get one or more principles more absolutely and undeniably true and evident, from which the current rules might be deduced, either just as they are, commonly received or with slight modifications and rectifications.'³

Such principles Sidgwick finds in Kant's Categorical Imperative: 'Act as if the maxim of thy action were to become by thy will a universal law of nature,' and in Samuel Clarke's rule of equity and rule of love or benevolence. Kant's Imperative gives the form of a law or general rule: 'What is right for me is right for anyone else in similar circumstances.' The Rule of Equity is:

'Whatever I judge reasonable or unreasonable for another to do for me; that by the same judgment I declare reasonable or unreasonable that I or the like one should do for him.'⁴

This maxim is simply a precise statement of the 'Golden Rule' of the gospel: 'Do unto others as ye would that they should do unto you.' The Rule of Universal Love or Benevolence declares:

'Every rational creature ought in its sphere and station, according to its respective powers and faculties, to do all the Good it can to all its fellow-creatures; to which end universal Love and Benevolence is . . . plainly the most direct, certain, and effectual means.'⁵

'Love your neighbour as yourself' perhaps sums up the Rules of both Equity and Benevolence. The Maxim of Prudence, or rational self-love, is that 'one ought to aim at one's own good on the whole.' These maxims are among those 'absolute practical principles, the truth of which, when they are explicitly stated, is manifest.'⁶

'Hereafter as such is to be regarded neither less nor more than *Nous*'⁷ is a self-evident maxim of impartiality elicited from the Maxim of Prudence. It is self-evident too that 'whatever action any of us judges to be right for himself, he implicitly judges to be right for all similar persons in similar circumstances.'⁸ As regards the Rule of Equity, Sidgwick says of it:

'Common Sense has simply recognised the practical importance of the maxim; and its truth, so far as it goes, appears to

us self-evident.'⁹ 'And it is evident to me that as a rational being I am bound to aim at good generally,—as far as it is attainable by my efforts.'¹⁰

It is found (a) that of the commonly received maxims of duty most, when closely examined, 'contain an implicit subordination to the more general principles of Prudence and Benevolence; and (b) that no principles except these, and the formal principle of Justice or Equity, can be admitted as at once intuitively clear and certain; while, again, these principles themselves, so far as they are self-evident, may be stated as precepts to seek (1) one's own good on the whole, . . . and (2) others' good no less than one's own, representing any undue preference for one individual over another. Thus we are brought round again to the old question with which ethical speculation in Europe began, "What is the Ultimate Good for man?"—though not in the egoistic form in which the old question was asked. When, however, we examine the controversies to which this question originally led, we see that the investigation which has brought us round to it has tended definitely to exclude one of the answers which early moral reflection was disposed to give to it. For to say that "General Good" consists solely in general Virtue,—if we mean by Virtue conformity to such prescriptions and prohibitions as make up the main part of the morality of Common Sense—would obviously involve us in a logical circle; since . . . the exact determination of these prescriptions and prohibitions must depend on the definition of this General Good. . . . For example, Common Sense may seem to regard Liberty, Frugality, Courage, Placidity, as intrinsically desirable; but when we consider their relation respectively to Prudence, Meanness, Foolishness, Weakness, we find that Common Sense draws the line in each case not by immediate intuition, but by reference either to some definite maxim of duty, or to the general notion of "Good" or "Well-being." . . . Other qualities commonly admired, such as Energy, Zeal, Self-control, Thoughtfulness, are obviously regarded as virtues only when they are directed to good ends.'¹¹ Again, 'Wisdom is insight into Good and the means to Good; Benevolence is exhibited in the purposive actions called "doing Good"; Justice (when regarded as essentially and always a Virtue) lies in distributing Good (or evil) impartially according to right rules. If then we are asked what is this Good which it is excellent to know, to bestow on others, to distribute impartially, it would be obviously absurd to reply that it is just this knowledge, these beneficent purposes, this impartial distribution.'¹²

What, then, is the Good, that which is ultimately and intrinsically good—good in itself?

This—the question debated in the ethical controversy of ancient Greece—assumed that any 'rational individual would make the pursuit of his own good his supreme aim: the controverted question was whether this Good was rightly conceived as Pleasure or Virtue, or any *tertium quid*.¹³ . . . 'Which of the objects that men think good is truly Good or the Highest Good?'¹⁴

As we have just seen, the commonly accepted rules of virtuous conduct involved a reference to good otherwise determined. There remain, therefore, pleasure and the *tertium quid* (if any).

Now, pleasure is 'Feeling which is in itself desirable, and which is apprehended as desirable by the sentient individual at the time of feeling it,' and happiness is pleasure and the absence of pain. At the end of ch. ix. of bk. I. in which the meaning of good is closely discussed, Sidgwick reaches this conclusion:

In the view of common sense 'beauty, knowledge and other ideal goods, as well as all external material things, are only *reasonably* to be sought by men in so far as they conduce either (1) to Happiness or (2) to the Perfection or Excellence of human existence.'¹⁵

Other objects of pursuit do not seem to be in themselves intrinsically and ultimately good. Fears, e.g., which is so eagerly pursued, is not 'an object which it is reasonable for men to seek for its own sake. It only commands itself to reflective minds either (1) as a source of Happiness to the person who feels it, or (2) as a sign of his Excellence, moral or intellectual, or (3) because it attests the achievement by him of some important benefit to society, and at the same time stimulates him and others to further achievement in the future. . . . a man is commonly thought to benefit others either by making them happier or by making them wiser and more virtuous.'¹⁶ Similar considerations are recognised in the case of other commonly accepted sources of happiness—e.g., health, wealth, mental position.

As to human perfection or excellence, it is not 'in accordance with Common Sense to regard Subjective Rightness of Will, or other elements of perfection as constituting Ultimate Good.' Subjective rightness of will—a man's will to do what he thinks is right—is compatible with the most

mistaken views as to what is right. A fanatic may be a most dangerous and mischievous person.

"And what has been said of Virtue seems . . . still more manifestly true of the other talents, gifts, and graces, which make up the common notion of human excellence or perfection. . . . Reflection shows that they are only valuable on account of the good or desirable conscious life in which they are . . . actualized, or which will be somehow promoted by their exercise."¹

"What is ultimately good or desirable must be desirable Consciousness," i.e. either (1) happiness or (2) relations of the conscious subject to something objective, something that is 'not merely consciousness'—e.g., the relation of the mind to truth (in cognition), to beauty (in contemplation of beauty), to freedom or virtue (in volitions to realize virtue or freedom). To Sidgwick it seems clear that such objective relations of conscious subjects are not in themselves ultimately and intrinsically desirable.

In bk. III, ch. xiv, he appeals first to the intuitive judgment of the reader, "after due consideration of the question when fairly placed before it"; and secondly to a comprehensive comparison of the ordinary judgments of mankind. As regards the first argument, to me at least it seems clear after reflection that those objective relations of the conscious subject, when distinguished from the consciousness accompanying and resulting from them, are not ultimately and intrinsically desirable; any more than material or other objects are, when considered apart from any relation to conscious existence. Admitting that we have actual experience of such perceptions as have just been described, of which the ultimate object is something that is not merely consciousness; it still seems to me that when (in the latter's phrase) we "sit down in a cool hour," we can only justify to ourselves the importance that we attach to any of these objects by considering the consciousness, in one way or another, to the happiness of sentient beings.

The second argument, which refers to the common sense of mankind, obviously cannot be made completely cogent; since, as above stated, several cultivated persons do habitually judge that knowledge, art, etc.—not to speak of Virtue—are ends independently of the pleasure derived from them. But we may urge not only that all these elements of "ideal good" are productive of pleasure in various ways; but also that they seem to obtain the commendation of Common Sense, roughly speaking, in proportion to the degree of this productivity. This seems obviously true of beauty and will hardly be denied in respect of any kind of social ideal. It is paradoxical to maintain that any degree of freedom, or any form of social order, would still be commonly regarded as desirable even if we were certain that it had no tendency to promote the general happiness. The case of knowledge is rather more complex; but certainly Common Sense is most impressed with the value of knowledge, when its "fruitfulness" has been demonstrated. It is, however, aware that experience has frequently shown how knowledge, long fruitless, may become unexpectedly fruitful, and how light may be shed on one part of the field of knowledge from another apparently remote; and even if any particular branch of scientific pursuit could be shown to be devoid of even this indirect utility, it would still deserve some respect on utilitarian grounds; both as furnishing to the inquirer the refined and innocent pleasures of curiosity, and because the intellectual disposition which it exhibits and cultivates is likely on the whole to produce fruitful knowledge. Still in cases approximating to this last, Common Sense is somewhat disposed to complain of the misdirection of valuable effort; so that the need of human commonly paid to science seems to be graduated, though perhaps unconsciously, by a tolerably exact utilitarian scale. Certainly the moment the legitimacy of any branch of scientific inquiry is seriously disputed, as in the . . . case of vivisection, the controversy on both sides is generally conducted on an avowedly utilitarian basis.²

Though it has to be allowed that common sense is disinclined to admit happiness (=sum of pleasures) to be the ultimate Good, yet this can be explained by considering (1) that the term 'pleasure' is very commonly used in a bad sense and with a restricted scope; (2) that many pleasures depend on our experiencing desires for other things than pleasures; (3) that, when happiness is taken as the ultimate Good, it is often supposed that what is meant is that each individual should pursue only *his own* happiness; (4) 'from the universal point of view no less than from that of the individual, it seems true that Happiness is likely to be better attained if the extent to which we set ourselves consciously to aim at it be carefully restricted.'³

As the result of this appeal to common sense,

¹ *The Methods of Ethics*, p. 326.

² *Id.* pp. 461-462.

³ *Id.* p. 465.

Sidgwick concludes that we are justified in considering that common sense is disposed to accept happiness as the ultimate Good.

It may seem almost superfluous to insist on men's ineradicable belief in the value of happiness. Our desire that virtue should be rewarded—rewarded with happiness, that is—that there should be a heaven for the good, answers some of the deepest demands of our nature. We are convinced that the 'wages of virtue' ought not to be 'lost.' What we wish to those we love is 'long life and happiness,' 'many happy returns,' and so on. Long life without happiness is not desirable, and an hour, a day, a week, of torturing pain, or even of simple discomfort or mere indifference, is in itself entirely undesirable.

Sidgwick's argument has eliminated every alternative except happiness; and he points out that the acceptance of cognition of objective truth, contemplation of objective beauty, and so on, as ultimate Good, instead of happiness, would leave us without any 'criterion for determining the comparative value of different elements of "Good".' He concludes that 'the Intuitionist Method rigorously applied yields as its final result the doctrine of pure Universalistic Hedonism.' Thus the utilitarianism of Bentham and Mill is provided with that intuitionist basis which it had previously lacked, and the effort of thought which has so fully explained and systematized the maxims of common sense has also accomplished a further great constructive achievement, and has succeeded in unifying intuitionism and Benthamite utilitarianism. The 'consilience' is very impressive.

The problem that occupied the ethical schools of Greece is thus solved: It is seen that virtue consists in the promotion of happiness (pleasure and absence of pain); as far as human conduct is concerned, the practice of virtue is the best means to the general happiness, and 'that most excellent of all practical principles, the active principle of benevolence,' as Butler calls it, the principle which aims at the happiness of others, is the root and support of common-sense morality. And not only so, but—since this fundamental principle is in essence no other than the Golden Rule of the Gospels—we have here the coincidence of intuitionist hedonism with Christian ethics. This unification, though recognized by Sidgwick, was not emphasized by him; but it furnishes a striking confirmation of the view which he reached as the result of systematic and profound reflection on ethical thought.⁴

This is perhaps the most convenient place for some further consideration of that doctrine of the dualism of practical reason to which reference has already been made. This dualism is regarded by Sidgwick as the final ethical difficulty—'the profoundest problem of Ethics.'⁵ He accepts as intuitively certain the maxims of reasonable self-love and of rational benevolence, but he does not find in his moral consciousness 'any intuition, claiming to be clear and certain, that the performance of duty will be adequately rewarded and its violation punished,' though he feels a 'desire, apparently inseparable from the moral sentiments, that this result may be realized.'⁶ He has not been able to reach the desideratum of the practical reason—a reconciliation of the individual with the universal reason. There seems to be no clear and certain intuition that the action most conducive

⁴ A most interesting and thoroughly argued account of the steps by which Sidgwick arrived at his Utilitarianism on an intuitionist basis "is to be found in the preface to the sixth and subsequent editions of *The Methods of Ethics*, and in *Autobiography*, 2. [1901] 297 ff.

⁵ *The Methods of Ethics*, p. 330, note 4.

⁶ *Id.* p. 367.

to the agent's good is always coincident with that most conducive to the good of others, no convincing and indisputable metaphysical or theological proof. Again, it is not found that such invariable coincidence is supported by an appeal to experience, that 'inseparable connection between Utilitarian Duty and the greatest happiness of the individual who conforms to it' can 'be satisfactorily demonstrated on empirical grounds.'¹ His conclusion is:

The discussion of the 'profoundly difficult and controverted question' with which we are here concerned 'belongs rather to a treatise on General Philosophy than to a work on the Methods of Ethics: as it could not be satisfactorily answered without a general examination of the criteria of true and false beliefs. Those who hold that the edifice of physical science is really constructed of conclusions logically inferred from self-evident premises, may reasonably demand that any practical judgments claiming philosophic certainty should be based on an equally firm foundation. If on the other hand we find that in our supposed knowledge of the world of nature propositions are commonly taken to be universally true, which yet seem to rest on no other grounds than that we have a strong disposition to accept them; and that they are indispensable to the systematic coherence of our beliefs,—it will be more difficult to reject a similarly supported assumption in ethics, without opening the door to universal scepticism.'²

We may observe that it is practical dualism which alone among ethical doctrines clearly sees, honestly recognizes, and fairly faces the claims (for the individual agent) of both self and others, and it gives a clue to the mixture of good and evil that is in men, and does not leave us with a hopeless puzzle—self-love and benevolence are recognized as both natural and both rational.

There is another consideration, which is not insisted on by Sidgwick, but which appears to be of great interest and importance in its bearing on the dualism of practical reason. It is this. Whoever accepts the end of rational benevolence—i.e. the happiness of others—can accept it only on the ground that each individual's happiness is to him ultimately and intrinsically valuable, valuable in itself, and, since a man cannot directly experience any happiness but his own, this belief in the value for others of their own happiness must be based on his recognition of the value for himself of his own happiness. The reasonableness of benevolence implies the reasonableness of self-love. If we start from rational benevolence, we are irresistibly led back to self-love as our starting-point, and in the precept 'Love your neighbour as yourself' we find the same implication that love of our self is logically prior to, and sets the standard for, love of our neighbour.

On the other hand, as Sidgwick points out, the agent who 'purs forward, implicitly or explicitly, the proposition that his happiness or pleasure is Good, not only for him but from the point of view of the Universe . . . may be brought to accept Universal happiness or pleasure as that which is absolutely and without qualification Good or Desirable.'³

This reciprocal implication of the 'two chief or superior principles' of conduct is striking, and is another instance of the 'conciliences' which are so impressive in Sidgwick's ethical construction.

Sidgwick's account of the relation between ethics and politics is highly interesting and important. The two are in his view so closely connected that they are in fact parts of one whole—i.e. the science of conduct, of what ought to be done.

'Ethics aims at determining what ought to be done by individuals, while Politics aims at determining what the government of a state or political society ought to do and how it ought to be constituted.'⁴

The relation between ethics and politics is in the utilitarian view particularly close, and must in any case be such that some common measure can be applied in both departments; otherwise hopeless confusion will result. It is imperative that any satisfactory theory of ethics should have a corresponding theory of politics, and that any theory of

politics should be considered in relation to ethics. Further, the two must be harmonious; for, unless they have a common principle and the same conception of ultimate human good, they cannot pretend to divide between them, and to regulate without inconsistency, the whole region of human conduct.

In *The Elements of Politics* Sidgwick has given us an indispensable supplement to the ethical work published seventeen years previously, accepting the same fundamental principle—the principle of rational benevolence, the supreme aim of which is the promotion of the general happiness. The aim is all-embracing—'the happiness or well-being of humanity at large.' In the preface to the *Politics* Sidgwick explains that what he has tried to provide is 'a book which would expound . . . the chief general considerations that enter into the rational discussion of political questions in modern states.'

'The Theory of Politics as here expounded is concerned with human societies regarded as possessing Government. Its primary aim is to determine what the constitution and action of Government ought to be; accordingly its method is not primarily historical, but deductive, based on psychological propositions not universally and absolutely true, but approximately true of civilized men. It has two main divisions: one concerned with the Functions of Government, internal and external, and the other mainly with its structure.'

The part played by the dualism of the practical reason is different in politics from what it is in ethics.

According to this dualism, 'Reasonable Self-love and Conscience are the chief or superior principles in the nature of man, because an action may be suitable to this nature, though all other principles be violated, but becomes unsuitable if either of those is.'⁵

In the case of the individual agent it seems to be theoretically possible that the good of the agent may conflict with the good of the whole, and experience seems to confirm this view. Common sense admits the possibility and the actuality of self-sacrifice. A man may give his life for others; many a man has done this and more.

The statesman as such is not subject to this division in the councils of practical reason. He exists for the good of the governed in the political community to which he belongs. The promotion of the good of his community (with of course a due regard to the good of the larger whole of which it is a part) in his *raison d'être*.⁶ But for him too the dualism is, from a different point of view, momentous. Though as statesman he is not liable to be faced with the conflict (which emerges primarily as a conflict of motives) between interest and duty, between the happiness of self and the happiness of others, yet, since the community which he administers consists of individuals who are one and all liable to this conflict, it is his business to reconcile the conflict to the utmost of his power, to make it for the interest of individuals to do that which, if they would do it, would be for the good of the whole—to furnish at any moment motives sufficiently strong to induce individuals at that moment to do what is for the general good. In proportion as the attainment of happiness for self and the attainment of it for others are—so far as the power of government extends—made coincident in any community, in proportion as they are promoted by the same course of action, in that proportion is the community well organized and well governed, to that extent do the members of the community enjoy what Kant calls the 'Supreme Good'; they are both virtuous and happy. The great problem for rulers, as for teachers, is to promote this coincidence of well-doing and well-being. Herein lies much hope for the future—the reduction for the individual agent of the conflict between self-love and rational benevolence does

¹ We have seen why Sidgwick would here substitute rational benevolence for conscience.

The biography written by his brother and his wife, *Henry Sidgwick: a Memoir by A. S. and E. M. S.*, London, 1900, gives a detailed account of Sidgwick's life, consisting largely of extracts from his own letters. It does not include any description or evaluation of Sidgwick's ethical and other philosophical writings. At the end of the *Memoir* (p. 625) is a list of the biographical notices of Sidgwick which had appeared previous to 1900.

Objections to Sidgwick's utilitarianism (sometimes referred to by him as utilitarianism on an intellectual basis) have been summarized and replied to by E. E. C. Jones in art. 'Rational Hedonism,' in *J.F.R.* v. (1894-95) 70 ff., and 'Discomfort on Same,' id., pp. 218 ff., 276 ff., and art. 'Professor Sidgwick's Ethics,' in *Proc. of the Aristotelian Society*, new ser., iv. (1903-04) 23 ff.

SIDHE.—See FAIRY, CELTS.

SIEVE.—1. Sieves used in rain-making ceremonies.—Sieves, and especially winnowing-fans,¹ are frequently employed by primitive peoples for magico-religious purposes, such as rain-making.

Among the Ainu, e.g., when rain is urgently needed, the people are gathered together and the master of the ceremonies appoints certain men to head small companies to execute particular functions. It is the duty of one of these parties to take sieves and scatter water about with them,² just as Buddhist monks, during the ceremonies to promote the fertility of the earth, 'pour water into little holes in the floor of the pagoda as a symbol of the rain which they hope Buddha will send down on the rice-fields.'³ In comparatively recent times (1898) Kaniwa peasants in the Tamschik district are known to have dug up the corpse of a Kankoluk (Dysentery), and to have beaten it, exclaiming, 'Give us rain!', while others poured water on it through a sieve in imitation of a shower of rain.⁴ In times of drought in S. India the Kipsa women 'take a frog alive to a new winnowing fan made of bamboo. On this fan they spread a few margosa leaves, and go singing from door to door, "Lady frog must have her bath. Oh! rain-god, give a little water for her at least." This means that the drought has reached such a stage that there is not even a drop of water for the frogs. When the Kipsa woman sings this song, the woman of the house brings a little water in a vessel, pours it over the frog which is left on the fan outside the house, and gives some alone. The woman of the house is satisfied that such an action will soon bring down rain in torrents.'⁵

2. Sieves used as cradles.—It was a regular custom among the Greeks and many other people to employ a winnowing-fan as a cradle for infants.⁶

In Java the wife places the newly-born child in a bamboo basket like the sieve used for separating the rice from the chaff. As she does this, she knows with the palms of both hands on the basket in order that the child may not be timid. Then she whispers the two spirits, saying, 'Cry not, for Njalamong and Kakiamong (two spirits) are watching over you.' Next she addresses the child, saying, 'Bring not your grandfather to the road, but be transported by a horse; bring him not to the bank of the river, but he fall into the river.' The object of the ceremony is said to be that these two spirits should always guard the infant.⁷

Similarly in Laos, when a child has been born in a house, it is laid upon a rice-sieve and placed by the grandmother or other near female relative at the head of the sturteese or ladder leading to the house. There the woman calls in a loud voice to the spirits to come and take the child away or for ever to let it alone, stamping on the ground violently to make it cry. The precaution, however, is taken of tying strings round its wrists

on the first night after birth, lest the spirits should take the invitation too literally. If the infant should fail to respond to the treatment, it is regarded as an evil omen. If, on the other hand, it behaves naturally and lifts up its voice, all will be well.

On the day after its birth the child is regarded as being the property no longer of the spirits, who could have taken it if they had wanted it, but of the parents, who forthwith sell it to some relation for a nominal sum—an eighth or a quarter of a ruppee perhaps. This, again, is a further guarantee against molestation by the spirits, who apparently are regarded as honest folk that would not stoop to take what has been bought and paid for.⁸

The same notion of rescuing a new-born infant from the power of evil spirits is seen in the Punjab custom of putting a new baby into an old winnowing-basket (*akka*) with the sweepings of the house and dragging it out into the yard. After this has been done, the child will bear the name of 'Winnowing-basket' (*Chhalla*) or 'Dragged' (*Ghaatla*). The object of this procedure is probably to deceive the spirits by rendering the child unrecognizable. The same may perhaps be the intention of a ceremony employed among the hills of the Deccan. As soon as a child is born, it is bathed and then laid on a sieve for a few minutes. On the fifth day the sieve, with a line and pole-lever on it, is taken outside the house and, after the worship of Chaiti has been performed, is thrown away.⁹

In Upper Egypt a newly-born child is merely dried, not washed, and immediately laid upon a corn-sieve beside the head the knife with which the umbilical cord has been cut is laid, and corn is scattered round about. This is intended to drive away the *akras*, the child's evil brother or sister from the spirit-world. On the morning of the seventh day the child is again placed on a sieve, tapes are fixed on metal plates and on the point of a sword, and the child is carried in procession through the whole house, while the midwife mutters wheat, barley, peas, and salt for the wicked spirits. The child is then shaken on the sieve, in order that it may lose fear for the rest of its life.¹⁰

Children born in an unlucky month (Fagun) among the Tswana people of Madagascar are either buried alive in the forest or placed in a winnowing-fan along with certain herbs and washed in water medicated with some of the same herbs. The ceremony is thought to avert the threatened ill-luck. Similarly the Chinese of Foo-chow set a lad suffering from smallpox in a large winnowing-fan, placing a piece of red cloth on his head and on the cloth some paroled beans. The beans (whose name in the local dialect is identical with the name for smallpox) are allowed to roll off to represent the passing away of all traces of the disease from the boy's body.¹¹

3. Sieves used in marriage-rites.—Among the Naoka, a caste of ferrymen in the Central Provinces of India, a winnowing-fan together with certain other articles is passed by the mother in front of the bridegroom to keep off evil spirits and scatter them to the winds like chaff. The Rajpurs in the same district exercise the bridal pair by touching the head, breast, and knees of the bridegroom with a winnowing-fan, a pestle, and a shunning-stick.¹²

4. Divination by sieves.—There was an early form of divination known as oecumenomancy (*oekromancy*, 'sieve', *oekros*, 'divination', *oekros*, as it is described in *Hudibras*, 'the oracles of sieve and shears, that turns as certain as the spheres'). A sieve was suspended, held by a thread or by the points of a pair of shears stuck into its rim; the movement, turning, or fall of the sieve at the running of the person suspected of a crime, coupled with the repetition of an incantation or other magic formula, decided the guilt or innocence of the person.

In the Highlands of Scotland, on Halloween, the young people until recently assembled in one of their houses for the express purpose of ascertaining future events by divination. In the Lowlands also similar customs prevailed at this season. In order to cause the apparition of a future husband or wife, it was necessary to rub a barn door and secretly, taking care to open both doors or, better still, take them off their hinges, to guard against complications that might arise on the arrival of the stranger. Having done this, the diviner takes a sieve (wheat or barley) and goes through the act of winnowing corn. After this has been done three times, the 'future husband or wife' will pass through the barn, entering at the windy door and passing out at the other.¹³

5. Conclusion.—From the foregoing examples it would seem that the sieve or winnowing-fan

figures in magico-religious cults primarily as a symbol of fecundity. Sieves in the Stone Age appear to have been simply jars pierced with holes, and therefore they may have been used for carrying water. In this way their connexion with rain-making ceremonies is readily explained, since the dripping of the water from the vessel would be calculated to suggest to the primitive mind the falling of rain. Thus the instrument would soon come to be regarded as a means of controlling the weather.¹ But the custom of carrying water in a sieve was apparently also anciently connected with virginity and a fertility cult,² and, consequently, at a very early period the implement may have been used to promote fertility and growth. This view is supported by the connexion between the sieve and the winnowing-fan—an article intimately associated with corn, the symbol of growth and fertility.³ Moreover, when a winnowing-fan is used as a cradle, it is not infrequently surrounded by corn or fruit to emphasize the desire to communicate to the infant the power of fecundity and growth. The sowing of seed was unquestionably regarded by the ancient Greeks and other primitive people as analogous to the begetting of children, just as in Germany barley and flax seed are sown over stunted children to make them grow.⁴ It seems, therefore, that infants were cradled in sieves and winnowing-fans originally to promote fertility, and that the notions of rescuing them from evil influences and of purification are only later interpretations (suggested by the separating function of the fan) that have arisen to explain the custom. In the Bacchic ritual the earlier conception is clearly indicated on the monuments by the appearance of the implement filled with fruitage together with the male organ of generation.⁵ Here the winnowing-fan, from which Dionysus derived his surname, is unmistakably represented as the emblem of creative energy. In the Athenian marriage ceremonies the fact that the boy who carried the *klanon* was obliged to have both parents alive suggests that the basket was a fertility charm to induce the birth of children and natural wealth. The symbolism of the *klonites*, of fruit, and the child point to the same conclusion. It is not without significance that the implement has been used in recent times in Scotland as a means of producing an apparition of a future husband or wife.

E. O. JAMES.

SIKHS.—I. History.—One of the most striking of the creeds in India, which, arising on its own soil, protested against her dominant Brahmanism, is the Sikh religion. Socially and politically as well as in religion Sikhism opposed the influence of the Brahman and the system which he taught and represented. Its founder, Nanak (q.v.), the first guru, was born in A.D. 1469, fourteen years before Luther; the traditions of his earlier life picture him as leading the life of one meditatively careless of the things of this world until he received a definite call to a divine mission as the expounder of a new doctrine. Teaching that Hindu and Muhammadan differed in no essentials of faith, he set out on a series of pilgrimages to the four points of the compass and made a fifth and last allegorical visit to the saints (*siddhas*) of Gorakhnāth (q.v.). These pilgrimages may have extended far beyond the confines of modern India,

and indeed it is claimed that he visited not only Ceylon and Kashmir, but also Russia, Turkestan, and Mecca. His preaching was intensely monotheistic and largely directed against the pretensions of priestcraft. He reproached his Hindu compatriots who lived upon alms wrung from the people, and he taught the dignity of labour. He composed religious hymns, being thus the first contributor to the *Granth* (q.v.), but his teaching had no political aims.

Before his death in 1538 Nanak had installed as his successor Angad, like himself a Khatri by caste, and his disciple, but not of his kin by blood. Angad invented the Gurmukhi alphabet¹ and enlarged the *Granth*, but he remained a humble religious teacher, earning a livelihood by twisting coarse twines into rope. He died in 1552 or 1553.

Angad installed as guru Amar Das, who began to organize the new sect and develop its teaching. He divided the country into 22 *sees* (*manja*, lit. a couch or large bed), and maintained a public refectory at which all ate without distinction of caste. He also reformed the Brahmanical rites at marriage and death, forbade pilgrimages and similar extravagances, pronounced against *sati*, and separated the Sikh recluses, or *Udasis* (q.v.), from the laity. Having added largely to the hymns of the *Granth*, he bestowed the apostolic succession on his son-in-law, Ramdas.

Guru Ramdas succeeded in 1574, and is said to have entered into closer relations with the emperor Akbar than his predecessor. The biographers of that tolerant ruler do not indeed allude to the guru or their teaching, but his broad-minded policy doubtless encouraged the new sect to develop its religious activities, while it gave it no provocation to enter the political arena. Ramdas founded Ramdasapur, later known as Amritsar, the sacred capital of the Sikhs, and in 1581 he was succeeded by his youngest son, Arjan Dev. With his accession Sikhism entered on a new phase. He laid aside the garb of a *fagir*, dressed in costly attire, and organized a system of tithing his followers. His energy succeeded in sending disciples to trade and spread the faith as far afield as Turkestan; and it gained many adherents in Kabul and Kandahar as well as in India generally. Nevertheless Arjan Dev was able to maintain amicable relations with Muhammadans like the famous saint Miran Mir, and his chief opponents were a Hindu finance minister to the Mughal governor of Lahore, and his eldest brother, Prithi Chand,² who never forgave him his own supercession in the guraship. Unfortunately he entered into an obscure conspiracy with Khuro, son of the emperor Jahangir, and expired his assistance to the rebel with his life.

In 1606 Ramdas's only son, Hargobind, succeeded him. He rejected for good the tokens of a *fagir* and wore two swords, one denoting *fagirs*, or spiritual, the other *amir*, or secular, authority. He built the first Sikh stronghold, and many whom want and misgovernment had driven from their homes flocked to his standard. But, if he was the first of the gurus to take up arms against the Mughals, he met with scant success as a leader, for Jahangir is said to have kept him a prisoner at Gwalior for twelve years until that emperor's death in 1628. Even then he obtained his liberty only by sacrificing his treasures.³

Hargobind died in 1645 and was succeeded by

¹ This alphabet is derived from the Devanāgarī, through the Thari alphabet of the Panjāb hills and the Landa of the Panjāb (G. A. Grierson, *JRS*, 1914, p. 377).

² The founder of the Khanda sect.

³ The Sikh accounts represent Miran Mir as having reconciled him to Jahangir; and this is the version of the *Distans* (Dr. A. Troyer, Paris, 1910, II. 77), which adds that he continued in the imperial service under Shah Jahan.

his grandson, Har Rai, his son, Gurditta, having entered the Udāsī order and thus being disqualified to succeed to a secular office. He too entered into relations with a rebellious seign of the Mughal dynasty, Dara Shikoh, and on his defeat he sent his son, Rām Rai, to Delhi to negotiate a pardon. The lad was still a hostage in the hands of Aurangzib when his father died, and either on that account or because he had in fear of ill-usage misquoted a verse of the *Graṇth* he was disqualified by his father, who designated his second son, Har Kiṣṇ, as his successor. This son too was summoned to Delhi, where he died after vaguely appointing as his successor one 'at Bakala,' a village on the Bīas river.

No fewer than 22 Khatri of the Sodhi sept claimed the *guru*ship, but it was awarded to Tegh Bahādur, the only Sodhi who divined that a devout follower had not fulfilled a vow made in distress. He was duly installed, but, saying that he was unworthy to wear his father's sword, he proclaimed his ambition to be styled Degh Bahādur, or 'lord of the vessel,' the *deg* which symbolizes the world. His accession led to many dissensions. Rām Rai had founded a sect of his own, which still endures in the Dehra Dūn. Dhir Mal, probably an older brother of Gurm Har Rai, who had refused to acknowledge his accession, had possession of the *Graṇth* and supported Rām Rai's pretensions to the *guru*ship. This opposition from his own kin compelled Tegh Bahādur to seek a refuge in the Jaewān Dūn beyond the Siwālik hills, and there in 1665 he founded Anandpur. Nevertheless he was able to make progresses through the Mālwa of the southern Panjāb, the Kurukshetra, eastern and lower India, while his influence extended even to Ceylon. But the intolerance of Aurangzib led to his seizure and execution at Delhi in 1675.¹

We now come to the 10th and last *guru*, Govind Singh, founder of the militant Sikh theocracy. Born at Patna in 1666, and installed at Anandpur in 1676, he made momentous changes in Sikh ritual and polity. His policy was to raise the Sikhs to one and the same high caste, the Khālās. To this end he chose five faithful followers, whom he initiated with the *khanda pukai*, 'wresting by the two-edged dagger.' These five in turn initiated the *guru* himself, and he thus placed initiators and candidate on the same level.

In this rite the candidate bathes and dons clean clothes. He is seated in an assembly generally convened for the purpose, and a Sikh who is regular in his observance of Sikh rules of conduct sits with a dagger some sugar in water in an iron basin, while chanting verses from the *Granth*. This solution is called *amrit* (whence the rite is sometimes called *amrit chakras*, 'to be filled with nectar') and is sprinkled on the candidate's hair and body. He is also given some of it to drink and is made to repeat certain vows which constitute the *rehat*, or Sikh rules of conduct. The *amrit* is believed to confer immortality and to make the initiate a son of Govind Singh and a Singh ('lion') or true Kshatriya. He also becomes a son of Mātā Salīb Devī, the childless wife of that *guru* who was promised the motherhood of the whole Khālās. The *pukai*, erroneously derived by J. D. Cunningham² from the Greek *puke*, 'gate,' is generally regarded as a baptismal rite, but the bathing is merely to obtain ceremonial purity. The use of the dagger is doubtless intended to communicate soldierly qualities to the initiate. The Baluch have at birth a very similar practice. The *amrit* confers immunity in battle. The *churn pukai* (see below) conveys the mantle of the *guru* to his disciple.

Recent research has shown that the network of Sikh organization had been spread by Tegh Bahādur's predecessors as far east as Patna and even Decca, which became a *hazir* sangat, or provincial sangat, at first under the pontifical throne at Anandpur and later under the *talib*, or semiprovincial throne, at Patna. When Tegh Bahādur visited Decca in 1666, he found prosperous sangats at Sylhet, Chittagong, Bawlip, Lachkar, and elsewhere, and by the time of Guru Govind Singh Decca had earned the title of 'the home of Sikhism.' The tekhs were four, viz. Anandpur, Amritsar, Patna, and Nander (in the Nāim's Domains), Deccan (Gurukul Singh, *Sikh History from Eastern Bengal*, Decca, 1914, p. 228 f., 1918, p. 276 ff.).

¹ *Hist. of the Sikhs*, p. 74 n.

The *guru* assumed the suffix of Singh instead of his Hindu suffix, Rai, at initiation, and all initiates take that suffix. His five initiators were a Khatri and four men of castes generally regarded as Śūdras who had offered their heads in his service. Various versions of this choice of the *panj pīdars*, 'the five beloved ones,' of the *guru* are current. That of the *Panth Prākāś* relates that the *guru* called for Sikhs willing to offer their heads for his sword, the goddess, and five came forward. The *guru* took them one by one into his tent, and, emerging with his sword dripping with the blood of a goat, tested their devotion by pretending that he had killed each in turn.¹ But the Sikhs who seek to retain the cult of Devī and to reconcile it with the *gurus'* monotheism say that one of the five was actually sacrificed to the goddess at Naina Devī, and this is the version current in the Siwāli hills, where Sikhism never found a footing.² In requital the Devī promised him the success of his sect. Guru Govind Singh was a man of considerable learning. A Gurmukhi, Sanskrit, and Persian scholar, he deputed five Sikhs to learn Sanskrit at Benares, and had many important Sanskrit and Persian works translated into the *shāhī*, or vulgar tongue. In accord with his democratic policy, he abolished the system of collecting tithes through *masands* (collectors), which Guru Arjan had organized, and the system was maintained only by some dissident Sikh sects. He was, moreover, a military leader of parts. His refusal to pay tribute in any form to the *rājā* of Bilāspur, from which state Tegh Bahādur had purchased the site of Anandpur, led to his first battle. He defeated the *rājā* in 1682, but his victory cost him the hostility of many of the hill states in the mountainous country which forms the north-east corner of the Panjāb. Among them he found some allies, but his teaching made no headway among the ancient Hindu polities of those states, and his only effective ally was the *rājā* of Simūr, a state lying west of the upper Jamna, who allowed him to found Paonta in the Kārda Dūn of that state in 1684. Had Sikhism succeeded in winning over the hill people, its history might have been different, but the influence of their Rājput overlords and Brahmanical priests was too firmly planted to allow a democratic theocracy to make converts among them. Guru Govind Singh sought support in other directions. He enlisted 500 Muslim Pathāns, but they failed him at a crisis, as did the Udāsīs whom he had fostered. His military position was weak. It lay in the *dāns*, or valleys, of the outer Himalayas; behind him were the hill *rājās*, jealous of one another, but still more jealous of a plainman preaching a new creed. On his widely extended front he was opposed to the decadent but still organized and powerful authority of the Mughals. He was not without supporters among the Muhammadans of the plains, notably the *pir* of Sadhaura and other spiritual notables. But the Mughals, by a well-conceived campaign in conjunction with the hill *rājās*, drove the *guru* out of Anandpur, and in the flight of the Sikhs his children were captured. They were buried alive at Sirhind, and their martyrdom made that thriving city for ever accursed in the eyes of the Sikhs. The *guru* himself escaped to the south of the Sutlej and, on Aurangzib's death, threw in his lot with Bahādur Shāh, whom he helped to defeat Prince 'Azim. This ensured him tolerance, if not favour, but in 1708 he was treacherously stabbed by a Pathān who had been reared in his family, and he died soon afterwards.

¹ Gokal Chandra Narang, *Transformation of Sikhism*, Lahore, 1912, p. 70.

² *Siwāli Hill States Gazetteer*, Lahore, 1904, 'Bilāspur,' p. 131.

Before his death a new and devastating force had arisen in 'Banda, the Bairāgi.' Born at Rajauri, the capital of an ancient principality in the Jammu hills, Lachhman, as he was first named, became a Bairāgi and then a Yogi with the style of Madho Dās, and in the latter character he acquired skill in the occult sciences. Meeting Guru Govind Singh on the Godavari in S. India, he became his slave (*bonda*), but not his disciple, with the title of Banda Bahādur, 'the lord slave.' On him the guru bestowed his own sword, bidding him observe strict continence and truthfulness and avoid schism, the use of a cashion in the Sikh temple, and the title of *guru*, but enjoining on him brotherly love and peace with the Singhs. These behests Banda did not obey. He married, and started a sect of his own, the Bandāl Singhs; he substituted for the *khanda pahul* the *chara pahul*, in which the initiate drinks water used in washing his guru's feet; and for the war-cry of the true Singh, '*Fatāh iatke-guru jī kī*,'¹ he enjoined the cry, '*Fatāh dāras* (or *dārān*) *fatāh dhārma*,' 'Victory to religion and the faith!' He donned royal dress and lorded it over the Sikhs, instead of regarding himself as merely an equal and a brother. He also ceased to enforce the Singh rule against cutting the hair, and exhorted the Sikhs to abstain from flesh, though Govind Singh had encouraged its use for military reasons. But this does not complete the tale of Banda's backslidings. The Sikh *gurus* had been installed by a special rite, in which five pieces and a coconut were placed before the *guru*-designate, while his predecessor and appointer circumambulated him four times. By this rite the spiritual light of Guru Nanak had been transmitted to his successors, and on the forehead of each in turn the *tika* (coronation mark) was made by a member of a family of cultivators in which the office was hereditary.² Guru Govind Singh had installed the sacred *Gurmūkh* itself as his sole successor, but Banda claimed to be the eleventh *guru*. This and his other heresies in the end alienated the true Singhs, and, though in his earlier years as a soldier-saint Banda had won notable successes against the Mughal government, even taking Sirhind and making it with merciless slaughter of the Muslims, his career ended in defeat and failure. At its zenith in 1714 he had convened a royal *darbar* at Amritsar and assumed kingly robes with an aigrette in his turban, and the country from Lahore to the banks of the Jamma had passed into the possession of the Singhs. Banda had also succeeded in extorting some kind of allegiance from the hill *rājās*, and indeed he found in the hills a refuge in time of stress and a retreat for religious meditation, to which he seems to have abandoned himself at critical moments when he might have followed up a success or organized territory already won. But his character lacked consistency. While, on the one hand, he chartered the heretic Rām Rāias, on the other, he dealt mercilessly with Muhammadan towns whose inhabitants had befriended Guru Govind Singh. The true Singhs, the Tat Khālas, the elect of the elect, separated themselves from Banda, who left them Amritsar and retired to Gardāspur, nearer the hills, where his strength lay. Thence he carried on a predatory warfare until the Tat Khālas reluctantly appeared in arms with the Muhammadans against him. This en-

ured his downfall, and in 1716 he was probably captured and put to death at Delhi. Tradition says that he was executed with every circumstance of cruelty, but it also avers that by a mental process he triumphed over his physical sufferings, reanimated himself, and retired to the banks of the Chenab in his native state of Jammu. There his tomb is still held by his descendants, and his followers are still to be found in the Panjāb under the name of the Banda-panthis.

Banda's death left the Singhs without a secular leader, and, though most of the Bandāls rejoined the true Khālas, they had no definite policy. Their forays provoked reprisals, and a price was offered for every Sikh head. Farrukhsār attempted to conciliate them and assigned tracts of territory to some at any rate of their leaders. One of them, Kapūr Singh, accepted (contemptuously, some say) the Muhammadan title *nasab*, and he with many of the other leaders formed what was known as 'the veteran army' (*budhā dal*), while the younger (*tarā dal*) organized itself into five companies, the Shahids (q.v.), Amritsaris, Dallewālīs, Rāmdāsīs, and another. The *budhā dal* clung to Amritsar, and many of both *dals* settled down to cultivation; but the younger generation found itself pressed for subsistence, and sought an outlet in Rajpūtāna. The Muslim governors seized the occasion to harass the veterans, and in revenge the two *dals* recombined and ravaged the whole of the northern Panjāb. Upon the distracted province fell Nadir Shāh's invasion of 1738-39. The Sikhs did not respond to the Mughal governor's request for aid to oppose him, but they harassed him on his retreat and refused to surrender their booty. This led to fresh persecution, and Ahmad Shāh's incursions found the province still more rent by intestine strife than those of his predecessor. Finally the Mughal governor, Adina Beg, sought Sikh aid and with it recovered a fraction of the province, but, distrusting his allies, he called in the Marāthās, who overran it, driving the Durrānis across the Indus, in 1757. On Adina Beg's death, in the following year, the Sikhs killed his principal minister and made themselves independent in the central and north-eastern Panjāb.

By this time their old division into two armies had disappeared, and of the five companies only one, the Shahids, remained, twelve new *misls* (confederacies) having taken the place of the five companies. Of these twelve, however, four are more correctly to be described as *dēstas* (militant orders), like the Shahids, who formed the oldest and at one time the most important *dēstas*. No attempt had been made to revive the *gurus*hip, but Nawāb Kapūr Singh, who was childless, bequeathed his honours and the leadership of the Khālas to Jassa Singh, Ahlūwālī, saying that he was destined to be a *bādshāh*, 'king,' a title subsequently accorded him by his own followers. Yet, although he had been treated by Mātā Sundri, a widow of Guru Govind Singh, as her own son, he did not aspire to any authority over the Khālas and was content to be elected head of the Ahlūwālī *misal*, although he struck coin in the old Mughal mint at Lahore with the inscription in Persian: 'Struck in the world by grace of the Everlasting; Jassa, the Kalāl, beloved Ahmad's country.' Initiation by him was highly prized, and Rājā Anr Singh of Patiala was one of his initiates. Ah Singh of Patiala consented to take the province of Sirhind on lease from Ahmad Shāh in 1767, with the title of Rājā-i-rajanā Mahinder Bahādur, the Muhammadan chiefs of Maler Kotla and Railkot fearing the Sikhs too much to undertake its charge. This paved the way for the

¹ The form usually given is '*Wāh Gūrū Nānak Kī Khālā, Wāh Gūrū Nānak fatāh*' (Narang, p. 180; but cf. Khassan Singh, *Philosophy Hist. of the Sikhs*, p. 219).

² The founder, Mātā Budhā, was so named by Guru Nanak when he expressed fear of an early death. Owing to the guru's prophecy of gift of long life, he survived to initiate the first five successors of Guru Nanak. The 'light' of the guru is sometimes called *darjāt*, a term borrowed from Islam.

³ Kalāl = Ahlūwālī; see below.

organization of the Sikh territories south of the Sutlej into Sikh kingdoms, the principal being the Phulkian states (Patiala, Nabha, and Jind), Faridkot, Kalua, and the now extinct chiefship of the Bhain of Kaithal. But Muhammadan states like Māler Kotla, Raikot, and many religious institutions whose incumbents had befriended the Sikhs from time to time, were tolerated and protected.

Meanwhile to the north of the Sutlej the introduction of a monarchical system (for which Kapur Singh and Jassa Singh had paved the way) and the authority of the *Grantha* materialized, as it were, in a *gurmatta*, or cabinet. This institution is by some ascribed to Guru Govind Singh, who had declared that wherever five orthodox Sikhs were assembled the *guru* must be deemed present. But probably the first *gurmatta* as a council of state was held at Amritsar in 1782. It was convened by the *grantha*, or exponents of the *Grantha*, or, according to others, by the Akālīs (q.v.). Its precise functions were ill-defined, but it certainly exercised some judicial powers. In 1765 a national council held at Amritsar proclaimed the Khālsa the supreme religion and minted coins with the Persian legend: *Deh-ye Togh-ye Fatih namrat bedrang—Yast-ye Nānak Guru Govind Singh*, 'Guru Govind Singh received from Nānak the *deh*, the sword and unending victory.' Thus the Sikhs marked their rule as a theocracy, democratic in principle and owing no allegiance to an earthly king. The failure of Ahmad Shāh's last invasion in 1767 left them masters of the Panjāb from the Jamna to the Indus.

With these events the religious development of Sikhism may be said to have closed. The next phase in its political history is the transformation of the *misl* into hereditary chiefships or clans. The ruling family of the Kapāthala state is descended from Jassa Singh, 'Badshah'; that of Kalua from the elected chief of the Karori-Singhi, or Panjasthi, *misl*; and those of the Phulkian states and other *dhals* from Phāl, the founder of the *dhara* of that name. The Rāngarhia *misl* founded by another Jassa Singh, who was a carpenter by caste, gives its name to the Sikh carpenter caste generally, just as all Sikh Nobes or Kalua aspire to be called Ahlūwālās. The founders of the Nihānāwāl *misl* were the standard-bearers of the Khālsa, but its chiefship soon became hereditary and Ranjit Singh extinguished it in 1808. The Dullewāl *misl* was founded by a Khatri surnamed Rāthor on account of his valour, and from his village it took its name, but a Jat was elected its chief, his descendants divided its territories, and their disunion enabled Ranjit Singh to annex nearly all its possessions.

The secularization of the possessions of the Khālsa and the inveterate tendency of the leaders of *misl* to treat their territories as private estates paved the way for the rise of Maharaja Ranjit Singh, chief by inheritance of the Sukarchakia *misl*. Its territories, which were considerable, lay in the north of the province, but of his fellow-chiefs several were more powerful, and it was only by the exercise of great natural abilities, astuteness, and good fortune that he was able to weld the Sikh states north of the Sutlej into a kingdom. He extended its power to the Afghan frontier beyond Peshawār, conquered Kashmir, and effectively reduced the hill states to submission. He also extended his power over the south-west Panjāb, but south of the Sutlej a British protectorate of the cis-Sutlej states barred his ambitions. Autocratic though his power was in reality, he continued to mint coins bearing the Khālsa legend, and, while he appointed Muhammadan *qādir* and *mufṭis*, he upheld Sikhism as the State religion.

2. *Theology and ritual.*—The distinctive tenet of Sikhism is monotheism, and, though the existence of the countless gods and goddesses of the Hindu pantheon is not denied, their worship is not inculcated and may be said to be implicitly condemned. The *Grantha* repeatedly condemns idolatry. Nevertheless the masses worship the *Grantha* itself in almost the same way as Hindus worship images. It is, however, difficult in India to draw the line between worship and reverence. Sikh theology is somewhat nebulous. Guru Nānak's idea of God is pantheistic rather than theistic, but he displayed an utter disregard of form and formal theology. He respected every religion so far as its real essence was concerned, but despised mechanical worship in any aspect. Guru Govind Singh made Sikhism more formal. He forbade smoking and cutting of the hair at any period of life. As a uniform he prescribed the wearing of the five *k's*, viz. the *kes* (long hair), the *kachh* (short drawers ending above the knee), the *kara* (iron bangle), the *kripṭa* (sword),¹ and the *laungha* (comb).

The Sikh retains the Hindu reverence for the cow, but is generally a meat-eater and disregards most of the Hindu ceremonial in the preparation of food. A merciful regard for animal suffering, however, makes him eschew all flesh not killed by a single stroke of the sword or jerk of the neck.² Female infanticide was sternly prohibited by the *gurus*, and Sikh women are permitted to acquire education, especially in the semi-sacred Gurmukhī script. At weddings the Hindu ritual is discarded, no Brahman need be employed, and Vedic texts are dispensed with. The worship of Ganesh and the planets is not allowed, and in recent years an agitation for an independent marriage ritual led to the passing of the Anand Marriage Act (Act I of 1909). In this rite the *Adi Grantha* is circumambulated in lieu of fire, and texts from it are recited to sanctify the union as emblematical of that between the soul and the Supreme. Metempsychosis is a cardinal tenet in Sikhism, and each successive *guru* was Nānak; indeed Guru Hargovind so signed himself. Where Sikhism has failed as a social force is in the abolition of the caste system. Nānak did not attempt its condemnation. He observed its rules and was content to preach that God cared not for a man's caste but for his deeds. Guru Govind Singh abolished it in theory, but in practice Sikhism fully recognizes caste distinctions, though at initiation, and in theory after it, all Sikhs may be equal.

3. *Sects and orders.*—Sikhism is rent by whimsies so that it is difficult to enumerate all its sects and movements. Two great groups may be distinguished: the Nānakpanthīs,³ or Sikhs of Nānak, are merely Hindus who follow Nānak's teaching; the Sikhs of Guru Govind Singh are the Singh, the Khālsa or Tat (wa) Khāls.⁴ With the Nānakpanthīs may be roughly equated the Sahjdhārī,⁵ 'easy-going' Sikhs; and with the Khāls the Keshdhārī Sikhs, i.e. those who wear the long hair (*kes*). These two groups are tending to separate, though a Keshdhārī will still take a Sahjdhārī girl to wife. The Rām Rāts⁶ have not much following in the Panjāb. The Hindālīs,⁷ once influential,

¹ Some authorities give the *khanda* (steel knife), but this is an error, due to the use of the *khanda* in the *pahā* rite.

² *Jhatka*, a sudden stroke; a jerk; cf. *zhat*, a moment, snatch, or sudden attack.

³ *Anand* means 'joy' and is the equivalent of the Urdu *shādī* used at *Barsi* by the lower classes in widow re-marriage and similar semi-ritual unions, the tendency is now to bring it into vogue among the higher classes.

⁴ H. A. Rose, *Glossary of Panjāb Tribes and Castes*, Lahore, 1914, II. 1531. They are to be distinguished from the Nānakpanthīs and the Nānakpanthīs (q.v. p. 193).

⁵ *Id.* p. 402.

⁷ *Id.* p. 307.

⁶ *Id.* II. 341.

⁷ *Id.* II. 322.

lost ground by throwing in their lot with Ahmad Shāh Abdālī, and they are now called Narijānī, or 'worshippers of the Bright One (God)'. The Nirānkārī, a modern sect, revived Nānak's teaching, though they respect the later *gurus* also. The Gangūshāhī,² who refused initiation from Guru Govind Singh, the Mīās,³ or 'demoniac' followers of Prithi Chand, and the Dhīrmālīas,⁴ founded by Dhīr Mal, elder brother of Guru Har Rāi, are all schismatical sects. The Sanwal-Shāhī⁵ are followers of a disciple of Guru Nānak, and are found chiefly in the south-west Panjāb; the Sewapanthī⁶ are confined to the Sindh Sāgar Doab. The Kākās⁷ are an extremist sect whose tenets are kept secret, but they disdain female infants. Orders rather than sects are the Diwān Sādhs,⁸ or 'ecstatic saints', the Nirmālīs and Udāsīs (q.v.). The term 'Rāmīdāsī'⁹ has various meanings, but it is usually applied to a weaver or tanner who has been converted to Sikhism. Mazhabī¹⁰ is similarly applied to a converted sweeper.

4. **Present conditions.**—The Sikhs have now a central association, called the Chief Khālās Diwān, with its headquarters at Amritsar and local societies (Singh Sabhās) all over the Panjāb and at some places beyond it. They have also at Amritsar the Khālās College, and at Tara Tārān and Gujranwālā two theological seminaries receive grants from the Diwān. They possess 33 girls' schools, a newspaper (the *Khālās Advocate*), orphanages, a trust society, and a Khālās Young Men's Association, besides a Sikh Bank. Attempts are also made to help the depressed classes.¹¹

LITERATURE.—See the works referred to in the text and especially Khāsā Singh, *Philosophic Hist. of the Sikh Religion*, 5 vols., Lahore, 1914; M. A. Macaniff, *The Sikh Religion*, 8 vols., Oxford, 1899; J. D. Cunningham, *A Hist. of the Sikhs*, London, 1849, reprinted, Oxford, 1918; Sewarām Singh Thapar, *Śrī Gurū Nānak Dev*, Rawalpindi, 1904; Rap Singh, *Sikhism, A Universal Religion*, Amritsar, 1911; *Shri Nānak or the Search after Truth*, do. 1911. The Gurmukhī literature is now very voluminous.

H. A. ROSE.

SIKKIM.—Sikkim is a small country lying between Nepāl and Bhūtān and between Tibet and India, and consists of the larger part of the mountain valley of the Tista river. It is a land of steep and lofty ridges and peaks and of deeply cut valleys. The area is only 2318 sq. miles, and, while its lowest elevation, at the junction of the Tista and the Rangit, is about 700 ft., its highest, the top of Kinchinjunga, is 28,146 ft. This range of elevation implies an immense variety of vegetable life and also of insect and bird life. Other animal life is rather restricted in both individuals and species, most probably by the influence of the hordes of leeches which infest the jungles and roads in the rainy season. The rainfall is abundant, and the forests are thick, but from 2000 to 5000 ft. these have been to a great extent cleared to make way for cultivation. Apart from agriculture there are no industries, though an attempt is now being made to develop the mineral resources (mostly copper) of the country.

The population at the 1911 census numbered 87,920. It also is varied, but consists principally of immigrants from Nepāl. There are 26 Nepālī castes (many of which are really tribes) represented. Besides these there are Tibetan and Bhūtānī tribes, and Lepchās, the so-called aborigines of Sikkim. Nepālīs, Tibetans, and Bhūtānīs are described elsewhere.¹² It need only be said here that the Nepālīs profess Hinduism of the type found in Nepāl. They are recent immigrants and

have not had time to develop any peculiar features or to build any but insignificant shrines. The Bhūtānīs, migrant herdsmen, are very few. The Tibetans came into the country in the 17th cent. and usurped the government. They have now much Lepchā blood in them, which, however, has not sufficed to improve them. They brought Lāmāism (q.v.) with them, with Lāmāistic literature, and introduced the elements of civilisation. It has been said that it was a tribe of robbers that entered Sikkim as the first colonists, and it is easy to believe this. They are a dishonest race in speech and act, given to bullying and violence, but thorough cowards, filthy in their persons, habits, and conversation, and generally tainted with venereal disease. Both polygamy and polyandry are common among them. Needless to add, they are priest-ridden to a degree, and their priests are, with some exceptions, exemplars of the flock in all their vices. There are over 40 monasteries and nunneries.

The origin of the Lepchās (in their own speech Rong, 'valley men') is not known with certainty. They are thought to have come from somewhere on the borders of Tibet and Burma. According to their own traditions, they came to Sikkim from the east in company with the Jindās (who went on to Nepāl and who share this tradition) and the Mech (who settled in the plains at the foot of the hills). The Lepchās settled in Sikkim, which they called Ne-lyang (= 'cave country'), and lived a primitive life in its deep forests, keeping no cattle and cultivating very little, but living mainly on forest produce. They claim yet to be able to live wherever the monkey lives. The Lepchā is gentle, inoffensive, and timid, fond of solitude, with no peculiar arts or industries; indeed he is not at all fond of work. His speech is Mongolian and monosyllabic, though during years of Tibetan dominance many Tibetan words have been introduced. His faith and his folklore are, like his speech, certainly Mongolian, and now more or less Tibetan. Lāmāistic Buddhism of the unreformed Nying-ma-pa is generally attributed to him, but it is its animistic, not its Buddhist, elements that appeal to him. There is still extant a tradition of a former religion in which the Lepchās believed in a good spirit, but preferred, for prudential reasons, to worship had ones. One may also hear sometimes of Lepchā scriptures, written by a king of Rokangkorung, in which the king appears as a kind of Lepchā prophet. But, as the Lepchā alphabet is the Tibetan one slightly modified by an early Tibetan king of Sikkim, this tradition is of doubtful value.

It is very difficult to say how much of the folklore is originally Lepchā and how much is Tibetan. Many of the stories of jackals and tigers are common to the two peoples. It is interesting to note that there was a tribe of very foolish Lepchās like our wise men of Gotham. But the inquirer is sure to be informed that these 'great fools' are extinct. One of their achievements was to build a tower meant to reach the sky. When it was very high, the builders on the top called down for more stones and those below thought they were being told to cut away the foundations. They did so, and the tower fell and killed half the tribe. The site and ruins are still shown. There is also a flood tradition, in which a Lepchā family is saved by the mountain Tondong ('the uplifted horn') elevating its summit, on which they were perched, above the rising waters. As the flood passed away, the uplifted horn again contracted.

W. G. MACKENZIE.

SILENCE.—Silence, as an aid to worship or as a method of preparing the soul for spiritual experiences, has been practised among larger or smaller groups in almost all periods of religious history and in almost all parts of the world. It was given an important place in the Pythagorean societies and probably also in the Orphic circles in Greece. Pythagoras is said to have made silence the form of initiation into his religious order, requiring the initiate to remain silent and listen for an entire year—some say even three years. Socrates, at least the Socrates of Plato, refers frequently to the importance of silence, and he appears to have practised silence as a form of inward culture. One striking account of Socrates in an intense long-continued silent meditation is given in the *Symposium*.¹ Plutarch, too, pronounces silence the best way to wisdom and far superior to speech.

The OT contains many references to the value of silence as a preparation for spiritual vision or revelation. Many of the prophets and leaders of Israel were prepared for their mission by the discipline of silence, and the voice in the stillness was felt to be a clearer revelation of God than earthquake, fire, or storm. The most emphatic passages on the value of silence, however, are to be found in the Psalms and in the later period of Hebrew literature, i.e. after the Exile:

'Be still, and know that I am God' (Ps. 46th); 'Praise is silent for thee, O God' (Ps. 65th); 'Keep thou silence at the presence of the Lord, God' (Zeph. 1st); 'The Lord is in his holy temple; let all the earth keep silence before him' (Hab. 2nd); 'Keep thy foot when thou goest to the house of God; for to draw nigh to hear is better than to give the sacrifice of fools (i.e. talk) . . . Be not rash with thy mouth, and let not thine heart be hasty to utter any thing before God' (Ec. 5th).

The later uncanonical books show an increasing appreciation of silence. One passage from the book of Wisdom (18th) must suffice:

'When all things were in quiet silence and night was in her swift course, Thine Almighty Word, O Lord, leaped down from heaven.'

The practice of silence is implicit rather than positively explicit in the NT. Christ prayed frequently apart alone, and sought the opportunity for quiet communion. He also enjoined upon His followers the practice of retreat from noise and disturbance to the silent closet for solitary prayer. There seem to have been periods of silence in the meetings of the primitive Christian Church, though this is implied rather than overtly stated or emphasized in the accounts. The worshippers of Mithra, as was true of the initiates in all the mystery religions, exalted silence. The preparatory instructions to these initiates contained these directions:

'Lay thy right finger on thy mouth, and say Silence? Silence! Silence! Symbol of the living, imperishable God.'

Egyptian mystical worshippers called God 'the Lord of the silent' and addressed Him thus:

'Thou erectest Wall for him that thirsteth in the desert; it is closed to him who speaks, but it is open to him who is silent. When he who is silent comes, lo, he finds the wall.'

Many of the Christian Fathers encouraged the practice of silence and appreciated its value as a way of cultivating the spiritual life. Ignatius of Antioch, Clement of Alexandria, Gregory of Nazianzus, and Gregory of Nyssa especially dwell upon its use. Gregory of Nazianzus says:

'To speak of God is an exercise of great value, but there is one that is worth much more, namely to purify one's soul before God in silence.'

¹ 208 B.

² Quoted from J. H. Breasted, *Development of Religion and Thought in Ancient Egypt*, New York and London, 1912, p. 208.

³ *Orat.* xxv.

Augustine refers in many places to the need for retirement, solitude, and silence, if the soul is to find God. The most impressive passage on the effect of silence is the famous one in the *Confessions* describing 'the sweet communion' which he and his mother, Monica, had at Ostia just before her death:

'When in one's body the storm of the flesh is silenced, when the voices of land and sea are hushed, and the canopy of heaven is silent; when the soul is quiet within itself; when the dreams and fancies of the imagination are silent; when every tongue, and every sense, and all that is perishable, is silent; and when the Creator speaks, not through any of these, but speaks Himself directly, and we thus hear His voice, not from any man's lips, and not from the lips of angels, not in thunder and darkness, and not in intelligible parable, but hear Him whom we adore in these things, Himself alone apart from them all, even as we have risen above them, and, in rapturous flights of thought, have reached the eternal wisdom which is highly exalted above them all; if then this condition could be a lasting one, and all other thoughts and imaginings of a different nature could be banished for ever, and the beholder were thus carried away, consumed, swallowed up in joy, and the soul's yearning satisfied, would not that be the moment to which these words apply, "Enter thou into the joy of thy Lord"?'¹

Mystics in all ages, whether Christian, Neo-Platonic, Persian, Indian, Arabic, or medieval Jewish, have made large use of silence and have considered it a way to find God. A well-known passage from Hierotheus—a pseudonym for a Syrian mystic of the 5th cent.—furnishes a good example of the Neo-Platonic attitude:

'To me it seems right to speak without words, and understand without knowledge, that which is above words and knowledge; this I apprehend to be nothing but the mysterious silence and mystical quiet which destroys consciousness and dissolves forms. Seek, therefore, silently and mystically, that perfect and primitive union with the Arch-Good.'

Thomas à Kempis in the *Imitation* expresses in striking words what all Christian mystics say in one form or another:

'In silence and in stillness the religious soul grows and hears the mystery of Holy Writ. There she finds rivers of love wherein she may wash and cleanse herself night after night that she may be more familiar with her Creator. . . . Whoso, therefore, withdraweth himself from his acquaintances and friends, God will draw near unto him with His holy angels. . . . Shut thy door behind thee, and call unto thee Jesus thy Beloved. Stay with Him in thy cell: for thou shalt not find so great peace elsewhere.'

The Roman Catholic mystics of the Counter-Reformation and the Quietists of the 17th cent. show an increased appreciation of silence, and they made the practice of the presence of God in silence the very centre of their religion.

In the monastery silence was a large element of the religious life. St. Benedict made very strict rules regarding the practice of silence for the monks of his order, and all other monastic orders laid strong emphasis upon it and set apart periods of 'great silence'. The Cistercians were especially strict in their observance of silence, while the Reformed Cistercians, or Trappists, carried their demands for silence to excessive lengths of strictness, some of them taking perpetual vows of silence. The Carthusian monks, in their periods of purity and strictness, lived as contemplatives and spoke little.

The members of the Society of Friends (*q.v.*) have given a greater place to silence than any other Protestant sect. They took from the 'Seekers' (*q.v.*) of the English Commonwealth period the custom of sitting silent in meetings for worship, and they considered silence essential to worship and a preparation for all public service. George Fox, their founder, practised silence and solitary meditation during his long period of search for light on his own path, and, when he went out to gather others to the truth which he had found, he insisted that those who gathered about him should first learn to sit still and listen.

¹ *Bk.* ix. ch. 10.

² Quoted from W. R. Inge, *Christian Mysticism*, London, 1899, p. 103.

³ *Bk.* I. ch. 26.

On one occasion he sat in silence for 'several hours,' he writes 'to furnish the people with words.' At last he 'was moved by the Lord to speak,' and the people were 'raptured by the Lord's power, and word of life.'¹

Robert Barclay, the most distinguished of the early defenders and interpreters of Quakerism, wrote from his own experience a striking account of the power of this Quaker silence. He says:

'Sometimes, when there is not a word in the meeting but all are silently waiting, if one come in that is rude and wicked, and in whom the power of darkness prevails much, perhaps with an intention to mock or do mischief, if the whole meeting be gathered into the life, and it be raised in a good measure, it will strike terror into such an one, and he will feel himself unable to resist; but by the secret strength and virtue thereof, the power of darkness in him will be chained down: and if the day of his visitation be not expired, it will reach to the measure of grace in him; and raise it up to the redeeming of his soul. . . . For not a few had come to be convinced of the truth after this manner, of which I myself am a true witness, who not by strength of arguments, or by a particular disputation of such doctrine, and conviction of my understanding thereby, came to receive and bear witness of the truth, but by being secretly reached by this life. For when I came into the silent assemblies of God's people, I felt a secret power among them, which touched my heart, and as I gave way unto it, I found the evil weakening in me, and the good raised up; and so I became more built and united unto them, hungering more and more after the increase of this power and life, whereby I might feel myself perfectly redeemed.'²

After the writings of the Continental Quietists, Molinos, Madame Guyon, and Fénelon, became the favourite books in Quaker circles, and as a result of this influence the whole Society became permeated with quietistic ideals, especially in the period from 1769 to 1830. Friends came to regard this silence as the essential mark of spiritual life

thou thyself but hold thy tongue for one day) on the universe, how much chaos are thy purposes and desires; what work and rubbish have thou made workman within thee swept away, when intensive noises were thus cut! Speech is too often not, as the Frenchman defined it, the art of commanding Thought; but of quite stalling and suspending Thought, so that there is none to command. . . . Speech is of Time, Silence is of Eternity. Deceit will not work except in darkness; Thought will not work except in Silence. . . . Silence, the great Empire of Silence: higher than the stars; deeper than the Kingdoms of Death! . . . The great silent man! . . . A country which has none or few of these is in a bad way. Like a forest that has no roots, which had all turned into leaves and boughs,—which could soon wither and be on fire.'³

RUFUS M. JONES.

SILENOI.—In the recently discovered *Leconte* of Sophocles Silenoi is the leader of the Satyr-Trackers. Though the art-form, origin, and exact connotation of the Satyr are still open to question, the nature and art-form of the Silenoi have, thanks to recent investigations, been clearly defined. In fig. below, from the François vase,⁴ are represented and, happily, inscribed three Silenoi. They form part of the cortège of Dionysos, who brings back to Olympus Hephaistos, mounted on a mule; they are characteristically employed: one carries a wine-skin, another plays the double-flute, and the third carries a nymph. These inscribed Silenoi have characteristic equine ears, upspringing tall, and hooves. This leaves no doubt that,

and as the one way to communion with God. The favourite texts of the Bible for Friends of this period were those on silence and stillness, and silence seemed almost to possess magic power. Many meetings were held year after year without any interruption of the silence, and the only public vocal utterances in many Quaker communities were heard when visiting ministers came from a distance on itinerant service. This Quaker quietism largely yielded place before the evangelical wave which swept over the Society of Friends in the first half of the 19th cent., the great exponent of this movement being Joseph John Gurney of Norwich (1788-1847).

In recent times silence as a method of communion has been given a new and growing place in the Church of England. This modern practice of silence had its beginnings in New Zealand, was transmitted to London, was taken up in many churches in England, and later became a feature in some of the Episcopalian churches of America.

Carlyle, in rhapsodical manner, has expressed an appreciation of silence which has many parallels in literature but which may be taken as a striking literary estimate of the moral and spiritual value of silence.

'Silence and secrecy! Altars might still be raised to them (even this an altar-building time) for universal worship. Silence is the element in which great things fashion themselves together: that at length they may emerge, full-formed and majestic, into the daylight of life, which they are bound forth to rule. . . . do

whatever be the art-form of the cognate Satyr'⁵ (g.v.); the Silenoi are in the 6th cent. B.C. horse-daimons. In horse-breeding countries the horse is a familiar 'daimon of fertility'—witness the October-horse of the Romans and our own hobby-horse. On the original of fig. above the Silenoi are markedly ithyphallic.

Happily the explanation of Silenoi horse-daimons is now confirmed by philology. O. Lagercrantz⁶ has solved the long riddle. Σιληός with its by-form σιλαός is derived from the Indo-Germanic *sil-. The word σιληός is Thracian-Phrygian, a 'satem' language, so the signification of the reargutural is all in order. The Greek cognate σίλος naturally preserved the guttural, and σιληός the argument. According to Hesychius, σίλος = ὄξερος, the horse as stallion; according to Archilochos,⁷ the horse.

ἰσὶ δὲ σιληός
ἵππος ὁ ἄνθρωπος ἡμιάνθρωπος
σφραγὶς ἐκδομένης ἀπορρηγμένης.

In Thracio-Phrygian *ass* was attained the semi-divinity of a capital letter, *Silenos* in Greek never.

That originally the *Silenoi* were ass-daimons as well as horse-daimons is abundantly clear from the myths of the two arch-Silenoi, *Marsyas* and *Midas*. S. Reinach¹ has shown that the flaying of the flute-playing *Silenos*, *Marsyas*, was in its origin not the savage punishment of a rival, but the sacrifice of a sacred ass. The skin was preserved for its magical properties, and shown at Celasus in the time of Aelian.² He further suggests, though the etymology is not quite certain, that the name *Marsyas* is connected with *adversus*, from which comes our 'marasmpial.' *Marsyas* became human in Greco-Roman art,³ and carried his own hide in the form of a wine-skin—a figure exactly parallel to the first *Silenos* in fig. above. The skin of *Marsyas* may well be the origin of the famous 'peau d'âne' of French literature.⁴

Even more unimpeachable is the evidence of King *Midas*, who judged the case of the *Silen Marsyas* and who caught 'Silen' in his rose-gardens. *Midas*, says Philostratos⁵ in telling his story, 'had something of the race of satyrs about him, witness his ears.' By the time of Philostratos the word 'satyr' is loosely used to cover any half-animal daimon. The asses' ears mark *Midas* for us as a *Silen*, in ass—not horse-form. We think of the ass as the patient burden-bearer, and it surprises us that he should figure as fertility-daimon side by side with the splendid horse, but to the ancient Greek (as to the modern) it was the male that was beast of burden; the ass was primarily sire of the useful mule and ever prone, as *Simonides* of *Amorgos*⁶ says, *ἐπὶ τρυφῇ ἀγεσθός*. It may well be, as Reinach⁷ suggests, that the ass-daimon was the primary basis of the *Silen*, and that the horse-form was due to a later blend with the popular horse-Centaur. The connexion of ass and *Silen* was remembered down to Alexandrian times. In the great Dionysiac procession of Ptolemy II. *Silens* and *Satyrs* alike are mounted on asses, not horses.⁸

Midas in popular legend is a Phrygian; but *Herodotus*⁹ knew that his real home was in Europe, not Asia. The Macedonians claimed that *Silenos* was caught by *Midas* in his wondrous rose-gardens overshadowed by Mt. *Bernice*. The magic roses as fodder for the ass live on in *Apuleius*.¹⁰ The spring in which *Midas* mixed the wine to snare *Silenos* is placed by *Athenaeus*¹¹ (on the authority of *Bion*) on the borderland between the *Madi* and the *Paonians*. Its name was *Trus*, and the name is instructive; *trus* is Greek for a mule, the sire being a stallion, the dam a she-ass.¹² *Silenoi* are constantly associated with springs and rivers; the old interpretation¹³ was that they simply were springs; but the ass-and horse-form points to a wider fertility connotation.

Midas, the ass-eared *Silen*, is a Phrygian, and, like all other Phrygians, before he passed from Europe into Asia, he was a *Brigian*¹⁴ of Indo-European stock, but, like *Dionysos*, Thracian, not

Greek. It is now clear why the word 'Silenos' is from the Thracio-Phrygian 'saten' form of an Indo-Germanic root. The sanctity and sacrifice of the ass—so strange to the Greeks—were familiar to the Thracio-Phrygians. A portion of the Thracio-Phrygian stock dwelt about the great snow peak of *Bora*¹⁵—the modern *Nidje*, 2000 ft. high, the highest point between *Hakkara* and the *Axios*; hence its name, which means simply 'mountain,' the guttural form surviving in Russian *gora*, 'mountain.' Here was the home of the *Silenoi*; witness the coins of Macedonia. It was to these *Hyperboreans* that *Apollo*, and *Perseus* before him, fared and saw them 'sacrificing splendid hecatombs of asses.' In these feasts, *Pindar*¹⁶ tells us, *Apollo* took special joy and—most instructive for our purpose—the god laughed aloud to see the romping licence of the monstrous beasts.¹⁷ The *Silen* is dissolute even in old age; and yet as flute-playing Phrygian, countryman of the Thracian *Orpheus*, he is redeemed always by the spirit of music and mysterious prophetic wisdom. It was not for his ambience only that *Socrates* was dubbed *Silen*.

LYONNET.—In the *Lendons* of *Roemer* and *Darmstadt-Sagda* *Silenos* must be sought under 'Satyr'—a serious defect in method tending to confuse the known with the uncertain. O. Gruppe, *Gräciſche Mythologie*, Munich, 1897-1900, discusses *Silenos* under 'Pan, Satyr, Silenos.' The same defect must be noted in the present writer's discussion of the horse-shaped *Silen* in *Prolegomena to the Study of Greek Religion*, Cambridge, 1903, pp. 321, 323. In the article of the *Lendons* will be found full references to the older literature, in which the *Silenoi* are explained as either *Quati* or *Serpent-daimons*. The references for the new view are given more conveniently in the text. Indispensable to the study of the ass-and horse-forms, though not dealing directly with the *Silenoi*, is A. B. Cook, 'Animal Worship in the Mycenaean Age,' *JHS* xiv. (1904) 91-103. His three figures (fig. 1) the *andros* of Mycenae which are the human-daimon ancestors of the *Silenoi*.

SIMON MAGUS.—*Simon Magnus*, the subject of an episode in the first evangelization of Samaria recorded in *Ac 8²⁴*, appears in ecclesiastical tradition under three aspects: (1) as a false Messiah, who practised magical arts and subsequently attempted, by the aid and with the sanction of Christianity, to set up a rival universal religion; (2) as the founder of a Gnostic sect; (3) as a travesty of the apostle Paul. Our information about him is derived from three distinct types of early Christian literature—the heresiologists of the 2nd to the 5th cent. A.D., the Clementine literature, and the apocryphal *Acts of SS. Peter and Paul*. The first two features of the tradition are present in a greater or less degree in each of those sources; the last occurs with certainty only in the *Clementine Homilies* and *Recognitions* and possibly in the apocryphal *Acts*.

1. The narrative of *Ac 8²⁴*.—In *Acts* *Simon* is described as a man who had bewitched the people of Samaria by his sorcery, 'giving out that himself was some great one: to whom they all gave heed, from the least to the greatest, saying, This man is the great power of God.' At the preaching of *Philip*, *Simon* believed and was baptized; but later, when *Peter* and *John* came down to Samaria to confer the gift of the Holy Ghost upon *Philip's* converts by the laying on of hands, he offered the apostles money, saying, 'Give me also this power; that on whomsoever I lay hands, he may receive the Holy Ghost.' *Peter* cursed him for his presumption and made him repent; the

¹³ *Herod.* vii. 72.

incident concluded with Simon's request for the apostles' prayers on his behalf.

The authenticity and integrity of the narrative in Acts are suspect on several grounds. (1) The text shows traces of interpolation. In v. 4 *speeches and sermons* look like the echoes of *sermons* in v. 7 and *speeches* in v. 10, and the verse simply repeats the sense of the foregoing narrative. (2) The commendation named by Simon in Samaria, resulting in the admission of the whole city and the declaration that he was the great power of God, must be an exaggeration, since it is quite out of proportion to the importance of the representation of a common type of impostor. (3) There is no clue to the story: nothing is said as to what became of Simon after his repudiation by the apostles. (4) It has been urged that the theory implicit in v. 14, that the power of conferring the Holy Ghost belonged exclusively to the apostles, is an unhistorical transference of the ideas of a later age into the conditions of the primitive Church.

According to the theory that the text has been interpolated, Simon was at first represented merely as desirous of acquiring Philip's miraculous powers. His acclamation by the people as the great power of God, his contrivance with Peter, and the suggestion that his purpose was to purchase equality with the apostles are relegated to a later version of the story, whose motive has thus been fundamentally revised.

2. **Simon in ecclesiastical tradition.**—(a) *Justin*.—In the 2nd cent. A.D. a cycle of legends concerning Simon's doings in Rome grew up as a sequel to the story of Acts. Justin Martyr¹ is our earliest authority, and his evidences should carry considerable weight, since he was a native of Nablus (Shechem) in Samaria,² though allowances must be made for misrepresentation natural to a champion of orthodoxy and an apologist of the Church. Justin describes Simon as a native of Gitta in Samaria, who was acknowledged almost universally by his fellow-countrymen as the transcendent God 'above all principality, power, and dominion,'³ but does not definitely connect him with the impostor of Acts. He was the master of the heretic Menander of Cappadocia,⁴ who taught in Antioch that his followers should never die, and was accompanied in his travels by a woman named Helena, who had formerly been a prostitute and whom he declared to be 'the first intelligence' proceeding from himself. For Simon claimed to be and was accounted a god both in Samaria and elsewhere. He had won the favour of Caesar (presumably Claudius),⁵ and a statue was erected to him as god on an island in the Tiber by command of the Senate,⁶ bearing the inscription 'Simoni Deo Sacra.'⁷

Justin has confused Simon with the old Sabine deity Semo Sancus, who presided over compacts.² His mistake can be checked with absolute certainty, thanks to an accident of Roman archaeology. In the year 1574 the base of a statue was discovered on an island in the Tiber, with the following dedication inscribed on it:³

*Sungai | Sango | Dera. Filla | Ractum | Sax. Pungulus.
A. P. F. | Cid. Nyschana | Qaliquanalla | Decur. | Eidenalla |
Derm. Dola /.

(8) *Tertullian and Origen*.—The ecclesiastical writers of the next two generations add little but detail to Justin's account. His story of the status which the Romans dedicated to Simon became part of tradition and is reported by Irenæus and almost all later authorities. Tertullian* identifies Simon the heretic with the Simon who had been cursed and expelled by the apostle Peter, attributes his magic art to the service of angels, as Justin had ascribed it to the help of demons, and says that he

ransomed Helen of Tyre to console himself for the loss of the powers which he had desired to purchase of the apostles. Origen, like Justin, places Simon in a series of pretenders to divine honours, who had appeared since the ascension of Christ, and puts him in the line of the Samaritan Messiah — Tiberius, Domitian, and Cleothus.

3. **The tradition of Simon's conflict with St. Peter in Rome.**—Hippolytus is the first ecclesiastical writer to connect the tradition of Simon's sojourn in Rome with the tradition of St. Peter's presence there. Justin alludes to the disillusionment of the Roman people,² but Hippolytus gives the earliest extant version of the legend of Simon's conflict with Peter, his final defeat, and death.³ His narrative, however, disagrees completely with the legend of Simon's flight and fall from heaven in the presence of the emperor Nero, which was accepted later. Hippolytus makes no reference to the conflicts of Simon and Peter in Syria, and only in passing mentions the opposition of the Apostle in Rome. Simon taught sitting under a plane-tree and, in order to convince his hearers and to escape exposure, promised that, if he was buried alive, he would rise again the third day. A trench was dug and Simon was buried, but the test failed. This version of the legend of Simon's death is perhaps paralleled in the apocryphal *Acts of SS. Peter and Paul*⁴ by the story of Simon's undertaking before Nero to rise again after he had been beheaded and of his successful imposture by substituting a ram for himself.

The earliest conclusion of the death of Simon with the incidents of his assumed flight extend in ecclesiastical tradition is found in *Archiepisc.* (fl. c. 210?). Peter invoked the name of Christ, and Simon was precipitated from his fiery chariot. This account varies from later tradition in that Simon does not die outright as a consequence of his fall, but is conveyed to Brundisium (= Brundisium) and there, overcome by his sufferings and his shame at his failure, casts himself down a precipice. The pre-Catholic *Acta Petri cum Simone*¹⁰ agrees with *Archiepisc.* in prolonging Simon's life after his fall, but attributes his death to the assistance of the physicians of Terracina. This writing must belong to the earlier part of the 3rd cent. A. D. *Acta Commodi*¹¹ (fl. 220) alludes to the dog watch, being made to speak by Peter's command, betrayed Simon's presence in the forum of Marcellus, and prophesied his own presence. The *Agenda Dionysii*,¹² which was introduced into the Apostolic Constitutions, and is dated about the end of the 3rd cent., i. e. slightly earlier than *Archiepisc.*, describes Simon's attempted flight, but seems to imply that he survived his fall, from which he suffered a broken ankle, since it relates that, while manured away from him, others came to him. The same document and also *Epiphanius*¹³ refer to a previous contest between Peter and Simon Magus in Palestine, but there is no reason to suppose that either had any other source of information than the narrative of Acts. Epiphanius' account of Simon's overthrow is unambiguous. *Philaster*¹⁴ (c. 380) is the earliest writer who definitely alludes to previous conflicts in Palestine other than that recorded by St. Luke; he mentions the flight of Simon from Jerusalem to Rome and his challenge to Peter before Nero, as well as his fall to the intervention of an angel at the prayer of Peter, and makes his death immediate. Philaster apparently did not derive this information from his chief source, the last synagoga of Hippolytus (c. 200). Cyril of Jerusalem¹⁵ is the earliest of the Fathers to attribute the fall of Simon to the joint prayers of the apostles Peter and Paul, as it is recorded in *Pseudo-Peter et Pauli*.¹⁶ The author of the work *de Manducatione Hieronymi* and *Epiphanius*¹⁷ draws upon the apocryphal *Acta* for a number of incidents in his account of Simon. The *Apocryphal Constitutions*¹⁸ were put together all the strands which were finally combined in the legend of Simon Magus.

4. **Difficulties in identifying Simon the Gnostic with the Simon of Acts.**—From Irenæus onwards the Fathers of the Church are unanimous in ascribing to Simon Magus the origin and author-

1945, 1946, 1947, 1948, 1949, 1950, 1951, 1952, 1953, 1954, 1955, 1956, 1957, 1958, 1959, 1960, 1961, 1962, 1963, 1964, 1965, 1966, 1967, 1968, 1969, 1970, 1971, 1972, 1973, 1974, 1975, 1976, 1977, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 26

The seventh Power of the intermediate world, the Father of all, moulded man by taking dust from the earth and fashioned him after His own image and likeness. The image of the Father is the organizing principle in man, since by it alone he attains actuality, just as the Spirit waited over the face of the waters, i.e. 'Erebus, with which it is identified, is the organizing principle of the world of sense.² Hence man was originally compounded of two elements—a spiritual and an earthly—and was both male and female, reproducing the nature of the Father, in whose likeness he was made. The primal man, as the image of God and the microcosm, remains in the intermediate world; he is the ideal copy of the men of earth, whose present condition explains their need of redemption. For they are in a fallen state and no longer reflect the perfection of their archetype, since the sexes have been separated. Redemption was apparently represented as the reunion of the sexes, i.e. the renewal of man in his original likeness to the Father. Unfortunately the doctrine of redemption survives only in an isolated and very obscure fragment of *The Great Announcement*.³ Man's nature is the theatre of a conflict arising from the combination within him of two mutually hostile elements, the divine spark both animating and at the same time striving against the previously existing matter from which he was fashioned. Left it should free itself by turning upwards to its source, whither it continually tends, the soul was divided, and the two parts were imprisoned in male and female bodies. The soul, thus maimed and entangled and subject to changeable generation, is powerless to raise itself into the upper world, until after passing into many bodies it discovers and is conjoined with its affinity. Redemption consists in the deliverance of man from slavery to finite things and his restoration to his original home, and is effected by the gradual reunion of the sexes; the completion of the process would coincide with the regeneration of all things.

4. *Affinity of 'The Great Announcement' with Greek philosophy and pagan religion.*—The system of *The Great Announcement* is an attempt to reconcile two incompatible things. The popular theology and science of Hellenism provide the matter, but the form of its presentation is determined by reverence for the inspired tradition of its author's nation. In order to commend alien doctrines to his countrymen, he had to discover them in their Scriptures, and allegory supplied the means of penetrating beneath the surface to the deeper meaning which they contained. But this device has scarcely modified the substance of the thought, though the violent explications of interpretation required, while heightening the sense of mystery, have rendered its presentation unnecessarily obscure. As Hippolytus points out,⁴ in affirming that fire is the principle of the universe 'Simon' is following Heraclitus, and his teaching about the manifest and hidden properties of which it is composed is simply an echo of Plato's speculations concerning the intelligible and the sensible and Aristotle's distinction between *kyrena* and *telos*. The theory of redemption by the reunion of the sexes is borrowed from the *Spangdon*⁵ and assimilated by taking Plato's story seriously, in adopting the method of allegory to reconcile the Jewish Scriptures with Greek science Simon had a forerunner in Philo, and therefore considerable of thought as well as of expression are not surprising in the two writers. Philo also designates God 'the Standing One'⁶ and interprets the story of Adam's creation by reference to the myth of a primal man⁷ who is a hermaphrodite. But the use of allegory also opened the door for the immediate influence of Greek-Oriental religion and mythology. For the premisses of *The Great Announcement* to scientific culture are merely superficial. The history of Greek philosophy had completed a circle. Having arisen as an interpretation of mythology, it had now more become the handmaid of a religion which discovered in primal tradition a revealed wisdom anticipating all the conclusions of science. The ultimate source of the speculations of *The Great Announcement* is to be found in the cosmogonies of the Greek and Oriental religions modified by astrology. In Orphic speculation the blessed Flame beget Heaven and Earth of Night, who as the child and companion of Zeus corresponds to 'Erebus.

Reconstruction differentiated a hierarchy of personal attributes within the Supreme and separating from Him like links in a chain. And the Egyptian priests, by combining native speculations with Plato's theory of ideas, interpreted the myth of Isis and Osiris as a parable of creation, the child Horus representing the perceptible world which is the image and reflection of the *cosmos agnos*.⁸ The prevalence of Chaldean astrology, which named the planets after the most important gods of the nations and, by thus identifying the stars with persons, reinforced its teaching as to the influence of the stars on the destiny of the world, made it possible to ascribe personality to cosmological powers as the rulers of this world (*agros*), each of which presided over particular periods of time (*akros*), while the positions which it fostered drove men to deprecate the world of sense as a derivative reflection of the world of abiding realities under the tyranny of apocryphal angels.

9. *The myth of Helen.*—The myth of Helen's redemption, which forms the common tradition of the heresiologists, appeals to the authority of the Greek legend of Helen of Troy, in the shape in which the sceptical mock reverence of Stesichorus⁹ developed it. Justin once refers to his lost account of the Simonian doctrine, when he relates that Simon was worshipped as 'the god above all principality, power, and dominion.' Irenaeus, Theodoret, and Epiphanius¹⁰ agree in identifying Simon with the supreme God and Helen with 'Erebus, the first conception of His mind and His agent in creation. Through her He created the angels and archangels, who in turn created the world of men and were charged with its government. Her fall, and consequently the origin of evil in the world, was due to the rebellion of these spirits. For, as she was proceeding forth, they seized her and detained her on earth by imprisoning her in a human body and subjecting her to a series of transmigration. The motive of the angels is variously given in our different authorities. Irenaeus attributes their act to jealousy, because they were unwilling to be looked upon as the progeny of any other being, Epiphanius to concupiscence. In the course of time 'Erebus passed into the body of Helen of Troy; according to his interpreters, Simon wished to signify by this that 'Erebus' was the object of universal pervert and the eternal cause of strife, wasting the life of her foes until they resent.' Helen was identified with the lost sheep of the parable; for at each new incarnation her ignominy increased until she passed into the body of a prostitute at Tyre.¹¹ Meanwhile the angels misgoverned the world in their rivalry for pre-eminence. And therefore the supreme God descended, deceiving the ambitious ranks of the world-ruing angels who barred His passage by 'transfiguring himself in the form of the dwellers of each heaven,' until at last He appeared in the similitude of a man among men and was deemed to have suffered death in Judaea. Simon rescued Helen from her shame and was thus reunited to his affinity, who throughout the ages was awaiting the advent of her consort and redeemer.¹²

10. *The conception of salvation.*—The myth of Helen is only vaguely connected with the salvation which Simon brought his adherents. Hippolytus declares that Simon, having purified Helen, brought salvation to men by his own discernment (*διὰ τὴν αὐτῆς περὶ σωτηρίας*).¹³ Epiphanius records that Simon interpreted the story of the wooden horse as a symbol of the self-destruction wrought by the *kyrena* of the Gentiles.¹⁴ Salvation therefore consists in *kyrena*. It is possible that the descent of

Simon himself. For the two references to the NT, by which Helen is compared to the lost sheep and St. Paul's description of the Christian armour (Eph 6¹⁰⁻¹²) is adduced to justify her identification with Athene,¹ may very well be portions of the propaganda of his later followers embodied in the traditional exposition of his teaching. *The Great Announcement*, on the other hand, must have been composed later than the 1st cent. A.D., since its quotations² from the NT (1 Co 11²⁷, Mt 3³⁷) are an integral part of the text. There is no difficulty in accepting Samaria as the place of its composition, in spite of its use of Alexandrian allegory, since the Samaritans readily adopted the methods by which the Jews of the Dispersion attempted to reconcile their religion with Greek culture.³ Just as they imitated the pragmatism of such apologetic historians as Eusebius and Artapanus⁴ in harmonizing the traditions of their race with Greek mythology,⁵ so some unknown Samaritan perhaps borrowed from Philo the science of allegory to transform the Pentateuch into a vehicle of Hellenistic theosophy.

14. *Relation of the Simonian system to other forms of Gnosticism.*—Harnack regards Simon as the founder of 'a new religion, and that a world-religion, upon the principle of embodying all the important articles of the older ones.'⁶ Lipsius dismisses the system attributed to Simon as 'an obvious adaptation of the earlier popular Christian Gnosticism, as it was propagated in Syria about the time of Trajan.'⁷ The Simonian in its main outlines resembles other Gnostic systems, but is an early and original version of the common type.

Apart from his character as the author of heresy, in general, Simon is regarded by the Fathers as in particular a heretic from Judaism. Hegesippus places him at the head of a list of Jewish heresiarchs.⁸ Tertullian contrasts him with Marcion and Valentinus and classes him with Helion, as a typical representative of Jewish and Samaritan heresy. His hostility to Judaism is manifested chiefly by his disparagement of the prophets and his rejection of the moral law. Epiphanius⁹ attributes to Simon's followers the doctrine that the God of the Jews was one of the angels of the lower world who created man; but this doctrine, if it ever found a place in the teaching of the sect, is not one of the original tenets of Simonian Gnosticism, and must have been introduced later, probably owing to the influence of Marcion. For Simon's sense of the antagonism between the law and grace did not issue in the antithesis of a just God, the creator of the lower world, and a good God, the creator of the world of light. And just as he is less logical than Marcion, so his hostility to Judaism is less radical than that of the Ophites. The strained interpretation of Scripture characteristic of Simon's system is not peculiar to him, and his use of a pagan legend is parallel to the Gnostic Justin's allegorical interpretation of the myth of Heracles by which Harodotus prefaces his account of the Scythians.¹⁰ But he accepts the Pentateuch as containing a true revelation, and does not read it

backwards like the Ophites, who worshipped the serpent as a benefactor for persuading men to taste of knowledge and revered the sinners of the OT as saints.

Nevertheless the Simonian system is most closely akin to Ophitism and to Valentinianism, in which the leading characteristic of primitive Gnosticism tend to recover their central position. It must be assigned to a comparatively early date in the history of Gnosticism, since its dualism is by no means absolute. The origin of evil is subsequent to creation; the lower world was willed by the supreme God, and His immediate companion was charged with the task of bringing life to quicken it. And, just as the creation of the lower world is not attributed to the malice of a subordinate demiurge, low in the scale of divine being, or to an act of rebellion in heaven, so the conception of a mediator in redemption is absent; the Most High Himself descends to seek and redeem His companion. In respect of the doctrine of a primal man, Simon's system is closely similar to that of the Ophites. For in that system primal man, who in Simon's system is the image of the Supreme, is identified with the supreme God Himself, and His immediate companion, second man, is His thought¹¹ (*Ennoia*). Simon, however, unlike the Ophites, practises a rigid economy in the number of persons whom he brings upon the stage; this simplicity indicates an early date by contrast with the many differentiations of God among whom the successive parts in the drama of redemption were distributed by the later Gnostics. The actors are reduced to the two essential persons—the fallen deity and the saviour, Helen and Simon; and therefore primal man plays no part in the fall or in redemption, as in the system of Valentinus. But Helen (*Evea*) is a variant of the fallen female principle whom Valentinus named Sophia or Achamoth. The Fathers were quick to notice points of similarity: pseudo-Tertullian identifies Helen with Sapientia;¹² Simon himself is reported to have called her *Heaven* and Holy Spirit.¹³ The earthly degradation of Helen emphasizes the thought that the exile of the fallen goddess here below, as the thrall of her own creation, itself calls for a redeemer. In the system of Secundus,¹⁴ a disciple of Valentinus, Sophia is distinguished from her abortive offspring Achamoth, and remains throughout in the upper world, where she is redeemed by becoming the saviour's bride. This transference of some from the earthly to the celestial world is the product of reflexion and marks the Valentinian as a later version of the myth of a fallen goddess.

The points of contact with the earlier forms of Gnosticism are more frequent in the case of the myth of Helen than in that of the system of *The Great Announcement*. The device, e.g., by which Helen's redeemer escaped the notice of the world-ruling angels resembles the descent of Jesus, as it was sung by the early Nazarene sect of the Ophites;¹⁵ the theory of emanations in *The Great Announcement* resembles Valentinus's developed doctrine of syzygies. The doctrine of transmigration does not play so conspicuous a part in most Gnostic systems as in *The Great Announcement*, where it is represented as a process by which the seeds of divine light are sifted and purified from their imprisonment in evil matter; perhaps the theory was originally employed to justify the one feature which is absolutely peculiar to this system, for the identification of the supreme God and His consort with historical persons distinguishes the doctrine of the Simonians as unique in the many forms of Gnosticism.

15. Simon Magus in the character of a Gnostic in the 'Clementines'.—The chief catchwords of Simonian Gnosticism were known to the author of the original work which underlies the *Clementine Homilies and Recognitions*. Both versions of this early Christian romance give accounts of Simon's history,¹ which agree so closely that they must have been derived from a common source.

Simon, a native of Gitta in Samaria, was educated in Alexandria, where he learned the wisdom of the Greeks and became an adept in magic. He later became a disciple of Demetrius, the successor of John the Baptist, and supplanted him in the leadership of the sect. He announced himself to be the highest Power, exalted above the creature of the world, and called himself 'the Standing One,'² signifying that he would be established for ever and would never see corruption. He associated with himself Helena, who is called Lucea in the *Recognitions*, and had been the only female disciple of John the Baptist. According to his account, she had come down from the highest heavens and was Wisdom, the mother of all things; the Greeks and barbarians who fought at Troy were contending for an image of the truth, being ignorant that she was the consort of the one and only God, with whom she dwelt in heaven.

The *Clementines* are acquainted with the distinctive catchwords of Simonian Gnosticism in much of its forms; but, since this acquaintance is only superficial, no attempt is made to avoid confusion with other similar systems. Helena is confused with the Sophia of Valentinus, and her identity with Helen of Troy is explained by the theory that the object of contention between the Greeks and barbarians was a phantom of the celestial Wisdom, not by the theory of transmigration. The claim that Simon himself was the supreme God is confused with the distinction between the supreme God and the subordinate creator, which is characteristic of later forms of Gnosticism, but is not original in the Simonian. Subsequently in the romance Simon expounds the doctrine of an unknown and perfect God and contrasts Him with the creator, whose imperfection and weakness are manifest.³ St. Peter is the champion of the Monarchian theory in the form in which it was developed early in the 3rd cent., and especially at Rome in the controversy of the Church with Gnosticism. Moreover, doctrines similar to those taught by his historical disciple, Menander, are placed in the mouth of the Simon of the *Clementines*. Menander promised his followers that they should never die. Similarly Simon is represented as denying a future resurrection, since the knowledge of its heavenly origin makes the soul at once superior to its bodily prison.⁴ Simon is attacked in the *Clementines*, not as the leader of a particular Gnostic sect, but as the author and typical representative of Gnostic heresy in general.

16. The attack on St. Paul under the mask of Simon Magus.—In addition to this hostility to Simon Magus as the representative of Gnosticism, which is the fundamental characteristic of the disputes between St. Peter and Simon described in the *Clementines*, there are undoubted traces of a veiled attack on St. Paul, most frequently in the disguise of Simon, but in one instance under cover of the designation 'the enemy' (*ὁ ἐχθρὸς ἀνθρώπων*). St. Paul is attacked (1) for having stirred up persecution against the infant Church; (2) on account of his claim to equal authority with the apostles in virtue of the personal call heard in the vision on his way to Damascus; (3) for his opposition to the original apostles and their associates, in particular for the rebuke which he administered to St. Peter at Antioch.

(1) In the *Recognitions* St. Paul the persecutor is referred to as 'the enemy'; and, since the section in which this designation is used in the *Recognitions* also occurs in the table of heads

given in the last chapter of the third book, it must also have stood in the lost *Chronicle of Peter*, which underlies both the *Homilies* and the *Recognitions*. St. Peter describes how an enemy raised a tumult in the temple and thus interrupted the preaching of James, when the conversion and baptism of the people at Jerusalem was imminent; after throwing James headlong from the top of the steps, this man was dispatched with a mission from Calpheus to Damascus. The designation does not occur in the *Homilies*, but in the epistle prefixed to the book St. Peter, its putative author, attributes the rejection of his own preaching to the lawless and babbling teaching of the enemy. This is an allusion to St. Paul, not in the character of a persecutor of the Church in his unconverted days, but as the spoiler of the Gentiles.

(2) In other portions of these works, when the stigmas of Simon is adopted, the hostility to St. Paul is much more covert. In one passage of the *Homilies*,⁵ in which this hostility is generally more violent than in the *Recognitions*, St. Peter refutes Simon's contention that revelation is richer in more certain than that given in personal intercourse. There is an obvious allusion to St. Paul's vision on the road to Damascus and to the claim to an equal apostolate which he based upon it. After suggesting that the real purpose of his vision of Jesus was to confound him as the adversary of the faith, St. Peter proceeds: 'But if he made you an apostle after a brief discipleship in a single vision lasting but an hour, prove it by preaching his message, by interpreting his doctrines, by saving his apostles, by not contending against me, his companion.' But St. Paul supported his authority not merely by the single vision on the road to Damascus; he also claimed to have visions subsequent to his conversion. This claim is perhaps disparaged in the *Recognitions* by words put into the mouth of St. Peter,⁶ when disputing with Simon concerning the power of imagination to rise above the apprehension of things perceived by the senses: 'But if you think that there is easy access for your mind above the heavens, and that you are able to conceive the things that are there and to apprehend that immeasurable light . . . The miracles which St. Paul wrought are perhaps discredited by ascribing Simon's ascendancy over his followers to his skill in magic.'⁷

(3) (a) During the earlier part of his mission to the Gentiles at least St. Paul was involved in bitter controversy with opponents who claimed to be successors of the apostles, and sometimes even with the original apostles. His opponents sought him, on the one hand, of undue laxity in dispensing his converts from fulfilling the obligations of the Jewish law and in allowing them to compromise with heathenism by eating meats offered to idols, and, on the other hand, of a desire to establish his own authority and to make capital out of an insincere profession of Christianity by preaching himself rather than Christ,⁸ which issued sometimes in undue severity in the exercise of the power to which he pretended.⁹ Some of these taunts are quoted in St. Paul's apologies. He was accused of pleasing men and not God,¹⁰ and was referred to as an 'enemy' (*ἐχθρὸς*)¹¹ and a 'deceiver' (*πλάνος*).¹² Similarly, according to the *Clementines*, it is Simon's whole mission to commend himself under shelter of his professed allegiance to the truth which the apostles teach; St. Paul's supposed laxity in the matter of meats offered to idols is parodied in an episode at Tyre, where Simon is reported to have entertained the people to a feast on sacrificial flesh;¹³ Simon is also called the 'enemy' and the 'deceiver', who misleads his converts into receiving him as a friend and a preacher of the truth.¹⁴

(b) St. Paul perhaps sometimes provoked his opponents by the strong terms of condemnation with which he rebuked them. 'I would,' he says, 'they were even cut off which trouble you';¹⁵ and he pronounces a curse on any one, though an angel from heaven, who should preach any other gospel than that which he had preached.¹⁶ In the *Homilies and Recognitions* the charges levelled by St. Paul at his opponents are retorted on Simon Magus. Just as he called them 'false apostles . . . transforming themselves into the apostles of Christ,'¹⁷ so St. Peter denounces Simon as a false apostle, who opposes the true (*ἀποστόλων*).¹⁸ In the *Recognitions* there is an echo of the phrase which St. Paul used to expose the seductions of these false teachers: 'for Satan himself is transformed into an angel of light.'¹⁹ Simon, since he is the Devil's minister, is described as 'the Evil One transforming himself into a splendour of light.'²⁰ On one occasion St. Paul denounced one of the original apostles himself. The passage in the *Homilies*²¹ in which St. Peter confutes Simon's theory of the greater certainty of a revelation obtained in visions is a counterpart to St. Paul's whistleblowing St. Peter at Antioch.²² St. Peter says that Simon had pitied himself against a solid rock, the foundation of the Church, and was shattering the preaching which he had heard from Christ, and then, referring to a phrase used by St. Paul to the Galatians,²³ he proceeds, 'or

if you call me "condemned," you accuse God who revealed the Christ to me."

St. Paul in the person of Simon is attacked not for repudiating the law, but for his opposition to the original apostles, which he justifies by a claim to equality with them. It is true that St. Peter, in the apostle paralytic in the *Homilies*, describes his doctrine as lawless; but the real sin is the assumption of the right to expound the law in opposition to the twelve apostles whose peculiar prerogative it is, as the custodians of the teaching of 'the True Prophet' and his personal disciples.¹ It is the mission of St. Peter to resist the false apostle, Simon Magus, as Moses resisted the magicians in Egypt,² and to warn his hearers not to listen to any preacher who has not received a testimonial from James, the Lord's brother. The offense of this false gospel is recognized as heinous; for the True Prophet in his last charge to his apostles had foretold that a preacher of error must necessarily pervert the true gospel in order that by his overthrow the truth might be the more clearly established.³ Simon Magus, like St. Paul, is a chosen vessel, but of the Evil One.⁴ He is the deceiver who is chosen by the Devil to go as St. Peter's forerunner to the Gentiles with a counterfeit gospel.⁵ Simon Peter, according to the *Clementines*, is the real apostle to the Gentiles, who brings them the salvation to which they have been called by following in the footsteps of Simon-Paul and correcting the errors which he teaches.⁶ The contest between St. Peter and his adversary in both forms of the romance ends in the complete defeat of the latter, when Faustianus, the father of Clement, in the form of Simon publicly recants his errors at Antioch in language reminiscent of St. Paul's style.⁷ The same Simon confesses that he was brought to make this avowal because an angel of God had scourged him by night; this is an allusion to the affliction which St. Paul attributed to an angel of Satan sent to buffet him.

In the episode of the *Recognitions* which describes the persecution of the Church by St. Paul in his unconverted days the future apostle, under the designation of 'the enemy,' is clearly distinguished from Simon, since he himself denounces the apostles as disciples of the magicians.⁸ Moreover, the theory that Simon plays a providential part in the dissemination of the true gospel as the false forerunner of the apostles is only a particular application of the Hellenistic doctrine, generally characteristic of the *Homilies*, that good and evil necessarily go in pairs.⁹ But there can be no doubt that St. Paul is attacked under the mask of Simon Magus; for, whereas elsewhere in these books Simon does not believe in Jesus at all, in these passages he is represented as falsely claiming to have received a commission from Christ in opposition to the claims of the original apostles.

17. Modern critical theories based on the equation Simon=Paul.—Starting from the evidence which the *Clementines* afford of a veiled attack on St. Paul in the person of Simon Magus, inspired by Jewish-Christian or Ebionite hatred of the Apostle of the Gentiles, Baur put forward the theory that the figure of the arch-heretic and false apostle Simon Magus was simply invented by his opponents as a caricature of St. Paul, and that the traditions of a conflict between St. Peter and Simon Magus had their origin in the contest between St. Peter and St. Paul. Baur was followed by the critics of the Tübingen school—Volkmar, Hilgenfeld, Lipsius, Zeller, and others. And more recently his thesis has been defended by Kreyenbuhl, Krenkel, Preuschen, and Schmiedel. The theory consists of two main contentions: (1) the story of Simon Magus in Acts is a modification of a Jewish-Christian tradition, whose original anti-Pauline tendency has been forgotten; and (2) the ecclesiastical traditions of St. Peter's travels and labours among the Gentiles, and especially of his martyrdom at Rome, are unhistorical and had their origin in the journeys and labours of St. Paul.

(1) The story of St. Peter's resistance to Simon Magus at Samaria was originally intended as a counterpart to St. Paul's condemnation of St. Peter at Antioch, representing the victory of the Prince of the Apostles and the complete discomfiture of his opponent. The rapid conversion of Simon is intended to question the genuineness of St. Paul's sudden change from a persecutor to a disciple. The personal pretensions of Simon Magus are distortions of the claims of St. Paul. Simon Magus proclaiming himself to be some great one, and acclaimed by the Samaritans as 'the great power of God,' is St. Paul claiming that he lives by the power of God, or that the power of Christ rests upon him, or that his gospel is the power of God.¹ St. Paul's pretensions to equality with the apostles are caricatured in the request of Simon to receive the power of conferring the Holy Spirit by the laying on of hands. For Simon offering money for this power is really St. Paul attempting to purchase the apostleship by the contributions of the Gentile churches to the poor saints in Jerusalem.² St. Peter's rebuke to Simon is understood only when it is seen to be a reflection on the conduct of St. Paul. 'Thou hast sold thyself not for gold in this matter' is a refusal to acknowledge his right to the *episcopatus auctoritatis*.³ 'I perceive that thou art in the gall of bitterness' is an allusion to his bitterness in controversy. This theory presupposes that tendency in an opposite direction is also present in the Acts; that St. Luke in fact wrote the work as a pamphlet in defence of St. Paul, suppressing some facts and modifying others, with the object of representing the relation of the original apostles to his master as always harmonious. He has inadvertently preserved legends of an anti-Pauline tendency owing to the fact that their original purpose has been forgotten.

(2) Lipsius maintained that the tradition of St. Peter's mission to the Gentiles and martyrdom at Rome was an Ebionite fabrication, whose motive was a desire to detract from the glory of St. Paul's labours by misrepresenting him as the false forerunner of the preacher of the true gospel, which corresponded to the standards of Jewish-Christian orthodoxy. St. Paul is already subordinated to St. Peter in Acts, since the latter is there represented as initiating the mission to the Gentiles. The legend of St. Peter's visit to Rome was later adopted in a Catholic sense, when it was realized how easily it might be used to subvert the interests and ambition of the Roman Church. His intention was thereby fundamentally transformed. Whereas originally the purpose of St. Peter's presence in Rome was represented to be the final discomfiture of the false apostle, i.e. Simon-Paul, in the Catholic version of the legend St. Paul is introduced as co-operating with him in the foundation of the Roman Church and as his second in the contest with Simon.

18. Arguments used in support of the Tübingen theory.—Three arguments have been chiefly urged in support of Baur's thesis that the legend of Simon Magus originated in a distortion of St. Paul: (1) there is evidence of a bitter polemic against St. Paul in his lifetime, emanating from Jewish-Christian circles; (2) the *Clementine Homilies* and *Recognitions* embody traditions of a time much earlier than the date of their compilation; (3) all the versions of the apocryphal *Acts of St. Peter* betray a similar hostility to St. Paul under the mask of Simon Magus, and go back to the same cycle of legends as the *Clementines*, since the legend of St. Peter's travels in Palestine and the legend of his visit to Rome presuppose each other.

(1) That St. Paul was engaged during his lifetime in bitter controversies with opponents who disparaged his claims to be an apostle and appealed against him to the authority of the original apostles is sufficiently attested by the evidence of his own epistles. The internal evidence of his own writings is corroborated by external evidence. Epiphanius¹ mentions certain fictitious discourses current among the Ebionites, in which St. Paul was accused of being the son of a Greek father and mother and which ascribe to him an exaggerated hostility to the law, due, as they assert, to his disappointment in failing to obtain the hand of the priest's daughter in marriage, after he had become a proselyte. Evidence of an attack on St. Paul, sometimes veiled and sometimes open, have been discovered in the Apocrypha, in the Gospels, and in certain incidents recorded in Acts. It is ultimately against him that the condemnation of the Nicenean is directed in the Revelation of St. John;² his lusty had led men to violate the commands of the Apostolic Council at Jerusalem, to eat things sacrificed to idols, and to commit fornication; his phrase, 'the Gospel of God,' is parodied in the condemnation of those of Thyatira 'who know not the depths of Satan.'³ St. Paul is the enemy in the parable, who overcame the wheat with tares.⁴ St. Luke in the Acts has attempted to wreathe St. Paul's honour certain episodes invented to discredit him, but their original

intention can be detected; e.g., the incident of his destination at Derbe! originally parodied his claims to speak with the authority of Christ; his champion goes out of his way to explain the reasons of St. Paul's flight imprisonment under Felix,¹ which was probably urged against him to his reproach. The story of St. Paul's contest with the seeress Elymas or Barjesus in Cyprus² is introduced to counterbalance the story of St. Peter's conflict with the magician Simon, and thus anticipates the later apocryphal legends in which St. Paul is alliance with St. Peter combats a caricature of himself.³

(7) It is contended that the Clementine *Homilies* and *Recognitions* preserve the earliest form of the legend of St. Peter's conflict with St. Paul in the disguise of Simon Magus, and therefore embody a Jewish-Christian myth of the 1st cent. all but contemporary with the first generation of Christians. The *Homilies* and the *Recognitions* relate the story of the wanderings of Clement of Rome in Egypt and Palestine in search of the lost members of his family, during which he accompanies St. Peter and witnesses his conflict with Simon Magus at Caesarea and Laodicea. Neither gives the romance in its original form, but both are recensions of a common written source, the *Circuits of Peter*, known to Origen⁴ (c. 230), which itself had an archetype in the *Proceedings of Peter* (c. 100). Whether any of these versions was made at Rome has not been decided; there is a general tendency among recent critics to accept the opinion that they were all composed in Syria. The *Circuits of Peter*, fragments of which have been preserved by Epiphanius,⁵ presents no very definite sectarian features, and the view has been maintained (e.g., by C. Hogg) that the *Homilies* represent a recast of an orthodox work by an Ebionite editor. But it is probable that the Ebionite features, including the hatred of St. Paul, were present in the *Proceedings of Peter*, the earliest known recension of the whole literature. Lipsius proposed to bridge the gap of over 100 years which separates this work from the 1st cent. A.D. by conjecturing the existence of an earlier Ebionite *Acts of Peter*, and supported his hypothesis by the contention that the account of Simon Magus given in the *Apocritic Constitutions* is a summary of the contents of this book. But the discovery of the *Syriac Didascalia* disproved his hypothesis; for this work (the earlier form of the *Apocritic Constitutions*), the compilation of which was contemporary with that of the *Proceedings of Peter*, contains no reference to a visit of Simon Magus to Caesarea. Lipsius's attempt to reconstruct an original 1st cent. romance relating the contest between St. Peter and Simon has since been abandoned, and the champions of the Tübingen theory now have recourse to the hypothesis of an oral tradition. The *Homilies* are undoubtedly composite and embody elements of the tradition not contained in the *Circuits*—e.g., the dispute with Apion concerning idolatry; the hypothesis of an oral source, it is maintained, would explain the confusion of characteristics in the person of the Simon of the *Homilies* and *Recognitions*.

(8) The legend of St. Peter's contest with Simon at Rome and his subsequent martyrdom is given in a series of apocryphal *Acts*. The earliest of these, the *Actus Petri cum Simone*, is a heretical composition; the *Apocritic Acts of Peter*, preserved in two recensions, is an orthodox recast of the legend;⁶ St. Paul appears in both forms of the legend; in the earlier he departs from Rome for the evangelization of Spain, before St. Peter's arrival; in the latter he acts as St. Peter's second in the dispute with Simon and is martyred with him.

(9) These books preserve traces of a polemic against St. Paul under the mask of Simon similar to that carried on in the Clementines. In the *Actus Petri cum Simone* St. Peter denounces Simon as a clerk and an impostor,⁷ using the very same terms (*clerk*) with which Simon was designated in the Clementines, and St. Paul by his opponents.⁸ Moreover, this term of reproach is used of St. Paul himself and coupled with that of snare by apostate Christians⁹ who had been misled by Simon. Simon is also called 'the enemy,'¹⁰ 'a Troian of hostility' to St. Paul are many numerous in the Catholic *Acts*, which perhaps represents an orthodox recension of a document of distinctly anti-Pauline tendency, since Paul is associated with St. Peter to combat his own caricatures. St. Paul in the disguise of Simon is attacked for his inconsistent attitude to the question of circumcision.¹¹ Simon warns his emperor Nero against the apostles, because they are circumcised. The apostles answer that Simon himself is circumcised and suggest that his object is to deceive souls by his strict conformity to the Jewish law. The favour which Simon enjoys with Nero is perhaps a reflection on the mild treatment which St. Paul was supposed to have secured during his captivity at Rome by his recommending obedience to the power of the emperor. The pretended bewitching of Simon and his trick of substituting

a man for himself¹² are manifestly malicious perversions of the legend of St. Paul's martyrdom. The story of Simon's attempted flight perhaps originated in St. Paul's claim to have been caught up into the third heaven in a vision. For in the *Actus Petri cum Simone* the object of Simon's flight is not to regain his ascendancy over the people by a proof of his magical powers, but to manifest his divinity by ascending to God, whose power he is.

(10) The conflicts between Simon and St. Peter are located in the Clementine literature entirely in Palestine and Syria; in the apocryphal *Acts* in Rome. But the Roman contest is not a mere echo of the Syrian. For the books of apocryphal *Acts* presuppose earlier conflicts in Palestine; the Clementines foreshadow a final conflict in Rome. The Clementines regard St. Peter's commission to follow and rebuke Simon as the divinely appointed method of bringing salvation to the Gentiles. St. Peter continually contemplates Rome as the goal of his travels,¹³ and his adversary prophesies that Rome will be the scene of his crowning glory, when he will be adored as a god.¹⁴ The apocryphal *Acts*, and especially the *Actus Petri cum Simone*, mention a previous victory of St. Peter over Simon in Judaea and give details of one incident¹⁵ which place it beyond doubt that these allusions do not refer exclusively to the contest recorded in *Acts*.¹⁶ Lipsius found in this agreement of the Clementines with the apocryphal *Acts* an argument in support of his hypothesis of 1st cent. Ebionite *Acts of St. Peter*; but, now that this hypothesis has been abandoned, the original oneness of the tradition underlying these two classes of literature is still urged in support of the theory that the veiled attack on St. Paul under the mask of Simon Magus in the Clementines derives from a 1st cent. legend orally handed down, since the anti-Pauline interest seems to be the basis on which they agree.

19. The theory that Simon-Paul = Simon of Cyprus.—The attempt to answer the objection, Why was the name Simon adopted to conceal St. Paul?, has given rise to an ingenious theory. Originally it was supposed that the name was given him to contrast him with St. Peter as the false Simon with the true. But later the suggestion was made that it was given him at the time of his imprisonment under Felix. Josephus¹⁷ mentions a courtier of Felix, a Jew of Cyprus, named Simon, whom he used as a go-between in his intrigues with Drusilla, the wife of Azizus, king of Emesa, since he pretended to be a magician. It is just possible, though very improbable, that this person may have been the same as Simon of Gitta, Josephus having confused his native place with Kition, i.e. Cyprus. But that St. Paul was ever accused of using the disguise of this man's name for the purpose of doing such a favour for Felix is out of the question. Those who maintain the theory disagree as to who were responsible for the calumny, Kreyenbuhl attributing it to the Jews who accused St. Paul before Felix, Rrenkel to his Jewish-Christian opponents.

20. Criticism of the Tübingen theory.—Pushed to its logical conclusion, this theory amounts to a denial that the Samaritan sorcerer ever existed; he originated as a caricature of the apostle Paul, and his later characteristics either arose out of the rôle which the Apostle of the Gentiles was represented by Jewish-Christian hatred to have played in the early history of the Church or were added when his connexion with St. Paul had been forgotten and the tradition had been adopted by the Catholic Church. Simon Magus became the father of heresy, because St. Paul was attacked in his person as the typical false apostle, whose mission is to oppose the true; since Gnosticism was the most serious danger to the Catholic system in the 2nd and 3rd centuries A.D., it was inevitable that the arch-heretic should be represented as a teacher of Gnostic error.

Preuschen¹⁸ has discovered the origin of the conception of Antichrist as a false teacher—as opposed

to the earlier conception of him as a persecuting monarch—in the figure of Simon Paul, and appeals to the evidence of the Christian apocalypses. Simon Magus is detected in the Antichrist of the *Christian Apocalypses of Elias*, in the second beast of the Revelation of St. John,¹ who deceived the people of the earth by his signs and caused men to worship an image of himself, and also in a false teacher prophesied in the *Sibylline Oracles*.² The latter foretell the advent of a beast (Belshazzar) from the Seleucides, who would mislead three classes of men—the elect, the lawless Hebrews, and the Gentiles. If the mention of the Seleucides (i.e. the people of Augusta) alludes to Samaria (Seleucia), the passage must be an interpolation, since it is inserted in a context which probably refers to the triumphs and Cleopatra, i.e. to a time before Octavian had assumed the name Augustus, though it is possible that allusion is made to the events of A.D. 70. But it is improbable that, even if Simon is a caricature of St. Paul, he was so important a figure at this early date as to be identified with Antichrist. The passage more probably alludes to the worship of the emperor. Most of the defenders of Baur's thesis, while still maintaining that St. Paul is attacked in the disguise of the sorcerer, have been convinced that Simon was a historical personage, whether they identify him with the Samaritan impostor whose doings are recorded in the earlier uninterpolated version of the story in Acts or with the hypothetical 2nd cent. leader of a Gnostic sect.

Nevertheless it is still contended that the Pauline features in the composite figure of the Simon of the *Clementines* are older than the Gnostic, and are in fact the cause of the vitality of his legend. By the time that the earliest Clementine romance was written St. Paul's peculiar contribution to the development of Christianity had been forgotten and the uniqueness of the part that he had played in the mission to the Gentiles was obscured by the growing reverence of the Catholic Church for St. Peter. And yet it is just this claim of St. Paul to be the Apostle of the Gentiles that is traversed and distorted in the controversy of St. Peter with Simon Magus. The *Clementines* repeat the reproaches which were made against St. Paul in his lifetime. Schenckel¹ thinks it 'a psychological impossibility' that any one should venture to attack the memory of a now revered apostle in the 3rd cent. A.D. But this is exactly what the author of the *Recognitions*, at least, has done; the allusion to St. Paul's persecution of the Church is too obvious for the writer to have repeated it without realizing that he was bitterly attacking the memory of the Apostle of the Gentiles under the name of 'the enemy.' Moreover, the currency among the Ebionites of writings which attacked St. Paul without any disguise is well attested for a period much later than the date of the composition of the *Clementines*.² It is more probable to suppose that the terms with which St. Paul is reproached—'the deceiver' and 'the enemy'—were handed down in the Ebionite sect through long generations of passionate hatred, against the adversary of their sectarian narrowness, than that they survived because they were embodied in a tradition whose original intention was no longer understood. The intensity of the hatred manifested against St. Paul in the *Clementines* is due to the fact that it was still felt; their inability to make any progress or to forget any prejudice was the distinguishing characteristic of the Ebionites. The intense hatred manifested against Simon Magus as the representative of Gnosticism is self-explained.

The figure of the champion of Gnostic error was chosen as a disguise for St. Paul, probably because certain tenets characteristic of this heresy—e.g., the antinomianism—were supported by an appeal to his epistles and arose from an exaggeration of his doctrines. An Ebionite of the 2nd or 3rd cent. could justify the long cherished hatred of his sect and discredit its object by pointing to the results of his teaching. Moreover, whenever the figure of Simon Magus was adopted as a disguise of St. Paul, he was most probably regarded as a distinct historical person, since the sting of caricaturing an adversary under the name of another consists in the historical inhuiv associated with that name.

The *a priori* improbability of the theory is corroborated by a closer examination of the evidence on which it rests. In the dispute at Laodicea described in the *Homilies*, where the attack on St. Paul is most violent, Simon is the mouthpiece of the doctrines of Marcion. An impeno against St. Paul would not be out of place, since Marcion's antithesis of the law and grace was simply an exaggeration of Paulinism. In the apocryphal *Acts of Peter* Simon, so far from representing a rebellion against Jewish-Christian exclusiveness, is a champion of Judaism in its controversy with the Church. This work probably belonged to the Lucian collection, and, if so, there is positive evidence that it could not possibly have been written under Eliconite influence; according to Photius,¹ the Lucian *Acts of Peter* taught that the God of the Jews was evil and that Simon was his minister. Moreover, the contention that St. Paul was introduced into the later recensions of the *Acts* with the object of distinguishing him from Simon is untenable, since the tradition of his association with St. Peter at Rome, mentioned by Dionysius of Corinth,² is older than the tradition of St. Peter's encounter with Simon at Rome, of which Hippolytus gives the earliest extant account. Justin Martyr's authority for the visit of Simon to Rome is weakened both by his mistaken conjecture about the statue and by the confusion which makes him date it in the reign of Claudius. Probably the story of this visit is entirely legendary, and the later traditions about it arose by the transference from Syria to Rome of the scene of St. Peter's victory in the conflict with Simon. For both the *Clementines* and the earliest extant version of the *Acts of Peter* reproduce Justin's story of the statue,³ just as they are both acquainted with some of the catchwords of the Gnostic system ascribed to him.

21. The real Simon Magus.—In each of the three types of early Christian literature from which our information about Simon Magus is derived he is represented to have claimed divine honours and to have set up a rival religion to Christianity after his encounter with the apostles, by attempting to transfer to himself the worship which men paid to Jesus.

The founder of the Gnostic sect of the Simonians himself claimed to be the supreme God, and this claim distinguishes the system attributed to him from all other forms of Gnosticism. Justin's mistake about the statue was probably suggested by his knowledge of this claim. Simon and his consort were worshipped by their followers with the attributes of Zeus and Athena. The *Clementines* represent the object of his journey to Rome to have been that he might there be adored as a god. The story of Simon's flight was perhaps invented

with the purpose of ridiculing his pretended apotheosis. In the *Actus Petri cum Simone* Simon undertakes to fly to God, after he had been exposed by St. Peter, and leaves the earth with this invocation to the Father:

'Me, the Standing One, thy son, they wished to overturn; but having refused to agree with them, I have come to thy self.'

The self-immolation of Peregrinus Proteus² on his pyre at the Olympic games had familiarized the Christians of the 2nd cent. with the pagan craze for deification. The details of the episode were probably suggested by an anecdote of Suetonius:³ at games held in the presence of Nero an acrobat personated Icarus and, when he fell, besprinkled the emperor with his blood.

Origen⁴ tells us that the Simonians never confess Jesus as the Son of God, but say that Simon is the power of God. It is difficult to understand why Simon was ever regarded as a Christian heretic. For, though he claimed that Jesus was an incarnation of himself, he is more frequently represented as rivaling the religion of Christ's followers and travestying His passion. Simon's promise to rise again the third day, after he had been buried or beheaded, which is related with variations in detail both by Hippolytus and in the apocryphal *Acts*, is a parody of the resurrection of Jesus Christ, and is the early version of the story of Simon's death which was later superseded by the legend of his attempted flight. His aspect as a false Christ is older than his aspect as a false apostle.

Considering the independence of the three classes of documents to which we owe our information about Simon, there is a strong presumption that the points in which they agree contain the original kernel of truth. And these points of agreement tend to vindicate the authenticity of St. Luke's account of his doings. The author of *Acts* probably obtained his information about this incident in the early history of the evangelization of Samaria from Philip the Deacon, to whom its inception was due, while staying in his house when accompanying Paul to Jerusalem.⁵ Simon Magus was a Samaritan Messiah similar to Dosithueus and Cleodius, with whom he appears to have had some connexion; he assumed some of the cognate traits of the pagan *dei agnoscere*. Colossus⁶ had seen such enthusiasts in Samaria and heard them proclaim their gospel:

'I am God, or the Son of God, or the Divine Spirit. The dissolution of the world is at hand, and I come. . . I choose to save and ye shall behold me again coming in the power of heaven. Blessed is he, whose joys are everlasting now, but in the rest I will cast everlasting fire.'

Later, when he came into contact with Christianity, Simon conceived the idea of using the new movement for his own ends. The gospel of the Samaritan saviour already contained in germ the peculiar doctrines of Gnostic salvation, and it was natural that his later followers approximated more and more to the common type of Christian Gnosticism, with which he had always had close affinity; but this approximation never entirely obscured the original relation of the sect to its founder or the central place which he occupied as the object of worship. Simon probably owed his reputation as the father of heresy to the fact that he is the only heretic mentioned in the NT and that he opposed the apostles, to whom, according to the theory of the 2nd cent., was committed the custody of the catholic and apostolic faith.

22. Subsequent history of the Simonian sect.—According to the Fathers, Simon was succeeded in the leadership of the sect by his disciple Menander.

The Simonians were also known as the Helenians¹ and the *Enochians*.² They were ill famed for their practice of magical arts.³ The author of the tract *de Rebaptismate* says that they made fire to appear on the water when they administered baptism.⁴ The history of the sect is a record of dwindling numbers. Justin Martyr mentions a school of Simonians existing in Rome in the time of Antoninus Pius.⁵ Theodoros⁶ asserts that they spread chiefly in Syria, Phrygia, and Rome. Origen⁷ says that in his time (c. A.D. 230) Simon had no followers anywhere outside Samaria, and not more than 30, if that, in his native land. But his evidence must be discounted, since Eusebius⁸ speaks of them as still numerous in the reign of Constantius, though compelled to conceal themselves or to dissemble their faith. Epiphanius⁹ says that Gitta had by his time sunk from a populous town into a village, and that there were still some Simonians in existence.

23. The survival of the legend of Simon Magus.—The encounter of Simon Magus with the apostles in Samaria was quoted by the canons of the Church as the stock instance of the sin of attempting to purchase or confer spiritual gifts or preferment in return for money, and 'simony' (q.v.) became a technical term of ecclesiastical law. Simon's reputation as the author of heresy lived on long after the last remnant of his sect had vanished. In a Byzantine Psalter of the 9th cent. A.D. the overthrow of Simon Magus by St. Peter is depicted as the Biblical prototype of the triumph of orthodoxy won over the errors of the iconoclasts at the 7th Ecumenical Council of Nicaea.¹⁰ The story of Simon Magus survived in the popular mythology of the Middle Ages and contributed some elements to the legend of Faust. Faust, like Simon, enjoyed the companionship of Helen of Troy, and the incident of the *homunculus* which he made by chemistry originated in the legend that Simon had fashioned a boy from air and, having slain him, used his soul for the purposes of magic.¹¹

SIMONY.—1. *Definitions.*—'Simony' is a word of somewhat varied meanings. The most general definition of it perhaps is 'buying or selling spiritual gifts or offices'; and it is named from Simon Magus (q.v.), who, when he 'saw that through the laying on of the apostles' hands the Holy Ghost was given'—made outward manifestation seems to have accompanied the gift, over and above the laying on of hands—offered them money that they might give him the same power (Ac 8^{12,22}). The evil here mentioned has proved to be of wide ramifications in the Christian Church, and it may safely be said that no age and no country has been quite free from it; when it is suppressed in its more obvious forms, it takes a veiled form and becomes the more difficult to overcome.

In its primary sense simony is the buying or selling of sacraments or sacramental ordinances—e.g., the exacting or paying of money for baptism or the Eucharist, or especially for the conferring or receiving of holy orders, including the episcopate. But the term was soon extended so as to include more indirect forms of the same evil, such as the buying or selling of ecclesiastical offices, and the exacting or giving of undue promises in order to obtain ordination or preferment, even if no money passes, and the improper procuring of presentations to benefices. At a somewhat later date distinctions were made between *munus a munus*, when money or something of value is given or received, *munus ad obsequium*, when promises are exacted or given for the performance of the duties of a benefice in some way which the particular Church has not prescribed, and *munus a lingua*, when preferment is given or procured, not because of the merits of the person presented, but because of the influence of an outside party.

2. *Early period.*—The earliest known instance of simony after NT times is that of Paul of Samosata in N. Syria, bishop of Antioch A.D. 260-270, and a celebrated Monarchian heretic.¹ Simony certainly appears to be included in the charges made against him by the bishops in their letter quoted by Eusebius.² Paul enriched himself at the expense of the Church, but no doubt this was chiefly owing to his holding the office of *ducesarius* under Zenobia, queen of Palmyra, and to his selling justice in that capacity. There was, however, not much temptation to simony as long as the Church was poor, and suffering under persecution. In the 4th cent. the evil began to show itself in widely separated parts of the Christian world. At the Council of Elvira or Illiberis in S. Spain (c. A.D. 305) fees for baptism were forbidden; the gift received gratuitously by the priest (*sacerdos*) was not to be made a gain of.³ The practice of exacting baptismal fees was also blamed in the East. Gregory of Nazianzus in Cappadocia⁴ (A.D. 381) refers to candidates for baptism being kept back thereby; he says that baptismal offerings are not necessary, for the real offering is oneself. The *Apostolic Constitutions*, a Syrian work written c. A.D. 375, speaking of Simon Magus and of his trying 'to obtain the invaluable (*ἀρίστων*) grace by purchase,' bids its readers avoid oblations to God's altar which do not come from a good conscience;⁵ and this is found, expressed less explicitly in the *Older Didascalia* (3rd cent.) from which the later writer borrows.⁶ The *Apostolic Canons* (c. A.D. 400,

from the same school as, or perhaps compiled by the author of, the *Constitutions*) forbid giving or receiving the episcopate, presbyterate, or diaconate for money, and mention Simon Magus.⁷ The Council of Sardica (the modern Sofia in Bulgaria; c. A.D. 347) denounces bribery in the election of a bishop,⁸ and forbids the translation of bishops from one see to another, as this (it says) is always done from avarice, for 'no bishop has been found to go from a better to an inferior see';⁹ translations were evidently common in practice. But the genuineness of these canons is disputed.

An extension of simony already appears in the 4th century. At the Council of Antioch in *excelsis* (A.D. 241) a bishop is forbidden, even on his deathbed, to appoint his successor;¹⁰ and in the *Apostolic Canon*¹¹ a bishop is forbidden to give the episcopate to his brother, son, or other kinsman, or to ordain those whom he himself desires (so explicitly the Latin, and less plainly some texts of the Greek), for the gift of God may not be sold by him or made a matter of inheritance.

From the 5th cent. onwards we have numerous indications of the prevalence of simony. At the oecumenical Council of Chalcedon (A.D. 451) not only is ordination for money to any order (including those under the diaconate) strenuously forbidden, for it is turning the grace which cannot be bought (*τὸ ἀπώροτον χάρις*) into merchandise, but equally are those who give or accept bribes for appointments to Church stewardships and other ecclesiastical posts condemned, as well as the middlemen who negotiate these transactions.¹² The *Novella* of the emperor Justinian I., issued A.D. 534 to 565, prescribe an oath against simony to be taken at the consecration of a bishop by the elect and by the electors.¹³ A large number of councils deal with the subject.¹⁴ A Roman synod under Pope Symmachus, held A.D. 499 soon after his election, forbade canvassing and promises of votes before papal elections in the life-time of the reigning pope¹⁵—an early instance of what became a notorious evil in the Middle Ages. The 2nd Council of Orleans (A.D. 533 or 538) forbids ordination for money.¹⁶ The 3rd Council of Braga (in Portugal, A.D. 572) forbids bribes for ordination, and the exaction of fees for baptism, chrism (confirmation), and the consecration of a church.¹⁷ At the Council of Rheims (c. A.D. 625) a bishop is forbidden to take anything from another Church for his own advantage or for that of his Church.¹⁸ At the 4th Council of Toledo in Spain (A.D. 633) bishops are forbidden to appropriate Church property;¹⁹ and the 8th (A.D. 653) strongly condemns simony.²⁰ At the 11th (A.D. 675) the demanding, or even accepting, of fees for baptism, chrism, and ordination is forbidden.²¹

Nor was the East less emphatic. The 'Trullan' Council of Constantinople (A.D. 681 or 692) forbids ordination for money or the demanding of compulsory fees for the Eucharist.²² The 2nd Council of Nicaea (A.D. 787) was strong against simony,²³ whether in the case of a bishop demanding money or the like from other bishops or clergy or monks or in the case of any one obtaining a position in the Church by payment.

But perhaps the writer in the early period who deals most with the subject is Pope Gregory the Great (A.D. 590-604). In his epistles he constantly speaks of it, especially with reference to ordination. He declares that in parts of Gaul and Germany no one was ordained without a fee,¹ and so also in Achaia² and Epirus.³ He exhorts Brunichild, queen of the Franks, to prevent ordination for money, and 'selling the Holy Spirit.'⁴ Gregory declares in his letter to Isaac, patriarch of Jerusalem,⁵ that he has heard that in the Churches of the East no one is ordained without bribes. In li. 23 he urges an Illyrian bishop not to allow any ordinations for money or entreaties (here we have the *munus a lingua*), but only for merit. In li. 48 he says that the Donatists bribed a Catholic bishop in Numidia to allow one of their own bishops to be appointed in the place where he lived; and in li. 48, writing to the same correspondent (Bishop Columbus), he strongly deprecates the ordination of boys, and all venality in ordination or influence or entreaty.⁶ In iv. 27, writing to Jannarius, bishop of Cagliari (Cagliari in Sardinia), he forbids the receiving of any fee for ordinations, marriages of clerics, or the veiling of virgins (nuns), unless it is voluntarily offered. A Roman synod under Pope Gregory (A.D. 586) forbade any compulsory payment for the pallium—the vestment sent by the papal see to archbishops, at least from the 6th cent. onwards.⁷

Accusations of simony against individuals in this period must be received with some caution. It was very easy to charge a theological opponent with this crime. A few instances may be mentioned. For that of Paul of Samosata see above. Ambrose accuses the Arian bishop, Auxentius, of simony.⁸ At Chalcedon (bas, bishop of Edessa, was accused (falsely) of taking money for ordinations, as well as of spending the money of the Church on himself.⁹ Maximus, bishop of Salona in Illyria (Dalmatia), was accused to Gregory the Great of having been consecrated bishop by simony,¹⁰ but was afterwards declared innocent. In many such cases it is obvious that a charge of simony was a convenient weapon when the real accusation was one of heresy or schism.

Most of the prohibitions of the Councils in this period on the subject of simony were embodied in the *Corpus juris canonici*.

3. *Medieval period in the West.*—The form of simony which chiefly gave trouble in the Middle Ages was the buying and selling of ecclesiastical preferment. But two councils in the 12th cent. deal with compulsory fees: that of Tours (1163) forbids the exaction of payment for the admission of monks, or for appointments to monastic or clerical posts, or for burials, chrism, and unction with holy oil;¹¹ the 3rd Lateran Council (1179), for enthroning bishops, installing abbots, instituting presbyters to benefices, burials, benediction or marriages, or for the other sacraments.¹² Thomas Aquinas¹³ (1226-74) treats of simony at some length. He defines it as buying or selling anything spiritual or annexed to what is spiritual (*spiritual annexum*), since spiritual grace, being freely given, cannot be equated to any earthly price.¹⁴ It is therefore simony to give or accept anything for the sacraments as a price, though not as a stipend for priest's sustentance.¹⁵ It is clear from the objections which Aquinas answers that it was the common practice to exact money for the

sacraments—for baptism and masses, for absolutions under the name of penance, for ordinations, marriages, and so forth. And a widely spread practice such as this perhaps prevented the 'angelic doctor' from showing with his usual perspicacity the real distinction in these cases between simony and an innocent offering. A priest might demand fees for baptism on the plea that it was the only way by which he could get his living, but the demand would be simoniacal; if the fee is exacted as a condition of giving the sacrament, it comes under the head of simony, though a free-will offering is permissible and laudable. Aquinas goes on¹⁶ to observe justly that accepting and giving anything for the support of those ministering spiritual things is not simony unless there is any intention of buying or selling. Here comes in the same distinction as that made above. In art. 4 Aquinas explains what he means by buying or selling things which are 'annexed to what is spiritual,' and gives as an example that a bishop who demanded as a condition of collating a person to a benefice that part of the income thereof should be paid to himself would be guilty of simony. He then goes on¹⁷ to deal with *munus ad obsequium* and *munus a lingua*, terms which had been in use long before his day; both these, he says, are simoniacal just as if money were received and paid.¹⁸ Finally Aquinas deals¹⁹ with the proper penalty for simony, for which see below, § 6. It is noteworthy in view of the history of the times that the question is raised whether the pope can commit simony. Aquinas answers²⁰ that the pope can incur the guilt of simony like any other man, for the higher the place filled, the greater the sin. The things of the Church are his only as dispenser, not as possessor.

That in England simony was considered a grave offence during this period is seen from the *Salisbury Cathedral Statutes* of 1392,²¹ which, though only mentioning these cases incidentally, refer them expressly to the cognizance of the bishop himself. It was one of the regulations at Salisbury that the clergy were not to receive the oblations of the laity on Easter-day even after Mass, because it indicated avarice;²² this was to prevent simoniacal exactions (see below). The extent of simony in medieval England is seen by the denunciations of Chaucer (c. 1340-1400) in his *Canterbury Tales*. The 'Personen Tale' (*de Avaritia*) says:

It is the gretteste sinne that may be, after the sinne of Lucifer and of Antecrist: . . . 'he bi by tithes, bi bi by procurages, or by fleschly preyere of his freendes' i.e. by *munus a lingua*, of which Chaucer says that, if the nominee is worthy, it is not simony.

There were, indeed, many exceptions. Not all the clergy were guilty in this respect. Of the 'poore persone of a town' Chaucer says:

For looth were him to curse for his tythes,
But rather wold he yeven, out of doute,
Unto his poore parichurke aboute
Of his offring, and eek of his sustentance,
He coude in this thing han suffraunce.²³

The evil of simony had been prevalent all over the West under Popes Boniface IX. (1389-1404) and John XXIII. (1410-17), and the Council of Constance on 21st March 1418 decreed the vacation of offices obtained thereby; but the decree was half-hearted, and had little effect.²⁴ Offices in the curia were openly sold under Innocent VII. (1404-07),²⁵ and the elections to the papacy of Alexander VI. (1492), and of Julius II. (1503) were openly

promoted by bribes.¹ A stronger effort to abolish the evil was made by the Council of Trent in the 16th century. Bishops were forbidden² to receive money for ordinations or for letters dimissory, or the like, though their notaries might charge certain fees; and so³ with regard to benefices and other ecclesiastical posts, and the making of conditions (the *munus ad obsequio*; see above, § 1). The council in sess. xii. ('Decr. de observantia et evitanda in celebratione missae') forbids the importunate exaction of alms for masses as being simoniacal.

The extension of the meaning of 'simony' is illustrated by some chapters of the *Scottichronicles* of the Scottish historian John de Fordun, written c. A.D. 1395.⁴ Thus an abbot who gained his office by undue persuasion, and another who procured the succession to his office for his nephew,⁵ are judged to have been guilty of simony, even though no money passed. And this name is even given to the offence of a layman of Richard Cour de Lion's court who received gifts from Saladin. It is also applied to the case of a monastery of women which would admit only nuns who brought a certain dowry to the community.

In medieval Scotland offerings by parishioners came to be regarded as dues, and were exacted in spite of explicit regulations to the contrary, that 'neither sacraments nor sacramentals' (e.g., sprinkling of the people with holy water or benediction by the priest at Mass) 'were to be sold.'⁶ It was the custom (though explicitly forbidden by law) for the priest to retain the host in his hand on Easter-day till the communicant paid his dues.⁷ Offerings for masses, baptisms, burials, confession (called in England 'shrift-silver'), and the churching of women were common, and were exacted as of right, the priest refusing otherwise to officiate or to absolve.⁸ A relic of a quasi-compulsory offering by women when churched is still found in the last rubric of that office in the Book of Common Prayer: the woman 'must offer accustomed offerings' (in 1549 'her christen [christom, the white garment of the baptized child], and other accustomed offerings'). The exaction of 'hick rights and Fawche offrandis' and the withholding of the sacraments till they were paid was denounced at the last provincial synod of the unreformed Church in Scotland, held in 1563.⁹ In 1483 a Scottish Act of Parliament was passed to prevent money being taken out of Scotland to pay for promotion and for places in Rome; for no ecclesiastic could expect preferment without paying the cardinals and officials in Rome. A striking instance is the appointment of a bishop of Brechin in 1488, the deeds relating to which are printed in the appendix to the *Registrum Episcopatus Brechinensis*.¹⁰

4. The East.—As the Church in the West became richer, the form which simony took had reference chiefly to the presentation to benefices. But in the East, especially in the Far East, it seems that the ecclesiastical authorities have had to deal with the evil chiefly in connexion with the exaction of what are called in England 'surplice-

fees"—the exaction, not as a matter of free-will offering, but of right, of money for baptisms and other offices. In many cases the Eastern clergy have had to live principally on these fees. And, it is to be feared, the exaction of money for ordination (under whatever name the fees are charged) has been very common. Yet the decisions of the Apostolic Canons (which were believed to have apostolic authority) and of Chalcedon¹ are held to be still binding.

In Egypt simony was first introduced as a regular system by the Coptic patriarch Michael (Chail) III. (A.D. 881-884), who exacted large sums from bishops-elect to meet the demands of the Muslim government, and this system continued for several hundred years.² In India, among the Christians of Malabar, one of the efforts of the Synod of Diamper under the Portuguese (1500) was directed towards the extirpation of simony.³

With regard to the other minor Eastern Churches, it may suffice to quote the canons of two of them. The West Syrian (Monophysite or Jacobite) canons given by B. Denzinger⁴ say that a bishop may not receive a gift for ordination or for giving judgment; for in this and similar communities the civil authorities allow the bishop to be somewhat of a judge in ecclesiastical or quasi-ecclesiastical matters, such as marriage and divorce. Further, priests and deacons are forbidden to receive a gift from those to whom they distribute the sacraments;⁵ and those who confer or receive the priesthood by payment of a gift are to be submitted to the penance of adulterers and fornicators.⁶ The East Syrian (Nestorian) *Sin-Aadhas*, or Book of Canon Law, deals with ordinations to the episcopate, presbyterate, or diaconate, effected by bribes,⁷ and with improper appointments to the episcopate of persons who have been under penitential discipline;⁸ and forbids the exaction of fees for baptism,⁹ because baptism is spiritual circumcision, though it allows the giving of voluntary offerings.¹⁰ In spite of canons, however, bribery for ordination has always been the basis of the Far Eastern Churches. A particularly bad case occurred in the 6th cent., when one Abraham was consecrated through simony bishop of Beth Laphat in the south of Persia, with the result that he and his three consecrators were excommunicated by two succeeding patriarchs.¹¹

5. Modern Anglican regulations.—After the Reformation simony comes into view in England almost entirely with regard to preferment, but the statute 31 Eliz. esp. 6 imposed fines on those who conferred or received holy orders simoniacally, as well as voiding presentations to benefices so made. In the English canons of 1604 an oath is directed to be taken by those who are about to be admitted to office, that they have not obtained it by simoniacal payment, contract, or promise.¹² This applies to ordinations as well as to admissions to benefices and other ecclesiastical offices. The same oath is prescribed in the present canons of the Church of Ireland.¹³ Under modern conditions this regulation serves indirectly to protect the clergy from undue pressure by patrons of livings to make promises not required by the Church for the performance of their duty (the *munus ad obsequio*). This is seen very clearly in the canons of the Episcopal Church in Scotland. A provision of long standing enacts that no promise

other than the ordinary canonical subscriptions is to be required or given in the case of an episcopal election as a condition of the election, or of the confirmation of the election by the comprovincial bishops.¹ Another, dating from 1911, forbids (with certain reservations) any bishop, priest, or deacon about to be admitted to an office or order to make any promise, or to lay himself under any obligation inconsistent with his retaining his lawful liberty of judgment in performing his duties.²

But there is a danger of simony, direct or indirect, to which any system of ecclesiastical patronage is liable unless stringent precautions are taken. The sale of advowsons and of next presentations has given much trouble in the Church of England. The prohibition of the sales is *in toto*, if the system of patronage is maintained—and there are at least equally great dangers in popular election of the clergy by the parishioners—would lead to the patronage in many cases being held by persons who had no interest in the parish. On the other hand, if patronage is bought and sold indiscriminately, simony must be the result. One way in which this has in the past been the case is by exacting a resignation bond from the presentee to a benefice—i.e. a promise to resign after a definite period. General resignation bonds have long been forbidden, but a statute of the early part of the 19th cent. (9 Geo. IV. cap. 94) allowed such a bond to be given if it were in favour of some person named in the bond. The great reform in this matter was effected in England in 1898, when the English Benefices Act, among other provisions, required sales of advowsons to be registered, forbade sales of next presentations, or sales by auction of any right of patronage except as part of an estate, and invalidated agreements to exercise a right of patronage in favour of a particular person. The new declaration against simony was of a very stringent character.³ For this reform the Church of England is chiefly indebted to the persistence of Archbishop E. W. Benson, who, however, did not live to see the Act passed.⁴

6. **Penalties for simony.**—In the earlier authorities the penalty prescribed, in the case of all parties concerned, was excommunication for laity and monks (who at first were almost always laymen, and therefore judged under that category), and, in addition, deposition and deprivation for the clergy. But, as time went on, the penalty of excommunication seems by degrees to have been relaxed. Aquinas in his *Summa*¹ says that the proper penalty for simony is for a man to be deprived of that which he has got thereby, as is laid down in canon 2 of Chalcedon.² And the Nestorian *Sanhaddus*³ decrees deposition,⁴ and only in some cases excommunication.⁵ In England the Elizabethan statute⁶ imposes fines and voidance of the benefice.

But the Council of Chalcedon,⁷ saying that a layman or monk who has been guilty of simoniacal transactions is to be anathematized, and that the cleric is to be deposed, says also that the bishop who receives the money endangers his own office (*Sakdas*). Excommunication is also prescribed in the Sardian canons;⁸ in the *Apostolic Canons*,⁹ expressly for both giver and receiver 'as Simon Magnus [was excommunicated] by Peter';¹⁰ also at the 3rd Council of Braga.¹¹ Subsequent practice, however, varied. The 2nd Council of Orleans orders deposition of a priest ordained simoniacally, without mentioning the punishment of the ordainer;¹² the Council of Rheims orders deposition of a bishop appropriating the property of other Churches, saying that he is to be deposed 'as he cannot be excommunicated'.¹³ The 8th Council of Toledo¹⁴ adds imprisonment in a monastery to excommunication ('anathema'); the 11th¹⁵ in some cases adds a flogging. The 'Trullan' Council mentions only deposition,¹⁶ and so the 2nd Council of Nicaea¹⁷ in some cases, though in others¹⁸ excommunication is added. The Council of Tours¹⁹ only says that simoniacs will have their portion with Simon [Magus]; so the third Lateran, substituting Gehazi for Simon.

SIN (American).—There is, of course, no such thing as an aboriginal critique, or science, of conduct in America. Accordingly, among the American Indian peoples there is no conscious demarcation of classes of offence with respect to responsibility and object, such as is represented by the civilized man's conception of crime as offence against law, vice as offence against society, and sin as offence against the divine in nature or in human nature. Sin, vice, crime, pollution, and even misfortune, are, for the American Indian, all embraced in the category of evil; the range of the things which he recognizes as evil (and also as good) is, in the broad, equivalent to the range of things evil (and good) recognized by other races of men; but he did not, aboriginally, make a reflective separa-

tion of these things into classes. For this reason, it is impracticable to treat the native American conceptions of sin except as related to their general notions of morality, of which subject this is a special continuation.

1. **Pollution.**—It is a commonplace of the study of primitive thinking that the notions of spiritual and material, of psychical and physical, are not clear-cut, and that the distinction is, therefore, no more significant than it was to those Ephesians whom Hieronimus satirized for their purifications by blood. It is, indeed, perfectly natural to the animistic or pantheistic frame of mind to conceive

physical nature as susceptible of giving or of receiving spiritual taint, and hence to imagine that the spiritual taint may be removed by physical purification. This notion of uncleanness and its medicine, as pertaining both to men and to things, is as universal as is religious ceremonialism. Nor can it be dismissed as mere superstition while we repeat—and with reason—that cleanliness is next to godliness.

The American Indian does not differ from the rest of the human race in respect of this confusion of spiritual and physical. Notions of pollution and purification are a part of his habit of mind and the explanation of much of his ritual. Birth and death, the functions of sex, preparation for war, for great hunts, for sowings and reapings, and above all for the great clan and tribal festivals, are everywhere attended with purificatory ceremonies—among which are abstinences, fastings, sacrifices, cathartics and emesis, and dedicatory rites such as painting of the body and face with symbols, ointments, aspergings, anointings, and sacramental feasts. The Indian stands before his lodge at the dawn in order that the young and growing sun may strike him with the rays of its vigorous youth, and make him strong; he strokes his child with green vegetation that its life may be green and flourishing.

"The old Indians," writes a missionary to the Sioux, "continuously bathe their feet in dew and snow, and their bodies in snow and rain and 'sacred living water.' The purpose of this was more to 'keep the perceptions keen' than to keep the body clean."¹

The rite of baptism as practised by some of the Plains tribes, by the Aztec, and by the Maya was governed by a similar motive.

Thus, in the *Habo*, the officiating elder "makes certain wet lines on the face of the child." These signify that the sustaining of life through the power of water comes from *Tira'wa silius*, i.e., from Father Heaven.² Bishop Lanza says of the Yucatec that they named their baptismal rite *caputitil*, meaning to be "born anew"; and he adds that "they have such a respect for it that those who have sins on their conscience or who feel themselves inclined to commit a sin, confess to the priest in order to be in a state to receive baptism. . . . They believe that they receive therefrom a disposition inclined to good conduct, that it guarantees them from all temptations of the devil, with respect to temporal things, and by means of this rite and a good life they hope to secure salvation (gracia)."³ Another most interesting rite described by Lanza⁴ was the feast of *I. Xac* (February), in which expiation for the shedding of blood in the chase was made: "for they regarded as abominable all shedding of blood apart from sacrifices."

Pollution of places and things is, of course, recognized along with pollution of persons. The destruction of old utensils and the preparation of new for new undertakings or for the new year is connected with such a conception, of which perhaps the clearest symbol is the sweeping of sacred or festival precincts—a feature of the Creek *Bush*, and of numerous festivals of the Pueblo, Aztec, Maya, Inca, and other tribes with elaborate rituals. One of the most affecting anecdotes of the Mexican Conquest is related by Bernal Diaz.

A few days after Cortes' entry into Tenochtitlan a group of the Spaniards were conducted by Montezuma to the summit of the great temple overlooking the market-place. There the Mexican monarch first proudly indicated the wealth and populousness of the rich valley over which he ruled, and then brought the strangers into the presence of his gods. Cortes asked the occasion to demand permission to erect there a Christian cross. "You will see," he said in effect, "how these symbols of the devil which you have placed here will wither before the symbol of the true faith." Montezuma indignantly refused, upbraiding the Spaniards for their impurity; and when they departed he resented behind his person expiation and cleanse the temple of the sin wherewith it was tainted.⁵

2. **Vice and crime.**—Even among peoples with a scientific ethics the conception of vice (as a social offence punishable by public opprobrium) and of

crime (as physically punishable, by law) is not wholly distinguished from the conception of sin (as offence against God or nature). Vice and crime, though they may be punishable evils, are not regarded as sins when there is no guilty motive; and sin, at the other extreme, exists where there is temptation to guilt, entertained without resistance, even though it may eventuate in no vicious or criminal action. Nevertheless, in the great mid-realm of conduct most offences are regarded as having the twofold character of social offence punishable by society and sinful offence to be answered by the mercy of God or by the conscience. The practical problem of the distribution of responsibility is so complex that it forms to-day one of the greatest and least-settled fields of ethical controversy.

Such being the case among the more advanced, it is certainly not to be expected that primitive peoples should make any clear distinction between the two types of offence—least of all, in view of the fact that primitive societies, almost without exception, are theocratic in their sanctions: a people whose customs are regarded as established and sustained by tutelary or patron gods, or by ancestral heroes become divine, must inevitably regard offences against society as offences against divinity, and all social offences, therefore, as sins. This is the prevalent American Indian notion. Murder is punished for the appeasement of the manes of the murdered rather than for injury to the tribe. Impurity, and especially sexual perversion, was regarded in many localities as an abominable impiety, to be atoned only by bloodshed (though it may be suspected that the charge of this offence was sometimes brought, as by the Aztec against the Huastec and by the Inca against the Yanca, mainly as an excuse for bloody conquest). Disobedience to tribal custom has all the taint of blasphemy, and Indian legends abound with incidents of supernatural retributions for tabus defied.

Perhaps as clear a notion as may be gained of the range of Indian moral ideas is suggested by native terms for types of persons.

Thus the Omaha tribe have words to designate: (a) on the side of good: an unselfish person, a self-controlled person, a straightforward or truthful person, a willing, a sympathetic, a courteous, a hospitable person; (b) on the side of the bad: a liar, a thief, a quarreller, a glutton, a meddler, a libertine, a boaster, a talkative, a leaguer, and, again, as important, an obstinate, a stingy, a disreputable person. "Religion and ethics, closely interwoven, pervaded the life of the tribe, and in judging the evidence of constructive thought on them before one should not wonder that apart from the natural and social environment of the people."⁶ (A the blooded Sioux Beade says that the old Indians made much of humility (*hikshimashika*) and charity (*wasashika*), and in another connection he gives the interesting information that the soul of "a selfish soulless person dwell in any living object: a snake, who does his deed skillfully, is patient and hopeless, idle, alone and exclusive, an "aristocrat" in all but the ability to make others serve him."⁷

Both the virtues and the offences give an enlightening glimpse into the Indian's conception of the spiritual sociality of the world. Moral standards and moral enlightenment varied, and still vary, greatly from tribe to tribe; but it is probably true that everywhere the maintenance of custom rested upon the entirely theological grounds given to Knud Rasmussen by the old Eskimo:

"We observe our old customs, in order to hold the world up, for the powers must not be offended. We observe our customs, in order to hold each other up; we are afraid of the great Evil. . . . Men are so helpless in the face of Illness. The people have no power, because the dead are strong in their vital age, and boundless in their might."⁸

3. Sin, confession, and penitence.—The conception of sin in the more precise sense, as offence against divine powers, calling for repentance and inner regeneration, is by no means absent from the Indian consciousness. In a number of localities, and especially in the more civilized native states, confession and penance under priestly supervision were important rites in pre-Columbian times. Nor can we suppose that the institution of these rites in Christian form by the first missionaries would have received the hearty and conscientious favour which the mission relations attest, had there not been in the aboriginal disposition some natural intuition of their significance. As a matter of fact, impiety, blasphemy, and a willingness to do evil were thoroughly reprobated; while, on the converse side, the Indian sought by every means to find favour and enlightenment from the higher powers by which he deemed himself to be surrounded and sustained. Probably no human race has laid such general stress upon the significance of visions, won in fast and solitude, as a form of inspiration; in many tribes it was the common practice for a man or woman in trouble to seek help and consolation by this means, while it was no less general for each individual, on approaching maturity, to conduct a similar quest of his life's helper, making a kind of consecration of his strength to the tutelary power.

There are stories, not a few, of pagan Indians, visited by remorse for some crime, and expiating it even by self-inflicted death; stories, too, of entire change of character as a result of vision or of some similarly intimate experience. But for the more dechristianized conception of sin and responsibility it is necessary to turn to the ritualized religions of the semi-civilized nations—at least, for pre-Columbian practices. Thus, Las Casas, describing the religion of the Guatemalans, whom he knew intimately, presents their compunctions and penitences as worthy examples of purity to the Spaniards themselves,¹ while the similar practices of the Yucatan and Mexican peoples are described by Land, Sahagun, and other writers. Of the Yucatan Land says:

'The Yucatan knew naturally evil when they committed it, and they believed that it was in penitence for sin and evil that death came to them, as also illness and suffering. They had the custom of confession, and when they were in the midst of it, it was made in the following manner. When, in consequence of illness or something else, they were in danger of dying, they confessed their sins; but if they forgot to think thereof, their nearest relatives or friends reminded them of it. Thus they told publicly their sins to the priest, if he were present; if not, to their fathers and mothers, wives to their husbands, and husbands to their wives. The faults of which they most commonly accused themselves were theft, injuries, weakness of the flesh, and false testimony. But it often happened, when they came to recover, that there arose quarrels between husband and wife, because of their infidelity, and with those who had raised them. Men confessed their delinquencies (fouls), except those which they had committed with their slaves, for they said that it was permitted to use those who belonged to them as they wished. They did not confess sins in intention, although they regarded such as evil; and in their counsels and preachings they preached their avoidance.'²

Sahagun gives many prayers which are penitential or confessional in tone, and describes the numberless penitences imposed by the priests. Formal confession, it appears, was made primarily to the god Tezcatlipoca, 'Smoking Mirror,' the invisible and impalpable deity who penetrates all things and sees even into the recesses of the heart.

'Then, Lord, who art father and mother of the gods and oldest of divinities, know that hither comes thy vassal, thy slave; weeping, he approaches with great sadness; he comes plunged in grief, recognizing that he has fallen into error, that he has fallen into vice and grave delinquencies meriting death; he comes deeply pained and oppressed with all this.

Our merciful master, who art the sustainer and defender of all, receive in penitence and hearthens to the anguish of thy slave and vassal.'

After this prayer the priest exhorts the penitent to tell all, omitting nothing for shame or weakness; and, when the confession is made, he assigns the penance according to the gravity of the sin. Sahagun says that the confessors kept secret what was confessed to them, stating that it was not to them but to their god that the sin was confessed: 'they had not confessed to man, but simply to God.' Nevertheless, it appears that confession and penance relieved the culprit from civil penalties (again an instance of the confusion of crime and sin); and, when Spanish priests replaced the native with the Christian confession, the Indians expected the certificate of confession, which they asked of the fathers, to satisfy any legal complaint against their conduct. As in Yucatan, confession was not frequent, but only with approaching age or fear of calamity; but they at least believed themselves obliged to confess once in their life, and this, *in facie naturali*, without having any previous notion of the faith.³

The narratives of the French Jesuits and other Roman Catholic missionaries to the wilder tribes uniformly describe the enthusiasm with which the confessional was welcomed by the Indians, and their willingness to undergo penance for their faults. This, of course (though there is some evidence for a pagan practice of confession even among very primitive Indian tribes),⁴ does not argue any previous acquaintance with the rite, but it does indicate a ready comprehension of its meaning—for which there is some analogy in such pagan customs as that described in the 'Relations' of the mission to the Hurons:

'They address themselves to the Sky, paying it homage; and they call upon the Sun to be witness of their sorrows, their misery, or of their innocence. But, above all, is the tradition of peace and alliance with foreign nations they invoke, as witnesses of their sincerity, the Sun and the Sky, which we into the depths of their hearts and will wreak vengeance on the treachery of those who betray their trust and do not keep their word. So true is what Tertullian said of the most infidel nations, that nature in the robes of perdition makes them speak with a Christian voice, *encoment eorum naturae Christianum*,—and have recourse to a God whom they know almost without knowing him,—*Ignorant Deum*.⁵

The 'Relation of 1653-54' contains a number of affecting narratives of Indian conversions, and in the midst an account of the reception of the confessional rite, not without its amusing features. Says the good father:

'When winter expires in giving birth to spring, all our hunters beset themselves, with all their goods, to the banks of the great river, at the cave or harbor which we call Toloumout; and here, a public confession is made, without garments (lack), without weapons, and without any coercion. There is said to be a country where the cold is so great as to freeze all words uttered there; and, when spring approaches, upon these words throwing out, there is heard, almost in a moment, all that was said during the winter. Whatever may be the foundation of this story, it is true that all the evil that has been committed during the winter in these great woods is told to the father publicly in the month of April. The first concern rectify about the confessions of those who follow, and this from a zeal which they test for Christian justice.'⁶

Incidents of zeal for confession and baptism are related by many missionaries, and often in connexions that leave no manner of doubt that the candidates conceived the religious significance of the rite correctly, judged by the standards of the Church; i.e., the purification sought is clearly conceived by the Indian as an inner and spiritual change, not as a mere release from external taint and public obloquy. In the older native rites there are many elements that represent a conception of regenerated life. In most cases, it is

⁶ Ch. xxxii.

true, the native prophet or preacher promises material as well as spiritual advantages; but the latter are nearly always present. The Indians have learned lessons of religion from both Roman Catholic and Protestant missionaries, and their native prophets have adopted elements from both forms of Christianity, but obviously because of a distinctly native foundation upon which to build.

'Long time I knew nothing,—just like an animal,' said one convert to such a semi-Christian native priest. 'I was a drunkard, was a thief, and a robber. When I joined this religion, I was told to be good. . . . I prayed and was sick—my soul was sick. I prayed to God and he pays me for that. . . . A good Christian man in the dark sees a light toward God. God makes a way—a good Christian man goes straight through it to the end, like good medicine. I believe this religion. It helps poor people.'

The form of the idea underlying this expression is Christian, but its substance is the universal one of a human conscience, first oppressed by the sense of sin, then redeemed by an intimate and buoyant consciousness of grace received.

4. The origin of sin.—Theology is, of course, no primitive science. Nevertheless, the problems with which the theologian must deal are too elemental in human life not to have appealed to the minds of men in all grades of reflective advancement. Among them no problem is more universally felt than is that of the origin of evil: how comes it that men are tried with suffering, and above all oppressed by their own inescapable shame? This is the problem of the tales of Pandora and Eve, of Job and of *Edipus*, as well as of the Epistles of St. Paul; and it is the problem at the heart of many of the most ancient myths of the aboriginal peoples of the New World.

Not infrequently in American myth an age of innocence preceded the present condition of men. Thus the Cheyenne tale of the 'Great Medicine' tells of a paradisaic age when men were naked and innocent, amid fields of plenty, followed by a period in which flood, war, and famine ensued upon the gift of understanding. In the usual N. American stories death and evil come into the world as the result of wrongdoing, but there are many examples in which moral motives enter—as in the Eskimo tale in which man is given choice between eternal life in eternal darkness or mortality blessed by the light of day, and chooses the latter. Probably the most beautiful of all these tales is the Wintun story of 'Sedit and the Two Brothers Hux'.¹

Of this, the creator, caused the demigurge brothers Hux to make a road to heaven, at the top placing two springs, one for internal and one for external purification. Mortals growing old could return to these springs and there renew their youth. But Coyote—also a demigurge power—opposed this: 'Joy at birth and grief for the dead is better,' he says, 'for these mean love.' So the road is destroyed.

Of course, in the great number of tales, it is a broken tabu that first brings the disaster of evil into the world.

But certainly, of all native American beliefs, that of most extraordinary interest in this connexion is the Aztec conception. In Mexican and Mayan myth alike the origin of the world is represented as occupying a series of cycles or ages, each, as it were, an experimental creation, and each, up to the present, destroyed catastrophically to make place for a better effort. The present age—or 'Sun,' of the world, as the Aztec conceived it—endures by reason of the continual expiation, self-maceration, and sacrifice of human hearts, offered to gods who had made of themselves the first great sacrifice. The fullest version of this remarkable myth is in the anonymous *Historia de los Mexicanos por sus Pinturas*, though it is to be

found also in the *Anales de Cuauhtitlan*, fragmentarily. The idea underlying the myth is apparently related to the notion of Amaximander that individual life (even of gods) is in some sense an arrogance and injustice to be atoned for, and a great part of the ceremonial of Mexican religion was devoted to acts of atonement. How completely the idea dominated the Mexican mind is most impressively shown by the prayers recorded by Sahagun, for the whole sixth book of the *Historia* is virtually an elaborate ritual of penitence—not so much for individual sins as for the presumptuousness of living.

See art. COMMUNION WITH DEITY (American), ETHICS AND MORALITY (American), PRAYER (American).

SIN (Babylonian).¹—Free will was completely assumed by both Sumerian and Semite in Babylonia. Although the tendency to sin is attributed to man as a natural inheritance, the theologians never raise the problem of its ultimate origin in the divine order of things. The attitude of the Babylonian in this regard may be described as one of perpetual humility and concern for his frail human will, which is never sufficient to attain to the divine standards of purity. To introduce the subject in its general aspect, we cannot do better than quote from a Sumerian bilingual confessional (*erabauagut*):

'Oh lord, my wrongdoings are many, great are my sins,²
Mankind is dumb knowing nothing at all.
Mankind, as many as bear names, what do they know?
Whether he has acted shamefully, whether he has acted well,
he knows not at all.

Oh my god, my wrongdoings are seven times seven, forgive my wrongdoing.³

The penitential psalm from which this selection is taken is perhaps the best statement in cuneiform literature concerning the naturally sinful state of man, his abject foolishness compared with the wisdom of the gods, and his inability to avoid sin, even though his desire be set upon righteousness. Another prayer, probably employed in a magic ritual of atonement, has been recently discovered and throws more light upon the general aspect of the problem of sin:

'Who is there who forever [is sinless]?
Mankind as many as there be [committed] sin.
I thy servant have sinned and . . .
Before thee I stand and I turn . . .
Rebellious things I plot, I have set free the wicked.
I have spoken what is not good; but whatsoever is wished
thou knowest.
The food that belongs to god I have eaten.
I have trodden on the interdicted thing; evil I have done.
Upon thy vast possessions I have lifted a [covetous] hand.
Unto thy precious silver my greed goes up.
I have lifted my hand and touched what should not be
touched.
In my wickedness I have entered into dry tongs.
I have thus committed thy mighty abomination.
I have transgressed thy borders, a thing which is abominable
to thee.
In the wrath of my heart I have cursed thy divinity.
Wrong known and unknown I have committed.
I go about, I behold, and before me sinners I obtain.
Oh my god, it is enough, may thy heart repose.
Oh Ishtar, who hast been enraged, may it be pardoned.

⁴ *ib.* 15b, 23 and 24.

in which a man sues another for possession of a house, will illustrate the similar use of the word *arasa*. The judges arrange the legal proceedings, investigate the case, and convict the plaintiff of wrong or error.¹ *Arasa* is the official term employed in the great Code of Hammurabi and is there employed regularly in its original and legal sense, 'error,' 'wrong.' The Code also employs *arasa* in the sense of penalty for error, but not so frequently.

It is not always easy to determine the kind of sin or wrongdoing which many other terms of the Babylonian religious texts convey, such as *allatu*, 'slander,' 'impudence,' *illatu*,² 'contemptible conduct,' *limutu*, 'wickedness.' The result of sin,³ however, at least in the later period, was invariably the same. Man's protecting god abandoned him; he became the prey of disease and the prisoner of the demons. Hence elaborate rituals of atonement came into use to free mankind from the effects of religious, ceremonial, and ethical sins. These rituals have been defined and described in the art, EXPIATION AND ATONEMENT (Babylonian). In the more important rituals of atonement the penitent recites long lists of the sins which he may have committed; usually of an ethical character; e.g., the second tablet of the *Surpu* series has the following confession said for a sinner by a priest:

'Has he failed to free a prisoner and not loosed the bound?
Has he not named him in prison to see the light?
Has he said concerning a captive, "Seize him" or concerning the bound, "Bind him"?
Is there some unknown falsehood toward god, some unknown contrivances against goodness?
Is his wrongdoing against his god, is his perversity against his godness?
Is there hostility to the ancestors, hatred toward the elder brother?
Has he despised father and mother, behaved disgracefully toward the elder sister?
Has he given in bitterness and remained in largeness?
For "No" has he said "Yes"?
For "Yes" has he said "No"?'
This tablet continues the enumeration of ethical sins in such manner that it really forms a good source for an estimation of the moral standards of the Babylonians. Ceremonial sins are then recorded in detail:

'Has he strided toward a man under a curse?
Has a man under a curse strided toward his face?
Has he slept in the bed of a man under a curse?
Did he lie upon the divan of a man under a curse?'
Recitations of this kind appear to have been called 'the tablet of sins,' the tablet, according to the imprecation of one passage, being destroyed as an act which symbolized the annihilation of the demons and the expiation of sin.

'The tablet of his wrongdoing, of his sins, of his disgraceful conduct, of his curses, of his bans, be thrown into the water.'
In another ritual the penitent prays, 'Verily let be broken the tablet of my wrongdoings.'⁴

SIN (Buddhist).—The doctrine of sin, as held in Europe, is a complex idea of many strands. One

¹ *Arasa* *causa* *de* *no*; Schorr, p. 302, 9, see also pp. 304, 7, 306, 11; Code of Hammurabi, § 175.

² Not to be read *allatu*.

³ Excepting, naturally, purely political errors or wrongdoings.

⁴ See Zimmern, *Beiträge zur Kenntnis der babylonischen Religion*, Leipzig, 1901, pp. 23, 331, (corrected after Ebeling, no. 47) and p. 128, col. iii, l.

or two of those strands may be more or less parallel to statements found in the earliest Buddhist texts or to ideas expressed in Indian pre-Buddhist texts. But the doctrine as a whole, in any one of its various forms, is antagonistic to the Indian, and especially to the Buddhist, view of life.

To the Buddhist the universe is a cosmos, under the reign of law; whatever happens is a detail in an unending chain of cause and effect. The gods are as subject to this law as men. It holds good equally in the moral sphere and in the physical. Every wrong deed or word, every evil thought must work out its result, its effect; and that of its own force, quite independent of any deity. It is absolutely impossible for any conscious being to escape this result of his own act or thought, or, to phrase it in Indian fashion, of his *karma*. The application of this theory to details, and the explanations of the method in which *karma* worked, differed greatly at different times and places in India and among the different religious communities and philosophic schools that arose there.

Much has been written on the subject of *karma*. Most of it is vitiated by the erroneous assumption that there was only one theory, and that a statement in a work, say, of the 4th cent. A.D. is good evidence of beliefs held universally, say, in the 4th or 5th cent. A.C. The doctrine of *karma* is referred to as a great mystery in documents just earlier than the rise of Buddhism. It receives its first elaboration in detail in the older portions of the Pali Buddhist canon,¹ but in certain of the later portions,² in the 2nd cent. A.C., the point of view has changed. There is a good deal of evidence to be collected from the Sanskrit literature, both Hindu and Buddhist, dating from the 2nd to the 6th cent. A.D. No attempt has yet been made to deal with the history of the doctrine as a whole or even to collect and sift the evidence as to its form at any one particular period. E. W. Hopkins has several suggestive historical remarks on the last of the above-mentioned periods;³ and the present writers have discussed the amount of truth that lies at the basis of the general theory.⁴

No one holding the doctrine of *karma*, in any one of its various forms, could accept the doctrine of sin. What the European calls 'sin' he would call 'folly,' a result of ignorance. And there cannot be, in his view, any forgiveness of sin; it must work out to the bitter end, and of itself, its own fruit. This is cosmic law, from which there can be no escape—not even with the help of the most powerful deity, for that deity would himself be subject to the law. Again, another implication in the European use of the word 'sin' is that of an offence against a personal deity. This a Buddhist believer in *karma* would find difficult even to understand. To him no personal deity ever made the moral law. Should a deity erroneously think he did, and then take offence against some mortal because the mortal had broken the law that he (the deity) had made, then that would be an evil deed, and would work out its effect to the shortening of the life, as deity, of the person who wrongfully took offence. Even a Buddha cannot lay down the moral law, the *Dhamma*, as something devised or created by himself. He can but interpret a law that he finds existing⁵—a law ante-dating the existence of any personal law-giver.

The Buddhist would equate the abstraction 'sin' by every kind of collision, individual and social, with that cosmic moral law. Such collisions he would call evil, wrong, bad, demeritorious, corrupt (*pāpa*, *micchā*, *akusala*, *apāka*, *akkhi*, *līṭha*). And he would call them so because, as collisions or infractions, they threw back the in-

dividual in his long and, mainly, painful pilgrimage to higher, happier experience.

To the handicap imposed on each individual which is known among us as 'original sin' the doctrine of *karma* lends emphasis. From what has been said it is clear that no son of man can be born into the world free from the heavy mortmain of the follies and misdeeds of past lives, so far as these have not been already redeemed by unpleasant experiences. The same teaching, however, is equally insistent in the matter of the inheritance of a *plus* quantity of happy experience resulting from what we might call 'original virtue.' No lovely deed, word, or thought but brings its future reward, mundane or supramundane.

It should not, however, be concluded that sound Buddhist doctrine recognized, in the experiences of any given individual life, a mere gathering in of a predestined harvest of mixed crops, pleasant and painful, sown in previous lives.¹ That doctrine viewed every individual as a growth, or growing thing, both physically and spiritually. And all growth, while it is, on the one hand, the outcome of conditions (favourable or unfavourable to desirable growth), is, on the other hand, essentially creative. In the efforts at self-expression that we call 'creation' lay the capacity, and in the environing conditions the opportunity, of each individual to hough off the latent vices (*anusaya*) of his lower nature (called collectively the *kilesa*), and mould for himself, i.e. the resultant of his present self, a lighter burden of 'original sin,' a brighter heritage of future destiny.

LEAVE-TAKING.—The foregoing remarks are gleaned from countless passages in Buddhist canonical and early commentarial literature, most of which are as yet untranslated into English. But *Agguttara*, i. 371, is discussed by Ledi Sadaw, 'Some Points in Buddhist Doctrine,' *JPTS*, 1912-14, p. 117 f., and other texts in C. A. F. Rhys Davids, *Buddhism*, London, 1912, ch. v. T. W. and C. A. F. Rhys Davids.

SIN (Celtic).—In the Celtic sections of the *ARTS, COMMUNION WITH DEITY* (§ 3) and *CRIMES AND PUNISHMENTS* (§ 1) it has been shown that the Celts had clear notions on the subject of the gods being offended by neglect, whether of an individual or of a community. Their wrath manifested itself in illness, calamity, defeat in battle, and the like; and it had to be propitiated by sacrifice, usually of human victims, for the Celts considered that, unless man's life were given for man's life, the majesty of the immortal gods could not be appeased.² The proof of this is found in the passages from classical observers cited in these articles.³ How far the idea of sin against the gods had an ethical colouring we do not know, but this was probably not lacking, as the kind of crimes included among those punished by society suggests. In Gaul, too, the Druids acted as judges, and there, apart from punishment by death, excommunication from religious rites, especially sacrifice, was in common use in the case of those who would not submit to their decision. This was equivalent to outlawry, and the offender was regarded as impious and wicked.⁴

These statements receive further illustration from various mythical stories, mainly in Irish MSS. Though these have been redacted in most cases by Christian scribes, there is little doubt that, in so far as they describe the action of the gods or ideas purely pagan, they have undergone but small change through colouring by Christian conceptions. Even in such a Welsh legend as that of Nynnyaw and Peibaw transformed into oxen by God for their sins it is likely that the legend was a pagan one and that a pagan divinity was the

punisher of the culprits.⁵ In the euhemerized account of the relation of the Milesians to the Tuatha Dé Danann, i.e. of the pagan Irish Celts to their gods, the latter are said to have destroyed the corn and milk of the Milesians. To prevent this in future these made friends with Dagda, the chief of the Tuatha Dé Danann, and now their corn and milk were safe.⁶ This story appears to reflect the idea that corn and milk depend upon the gods, and may be withheld or destroyed by them because of man's misdoings. The compact with Dagda suggests the fresh covenants made with Jahweh by His worshippers in the OT after they have been punished by Him for their sins. The story of the yearly destruction by fire of the fort of Tara by Aillean mac Midhna of the Tuatha Dé Danann may be based on some idea of human guilt thus punished. Aillean made every one in the fort sleep through his fairy music and then set it on fire, until he was destroyed by Fionn.⁷

The gods punished the taking of things dedicated to them, or *talu*, and this may have been the subject of current stories known to classical writers. These speak of their own gods punishing the Celts for taking things devoted to them, perhaps applying to their divinity the anger of native Celtic gods.⁸ Such breach of tabu was also punished with torture by the ministers of justice.⁹ Trespass upon a sacred place was also obnoxious to the gods, and this is illustrated by several stories.

In one of these Kechnid, having committed a murder, was told by the god Oengus, in disguise, to remove from it. He disobeyed, and Oengus sent plague upon him, killing his cattle and horses, and threatening to slay his household if he would not go.¹⁰ This resembles the tale of the bursting of a sacred well and the waters overwhelming an impious trespasser. Riad, wife of Kechnid, went to the fairy well which her husband and his cup-bearers alone might visit, and, when she further showed her contempt for it, the waters overwhelmed her. They now flow as the River Boyne. Similarly Skene was destroyed for trespassing on Oenya's well, the purging waters now forming the river Shannon.¹¹

Myths of origins are here mingled with myths of punishment by the spirit or divinity of a sacred well, meted out to women to whom a sacred place was tabu. In other tales women who are the guardians or priestesses of sacred wells, and must keep them covered save when water is drawn, are similarly overwhelmed by the waters bursting forth when they fail to put the cover on, thus neglecting the ritual of the well.¹²

The breach of personal tabus, or *geasa*, is frequently described as punished by destruction or death. Heroes like Cúchulainn or Fionn broke the tabus which they had hitherto observed carefully, and this led to disastrous events culminating in death. These results are sometimes regarded as the inevitable operation of a kind of fate. The *geasa* are put upon one person by another, perhaps framed as an incantation or spell; he must obey; if not, disaster followed as it might do in the case of a curse. But the punishment, automatic though it might be, was also regarded as divine vengeance for wrong done to the gods, not always by the victim, but sometimes by his ancestors.

The best illustration of this is found in the long, tragic Irish story of *The Destruction of Da Derga's Hostel*,¹ in which the evil-doing (being of a fairy type who represent the older gods) avenges themselves upon Conaire for wrong done by his ancestor Eochaid to the god Míle. Conaire was told by Brigid, a divinity who can take the form of a bird, of the talism which he must observe. He became king, and at first all went well with him, and the land prospered. But the vengeance of the god began to work. Through late or circumstances which he could not resist Conaire broke one tabu after another, until at last he was defeated in battle and himself slain. The events leading up to the final vengeance are told with great detail and realism, and Conaire is clearly shown to be the innocent victim of a divine vengeance which he could not resist.

So also the story of *De Quera's Hostel* tells of the destruction of Conaire for breaking his oath.² Another curious story tells how Corribhann of Uraacht slew the god Dagda's son Aedh for seduction of his wife. Dagda punished him for this by making him carry the corpse on his back until he had found a name for the grave as long as Aedh's body.³

In Irish Celtic belief the fruitfulness and prosperity of the land depended largely upon the king's observing his gaesú; this also kept misfortune from him. But this was changed into the idea that the king's goodness or the reverse affected the fertility of the country. Probably there was not much difference between the two conceptions, though some of the gaesú detailed are of an arbitrary and, to us, unmeaning character. In any case some idea of obeying what were really divinely appointed rules seems to be implied, though perhaps the king, looked upon as a divinity, subject himself to rules, had been regarded as the source of fertility.⁴

How far the conception of retribution after death for wrongdoing was known to the pagan Celts is uncertain. Possibly towards may have been regarded as doomed to miss the joys of the after life, since the hope of these noble warriors faces death without a tremor. Some characteristics of hell in Irish Christian visions of the other world and in folk-belief may be derived from pagan belief—e.g., the sufferings of the wicked from cold.⁵ But they may equally be of Christian origin. As the idea of transmigration after death was not unknown to the Celts, the later folk-belief that souls of the wicked appear after death as ravens, crows, black dogs, and the like may be derived from some earlier pagan myth of retribution, though here again transmigration without retribution is quite as likely as not to have been believed in.⁶

The idea of sinlessness, i.e. innocence from particular sin or from sin in general, occurs now and then in the mythic tales, not apparently as a reflexion of Christian ideas.

When Bran on his voyage met the god Manannan mac Lir, the latter described to him the Elysian land, on which his comrades seemed to be smiling, and his people. They were immortal and sinless, unlike Adair's descendants, and they made love without crime.⁷ In another tale, cited below, the son of a sinless couple is revealed as a sacrifice, and he seems not to be the son of the inhabitants of such a divine land as Bran saw.

Other tales show that the gods could punish members of their own group for wrongdoing.

Aedh transformed his step-children into swans, in the pathetic story of *The Children of Lir*, and for this the god Dagh punished her by transforming her into a swan of ice.⁸ In another instance the god Manannan, having fallen in love with a mortal maiden, Tuag, sent a divine Druid, For Fíghil, to bring her to him. He brought her from her home and left her floundering on the shore while he sought a boat to carry her to Elysium. There a great sea wave sent by the god, or the god himself in that form, overwhelmed her, and For Fíghil

was afterwards slain by Manannan.⁹ The cause of offence is not stated, but doubtless it was that the Druid had forestalled Manannan in his love for Tuag. In another tale the goddess Becuna was banished from the gods' land because of her sin with Manannan's son. She came to earth and by spells induced Donn, king of Ireland, to marry to her widow and to banish his son. During the year that he remained in dalliance with her there was neither corn nor milk in Ireland—an example of the idea of a bad king causing disaster to his land (itself a divine punishment). His Druids told Donn that nothing could save the land but the sacrifice of the son of a sinless couple. This was the son of the queen of an Elysian region. She came to rescue him, bringing a cow, which was sacrificed in his stead, and she told Donn that he must renounce Becuna, else Ireland would still lose a third of its corn and milk.¹⁰

On the whole, the ideas which these stories reveal suggest branches of religious ritual and custom, and of customary law, passing over, however, into more ethical conceptions, while all through bringing the gods into relation with men as punishers of their wrongdoing.

REMARKS.—This is referred to in the footnotes. See also the chapter on 'Divine Unity and Plurality' in J. A. MacCulloch, *Celtic Mythology* (The Mythology of all Races, vol. II.), Boston, 1912. J. A. MACCULLOCH.

SIN (Chinese).—The knowledge of sin in China has developed in the course of her long religious history. The Chinese have always possessed 'a sense of sin and its consequences.'¹ Man is described by Chao Chi (2nd cent. A.D.) as differentiated from the brute creation by 'the knowledge of righteousness.'² Mankind is thus endowed with a moral sense.³ The emperor Tang (176 B.C.) said, 'The Great God has conferred on the common people a moral sense.'⁴ But man is prone to err.⁵

1. **Earliest ideas.**—In the early period of Chinese history, prior to 221 B.C., sin or crime was 'the disturbance of celestial routine,' 'the celestial order forming a human guide.'

'Offences against the gods or the spirits in a vague sense were often spoken of.' 'Sin was only conceivable in the case of an intrusion of nature's general plan.'⁶

Though sin was 'a moral and spiritual delinquency,'⁷ and transgressions would call down divine retribution, yet at the same time the idea of sin was vague, and the opinion has been expressed that it might be said to have no well-defined existence at all.⁸

Time and again tyrants and evil rulers have received condign punishment at the hands of those who, in accordance with the will of Heaven, overthrow their thrones and reconquer the country from their misrule. Their names, sins, and crimes are set forth in the Chinese classics and histories as terrible examples of the retribution which sin or crimes against high Heaven produce.⁹ The punishment for sin was a material one, meted out in this life. There was no hell or purgatory known to the early Chinese. There were some hazy ideas about a state of bliss where the good and even the bad went.

2. **Terms used.**—There are three principal words used for sin, *tsai*, *shu*, and *tsung*. *Shu* means evil, bad, vicious, etc.; *tsung*, to transgress, to go beyond what is right. Among the 'wealth of distinctive terms'¹⁰ for sin, evil, transgression in Chinese the nearest to the idea of sin is *tsai*, but it also means

debased, superstitious, and idolatrous; among its devotees evil and sin are constantly present, and the consequences of sin have to be guarded against in this world and the next. The idea of sin is the same in Taoism as in Confucianism to a considerable extent. But, while an approving conscience is what Confucianism aimed at, the Taoist desires virtue to be rewarded by material benefits, such as long life, wealth, health, official rank, and many descendants.¹ In the fundamental doctrine that 'every creature is good in its essence' Confucianism and Taoism are at one and opposed to Buddhism. While Confucianism has simply its plane of action in the present life, Taoism 'looks beyond this world' and aims at purifying 'the heart [and the body] by special methods.'

The influence of Buddhism on Taoism has been most marked, especially in its doctrine of future rewards and punishments for sins committed in this life.

'A hell, with many apartments for multifarious tortures, has been adopted . . . as also many means, derived from the same sources, for escape from the torments there. A system of merit and demerit and of retribution through spiritual agents in this life and hereafter was developed.'

Through Buddhism, Taoism has borrowed the Hindu ruler of the dead, King Yama, and he presides over the nine other judges in the hell mentioned above. This development in the ideas of a future state where sin was thus dealt with took place in the 11th cent. A.D. One Taoist notion also accepted by some Confucianists and indigenous in China is of a conditional immortality. The good souls, but only they, inherit heaven, a place of happiness.

Sin, thus practically unknown in Taoism's early days, has now a definite position in its later elaborated system of beliefs. This position is shown in the popular religious tracts and books in which Taoist beliefs are the *motifs*, though, of course, tempered in some by Buddhist ideas. At the same time the latter religion is responsible for the inception and development of many of the statements figuring as Taoist. This literature has a wide circulation, and many of the tracts are very popular. One of the most widely read and best known is *Actions and Recompenses*, probably written by an unknown author in the 10th century. One passage in it is as follows:

'Transgressions, great and small, are of several hundred kinds. He who wishes for long life must first succeed to strictly avoiding all these sins.'

Nor is the sinner left in doubt as to what his sins are, for categories of them are given in books of this sort. They are very full, as the following will show:

'Blasphemy, slandering and breaking images of the gods, multifarious to parents, oppression of the people, deception of the prince, lewdness of all sorts, careless scattering about of the five kinds of grain, slaughtering oxen and dogs for food, the use of false weights and measures, injuring others to benefit oneself, cheating of the good by the wicked, ill-treatment of the poor by the rich, aggravated forms of covetousness, crimes of violence, house-breaking, selling adulterated goods, cheating the simple in buying and selling, trampling injured paper money, deceiving the aged and duping the young, breaking of marriage contracts, striking and cursing grandparents, etc.'

It will thus be seen that relations between the gods and mankind, dutiful regard to parents, rightful and just intercourse between mankind, business relationships, and charity, as well as offences against the laws, are all thought of in this list of sins and crimes which would subvert family order and civil life. These and similar transgressions bring their retribution according to their heinousness, for life is shortened by twelve years for great ones, and one hundred days for small ones. A regular system of accounts is

adopted, and evil deeds and faults are entered to the debit of the keepers of these registers, and to their credit good actions are entered, a numerical value being assigned to each entry according to its position in the scale of virtue or evil. That this introspection, in some cases at all events, is most searching is shown by the following statement in one of these religious books:

'The most of what you do, what you say, the thoughts you think . . . are on the side of evil.'

The conflict between sin and the good in our own hearts is most strikingly stated in a philosophical work issued about the beginning of the 18th cent., and reminds one of St. Paul's reference to the subject in Ro 7th:

'When you have advanced sufficiently in knowledge of yourself, you will find it a grief. There will be, as it were, two men in your bosom. When you desire to do good, evil will come between. Again, when you wish to do wrong, a sense of shame will oppose you. Thus a battle goes on within you.'

Some of the gods even are not perfect or free from sin. The gemstone ruler of Taoism had a covetous heart, so one of his three sons had to become incarnate in 'the dusty, troublesome world.' Again, the Neptune of Taoism, the Sea Dragon, was disobedient, and his son was a drunkard, and the god of fire (originally a Buddhist god) committed theft. These stories are recounted in Taoist books published a few centuries ago.²

The Chinese, thanks largely to the moral teaching of Confucius, are remarkable, in comparison with many other non-Christian nations, for the purity of their religions. Yet the baser elements of human nature are to be found occasionally, so that not only are the everyday needs of life as well as riches, honours, health, prosperity, and offspring sought for from the gods, but there are a few deities worshipped by those who hope for help from them for the commission of sins and the carrying out of evil deeds. There is a small temple on the hill-side over the eastern portion of the city of Victoria, Hongkong, near some rocks which are believed, by the Chinese, to exert an evil influence on the morality of the city.³ The goddess of this temple is the patroness of prostitution.⁴ The present writer found on inquiry that the powder rubbed on the face of the image was supposed to make the worshippers who earned their living by that vice fair and attractive. There are also gods of gamblers,⁵ and of thieves,⁶ gods of revenge⁷ and of cruelty.⁸ The drunkards even take as their patron saint Li Tai-ph, an anacreontic poet of former times.⁹ Some men of former times who have been renowned for their evil deeds have been even deified and worshipped owing to an idea that it is well to propitiate them for fear of what they may be able to do to the living.¹⁰ The tendency is, however, more to canonize the good.

6. Present-day popular beliefs.—The resultant of all the preceding influences is that, with his eclectic attitude towards all these elements of belief, the average Chinese has evolved a blend or amalgam of the whole as regards the religious side of his life—his ideas of sin and forgiveness of sin and all else connected with his spiritual life.

SIN (Christian).—This article in large measure presupposes what has been written in the artt. **FALL** and **ORIGINAL SIN**. It confines itself to a discussion of the Christian view or doctrine of sin as a state or power actually present in the developed moral consciousness of man. Since a modern interpretation must rest on the history of thought, our first task is to study the teaching of the NT and of great Christian minds.

1. **The New Testament.**—(a) Jewish literature of the 1st cent. A.C. and A.D. takes a sombre view of man. Constant allusion is made to the all but universal corruption, and, as man's relation to God is construed in essentially legal terms, the prevailing temper is fear of utter condemnation. Though sin may be inherited, moral freedom is intact, and man can choose whether he will or will not live righteously. The heart, not the flesh, is the seat of the inborn evil impulse (*pezer levi*); but at least the flesh makes sin intelligible, and, as Holtmann puts it, 'there is no clear agreement whether the flesh represents a power ethically indifferent or one that somehow leads to sin.'¹ At the same time exceptional cases of sinless life are known: Each sin is an individual act, which can be weighed and numbered. Much responsibility for sin belongs to evil spirits which tempt men even to apostasy from God. But isolated offences can easily be expiated by penitence. Thus the Rabbinic mind swings between despair and pride. 'Far better were it for us,' says 4 Ezra, 'that we had not to face judgment after death' (7²²); on the other hand, the busy acquirer of merit thanked God that he was not like the rest of men (Lk 18¹¹). Sin is never put in relation to the love of God. Even by John the Baptist it is viewed solely as contumacy or rebellion. God is auditor, judge, king; man is debtor, culprit, subject.

(b) Jesus has no doctrine of sin in general; it was not abstract considerations creating an intellectual problem that He fastened on, but concrete sins. He does not speak of the Fall. But sin is a terrible fact, which is always committed against God, not merely against fellow-men (Lk 15²⁶), and the sinner is guilty. It has been said that Jesus dispersed the old morbid consciousness of sin like mist before the sun, but, if this means that He took it lightly, it is untrue. He does speak freely of good men and bad, and in the Beatitudes He implies the existence of those whom they describe. But He does not regard 'sinners' as merely one class of men among others; 'the righteous' are named so ironically. 'If ye then, being evil' (Mt 7¹⁸), is one of His most arresting phrases; Peter is rebuked as 'Satan' for attempting to hold Him back from the Cross and told that he thinks like men; 'no one is good' (18¹⁸). He replies to one questioner: 'Men must look like that to One who bids them love God with their whole heart and strength' (22²⁷). The call to repent, with which Jesus' ministry opens, assumes that all have sinned, and more than once this call is repeated. All must be merciful, for all need pardon, and all will perish unless they show a change of mind. It is the man who cries 'God, be merciful to me a sinner' who is justified (Lk 18¹³). The preaching of Jesus begins with individual acts of sin, but in addition He points to the corrupt heart which underlies them, for it is out of man's inner life that everything capable of defiling proceeds. Unless the heart is single, all is wrong. The sources of actual sin are this evil heart, stumbling-blocks put in the way by others (Mt 18⁷), and the temptation of the devil (13²⁶)—all of them influences which man can perceive and oppose. But no necessary determination to sin is

even glanced at. The kinds of sin against which Jesus specially warns men² are unkindness, which will come up at the Last Judgment (Mt 25); the passions of anger and lust, the impure look and desire being equally wrong with the impure act (Mt 5²⁸); self-deception and unreality of thought ('Thou blind Pharisee,' 23²³); and moral indecision (Lk 9⁴⁷). Sin develops; the inner treasure of the heart becomes evil (Mt 12³⁴); and men, growing worse and worse, come to resemble a bad tree bearing fruit after its kind. God punishes sin, but far greater is the truth that men can repent and that all sins can be forgiven except that which connotes final hardening and therefore entangles men in guilt for ever (Mk 3²⁹). It is when He is speaking of forgiveness that we can perceive how much sin means to Jesus. Guilt in His eyes is the heaviest of all loads, as is clear from the episode of the paralytic (Mk 2); men need pardon constantly (Mt 6¹⁴); and in God's sight even disciples are laden with an overwhelming debt calling for the sheer mercy of the Father (18²⁷).

(c) St. Paul, unlike Jesus, offers the data for a doctrine of sin in the sense that sin (oftenest used in the singular) is generalized from a profound interest in its nature and significance as a whole. Broadly it means what is opposed to the law of God—His will expressed in commandments—and through law man becomes fully aware of it (Ro 2¹³ 7). But law too can be generalized; it is present not merely in the Law of Moses, though its embodiment there rose most naturally in the apostle's mind, but in man's heart everywhere. All are under law; all have violated law; hence all are under sin. The sin manifested in individual acts is a power, a universal condition or tendency of human life, a principle confronting men which St. Paul virtually personifies, though it does not possess objective existence for him as 'a power in *rerum natura* but not in this or that will.' The personification is half poetic, just as in the case of death, law, or flesh. But the meaning is a terrible reality; there is a system of sin, to which all are hopelessly enslaved, their only wages death. Except for the counter-activity of the Spirit of God or Christ, human life is sinful through and through. The manifestations of this principle are variously named—transgression, unrighteousness, lawlessness, disobedience, etc.

St. Paul proves the universality of sin by several considerations; by inspection of the life of Jews and Gentiles (Ro 2 and 1); by citation of the OT (Ro 3); by deduction from the universality of death, its penalty; by regressive inference from Christ's atoning death, which implies a universal need; finally by what is to all intents and purposes a metaphysical argument about the compelling power of the flesh. This universality he does not hesitate to call a divine ordinance. The law was intended to multiply transgressions by provoking the natural antipathy of the flesh (Gal 3¹⁹), and thus to lead sinners to despair of attaining righteousness otherwise than through Christ and faith.

The original element in St. Paul's teaching does not lie in what he says regarding the various types of sin, or its moral character, or its effect on man's relation to God, who regards upon it in the doom of death. He seldom touches the connexion of sin with Satan or demonic powers, though we must not forget phrases like 2 Co 4⁴: 'The god of this world has blinded the minds of unbelievers.' His originality is contrast to Rabbinic thought lies in his explanation of the necessity of sin. To many scholars he seems to offer two unrecconciled theories. First, the necessity is due to Adam's fall—a familiar Judaistic conception made impressive by its insistence on the unity of the race

¹ *Neoschol. Philosophia*, I, 27.

² T. R. Glover, *The Jesus of History*, London, 1917, ch. vii.

for which Adam stood (Ro 5¹²). But for St. Paul this scarcely had the importance which it came to possess for historic theology; he really glances at it by way of illustrating the solidarity of believing men with Christ. 'Sin entered the world by one man' (5¹²) may mean that Adam created for posterity the conditions of sinning, or it may only mean that Adam's was the first sin of history. St. Paul may have conceived of him as but the first instance of the sin inherent in man's fleshly nature, which brings up the second theory. This is that the flesh is radically antagonistic to God: as has been said, it represents for St. Paul 'the virulence and constitutional character as well as the omnipresence of sin.' The will of the flesh and the will of man are one thing, the tie between the two being so close that there occurs in Ro 8⁷ the phrase 'flesh of sin.' It is because he is in the flesh that man does sin and can do no other. This is not a Jewish conception; according to the OT and Judaism, the flesh, so far from being the point of departure, rather by its frailty extenuates the sinner's guilt, and in any case entails no hopeless compulsion to evil. Nor is the theory traceable to the dualistic psychology of Hellenism, in which matter is opposed to mind—a view far too intellectual for the moral passion and despair of St. Paul. He does not equate sin and evil matter, or sin and sensuality, for there are spiritual sins, and he never forgets that God has created the flesh and can make it the abode of Spirit. A careful linguistic inquiry has led E. D. Burton to the following result:

'Neither the writings of contemporary usage nor that of the New Testament itself warrants us in finding in Paul . . . the notion that the flesh is by reason of its materiality a force that makes for evil, or that a corporeal being is by reason of that fact a sinful being.'¹²

We must then believe that to St. Paul the flesh is a power productive of sin not because it is sin, but because sin, rested in the flesh as an alien power, utilizes it as organ and instrument. Till Christ came, the empirically sinful fleshly principle ruled; ever since, the counteractive Spirit has been victoriously on the ground. For the man who lacks the Spirit and lives on the soil of law the flesh must always be the gateway through which sin, in the shape of lust, invades experience, but this inevitable revolt against God leaves responsibility undiminished. Man's state is revealed to him by conscience, not to furnish him with an excuse, but to prove that no way to righteousness is open except God's.

(d) The doctrine of sin in the Johannine writings has been described as accidental or even almost wholly absent. For the writer of the Fourth Gospel, it is held, sin is a mere privation, which in itself involves no moral culpability; it is 'the natural incapacity of man to possess himself of the higher life.' It is true that we cannot identify the Johannine teaching with the Pauline. The former allows more for degrees of sin (10²¹). Sin is indeed universal, but some men are, as it were, naturally of the truth (18²⁰) or of God (5²⁰). At the other extreme is unbelieving Judaism; in fact the sin in which the writer of the Gospel, from his historical and apologetic purpose, is chiefly interested, and upon which he generalizes, is disabled in Christ with its inevitable judgment. It is on this ground that the Spirit convicts of sin (10⁷). Those who sin purely out of blindness may come to faith if they are given sight, but the bulk of men have this condemnation resting on them that they preferred darkness to the Light now present in the world (3¹⁹), and this because light, by exposing evil acts, incurs the hatred of all whose practices are corrupt. Their blindness

is guilty. Such unbelievers are children of the devil, that murderer and liar from the first, in whose power the whole world lies (1 Jn 5¹⁹); they have learned of their father and do his will. Not that Christians are sinless, though in principle they have broken with moral evil (3⁷); on the contrary, they need pardon constantly (1⁹), and are in danger of self-deceit and lovelessness; nay, such deadly sin is possible as may not bear being prayed for (5¹⁴). This last almost certainly means apostasy from the faith. Obstinate unbelieving mankind make up 'the world'—a hostile system confronting God and His people which is unchangeable in origin and quality, though no effort is made to explain how it arose in a universe created by God. This world hates Christ because He does not belong to it (1 Jn 15¹⁸); as indeed it hates God, whom it has not known (15²¹). Sensuality and pride are characteristic of it (1 Jn 2¹⁶). This opposition of faith and worldly unbelief is primarily one of experience, but it hardens into something like a static or timeless and irreconcilable antagonism: the world cannot receive the Spirit (1 Jn 14¹⁷), and its nature is identical with the devil. Yet, on the whole, the Fourth Gospel leaves us faced by an antinomy; on the one hand, Jesus will not pray for the world (17⁹), on the other, the prospect of its being brought to faith in Christ's mission is left open (17²¹). Such a sentence as the last, or the great prophecy that Christ will draw all men to Himself (12³²), could hardly have been written by one whose mind finally rested in a metaphysical or gnostic dualism.

2. History of doctrine.—Church teaching about sin is much less concerned than Scripture is with the meaning of sin in experience and under the light of Christ. Roughly, two-thirds of its interest has been given to original sin—i.e. the sin of Adam in its consequences for the spiritual condition and fate of mankind, this first sin having as its foil an alleged state of original righteousness on which Scripture has little to say. Yet what most troubles the Christian conscience is neither sin committed by the first human pair nor the sin with which we are born, but the actual sinfulness of our acts and persons. Abstracting so far as possible from original sin, we shall seek to indicate the main trend of thought in the Church with regard to sin as found in normal adult experience:

(a) Among the more important questions unanswered in the 2nd cent. were the persistence of sin in the Christian life, and the rigoristic demand that lapse into grave sin should be viewed as involving the loss of salvation—a demand eventually rejected by the great Church even in face of Tertullian's unwillingness to readmit those who had been guilty of mortal sins (fornication, idolatry, murder). East and West conceived of sin differently, though at first both held that moral evil springs out of freedom, and that freedom cannot be lost. To the Greek mind not guilt but sensuality and decay were the essential features of the misery entailed by Adam's fall. The idea of original sin was largely foreign to the East as late as the 5th century. Not even the universality of sin was a fixed point, though Origen affirmed it speculatively; Athanasius distinctly says that there were many sinless lives before and after Christ. It was universally held that baptism remits all previous sin, but the terms on which later sins were pardoned caused much difficulty.

(b) The greatest of all controversies over sin is that between Augustine and Pelagius. In opposition to the Manicheans, Augustine insisted on the voluntary nature of sin, which is not a natural (i.e. automatic) but a moral fact. An act is not sin at all if it be not voluntary. But he was the first Church teacher to declare that none the less

¹² J. J. Dooney, in *Exp.* 6th ser., ix. (1901) 220.
¹³ *JThSt.* ix. (1900) 402.

it is due to a pitiful necessity. Man, cut off from God the source of all good, is impotent to do good actions. As a psychological indeterminist Augustine conceded that man may freely prefer a less evil to a greater; as a theological necessitarian he denied that without grace any right act is possible. It is sheer frivolity to talk, as Pelagius did, of pure freedom of choice as man's inalienable prerogative; the sinner's will is in the last resort the will of a slave. Not merely particular acts, but the nature, disposition, and affections of man are sinful and guilty throughout, incapable of any good. No terms can be made with Pelagius's doctrine that sin consists of individual actions only and leaves the will and nature unaffected, or that children are born sinless, or that the universality of sin (if a fact) is due to bad example or defective education, or that divine grace is requisite only in the form of instruction and the example of Christ. All this was gathered up in Augustine's religiously profound and logically rigorous doctrine of original sin together with its implications.

Sin he defines as *spontaneous defectus a bono*,¹ but (apparently in answer to the Manichean doctrine, which made sin a substance) he describes it further as merely negative in the sense that it is a *privatio boni*. Good is being, evil is not something positive but a loss or lack of being, which needs no efficient but only a deficient cause. This privative conception of sin, never really accepted by the Church, was probably meant by Augustine to guard against the mistake of viewing sin as essential to human nature and *eo ipso* created by God. God, like one who strikes an untuned harp, is the cause of man's activity, but not of its discord with the law of righteousness. Sin at bottom is pride, while the form which the perverted will takes in every human being is *concupiscentia* or lust. Any sin is 'mortal' in which the will turns away from God. Men are born not merely sinful but guilty, subject to God's wrath, and meriting eternal damnation. The thought of inherited guilt is no longer convincing, and must tend to evacuate guilt of its proper sense, but the religious power of Augustine's teaching as to the solidarity of mankind in sin will always make its own impression. The Church settled thereafter for centuries in a semi-Pelagianism, or, from another point of view, a semi-Augustinianism, which left the sinner with a capacity to assent to grace.

(c) In the following centuries also the emphasis moved by degrees from act to disposition, and mortal sin became equivalent to love of the creature instead of God. In the 9th cent., while venial sins were atoned for by a paternoster, mortal sins were changed to venial by the satisfactions of penance. Anselm made an advance of great moment by bringing out indisputably the guilt of sin, previously obscured by a tendency to construe sin as a defect and in large measure to overlook its personal relation to God; and yet even Anselm's view of guilt leans to the negative side. It is our failure to perform a duty, and the full spiritual relationship of the sinner to God is not made clear; a deficient thought of God so far concealed the full blameworthiness of sin. The older idea of sin as formally a *carencia*, or lack, persists in scholastic theology; it is what we have lost in comparison with Adam; materially it is *concupiscentia*, though, according to Duns Scotus, this, as but the *fomes peccati*, is not itself sin.

(d) The Reformers strove most of all to accentuate the religious and personal character of sin as interpreted by the light of revelation. As for content, sin is want of faith, the failure to fear

and love and trust God. Luther never tires of saying that mistrust of God is the gravest manifestation of our corrupt nature. He marked his opposition to the externalized doctrine of scholasticism by thus identifying sin with the 'faithless heart.' Thus the personal significance of sin was forced in upon conscience, despite the fact that in most ways the Augustinian tradition, which made original sin primary, still persisted. How inherited guilt can be reconciled with the new sense of moral responsibility is left dark; Zwingli alone protests that we cannot speak of sin (which for him embraces guilt) except when the individual will has appropriated the corrupt heritage. In the Protestant scholasticism of the 17th cent. much is said of the consequences of sin, viz. guilt (*reatus culpe*) and punishability (*reatus poenae*). The penalty is death in the most comprehensive sense: (1) *more spiritualis*, or the loss of the divine image; (2) *saeva corporalis*, including sickness and outward evils as well as actual dissolution; (3) *more aeterna*, or exclusion from everlasting life with God.

The preoccupation of orthodoxy with Adam's transgression and its fruits led to undue neglect of the social power of sin. Modern thought, instead of linking our inborn evil constitution to our first parents, speaks rather of a sinful race or community in whose evil we share, and insists that in this field the idea of inheritance means that we infect those who come after as well as receive infection from our ancestors. Not only so; it is rightly held that sin spreads in other ways than by heredity, viz. through bad training, unworthy example, and tempting provocations. We must advance to the conception of the whole complex sin of humanity, in which inherited sin is only an element. The traditional idea of total depravity, while no doubt indicative of the fact that no part of our nature is unstained and that we cannot of ourselves do what is in the highest sense good, is nevertheless unscriptural and untrue to life if taken to mean that non-Christians are 'utterly indisposed, disabled, and made opposite to all good, and wholly inclined to all evil.'²

(e) Socinian and Arminian criticism of a tradition so deeply influenced by Augustine bears chiefly on original sin, but from the Socinian definition of the essence of sin as voluntary transgression of the law it is clear that sin as such is for the Socinians a narrower idea than for orthodoxy. The later supranaturalists held that sin is imputable only when free will has failed to fight and overcome the difficulties of a nature disordered by sensuous impulses. At a wider remove from orthodoxy, 18th cent. Rationalism taught that man is characterized by a certain weakness of the will to good and a certain disposition to evil, while at the same time, though in consequence of his finitude only by degrees, he is perfectible, i.e. can develop the feeble inborn germ of good and rise above the tyranny of desire into true liberty of spirit. The interest and importance of Kant in this field largely rest on his efforts to supply what may be called a philosophic analogue to the Church doctrine of original sin—that radical evil in man as man the timeless origin of which is symbolized by the Biblical story of the Fall. But this we must pass over. Schelling gives his own philosophic form to the antinomies of tradition, holding that, in spite of a universal necessity rooted in the dark bases of God, evil is man's choice, and every creature falls by its own guilt. To Hegel the Adamitic fall is a mythic representation of an eternally necessary process; for man, good by nature (i.e. ideally spirit or rationality), must, in order to realize the life of

¹ A fuller definition is this (*de duob. libris*): 'Peccatum est voluntas relictendi vel consequendi quod iustitia vetat, et unde liberum est abstinere.'

² Westminster Confession, vi. 2.

spirit, pass by a dialectically inevitable movement from innocence to sin and from sin to virtue. The transition from innocence to sin is due to the necessity of transcending mere nature, which, *qua* absence of will, is bad; the transition from sin to virtue is mediated by retribution and amendment. This, as McTaggart points out,¹ means that sin is not only a necessary concomitant of virtue, but a necessary element in it. Sin must lead to virtue, and there is no virtue which is not based on sin. But it will naturally be asked whether this point of view is not more metaphysical than moral, and wrong even so; whether it can be taken seriously in moments of self-scrutiny and penitence; whether, provided the actual evil of life is part of its perfection, to replace vice by virtue is not simply a blunder; and whether the conception of goodness as rooted in badness has any relevance to Jesus, His personal holiness, and His revelation of the Father against whom all sin is done.

Modern theologians have determined the concept of sin variously, yet with an all but unanimous rejection of Pelagian tenets. Schleiermacher, reporting, as he held, on the Christian consciousness, defined sin as the positive struggle of the flesh against the spirit. Man's sensuous development gets ahead of his spiritual development, and, this being God's ordinance, we can avoid making Him the author of sin only by concluding that the consciousness of guilt, which we trace to sin but God does not, has been given us to stimulate the desire of redemption. Schleiermacher vacillates between the view that sin is non-existent for God and that it is caused by Him; he grounds it in human nature and finds this an enhancement of its gravity, yet he is tempted to explain it as a necessary outcome of our sensuous nature. Sin, he declares, is a social fact, being 'in each the work of all, and in all the work of each.' In contrast to this conception of sin as sensuality may be placed the view, notably exemplified in Julius Müller, that it is selfishness, though in Müller's case this was supported by a curious speculation, reminiscent of Origen and Kant, according to which finite selves have not so much pre-temporally as timelessly and primordially torn themselves loose from God and made self the principle of life. This theory of sin as being in principle selfishness has had great vogue, not in conservative quarters only. Ritschl too subscribed to it, but is chiefly meritorious for his insistence on the religious character of sin. Its real nature, range, and evil are only revealed fully by the Gospel; religiously it is the lack of reverence and trust towards God, while in a moral aspect it is antagonism to His Kingdom. His contention that all forgivable sin is in God's eye sin of ignorance has been severely criticized as abolishing guilt, though Ritschl's own main charge against original sin is that such sin could not be reckoned guilty. But it has been rightly felt that, as sin is not *all* ignorance, Ritschl's formula is misleading, and gives encouragement to the notion that deliberate open-eyed transgression is too great for God to pardon. Another of his valuable ideas is that of a 'kingdom of sin,' which is not in the least a futile effort to account for sin by the universality of sin, but a clear indication of the fact that the wrongly used freedom of the individual is relative to an environment—co-extensive in the last resort with human life—in which sin already prevails.

The most important English discussion of sin in recent years is that of F. R. Tennant,² who argues that we ought to substitute a plurality of concepts, developmental not static, for the rigid idea of sin with which theology has usually operated.

Sin is one thing, imperfection another; and imperfection is sin only when at the same time it is volitional. 'Man is conscious before he is self-conscious, impulsively appetitive before he is volitional, and volitional before he is moral,' so that natural and organic propensities provide the raw material out of which the will constructs sin. Sin and guilt are correlative and co-extensive. Penetrating and illuminative as Tennant's work is, it may be doubted whether his 'logically perfect' concept of sin will be approved by those who hold with St. Paul and Augustine, not to speak of numerous modern students of society, that men are ethically as well as physically involved in the unity of the race, and that we desert experience if we ignore either aspect of sin, the voluntary or the constitutional.

3. The doctrinal interpretation of sin.—Certain points, such as the universality of sin, have been sufficiently treated of above, but we may now consider from a theoretic point of view some larger topics which have been referred to only incidentally.

(a) Sin may be defined as indifference or opposition to the will of God, the refusal of faith and love. And, if the will of God be fully revealed in Jesus, it follows that the Christian estimate of sin is a new and creative one. For it declares that sin is what it is in virtue of its relation to holy love. Elsewhere sin is folly, ugliness, or sickness, not mistrust or rebellion against a love measured by the Cross. The difference is not superficial, but radical, inasmuch as it results from a new thought of God. Sin, then, is the explicit or implicit claim to live independently of God, to put something else, be it the world or self, in His place. In a moral aspect this fundamental godlessness or God-forgetfulness appears as selfishness and sensuality.

At bottom sin is a religious idea, which for that reason cannot be properly defined otherwise than by putting it expressly in relation to God. In a formal point of view the same consideration disqualifies the proposal to define it as selfishness. All selfishness is of course sin, but neither logic nor (the present writer would hold) experience justifies us in converting this proposition *simpliciter*. It is indeed very questionable whether some sins are not quite disinterested, involving no pursuit of egoistic ends at the cost of others. Thus the family affection which produces the family vendetta, or suicide committed to save the reputation of a friend, or the most odious forms of religious persecution are not obviously selfish and may actually demand true loyalty and unlimited self-sacrifice.

To define sin as sensuality is even more inaccurate. Many of the worst sins—hate, cruelty, lying, irreverence—have no close connexion with the senses; they run their course within the mind. It is of course recognized by those who prefer this definition that deliberate surrender to the force of bodily craving is not *per se* sinful; no man sins merely by taking food to satisfy hunger or by going to sleep; sensuality is the wrong gratification of bodily impulse, in contravention of higher demands. At the same time, to identify sin with sensuality, to make the two an equation, is more or less to extenuate its badness by deducing it from the natural conditions of human life. An illegitimate interpretation of the theory of evolution has probably rendered this view of sin more popular to-day than ever. Sin, it is held, is just the brute inheritance; we move upwards by working out the beast. But every biologist who thinks clearly will grant the necessity of distinguishing two things that differ—the enlargement of faculty

¹ *Studies in Hegelian Cosmology*, Cambridge, 1896, p. 131 ff.

² See his *Origins and Propagation of Sin* and *Concept of Sin*.

³ *Concept of Sin*, p. 122.

whereby man becomes more than an animal, and the voluntary commission of evil known to be such. But it is the first, not the second, that constitutes a rise in the scale of being. In other words, the willed commission of sin is an anti-evolutionary fact. Sin and the consequent disorder cannot be exhibited as the consistent prolongation of natural processes of development or as progressive adaptation to environment. As well might we call poverty a result of good trade, or error an example of compliance with the rules of logic. Doctrines of human development can in some real degree construct for us the probable situation—whether of race or of individual—in which sin is first committed; they can do nothing to explain its actual emergence or its religious or moral meaning once it has emerged. The argument of a few evolutionary writers, on quasi-Hegelian lines, that experience of moral evil is necessary to prepare men to appreciate good may sound imposing as a generalization, but breaks down completely when applied to definite persons and definite sins.

Men become aware of sin, first of all, as an episode, a definite evil act in which a higher will is thrust aside. As it has been put, 'It is a sin of which man accuses himself—a disobedience which he can isolate in his life, regarding it as a blot, a stain, an exceptional phenomenon to be dealt with by itself.'¹ But behind this is next discovered a motive or disposition which gives the act meaning; and out of which the act rises; and, by His condemnation of the murderous thought and lustful desire, Jesus made an end of the conventional idea that the sinner is merely one who commits so many wrong acts. Still deeper reflection points to a permanent character or state of personal life affording unity and basis to varied acts and dispositions or attitudes. The latest of all heresies is Pelagianism; if life is built on atomic lines, nothing like religion or morality is thinkable. No spiritual significance can be predicated of an act if it is a bare, accidental, unrelated point; but only if it carries with it a theory of its own origin in a certain articulated character from which it springs and on which it reacts. Nor is it true to say that this is but to use a collective name for the sum of our particular sins. Character is more than its past manifestations; in scholastic phrase, *peccatum actuale* does go back and down to *peccatum habituale*. Finally it is realized that the sinful individual life is part of a wider context of vitiated social life. The sins and sinfulness of a man require for full valuation this reference to the sin of the whole race.

(A) Christian theology must operate with an idea of guilt which is drawn from fully conscious moral experience. The idea is not confined to individual experience, but individual experience supplies our point of departure. Guilt is personal accountability and blameworthiness attaching either to a voluntary infringement of the will of God, in so far as that will is known to us or might have been known except for previous sin, or to a condition of personal life directly or indirectly consequent on such infringements. In strictness guilt is predicable not of acts, but of persons. No act, *qua* occurrence in space and time, is in itself wrong; ultimately moral quality belongs solely to the agent and his motives. Not only so, but acts pass, while persons remain somehow identical with their own past.

In this field we must first distinguish between guilt and sin in the sense of imperfection or badness. A young child may have acquired habits of lying or dishonesty through evil training in years prior to the normal awakening of full moral consciousness; in so far it is bad or imperfect, and

¹ J. Denney, *Studies in Theology*, London, 1904, p. 80.

it would be paradoxical to describe the child as without sin, for sin is whatever contradicts God's revealed will for human life. But the child's guilt may be small.¹ There can be no sin without guilt, but in such a case by far the greater portion of guilt attaches to others. In other words, guilt does not vary directly with sinfulness, except when we contemplate the race as a whole; collective human guilt is co-extensive and co-terminous with collective human sin. When the distinction just insisted on is wholly overlooked, guilt loses meaning and gravity; though it is undeniable that the religious mind does retrospectively predicate 'unworthiness' or the quality of being unpleasing to God of acts or states which at the time, from lack of enlightenment, could not have been other than they were. A second needful distinction is that between guilt as a feeling and as a fact. The consciousness of guilt cannot be taken as an exact or trustworthy index of actual guiltiness, for many wicked men have no bad conscience to speak of, and the worst and most hardened of men, feeling his guilt the least, and hardly conscious of the reproach of God or of his personal ill-desert, might otherwise be reckoned the least guilty. Our sense of guilt ought to be proportioned to our guiltiness; we cannot assert that in fact it is so.

To be guilty, a man must have moral knowledge or appreciation of right and wrong as they concern his action; where this pre-condition is lacking, as in imbecile or infant, guilt cannot be. But the knowledge in question need not be in the present consciousness of the sinner, for we should not cease to call a man guilty whose moral perceptions had been darkened by persistent wrong-doing. Further, guilt presupposes power in the moral agent to have acted otherwise. The sin must have been avoidable. If the liar had no option but to lie, because the constitution of things forced the lie from his lips, self-reproach is out of place. In all probability the modern habit of rightly bringing action into the closest possible connexion with character tends to obscure this real avoidability of guilty sin. How, it is asked, can we be responsible for what is the necessary outcome of character? Conscience imputes guilt to me on the ground that my character, being bad, inevitably expressed itself in just this way. But this appears to be out of harmony with the utterances of the moral consciousness. What I feel in moments of penitence is not that I am bad because I could act only in this sinful fashion, but that the badness of my disposition is revealed by the fact that I could do, and did, this evil thing. My sin is not an inevitable manifestation of me, but it is an actual manifestation of those elements in me which I ought have suppressed and did not. No form of determinism can consistently assign to guilt the significance it has for specifically Christian thought. Whether it be physical determinism, as in Lucretius, which makes the soul one kind of mechanical force working along with and in the midst of other forces of the same kind; or psychical determinism, as in Mill, for whom the self forms an organic mental unity, reacting according to law, like other organic unities, on the stimuli of the environment; or idealistic determinism, as it may be called, which ascribes to the self, besides this vital reaction, the logical capacity to co-ordinate and combine the motives present in consciousness—in every case the *qui generis* quality of personal action is lost sight of. Choice is confused with what is not choice at all—be it a physical event or a judgment of the understanding—whereas in fact it is the experience in which,

¹ And in principle this is the case of all; there is no young life which sinful infection has not touched long before the attainment of true moral personality.

by distribution of attention, we take up a selective attitude to the moral alternatives before us. We will take this attitude when we sin; it is not taken for us by any interior psychological clockwork. Moral freedom is expressed in the valuation of motives, and in the last issue guilt is a word with only legal but no ethical sense unless the will produces actions without being itself produced. This is not to say that freedom is unconditioned. On the contrary, as it has been put, in all life there is involved a 'synthesis of two moments which it is wrong to take as real in themselves, the moment of necessity or acceptance of the situation and the moment of freedom or free action in the situation.'¹ Freedom, that is, is the correlative of data provided in part by our temperament and circumstances, in part by our previous moral history. We are candidates for freedom rather than completely free, but moral liberty in some real though varying measure is an essential presupposition of that culpable responsibility to God which religion names guilt. That, in spite of this real liberty, man sin so habitually is due to the accumulated power of evil impulses which they have nourished or failed to eradicate and to the incessant pressure of sin-charged social forces.

(c) The genesis of sin within the individual life is a problem so intricate that we must bear well in mind that no conclusion or lack of conclusion regarding the origin of sin can in the least affect our actual consciousness of its nature. Sin is on the ground, but we cannot watch it rising out of hypothetical antecedent conditions. Yet if, as we have seen, it is our own moral act, or a moral condition of our being which apart from our moral act would have no existence, the origin of sin must lie in the abuse of freedom. As it has been expressed, 'In the secret places of the human spirit takes place that strange change by which the non-moral is transformed into the immoral. We face here a mystery which we cannot explain, yet may not deny.'² Such abuse of freedom, however, does not occur *ex causa*. The spontaneity of consciousness is a spontaneity of response to given factors in the world of presentation. What those factors are in this case may in part be understood if we recollect that our moral life has roots in animal nature, and is at first unformed—the process of our becoming being suffused from the very outset with a naive system operating in the midst of a chaotic strife between higher and lower impulses, a strife inseparable from each life's growth.³ This confused mass of impulses, shot through by incipient movements of self-creation, is played upon by tainted social influences. These are the occasions and provocations of sin, but when we ask how they are translated into actually the only answer is, 'By free choice.' This will seem inadequate only to minds obsessed by the idea of mechanical causation, which explains every phenomenon by some other. The will is not caused. Yet to refer moral evil to the free activity of will is less an explanation in the proper sense (all true explanation being teleological) than an implicit admission that sin is radically unintelligible—the one thing in the universe rightly to be called 'irrational,' as not merely an irreducible fact but the negation of all rationality. But, if freedom is an ultimate, we can see that the pre-condition of disobedience is also the pre-condition of obedience and of redemption. If God is love, it was necessary that sin should be possible.

(d) Nothing in sin can be so important for the Christian mind as its relation to God. He naturally is not the author of sin, in the sense either that it forms for Him a personal experience or that His will is equally fulfilled through human sin and human obedience. Otherwise we should need to be redeemed not by Him, but from Him. When sin, however, has once become real, like other real things it falls under the sweep of divine power and is made to serve the purpose of holy love. Thus it is permitted to expose itself in all its villainy and misery, pre-eminently at the Cross, this progressive self-revelation of evil being accompanied and more than impeded by a parallel disclosure of good. Again, sin is condemned by the divine holiness; on this subject the believing mind attains a certitude which admits of no dispute, including the insight that what religion calls the wrath of God—i.e. the reaction of His holiness against sin—is, in face of sin, a necessary aspect of love. This reaction takes shape in punishment: to ask whether God must punish sin is otiose, in view of the fact that He invariably does so. True, the old distinction of natural and positive divine penalties is unreal. Natural penalties, it was held, flow from sin by ordinary causation, habitual intemperance, e.g., leading to disease; positive penalties by their striking and unusual character compel the sufferer or onlookers to ascribe them to divine agency. But all divine penalties are positive in the sense that God's will imposes them, and the fact that their incidence may be mediated by ordinary finite causes does not alter this in the least. Sin's proper punishment lies, as it were, within sin itself. It consists in the self-stultification of the evil will (for, in McTaggart's vivid phrase, sin is like drinking sea-water to quench thirst), in the persistence of evil desire, in weakness of character, in the sense of guilt, above all and decisively in estrangement from God. And, if to lose communion with God be sin's worst penalty, it is no paradox to say that no one is punished for sin as the Christian is. The social consequences of sin, like loveliness and disposure, are directly proportioned to the moral evil prevailing in society as a whole. But we cannot fix a proportion between sin and suffering for the individual life (Jn 9). Sin always brings pain, but the pain, as the experience of Jews proves, may strike the most innocent of all. Not only so, but to the reconciled heart external evil, instead of being annihilating judgment, may be fatherly chastisement which opens the way for a fuller revelation of divine love and thereby for the blessing of others. To the experience of death, which literature in every age proves to have been felt as the greatest of all ills, sin imparts a new penal character, which in some solemnizing measure it may retain even for the Christian, despite his recognition of it as appointed by the Father's love.

Closer to the heart of faith lie the great divine counteractives to sin, of which life and history are full. All ethical institutions which minister to community in the largest sense, such as the family, law, and the State, are here to be reckoned in; still more the emergence of great prophetic souls, deepening and refining the moral insight of the race. Above all, Jesus Christ has been here, and in the light of His person the drift of divine redeeming activity has become apprehensible by faith. His sin-conquering power is still made ours in the Holy Spirit, ever available in prayer and energizing divinely in the will of the believer, so enabling him to overcome sin and transform it into its opposite. The cardinal truth about sin is that it can be so forgiven as to be replaced by Christian goodness, and that in His Son the Father has interposed to put it away by the sacrifice of Himself.

SIN (Egyptian).—I. Conceptions of sin.—An idea, by no means complete, of what the Egyptians regarded as sin is afforded us by the two 'Ascriptions of Innocence' in ch. 125 of the *Book of the Dead*.¹ The acts and qualities therein repudiated by the deceased are murder, robbery, theft, oppression, impiety towards the gods and the dead,² lying, slander, dishonesty, avarice (*am-ib*), hasty temper, pride, loquacity, eavesdropping, adultery, and masturbation. From statements in moral treatises and other literary compositions, and in the biographical inscriptions of feudal lords and officials, we learn that to the sins enumerated in those two distinctly haphazard lists must be added injustice, partiality, disrespect for the aged and for parents, disobedience, contentiousness, rancour, ingratitude, selfishness, and drunkenness.

Some conception of the varying degree of reprobation in which the different sins were held—i.e. to what extent they were classed as greater or lesser offences against the gods or the community—can be gained from a study of the two art. **ETHICS AND MORALITY (Egyptian)**, § 13, and **RIGHTEDNESS (Egyptian)**, §§ 2, 3, 4 (2), 5.

2. The origin of evil.—The Egyptians at a very early date seem to have had some conception of a Golden Age, when the sun-god ruled over the earth and when sin and evil did not yet exist.³

Already in the Pyramid Texts mention is made of 'those belonging to that first generation of the company of the righteous, that was born before anur arose, born before omonur arose, born before blasphemous arose, born before tumid arose, before the eye of Horus was wrenched out (i), before the testicles of Seth were torn away (j).'⁴

To explain the origin of evil in the world is perhaps one of the aims of the so-called *Destruction of Mankind*.⁵

According to this tale, the sun-god Rē (the god who was characterized by his righteousness and hatred of evil⁶) ruled at a remote age over gods and man. When he grew old, man thought blasphemously of him, so he sent down his eye in the form of the goddess Hathor to destroy them. After Hathor had for a while day revelled in slaughter, Rē returned and saved man from total extermination. But he henceforth refused to dwell any longer on earth, and withdrew himself to the sky.

In this legend men themselves seem to be regarded as the originators of sin, for it was as the result of their folly that the earth ceased to be under the direct rule of the perfectly righteous god.

Possibly also the above-quoted passage from the *Pyramid Texts* refers, in its original form, to this

¹ See art. **ETHICS AND MORALITY (Egyptian)**, § 13; **RIGHTEDNESS (Egyptian)**, § 2.

⁴ Cf. Sethe, *Die altägyptischen Pyramidentexte* (hereafter cited as *Sethe*), Leipzig, 1908-10, § 1402.

⁵ Cf. Naville, *TSEA* iv. [1878] 4 ff.; A. Erman, *A Handbook of Egyptian Religion*, Eng. tr., London, 1907, p. 29 ff.

⁶ See art. **RIGHTEDNESS (Egyptian)**, § 4.

rebellion against the sun-god.⁷ The reference to the quarrel between Horus and Seth is apparently a later addition. But he who inserted it evidently held the view that all the sin and misery that prevail in the world originated, not in the acts of men, but in Seth's murder of Osiris and his subsequent conflict with Horus.

3. The punishment of sin.—(1) *After death.*—The Egyptians had various conceptions of the punishments meted out to those who failed to obtain a favourable verdict at the posthumous trial.⁸ The majority of these are sufficiently described in the art. **RIGHTEDNESS (Egyptian)**, § 9 (1) (i.), (iii.), (v.). According to the *Second Tale of Khamwaset*, the unrighteous dead were tortured.

⁷ Sethe saw . . . one man in whose right eye the pivot (y) of the door of the fifth hall (of Amenut) was fixed, while he prayed and uttered loud lamentation.⁸

The man in question had been great and wealthy during his life, but after his death 'his evil deeds were found more numerous than his good deeds that he did upon earth.' 'We read in the same tale that those who were improvident during their lives suffered the pangs of hunger, while those who had left stupid, useless existences—the kind of men on earth whose life is before them, but God digests a pit at their feet to prevent them finding it—had food, water, and bread hung over them, but as "they were listening to take it down . . . others dug pits at their feet to prevent their reaching it."

A point overlooked in the art. **RIGHTEDNESS (Egyptian)**, § 9 (1), may here be noted. According to the above-quoted *Second Tale of Khamwaset*, the actively virtuous are granted a higher award than the moderately good:

'As for him of whom it shall be found that his good deeds are more numerous than his evil deeds, he is taken among the gods of the council of the Lord of Amenut, his soul goes to heaven with the noble spirits. And he of whom it shall be found that his good deeds are equal to his evil deeds, he is taken amongst the excellent spirits that serve Sokari-Osiris.'

The high ethical tone of this tale (the existing version dates from the latter half of the 1st cent. A.D.)⁹ is most remarkable.¹⁰ We find no trace in it of the idea that justification after death could be attained by means of spells and ceremonial oblations;¹¹ on the contrary, a man's fate in the hereafter is represented as entirely dependent upon how his life on earth had been spent. It may be pointed out at the same time that an equally high ethical standard is displayed in the description of the posthumous judgment in a composition of the feudal age, quoted in the art. **RIGHTEDNESS (Egyptian)**, § 9 (1), (iii.), and also in the well-known passage occurring in one of that special group of hymns discussed below in § 6.

⁹ Amen-Rā who judgeth the earth with his finger . . . He smiteth him that sinneth against him to the fire, and the just to the West.¹²

(2) *In this world.*—The Egyptian moralists warn the evil-doer that his sins will bring misfortune upon him or an untimely death.¹³ The gods 'who will not ignore the deed of any person' are often represented as directly responsible for the sinner's doom.¹⁴ A very ancient philosophical treatise informs us that the tongue of Ptah 'gives life to the peaceful, death to the guilty.'¹⁵

¹⁰ Cf. its phraseology with that of certain passages in A. H. Gardiner, *The Admonitions of an Egyptian Sage*, Leipzig, 1900, pp. 44, 78, 80, the whole aim of the sage here being to contrast the prosperous rule of the righteous sun-god with the disastrous rule of the weak Pharaoh whom he is addressing.

4. The necessity for being sinless.—As has already been stated in the art. *RIGHTHOUSNESS* (Egyptian), §§ 5, 9, the attainment of bliss by the dead depended upon the verdict which they obtained at their posthumous trial. The judge of the dead, whether Rē or Osiris, was characterized by his righteousness and hatred of wrong, as were also the members of the assistant judicial council. The deceased, in order to find favour in the sight of these gods and so obtain the verdict upon which his happiness depended, had also to be righteous, i.e. be able to show that he had led an absolutely sinless life on earth. Even an Egyptian would have regarded that as an achievement beyond the power of most men. Accordingly several ways were found of overcoming what must have appeared a very serious obstacle to salvation.¹ These were: (a) ceremonial ablutions, which, whether performed by or on behalf of a man during life or after death, cleansed him from his sin and made him righteous; (b) going on pilgrimage to Abydos or otherwise participating in the Osirian mysteries; (c) the recitation of magical formulae, by means of which things alleged (e.g., that the speaker was free from sin or had performed or participated in this or that ceremony), however untrue they might be, became actualities.²

5. The unwillingness of the Egyptian to acknowledge himself a sinner.—The nobles, officials, and private persons of the Old and Middle Kingdoms and early New Empire never seem to weary of asserting in their biographical inscriptions that, in respect of their character and conduct, they were models of perfection. To own that they were sinners or even imperfect never seems to have occurred to them. In fact they mention a fault only in order to deny that they were ever guilty of committing it.³

What looks like the most amazing spiritual pride may possibly be accounted for by the prevailing belief in the magical efficacy of formulae, written or recited.⁴ This belief, coupled with the idea that ceremonial purity and freedom from sin were their sole passports to posthumous happiness, naturally deterred the Egyptians from owning themselves sinners in any documents, particularly in ones so closely connected with their existence after death as were inscriptions on their tomb-chapel walls or on their funerary stela.⁵ To allow there that they were anything but absolute perfection would be to jeopardize their chances of salvation. Indeed, if a man felt that he could not attain happiness in the hereafter unless by some means or other he convinced his divine judges that he was free from all moral and ceremonial defects, he might well have shrunk from admitting that he had any such defects even to himself.

(1) The claim of the Egyptian to moral perfection was also prompted by his desire to win the goodwill of visitors to his tomb-chapel, so that they might be ready to present him with food and drink-offerings or in lieu of these recite certain spells.⁶

(2) Those who accuse the Egyptians of unexampled spiritual pride must bear in mind that,

¹ See Griffith, p. 20, note on l. 6.

² For details see art. *PERFORMANCES* (Egyptian), § 7, a, 3 (b), *RIGHTHOUSNESS* (Egyptian), § 10, *SAVING* (Egyptian), § 2.

³ See art. *RIGHTHOUSNESS* (Egyptian), § 2.

⁴ See § 4 (c) above, and Griffith, loc. cit.

⁵ See Breasted, p. 167 n., and esp. p. 120 f. It should be pointed out in this connection that similar statements to those that follow the word 'Assertion of Innocence' in ch. 125 of the *Book of the Dead* (i.e. 'I have done what men command and that wherein the gods are pleased... I have given bread to the hungry, water to the thirsty, clothes to the naked, a ferry-boat to the boatless. I have made offerings to the gods, and oblations to the blessed dead') frequently occur in the tomb-inscriptions and on stela of the feudal age; see, e.g., art. *RIGHTHOUSNESS* (Egyptian), §§ 2 (1), 3, 9 (9).

⁶ See art. *RIGHTHOUSNESS* (Egyptian), § 9 (9); Breasted, p. 109.

though in accordance with custom the narrative containing these self-assertory assertions is put into the mouth of the deceased, it was often composed under the direction of a pious son or some other surviving relative.⁷

(2) Such assertions in process of time became a convention, the stereotyped way of describing a deceased⁸ or living⁹ person's character, or even one's own.¹⁰

6. Acknowledgment of sin.—As has been pointed out, it was characteristic of the Egyptian to deny that he was guilty of sin. But certain hymns of the XIXth dynasty,¹¹ written on papyrus or inscribed on votive stela, display a religious sentiment hitherto unknown in Egypt and not met with again until Christian times. The persons who wrote the hymns, or for whom the hymns were written, speak of themselves as 'humble,'¹² 'afflicted,'¹³ 'distressed,'¹⁴ 'in bondage,'¹⁵ 'wearyed,'¹⁶ 'They confess that they are sinners deserving punishment at the hands of this or that divinity;¹⁷ but they throw themselves on the mercy of the divinity, pleading that they are 'ignorant and foolish, not knowing good from evil,'¹⁸ and 'disposed to commit sin.'¹⁹

'Punish me not for my many sins,' exclaims a supplicant of the god Amun, 'I am a wretched man, I am a man without understanding. All day I follow after my own dictates, as the ox after the fodder.'²⁰

The divinities addressed are represented as dismissing men for their sins.

A certain Nekhtamun, we learn, 'lay sick unto death,' and was 'buried' the night of Amun by reason of his sin.²¹ Nekhtamun 'was a just man upon earth,' but he 'brought his transgression' against the *Pach of the West* (a Theban goddess) and she chastised him. This goddess, we are told, 'smiles with the smiling of a savage. Now, she pursues after him that transgresseth against her.'²² The sinnergod Thoth is said in one hymn to have punished a man for swearing falsely by him.²³ According to another, a man was smitten with blindness for a similar offence against Ptah.²⁴

But these divinities are always addressed as compassionate and ready to forgive.

'Be merciful to me!' cries a supplicant of Ptah, 'look upon me, that thou mayest be merciful.'²⁵ Another supplicant appeals to Thoth as 'merciful one, who art able to take this [punishment in the form of sickness] away.'²⁶ Amun-Rē, we are told, 'comes at the voice of the distressed humble one.'²⁷ He is 'disposed to mercy' as is his petitioner to sin.²⁸ In answer to the prayer of a friend, this god heals a man whom he had smitten with sickness; for 'he smothered not a whole day earth. His wrath is finished in a moment and naught is left.'²⁹ Similarly the *Pach of the West* is merciful to him who transgressed against her, when he turned to her in penitence.³⁰

LITERATURE.—See the works cited in the text and footnotes.

AYIWAED M. BLACKMAN.

SIN (Greek).—Sin may be defined, for our present purpose, as all conduct which by omission or by commission, in overt act or inner meaning, is offensive to the supra-human Powers.

Gunn, *Journal of Egypt. Archaeology*, III, 21 ff.; see also A. Erman, *Handbuch*, pp. 71 f., 82 ff.; J. H. Breasted, *Development of Religion and Thought in Ancient Egypt*, p. 240 ff.

much as he acted unwittingly, is guiltless. It was his very endeavour to avoid his awful doom that led him into it. But to the earlier conception of sin that does not at all alter the position. His acts have placed him in the position of a guilty person, and the innocent community which unwittingly harbours him shares his guilt and his punishment. The vengeance of heaven requires his expulsion (*Nazarene*) from the community whose gods he has offended.

It is important here to raise the question, Is the fault which rests upon the people merely their failure to expel the guilty person, or is the community actually regarded as polluted by his presence? Obviously the answer must affect the whole conception of sin which is implied in the procedure. Now, however the matter may have been conceived in later times, there seems to be no doubt that at one period the people were regarded as actually polluted by the presence of the murderer. He is regarded as a plague-spot, a centre of contagion. He cannot take part in the worship of the gods, cannot enter the homes of the citizens without bringing contamination. If this were not already implied by such expressions as *plague*, *contagion*, etc., it seems to be clearly shown by such procedure as was adopted, e.g., by the Athenians in the case of the murderers of Kylon.

Rylon, an Athenian noble, attempted to make himself tyrant of Athens. He seized the acropolis, where he was besieged. He and his brother made their escape. His followers were forced to capitulate. They sought sanctuary in the temple of Athena Polias, which they left only when the archons guaranteed their lives. At the instigation of Megakles they were nevertheless put to death. This brought a curse upon the city, and, in order to remove it, men set in motion the legend, as it were, about the desecration. "Thereupon," says Herodotus, "the people sent ambassadors to Eretria and to Chios to induce them to help them"—i.e., those of the actual murderers who were already dead were exhumed and cast beyond the borders of Attica; the family (poes) of the Alcmeonids was banished in perpetuity; and after that Epimenides of Crete purified the city. Thus clearly the innocent community was regarded as being itself polluted by the presence of the sinner.

(5) *Procedure in cases of murder.*—The same sort of conception lies at the root of the Greek procedure in the case of murder and homicide. Our information is naturally faintest about that of Athens, which may be taken as typical. The legislation of Draco (c. 621 B.C.) appears to have accounted in general to a codifying of customary law, and his enactments appear to have possessed a quasi-religious sanction, as is already implied in the term applied to them—*thesmōi*.² His laws relating to murder (the effect of which seems to have been to discriminate definitely between intentional and unintentional murder, and to emphasize the right of the State to exact punishment³ instead of leaving it to the aggrieved individual) were not abrogated by the legislation of Solon (594 B.C.), who abolished his other enactments.⁴ Severe as his regulations seemed to a later age—their severity Aristotle⁵ considers to be their one notable feature⁶—they survived many revolutions and are the foundation of the ideal legislation in the *Laws* of Plato. It is, of course, beyond the scope of this article to examine these regulations in detail. But the significant point is that alike in Athenian law and in Plato all shedding of blood, whether voluntary or involuntary, requires, where the death penalty is not exacted, exile for a longer or shorter term, together with the performance of a ceremony of purification.

A curious procedure is that adopted in the case of a person who, being already attainted for involuntary homicide, is charged with committing another murder or with wounding with intent. Being a polluted person, he was not allowed to set foot in the land, but pleaded his case from a boat, lying off shore: see *ib.*

φύλακα φύλακα διὰ δυνάμεις ἑσται, οἷον διὰ ἐκτετακτομένης ἢ πρὸς τὰς
 πύλας, ταύτης δ' ἐν ἑστέῳσι διακρίσειται, ὃ δ' ἀπολογησάμενος προσεφώνησε
 αὐτοὺς ἐν ταύτῃ·

A similar procedure is enjoined by Fato in the case of an involuntary homicide who is driven to land by stress of weather: 'if he be wrecked and driven on the coast against his will, he shall encamp, wetting his feet in the sea, and wait for an opportunity to sail.'²

The procedure in the case of murder committed by a person or persons unknown is of interest as affording a comparison with Hebrew practice. The reader will remember the regulations laid down for such a case in De 21st :

"If use be found slain in the land which the Lord thy God giveth thee to possess it, lying in the field, and it be not known who hath smitten him: then thy elders and thy judges shall come forth, and they shall measure unto the slain which are round about him that it is slain; and it shall be, that the city which is nearest unto the slain man, even the elders of that city shall take an heifer of the herd, which hath not been wrought with, and which hath not drawn in the yoke; and the elders of that city shall bring down the heifer unto a valley with running water, which is neither plowed nor sown, and shall break the heifer's neck there in the valley; and the priests the sons of Levi shall come near . . . and all the elders of that city, who are nearest unto the slain man, shall wash their hands over the heifer whose neck was broken in the valley; and they shall answer and say, Our hands have not shed this blood, neither have our eyes seen it. Forgive, O Lord, thy people Israel, whom thou hast redeemed, and suffer not innocent blood to remain in the midst of thy people Israel. And the blood shall be forgiven them."

It seems an adequate explanation to say that the measuring 'unto the cities which are round about' had for its object merely to determine which community was to bear the expense of the purification. All analogy indicates that the nearest city was regarded as being actually contaminated by the murder.

Now let us compare the Greek procedure in a similar case. Aristotle, describing the duties of the archon basileus, says:

"If the actual offender is unknown, the writ runs against the doer of the deed" (line 34 in old version), re Spence's Answer.

The same sort of procedure is instituted by Plato:

"If a man is found dead, and his murderer be unknown, and after a diligent search cannot be discovered, the same provisions shall be made as in the other cases. The death sentence shall be passed on the guilty person (or persons), and prohibition shall be made to the market-places that he who has slain a man, or so many in guilty murder, shall not set foot in the temple or in all in the country of the slain man, under penalty of being put to death. It is agreed, and is known and being so understood beyond the borders of the country of the slain man." &c.

The Hebrew rite is to be performed 'in a valley which is neither plowed nor sown'—i.e., the guilt is to be transferred from the community to a no man's land.

Probably no unfolds are 'to be buried alive; and none shall be laid by their side; they shall be buried individually in the burden of the twelve portions of the land'—as in this country they used to be buried at the crossways—'in such places as are uninclosed and nameless; and no column or inscription shall mark the place of their burial.'¹⁴

(5) *Guilt of animals and things*.—Guilt, again, may attach, according to early ideas, to the lower animals and even to inanimate things. To the case of the lower animals we cannot do more than allude here, as it is not very prominent in Greek records and is susceptible, perhaps, of more than one explanation. That such guilt was recognized in Greece and that animals which had caused a person's death were solemnly tried is a well-attested fact:

And if a beast of burden or other animal causes the death of any man, except in the case of anything of that kind happening in the public games, the kinsmen of the deceased shall prosecute the slayer for murder, and the wardens of the country, each and as many as the kinship appoint, shall try the cause, and

trated by *Il.* iii. 351 ff., where Menelaos prays to Zeus:

"O Lord Zeus, grant me to take vengeance (*niekēō*) on him who hath done thee evil, even Alexandros, and overtake him by my hands, so that another, even among men of after time, may shudder to do evil to the host that hath shown him kindness."

Nägelsbach¹ compares *Dt.* 19¹⁰⁰:

"Then shall ye do unto him, as he had thought to do unto his brother: so shall thou put away the evil from the midst of them. And those which remain shall hear, and fear, and shall beseech thee no more any such evil in the midst of them. And thine eye shall see pity: life shall go for life, eye for eye, tooth for tooth, hand for hand, foot for foot."

Here, as in Homer, we have the retributive and deterrent intentions combined.

(5) *Retribution in a life to come.*—But, while normally sin is punished by material affliction in this life and virtue rewarded by material benefits, it is clear that the Homeric poet was familiar also with the conception that punishment or reward awaits men on the other side of the grave. The Homeric attitude to immortality does not appear to be quite fairly represented in much modern writing. But the fact is that for Homer there is no question of immortality. The survival of the soul after death is a certainty for Homer, just as much as this present life. And, if the picture of the after-life which he presents is a ghostly one, that is only because the after-life cannot be imagined but in one of two ways: either (1) as a duplicate of the present life, only that pain and conflict, parting and re-union, are done away and transience has given place to permanence; or (2) in terms of the immaterial. And, precisely as we cannot visualize an immaterial existence, our picture must be a mere suggestion of a realm of shadows.

Now, when Homer says "hurled to the house of Hades many valiant souls (*ψυχαί*) of heroes and made themselves (*αἰσεία*) to be the prey of dogs,"² or when he says that the ghost of Patroklos, as it appeared to Achilles,³ was "altogether like himself in stature and beautiful eyes and voice," it is actually argued, and apparently quite seriously, by some scholars that for Homer the real man, the man himself, was the living material body, of which the soul was a mere faint *Doppelgänger*. On the same principle we could easily prove precisely the same conception for even the most orthodox of Christian writers. The man we know and love is doubtless the living human presence, the immortal soul inseparable from its mortal bravery; and doubtless we cannot imagine the man himself except in the garment of mortality. Even the sincerest Christian cannot easily conceive his dead, if the dead came back, as other than disturbers and intruders on the banquet of life, as uncanny presences with whom he could not hold comfortable and familiar converse. And it is no paradox to say that the poet above all, by the very conditions of his art, is necessarily driven back upon the realm of material things, disguise it how he may, and, in exact proportion as he seeks to give to the ideal the semblance of reality and of life, he is compelled to render the ideal by the images of sense. And the society of Homer, beyond all others, is a society which seeks to avert its eyes from the unseen and mysterious dominions of the dead, and to turn them to the familiar scenes of human life and activity. But not the less the Homeric age knew that the grave is not the end—"sunt aliquid manes: letum non omnia finit"—and that, so far from the body being the man himself, it becomes, so soon as the soul leaves it, mere "dumb dust" (*αἶψα γαῖα*)⁴ which must be reverently dealt with, not for what it is, but even because it was once the tombstone of a beloved soul.

But, of course, the relation which the after-life as conceived by Homer bears to the present life was wholly different from that which Christian teaching conceives to exist. For the Christian this life is but a preparation, whether providential or probational, for a better and fuller life to come; this life is transient and mortal; the reality is the eternity which lies beyond. For the Homeric Greek they are both alike realities, and they differ only in that this life is certainly transitory, that may possibly be eternal; this life certainly holds within it many things desirable, what the after-life holds can only be a dim conjecture.

Within these limits the belief in the soul's survival after death could scarcely fail to have some bearing on the doctrine of sin. Where a man had refrained from all signal wickedness, he had nothing to fear from the world of the dead nor in it. Where he had distinguished himself beyond his fellows, whether for good or for evil, he might hope for a correspondingly exceptional felicity or woe beyond the grave. Our literature naturally says little of the hopes of the common man, and the "firesomeness of an over-peopled heaven" would have been felt with more than ordinary force by the Homeric heroes. But that the terrors of the unseen world were a very real thing in the Homeric age is abundantly clear. The evidence can be neither ignored nor explained away.

Take the case of perjury. This, like other sins, may bring its punishment immediately. The violation of the truce by the Trojans is conceived as bound to lead to their defeat in battle.⁵ Yet we have an unmistakable reference to the punishment of perjury after death in the underworld.⁶ But, we are told, the idea of posthumous punishment is non-Homeric. The examples of Tityos, Tantalos, and Sisyphos, in *Od.* xi. 578-600, occur in a late interpolation. Herod endeavours to make to explain away the *Iliad* passages as meaning that the powers under earth punish men in this life, or the passages are simply excised as spurious. This is a proceeding as misleading and unscientific as it is in linguistic or other grounds unjustifiable. The truth is rather that, while in general the living have no occasion to fear any evil either from the dead or in death, yet, whenever they come into collision with the great sanctities of life—when they commit murder or sin against the fundamental ties of family—then they have to fear punishment not only in this life but also in the life to come. And in taking an oath, which is an essential and basal feature of any early system of law, the gods of the underworld are directly and solemnly challenged, and it would be indeed strange if their jurisdiction were limited to this world. Surely it is not an accident that Pindar takes as the type of the happy dead those who *ἔλαπον κλέπταις*,⁷ or that Hesiod says *δρόπῃ δ' αἰσέσῃ γὰρ ἡρώεσσι κακὸν*.⁸

(6) *Atonement for sin.*—We have next to consider the mode in which atonement is made for sin in the Homeric age. The first essential feature is that the wrong conduct is intermitted, and where possible restoration or reparation is made to the aggrieved party.

Thus the daughter of Apollo's priest is restored to him,⁹ Odysseus staves the anger of the gods by performing a neglected sacrifice.¹⁰ An Agamemnon seeks atonement to Achilles by gifts of tripods, female slaves, etc.¹¹

The next essential thing is prayer and sacrifice to the offended deity.¹² The intention of the sacrifice is purely propitiatory, and precisely the same

¹⁵ *Il.* i. 36 ff.

procedure is followed to avert impending evil.¹ Hence, too, the sacrifice may be substituted by a vow,² and accompanied or rather followed by hymns.³

The usual term for 'propitiate' is *ἀπαρτίζω*, i.e. to render the god *ἀρετῶν*, 'well-pleased' or 'at peace' with the worshipper. The same idea is expressed by *ἀπαρτίζω*,⁴ *ἀπαρτίζω*.⁵ The propitiatory prayer is especially called *ἱκετήρ*; to pray is *ἱκετεύω*.⁶

[7] *Ceremonial purification*.—It is sometimes said that the ceremonial or symbolic ritual of purification, which in forms more or less repulsive we know to have been practised in later Greece and which is attested all over the world, was unknown to the Homeric age. No one, however, can maintain such a doctrine who does not approach the question with eyes wilfully shut to the obvious meaning of several Homeric passages. These are noticed in art. PURIFICATION (Greek) and need not be repeated here. But even had there been no actual reference to such practices in Homer, we should have been abundantly justified *a priori* grounds in assuming that they existed.

The case of Theoklymenos in *Od.* xv. 223 ff. is constantly quoted as supporting the opposite opinion. This appears to be a misunderstanding of the position of a suppliant. So far as the present writer knows, the blood-guiltiness of a suppliant was inoperative outside his own country. If this were not so, how could the guilty man ever begin the process of recovering his status? The very first step in that process is usually for the suppliant to seat himself at the hearth of some person beyond the borders of his own country. If his blood-guiltiness were operative, how could he approach the holy of holies, i.e. the hearth of his host? Usually the suppliant does not even reveal his identity before he has been a guest for some time. If his presence carried pollution beyond his own borders, could this have been tolerated? Once beyond his own land, he becomes, so far as concerns outsiders, possessed of all the rights of the suppliant; in his own land to day him is the duty of his victim's kindred; outside his own land for an alien to slay him is a crime which brings down the vengeance of Zeus *τεκμήριον*.

The well-known case of Orestes might, of course, be quoted. The festival of Pithoi (Chios), which formed part of the Anthesteria, was peculiar in that each participant drank his pitcher of wine separately. The reason given was that, when Orestes with his mother's blood upon him came to Athens during the festival, the Athenian king, not wishing to be inhospitable but unwilling to contaminate the worshippers, ordered separate pitchers of wine to be given to each.⁷ But that is a quite peculiar case. It is precisely to the *Neometes Theoi* at Athens that Orestes is sent by Apollo to make his peace with them.

The banishment of the suppliant, moreover, does not prevent him from offering prayer and sacrifice even to the Daity, whose sanctuaries in his own land he may no longer enter. But he must make himself an outcast, and then from beyond the pale solicit re-admission.

So we would interpret the various instructions given to Odysseus.⁸ He has offended Poseidon. He must therefore seek a land where men know not the sea nor eat food mixed with salt, who mistake the farmer's shovel (soul) for the seaman's ear (soul)—i.e., he is to travel beyond the sphere of the sea-god, and there he is to make his propitiatory offering to Poseidon.

3. *Hesiod*.—The general framework of ideas which we have sketched in Homer is to be presumed in our study of the conception of sin in

the later Greek authors. For in the history of religious ideas each new development does not cancel or repeal all that went before. Custom, with the force of an almost religious sanction,¹ is nowhere more powerful than here. The old and the new tend to persist side by side, each acting and re-acting upon the other. The present article can only aim at noting the more important points of departure and illustrating the leading tendencies.

The terminology of Hesiod is similar to that of Homer. Righteousness is *δίκη*,² and means that conduct which is in conformity with a divinely established order, which is careful of the rights of others, whether God or man. Unrighteousness is *ἄδίκη*,³ *ἄδικος*, *ἄδικος*, and is the conduct which ignores the rights of others and transgresses the laws of the divinely established order. The generally sober colouring of the poet's creed is redeemed from pessimism by his firm conviction that the Judge of all the earth is righteous and will not suffer unrighteousness to prevail finally.

¹ Now may neither I nor son of mine be righteous among men: for it is an ill thing to be righteous if the unrighteous shall have the greater right. But thus I deem not that Zeus the hurler of the thunder will bring to pass.⁴

Punishment of unrighteousness may not follow immediately after the unrighteous act, and the wicked may prosper for a time, but in the end the moral order of the world triumphs:

² It is better to pass by unrighteousness and to pursue righteousness. Righteousness in the end is better than unrighteousness, and the fool learneth it by suffering.⁵

Dike is the daughter of Zeus, honoured and revered by the gods who keep Olympus,⁶ and the observance of *dike* is the sovereign distinction whereby the race of man is divinely marked off from the lower animals, for whom the law of might (*bia*) is the only law.⁷

When we compare the specific sins which Hesiod enumerates with those of Homer, we are struck by the greater prominence of those which have no obvious ethical significance and are more of the nature of unreasoning tabus. On the one hand, we have the Homeric sins: perjury,⁸ falsehood,⁹ theft,¹⁰ covetousness,¹¹ dishonouring parents,¹² unjust judgments,¹³ injury to the fatherless,¹⁴ injury to suppliant or the stranger within the gates,¹⁵ taunting the poor with his poverty,¹⁶ lying with brother's wife,¹⁷ neglect of prayer and sacrifice,¹⁸ praying with unwashed hands,¹⁹ to which we may add idleness.²⁰ On the other hand, we have a whole catalogue of 'sins' which, if not severely reprobated, are at least 'unlucky', which have no parallel in Homer—cutting the nails at a festival of the gods,²¹ sitting on tombstones or other 'unmovables' (*ἀκίνητα*),²² contact with water which has been used by a woman,²³ muttering at a sacrifice,²⁴ placing a ladle across the mixing bowl,²⁵ leaving the wood of a house unplanned,²⁶ eating from unconsecrated vessels,²⁷ performing certain private operations indiscreetly,²⁸ bringing the contagion of death into contact with birth.²⁹ To find in these prohibitions traces of Orphic and Pythagorean teaching, as Fleck does, seems wholly mistaken. These ideas are of a type universally attested in early thought, and, if they do not appear in Homer, it is not so

much that they are unknown as that they are ignored.

The specific duties which Hesiod recognizes are mainly those of Homer: oath-keeping and honesty, worship of the gods by prayer and libation and sacrifice.¹ We need only notice the new dignity which he gives to work as a duty which wins the approbation of the gods,² who have appointed work as the lot of humanity.³ The practice of righteousness is, moreover, given a practical or prudential intention which is less obvious in Homer:

¹ Work, foolish Perseus, the work which the gods have appointed unto men, lest one day with children and wife thou hast to beg thy bread among the neighbours and they heed thee not.⁴

² According to thy power do sacrifice unto the deathless gods . . . that they may have a gracious heart and mind toward thee, that thou mayest buy another's estate, not another thine.⁵

³ Take just measure from thy neighbour and give him just return, with the same measure or yet better if thou couldst, that even so afterward in thy need thou mayest find him a sure help.⁶

So the *maris woman* is to be avoided for prudential reasons.

The punishment of sin is by way of temporal affliction in this life:

¹ Whoso sows evil seed and sows forward works, for them doth Zeus decree justice. . . . On them doth the son of Kronos bring from heaven a grievous visitation, even famine and plague together, and the people perish. Their women bear not children; their houses decay by devouring of Olympian Zeus; or men he destroyeth a great host of them within a wall if may be, or the son of Kronos taketh vengeance on their ships at sea.⁷

So the righteous are rewarded by temporal prosperity:

¹ Their city flourisheth and the people prosper therein. And there is in their land peace, the curse of children, and Zeus doth never decree war for them. Neither doth famine ever consort with men who deal straight judgments, nor doth, but in strife they tend the works that are their care. For them earth beareth abundant livelihood, and on the hills the oak's top beareth acorns, the oak's richest base; their flocks sleep are heavy with wool; their wives bear children like unto their parents; they flourish with good things continually, neither go they on ships, but bounteous earth beareth fruit for them.⁸

The punishment of the wicked may, of course, involve the innocent:

¹ Offendings a whole city respect the recompense of the evil man who slayeth and worketh the works of foolishness.⁹

We have seen in Homer how the vengeance of Zeus may involve the sinner's wife and children.¹⁰ So in Hesiod:

¹ When of his will rewardeth false witness and liars, and wrought justice and sinners beyond redemption, his race to dinner in the after days; but the race of him that keepeth his oath is better in the time to come.¹¹

But this does not seem to mean much more than is already necessarily implied in the solidarity of the family, and is at any rate no such explicit doctrine of the hereditary curse as we shall find in Theognis.

As to the apical agency by which retribution is effected, we have Hekate, who attends on crooked judgments (*Rechtsbeugung*),¹² and punishes perjury;¹³ the Erinyes as avenging spirits;¹⁴ Dike, who informs Zeus of the wickedness of men:

¹ Whenever any injureth her with crooked slighting, straight-way she atteth by Zeus the father and teller of the righteous mind of men till the people pay for the guilt of their kings who with ill thoughts wrought sad judgments, including falsely.¹⁵

But we have a specially interesting development in the idea of a sort of spirit intermediate between men and gods whose function is to act as 'watchers' (*phoroi*) of mortal men:

¹ The immortals are high among men and remark them that with crooked judgments oppress one another, taking no heed

of the anger of the gods. Yes, thrice ten thousand immortals sit there on the boundless earth, who keep watch over mortal men: who watch over judgments and forward works: clad in mist, lying everywhere over the earth.¹⁶

In Homer it is the gods themselves who 'in the likeness of strangers from another land visit in dreams the cities of men and watch the unrighteousness (*adikia*) and righteousness (*dikaioσύνη*) of men.'¹⁷

Historically these Hesiodic *phoroi* seem—but this is matter of opinion—to reappear in the *phoroi* of Plato's *Republic*.¹⁸ They seem to be rightly equated with the spirits of the golden race who, in Hesiod's account of the fall, in the form of *daemones*,¹⁹ exercise just this supervision over men.

The reader who turns from Homer to Hesiod is conscious of a change of atmosphere. The radiant gaiety of the Homeric world has given place to a world of most sober colouring, where the lights burn low and the shadows deepen. There is but a hint in Homer of an earlier age, a lusty spring-time of the world when men were mightier than their degenerate descendants. 'As men are now'²⁰—so the poet contrasts his own with the earlier age. But the contrast is merely of physical prowess. In Hesiod, on the other hand, we find a fully developed doctrine of a lost Golden Age from which men have through their folly and sin declined.²¹

4. *Solon, Theognis, etc.*—In the Greek poets of the period between Hesiod and the end of the 6th cent. B.C. the general conception of the nature and consequences of sin remains much as we have described it in Homer and Hesiod; *adika*, salacity, begets *hēstia*, wantonness, whence springs *eros*, moral blindness, sin, or the consequences of sin:

*ἄδικα γὰρ ἄδρα ἔστιν, οὐκ ἔστι δὲ ἄδικον ἐργον ἀνθρώπων ἔρως αἰὲρ νόσος ἔστιν αὖ.*²²

Or, again, as in Homer, *hēstia* may arise from the mere thoughtlessness of youth:

*ἔφη καὶ νεότης ἀνερπύζειν νόσον ἄδικον, πολλὰν δ' ἔχεται θυμὸς ἐν ἀνθρώποις.*²³

There is the same profound conviction of the moral order of the universe:

¹ O Zeus, father Zeus, thine is the dominion of heaven, and thou dost watch the works of men, lawless and lawful, and takest heed of the righteousness and unrighteousness of beasts' (*καὶ τὰ θηρία ὄψαι καὶ αἰὲρ ἄνθρωποι*).²⁴

There is the same certainty that sin must be followed by punishment:

¹ Unrighteous is the mind of the rulers of the people: for them there is prepared much suffering by reason of their great insolence. For they know not to restrain salacity (*eros*). . . . They wax wealthy by unrighteousness: they spare neither holy things nor public things; they steal and rob here and there; they take no heed to the august ministrations of justice, who, though she is silent, knoweth the things that are and that were afore, and in time verily she cometh to repay.²⁵ ² None ever wronged stranger or suppliant and escaped the knowledge of the immortals. Sin may prosper for a little, but 'the end is won, and the counsel of the gods prevails.'²⁶

The punishment of the guilty, we have seen in Homer and Hesiod, may involve the affliction of the sinner's connexions, his wife, his children, his city: the people pay for the sins of their rulers.²⁷ But now we find it explicitly stated that the sins of the fathers are visited upon the children. And this is, indeed, but the natural corollary of the conception that sin is inevitably followed by affliction. Since it appears that in this life the sinner frequently escapes punishment, while there was no lively conviction that there is any punishment after death, it was natural to conclude that the punishment must fall upon his descendants.

Otherwise the doctrine of the eternal and infallible justice of heaven becomes vain. God, it is intimated, takes long views. He hides his time until the cup of iniquity is full. The sword of justice may linger, but it will surely fall, if not upon the sinner himself, then upon the heads of his children or descendants.

'Not bring acids for men the works of unrighteousness. Zeus beheldst the seeds of all things, And smitten as the wind that sweeps the flowers in the spring . . . for the vengeance of Zeus. He was not fit to anger as each thing, like a mortal man, yet he who has a sinful heart—may not the gods be every day in mercy revealed in the end. One pays the penalty immediately, another after. And if they escape themselves and the doom of the gods overtakes them not, yet surely it cometh afterward: the innocent pay for their deeds, their children or their descendants after them.'

These things (the apparent scope of the sinners from restriction) deceive his mind of man; (or not at the moment of each act do the gods punish him, but one pays the ill debt himself nor hangs too soon his dear children in the aftertime; another rushes overtaken not; are that celestial death slugs upon his eyes, blinding doom.)³

The doctrine seemed to be the natural issue of the doctrine of the inflexible justice of heaven. And genuine examples of the unrighteous prosperity of one generation being succeeded by signal calamity in another were common enough. Popular fancy would manufacture others, and by an easy parabologism infer a general principle. How deeply ingrained in Greek belief it was is shown by the fact that in a formal curse—e.g., that pronounced by the herald at the opening of the Ekelesia and the Boule—the descendants and family of the transgressor were included:

මේ වෙනස්කම් අතිශයින්ම විශිෂ්ට ප්‍රයෝජන ක්‍රමයන්, අතින් ප්‍රතිඵල, අතින් සංසිද්ධා, සි

And Aristotle* implicitly justifies the doctrine, if regard be had only to the individual's reckoning with heaven. But, from the point of view of the innocent sufferer, it is manifestly unfair that he should pay the penalty for sins in which he had no part. The injustice of it was bound to strike every serious man.

As David cried: 'No, I have sinned, and I have done perversely: but these sleep, what have they done? let them alone, I pray thee; he against me, and against my father's house.' So Thackeray cries: 'O Father Zeus, would that it might please the gods that he . . . who works the works of holiness and taketh no heed of the gods might himself pay for his evil doing and that the sin of the father should not afterward be an evil for his children: that the children of an unjust father should not righteously reverencing their anger, who among their townsmen have loved justice from the beginning, should not pay for any transgression of their fathers. Would that this were well-pleasing to the gods: but now the door swings, and another afterward tears the veil.' And again: 'O Zeus, I wonder at this: thou art lord of all . . . how can thy heart count his sin and the righteous alike? . . . There is no sure sign given to man by the gods nor any certain way wherein one may walk and be well-pleasing to the gods. The sinners enjoy untroubled prosperity, while those who restrain their hearts from wickedness have poverty for their lot.'

It must be emphasized that Theognis is not questioning the fact, nor is he impugning the justice of heaven, which indeed he is concerned to maintain—precisely as Jeremiah⁸ makes the righteousness of God his justification for reasoning with Him:

* Righteous art thou, O Lord, when I plead with thee: yet would I reason the cause with thee: wherefore doth the way of the wicked prosper? wherefore are all they at ease that deal very treacherously?"

There in fact is the difficulty. If God is a just God, why does the sinner not pay for his sins immediately so that the anger of God should be unmistakably revealed? Why, if God is just, does the sinner sometimes escape punishment in this life altogether? If it be answered that God visits the sins of the fathers upon the children, then God is again unjust, in that He visits the guilt of the sinner upon the innocent. From this dilemma there could be no escape without a new

conception of the meaning of life—that is to say, a new conception of the destiny of the soul.

That new conception of the soul, which for convenience we may call the mystic or Orphic conception, profoundly influenced the Greek doctrine of sin from the 6th cent. onwards, and the remainder of this article is chiefly concerned to illustrate the traces of that influence to be found in Greek writers of the 5th and 4th centuries before Christ.

§ Pindar.—The genesis of sin is in Pindar conceived on familiar lines. Great prosperity (ἀγαθός) is a temptation or incentive to sin. The effect is likened to that of overfeeding: satiety (ἀρετή) breeds insolence (ἕψη). When ἕψη finds expression in action, it leads to woe (ἄλγος).

Thus taken, *свѣдѣніе* въ видѣ Крѣпости
 явится либо: *дѣломъ*, *заказомъ* или *подписаніемъ* *дѣла*, *подписаніемъ*
дѣла.
 Если же *подписаніе*, . . .
 . . . *дѣла* не *бѣдетъ* въ *дѣлѣ* *дѣла*
дѣла.
 So That: *дѣла*
дѣла *дѣла* *дѣла* *дѣла* *дѣла* *дѣла*

It may be noted that *ἀγος* and *ἕβος* come to have practically identical meanings, so that *Hybris* appears as mother of *Koros*,⁴ thus reversing the Solon-Theognis version, which makes *Hybris* daughter of *Koros*.

No Greek poet lays more emphasis than Pindar does upon heredity.¹ And nowhere do we find the solidarity of the family, whether for weal or for woe, more vividly realized. The family is like a field which is fruitful or fallow in alternate generations.² The 'family fortune' is of great moment always.³ Hence it is natural for Pindar to think of the destiny of a given generation as conditioned by the conduct of earlier generations—to conceive, in fact, the sin or the righteousness of the fathers being visited upon the children. But now, in several remarkable passages of Pindar, we have the nature and destiny of the soul presented in a light which alters the relative values of life and death. Unfortunately the fragmentary character of some of these passages makes their interpretation a matter of the utmost difficulty. Yet the general outlines seem sufficiently clear.

In trag. 131 we find a definite contrast between the destiny of the "body" (*psuchē*) which follows with overmortality death and the "likeness of life" (*eidōlos zōēs*) which "remains" yet alive: for it alone is from the gods. It sleeps when the members are active, but to them that sleep in many a dream it reveals the coming judgment for evil or good.

The soul, then, and the soul alone, is divine in its origin. It is a 'likeness of life,' that is to say, it is conceived as resembling the living man in such a way as to preserve its identity; it can be known among other souls as being the soul of such and such a person. It is a prisoner in the body, which hampers and impedes its activity. Its still small voice cannot be heard amid the thunder of fleshly energies; only in sleep, when these energies are hushed and stilled, it regains for a season its full efficiency. Life, this present life, is less a boon than a thorn: 'Man is well done with it soon as he's born.' Only by death can the temporary release of sleep become a permanent emancipation.

And, if one incarnation, why not many? It is an easy step to conceive the soul as undergoing a series of probationary incarnations, until it has again become worthy to be united with the divine, to return to heaven, which is its home. The

● 第 1 章 绪论

*In the earliest parts of the Old Testament, sin is almost invariably presented to us as nothing more than disobedience to the statutes regulating religious, social, and civil life in Israel, and a violation of the good customs in vogue among this people.¹

There is a large measure of truth in this view, but it is not inconsistent with what was said above. At this stage of religious development there is a very close organic connexion between deity and people; the customs and rules of national life are under religious sanction; they are the will of the deity. Man's ideas of sin depend upon their thoughts of God; for primitive peoples the deity has largely the character of an arbitrary, self-willed tyrant. There is no knowing what may please or anger Him, or what He may think fit to demand, what He may approve as pious, or what He may condemn as sin. Man may only discover that he has sinned through the punishment that crushes him.

Thus Moses is on his way to Egypt to fulfil the mission with which Jahweh has entrusted him; he is unconscious of anything that should cause the divine anger against him. Yet Jahweh makes an onslaught on him and seeks to kill him, because he had not criticised his son, although there is no previous command to execute in the document J, to which the passage belongs (Ex-2nd 3). David, when persecuted by him, thought it possible that, for some unknown reason, he had incurred the ill-will of Jahweh, that Jahweh had stirred up Saul against him, but might be appeased by a gift (1 S 21:1, 2).

Again, in the early period, the idea of sin is objective; sin consists in the performance or neglect of certain external acts.

² So occasion is taken to inquire more deeply into the nature of an as affecting man's inner life. "But is action antagonistic to God (*ontologischer*) without any reference whatever to the question whether the actor is conscious of this quality of his action. A man does not become a sinner through the purpose of his act but through his objective doing."³

The conditions of satisfactory relations with God are largely material and physical—various rites, regulations as to food and 'cleanness and uncleanness' generally, all sorts of tabus. Although most of the Levitical ordinances come to us from a later period, they probably represent very fairly the conditions of earlier times. This is implied, *inter alia*, by the prophetic denunciations of ritual. If we could compare the system of the Priestly Code with the practices in early Israel, the advantage would be with the Code. Thus the distinction with which we meet later between 'secret' sins, or 'errors' (*me'at*), and 'presumptuous' sins (*azn* [Ps 19¹³]), or sins 'with a high hand' (Nu 15²²)—i.e. between unconscious, unintentional sins and those which were conscious and deliberate—is, as we have seen in examples already referred to, ancient and primitive. The exact interpretation of ordinances as to ritual, etc., would often be known to the priests alone; moreover, the ordinances as to what was clean or unclean might easily be broken unwittingly.

In early times the principle of the solidarity of the family, tribe, or nation was strongly held: guilt attached to the kindred and fellow-tribesmen of an offender—as in the case of Achan (Jos 7: 1, 24) and of Saul and the Gibeonites (2 S 21). The guilt of fathers and ancestors attaches to children and descendants.

The punishment of sin may involve the death of the offender—e.g., the sons of Eli (1 S 2²¹),—or some minor misfortune, as in the case of David (2 S 19³⁴). Sacrifice (q.v.) played a large part in establishing, maintaining, and restoring right relations between God and man, but the cancelling of sin might also be effected by a suitable punish-

ment, and partly by the spontaneous forgiveness of God.¹

Moreover, in early times, religion was largely a matter of the tribe or nation; accordingly, as the nation incurred divine displeasure through the sin of one of its members, it could also be purged of guilt by his punishment—e.g., the incident of Achan.

It is natural to see in the story of the Fall (Gen 3) an account of the origin of sin, but sin is present in the serpent before it arises in Adam and Eve; the story rather gives the first sin as the origin of suffering. The first sin is typical of the primitive idea: it is an external act, the violation of an arbitrary command. Moreover, the story of the Fall was probably borrowed from a non-Israelite source, though no very close parallel to it has yet been found. It does not seem to have had much influence on early Israelite thought, which does not ascribe the corruption of human nature or the alienation from God that NT and later theology attribute to the Fall.²

The question as to what in the way of commission or omission was reckoned sin is too large to be dealt with here: it rather belongs to OT ethics.

'This ethical ideal of the ancient Israelites is far from perfect. The patriarchs use deception toward the stranger, as if it were a lawful practice. Polygamy is not considered an evil, nor intemperance in eating and drinking a vice. Great honor is made of a soldier. Barbarity is practiced in war, and generally towards adversaries, as the case of David himself proves. Suicide does not appear culpable.'²

4. The period from c. 750 B.C. to c. 586 B.C., with special reference to the prophets of the 8th cent., to Deuteronomy, and to Jeremiah and (in part) Ezekiel. — The various ideas as to sin already mentioned persisted in this period; and in cases where nothing is said about them in this section it may be understood that they were held by the prophets, etc., of this period.

Probably there is little in the prophets that was absolutely new; even ideas which appear for the first time in the literature of this period may not have been new to the hearers of the prophets. The most important novelty was a change of emphasis arising out of an advance in the doctrine of God. Sin is still that which God disapproves, but the ethical nature of God is much more clearly and fully held. He is no longer concerned chiefly with material gifts and external homage—the strict observance of the etiquette of His divine court. He desires sincere loyalty and heartiest affection from His people. He is concerned for their material, moral, and spiritual well-being, and desires that His worshippers should further His purposes by mutual goodwill and benevolence. This is summed up in Hos 12: 5 'I will have benevolence (*hesed*) rather than sacrifice, and the knowledge of God rather than burnt offerings.' Sin has now come to mean failure as to these matters. The prophets may not actually condemn ritual, but, if they do not, they regard it as altogether subordinate. One cardinal sin is social wrong-doing, the corrupt administration of justice, the exploiting of the resources of the community in the interests of a privileged few (Am 5: 12, 13; Is 1: 23; Mic 2: 2, 3). Deut. indeed, has regulations as to ritual, clean and unclean things, etc., but its main interest is to provide for the needs of the people.

Hosea's phrase, 'the knowledge of God' (4:6; cf. 14:5), includes what we should call fellowship and religious experience; the primitive view, as we have seen, held that sin arose from the ignorance of external ritual. Hosea and Isaiah

1. The number of people who are in the same boat as you are.

* Cf. E. Marti, *Gesch. der christl. Religion, Strassburg, 1897*, p. 184 ff.

¹ C. Piepenharing, *Theology of the OT.* Eng. ed., New York, 1999, p. 18.

hold that sin arises from ignorance of the character of God and His ethical demands. Isaiah uses the old ritualistic language and speaks of that which is nucleus (*asad*) as sin, but the term is no longer merely physical, and now denotes what is morally and spiritually unsatisfactory. He also emphasizes the idea that sin is rebellion against God (Is 47).¹

As regards punishment, these prophets are concerned chiefly with the judgment on the nation, though occasionally they deal with specific individuals (Am 7², Hos 1-3, unless those chapters are entirely figurative (Is 22²³)). Isaiah also discriminates between classes within the nation: it is well with the righteous, but woe to the wicked (33); the nation is doomed, but a remnant will escape (10²²).

These prophets are for the most part so absorbed in the guilt and punishment of Israel that they mostly say nothing as to forgiveness or treat it as impossible (Jer 13²³). The great exception is Hosea; according to him, Jahweh pleads with His people to repent, and offers them a free forgiveness (11¹⁰). There is no reference to sacrifice or any ritual conditions of forgiveness.

Ezek 18 repudiates the doctrine that children suffer for the sins of their parents.² Both Jeremiah and Ezekiel insist on the total and universal depravity of their fellow-countrymen in their own time, and Ezekiel extends this to Israel throughout its history (Jer 5¹⁻⁸, Ezek 18, 20).

These prophets also deal with the sins of Gentile nations. We have already mentioned the emphasis which they laid on social wrong-doing; they also denounce idolatry and other superstitions, whether connected with the worship of Jahweh or with that of foreign deities.

5. Exilic and post-Exilic Judaism.—(a) *Biblical, together with the Wisdom literature of the Apocrypha (in part).*—The Priestly Code and the later prophets are by no means indifferent to the ethical and spiritual aspects of sin, but we find in this literature a special interest in sins against the ritual laws (Ezek 40-48, Hag 1⁸, Zec 6¹⁰ 14²¹⁻²², Jl 1⁷, Mal 1⁸ 2¹³⁻¹⁴).

It is often said that the special attention given to sin-offerings in the Priestly Code is due to the deepened sense of sin in this period, but this is doubtful. In all times the idea that sacrifice atoned for sin was common; what was new in the Priestly Code was the limitation of atoning value to special sacrifices and of the efficacy of these sacrifices to sins that were not conscious or deliberate (Lv 5).

The sense of sin, of the unhappy alienation from God arising out of sin, together with the feeling of penitence, finds fuller expression in the confessions and aspirations of the Psalter, etc., than in the earlier literature—e.g., Ps 51, Neh 1. On the other hand, some of the Psalms breathe a spirit of self-righteousness which seems to argue a defective sense of sin (Ps 18²⁴). Probably, however, in such passages the writer is thinking of Israel as the loyal servant of Jahweh, in contrast to the idolatrous heathen, and is not claiming absolute righteousness for himself.

The literature of this period shows in many ways a raising of the moral and spiritual standard. A comparison of the narratives in the Priestly Code and in Chronicles with the corresponding narratives in the earlier literature, J, E, Samuel, Kings, shows that after the Exile the Jews regarded as sinful much that was not condemned in earlier times; e.g., 1 K 11¹⁻⁶ does not seem to see anything amiss in the polygamy of Solomon's harem; what was wrong was that many of the

women were foreigners; but the Chronicler has suppressed this account of the harem; as far as he is concerned, one might suppose that Solomon had only one wife, Pharaoh's daughter. A high ethical standard is set in Ezek 18, Job 29, 31.

The universality of sin is asserted (Ps 14, Pr 20⁹), though Ezek 14¹⁴ suggests that exceptionally righteous men, like Noah, Daniel, and Job, might be saved by their own righteousness.³

The OT does not develop any formal doctrine of the origin of sin, but explains sins variously according to the circumstances of individual cases. Human nature is such that man sins through the influence of different motives and causes—the pride engendered by prosperity, the distress arising from poverty (Pr 30⁹), indolence (20¹³), lust (27²⁰), persuasion by men (1¹⁰), etc. Sometimes, indeed, God Himself is spoken of as causing men to sin (Is 44² 63¹⁰, Ezek 20²³); but probably this is a rhetorical way of saying that God has ordained that indulgence in sin should make men more prone to sin—to put the idea in modern terms. Whether there is any real difference between the two forms of expression may be doubtful.

The literature of this period is much occupied with the relation between sin and suffering. In Dt 30, etc., Ezek 18, etc., Ps 1, etc., the doctrine is taught that a man's external circumstances correspond to his character and conduct: the righteous prosper, the sinner is unfortunate; accordingly, suffering and misfortune are indications of sin. Many of the Psalms suggest that suffering had awakened a sense of guilt in the writers—e.g., 32⁶, 119⁶. On the other hand, the book of Job, Ps 73, 37, etc., repudiates the view of close correspondence between a man's conduct and his external fortunes. Isaiah 53 represents the sufferings of the righteous as providing salvation for sinners, and as borne willingly—teaching on a much higher level than the old idea that the guilt of the sinner was shared by his kin and his fellow-countrymen, but yet in a way a development from it, involving the principle of the vicarious efficacy of suffering.

It is a natural characteristic of the Wisdom literature that it should lay stress on the moral and spiritual value of 'wisdom,' and speak of sin as 'folly.'⁴

(b) *Apocrypha (in part) and Apocalyptic literature.*—In spite of Job, the doctrine of inherited guilt persisted; Tobit prays that he may not be punished for the sins of his fathers.⁵

As regards the origin and causes of sin, there is as little formal theory and as great a variety of treatment as in the literature dealt with in the last section. Sin is due to the wilfulness and evil self-will of man (Sir 15¹⁰⁻¹²), a passage which expressly controverts the teaching found elsewhere (2 Es 3²) that it is due to God; it is an inheritance from Eve (Sir 25²⁴), from Adam (2 Es 23²³⁻²⁴)—a suggestion of the doctrine of original sin; it is due to fallen angels and demons (2 Es 15¹¹); the wide-spread belief in demonic possession inevitably led to the ascription of much wrong-doing to this cause. The idea of the tendency to sin being inherited from Adam—i.e. of original sin (2 Es 4²) as distinguished from the later Augustinian doctrine, which is really one of original guilt—regards this inherited tendency as the cause of sin, and inclines to limit the responsibility of the individual. On the other hand, the doctrine of transmigration (Wis 8¹⁶) maintains responsibility, even though the tendency to sin is held to be inborn.

As to its nature, sin is still regarded as rebellion against God (Wis 3⁶), as that which is contrary to the will of God; since God had made known His

⁴ See Prov., Ec., Wis., Sir., etc., passages; cf. also Job, 1:1.

⁵ To 2:1; cf. 12:1, Jdt 7:20, Dn 10:13, Bar 1:2-3.

will to the Jews in the Pentateuchal law, sin for them consisted largely in breaking that law (Sir., Prologue, 41st 49th; *Maas, passim*). Wisdom, following Hosea on the one hand and Plato on the other, sees salvation in wisdom (9th) and sin in ignorance and folly (2nd, 3rd 54th). The Apocalyptic literature, again, implies that a special sinfulness attaches to men of power and wealth, kings, nobles, princes (Ks. 38th 54th 67th 94th).

The idea of the universality of sin is found in 2 Es. 3 7th 8th:

'For in truth there is no man among them that be born, but he hath dealt wickedly.' In 3rd, however, there is a qualification: 'Then shall find that men who may be reckoned by name have kept thy precepts, but nations thou shalt not find.'

Similarly, in the Prayer of Manasse:

'Thou therefore, O Lord, that art the God of the just, hast not appointed repentance to the just, as to Abraham, and Isaac, and Jacob, which have not sinned against thee.'

Further, we find frequently in Sir. (e.g., 7th 8th) the contrast between 'sinner' and 'righteous' which is common in Psalms and Proverbs, implying that, however universal sin may be, practically men differ so much in this respect that some may be styled righteous and others sinners. But a closer investigation shows that the distinction is often what we should call sectarian rather than moral or spiritual: the professed worshipper of Jehovah is righteous; others are sinners. Sin becomes merely the lack of external adherence to certain sectarian views and practices.

The growing belief during this period in a future life, in resurrection, and in a judgment after death gave a larger importance to the consequences of sin, extended its punishment to an indefinite period, if not to eternity, and invested it with all the terrors of supernatural torture (Jth 16th, 2 Es. 10th, 4 Mac 12th).

By this time sin was largely regarded as concerning the individual, but the idea of national sin, sometimes arising from wrong-doing by only a part of the people, still survives (Ps. Sol. 2).

According to 4 Mac 5th, all transgressions of the law, whether small or great, are equally sinful; but Job. 7th mentions three sins as the special cause of the Flood: fornication, uncleanness, and all iniquity; there is a general tendency in this literature to lay special stress on sexual sins. This may be seen in the various lists of vices and crimes which summarize the ethical position (Wis 14th, Jr. Bar. 3, 13, Test. Jud. 16-19; cf. Test. Reub. 3).

6. Pharisaic, Sadduceic, and Rabbinic Judaism.

—It seems impossible to avoid the conclusion that Orthodox Judaism, at all times and even now, has laid undue stress on external observances; sin has largely consisted in the neglect or breaking of external laws, often concerned with matters of mere ritual. Witness the supreme importance attached to the Pentateuch and the Talmud, and the extent to which these, especially the latter, are preoccupied with the details of the ceremonial law. Naturally this tendency is exaggerated among the less advanced Jewish communities—e.g., in Russia and Poland. Yet such a tendency is not necessarily incompatible with a high morality; there is an advanced ethical standard in the law and the Talmud, if only it can maintain itself side by side with zeal for ritual. Moreover, these works do not ignore the inner and spiritual side of religion. C. G. Montefiore is justified in saying:

'The Law was not a mere external law, framed from fear of punishment and for hope of reward. It was the Law of the all-wise and all-righteous God, given to Israel as a sign of supreme grace. It was a token of divine affection, and in its fulfilment was the highest human joy.'¹

This statement could be supported by quotations from Jewish writers of every period. Thus

¹ The Synoptic Gospels, London, 1909, p. 502.

1. Abraham tells us, 'Sin is uncleanness.'² Doubtless physical, ceremonial uncleanness was often thought of as sin; but, on the other hand, uncleanness is often a figure for spiritual corruption. There is a similar combination of the ritual and ethical in *Abketh. v. 10 f.*, which names as the seven main transgressions neglect in the matter of tithes, of the offering of the dough-cake, and of the seventh-years fruits; corrupt administration of justice; profanation of the NAME; idolatry; incest; murder; and failure to observe the Sabbathical year. Heretical exegesis of the Pentateuch is apparently included under the corrupt administration of justice. Again, we find in *Abketh. iv. 5*, the pregnant saying:

'The reward of precept is precept, and the reward of transgression is transgression.'

So far we have been speaking of orthodox Judaism; such sects as the Hasidim and the various bodies of Reformed Jews lay less emphasis on the ritual law and more on the ethical and spiritual features of Judaism.

As regards the origin and causes of sin, later Judaism has inevitably been influenced by general speculative thought. Already in Job 9th it is suggested that God is responsible for injustice and wrong-doing. Later writers are often occupied with the problems which we connect with the terms 'free will' and 'divine sovereignty.'

According to Josephus, the Sadducees emphasized man's control over his actions: 'God is not concerned in our doing or not doing what is evil . . . to act what is good or evil is at man's own choice.'³ The Essenes, on the other hand, asserted that 'God governs all things,'⁴ or that 'all things are best sacrificed to God.'⁵ The Pharisees occupied an intermediate position; thus, 'when they determine that all things are done by fate, they do not take away the freedom from men of acting as they think fit; since their notion is, that it hath pleased God to make a temperamental (Gabra, rather 'combination') whereby what He wills is done, but so that the will of man may act virtuously or viciously.'⁶ Or, as *Abketh. iii. 24*, puts it: 'Everything is foreseen (Yak), and freewill (Mey) is given. And the world is judged by grace; and everything is according to work.'⁷

Later Judaism, with the exception of a measure of antinomianism in some of the Jewish mystics, has always asserted responsibility and ethical obligation, but there has also been a tendency to lay stress on the responsibility for human sin upon God. Sin is partly due to the *Yetzer ha-ra'*, רצון רע, the evil nature in man; and this was implanted in him by God. The phrase is often rendered 'evil impulse' (or 'tendency'), and this is according to its usage.

'The extraordinary thing about this theory of the origin of sin is that, in the last instance, God is the cause of sin; for, as Creator of all things, He created the *Yetzer ha-ra'* in Adam, the existence of which made the Fall possible (*Shema'ith rabba*, c. 27). . . . The Almighty is made to say: . . . "I repenteth me that I created the *Yetzer ha-ra'* in man, for had I not done this he would not have rebelled against me" (*Tellat Shema. Beresh. vi.*)'.⁸

A similar view was held by Baalshem, the founder of the Hasidim: 'We should thus regard all things in the light of so many manifestations of the Divinity.'⁹ In the Kabbala, too, God is the author of evil, seeing that He created both the just and the unjust, and formed man of a spirit of good and a spirit of evil.¹⁰ Such teaching helps the universality of sin; the Talmudic statement that children of a year old are free from sin need not be taken literally.¹¹

As Abraham tells us, 'Abrahamic Judaism took over from the Old Testament a belief that disease was a consequence of sin.'¹²

Both Philo and the Rabbin follow the OT in teaching that God's desire to forgive and the divine provision for forgiveness anticipate and stimulate

man's repentance.¹ The conditions of forgiveness are confession, repentance, amendment or good works. Since the final destruction of the Temple there has been no question of sacrifice, but to some extent, especially with the less enlightened, the ceremonies of the Day of Atonement have been credited with atoning value.² On the other hand, the prayers for forgiveness in the liturgy of the Day of Atonement illustrate the ethical and spiritual character of the Jewish doctrine of sin.

SIN (Hindu).—**1. Vedic.**—As in the *Rigveda* is found the most developed expression in Vedic literature of the concept of righteousness, so that *ṛikṣhitā* contains the most elevated expression of the sense of sin and the desire to be set free from it. Varuna is the god to whom the sinner addresses himself, as Varuna is the god who is omniscient, and who of himself or by his spies knows the thoughts of men. In the hymn vii. lxxxvi. the poet with unusual earnestness asserts his anxiety to be at peace with Varuna, of whose anger with him he is convinced by the testimony of his friends. He assures the god that the sin which he has committed, whether his own or inherited from his father, is not deliberate; heedlessness, drunkenness, dicing, passion, and thoughtlessness are pleaded as excuses; even sleep may produce wrong-doing, and the older may be involved in the sin of the younger. The god is therefore invoked to set free the sinner from his bonds, as the calf is released from the rope which fetters it. The hymn itself does not reveal the cause of the poet's appeal, and it is most probable that the sense of sin must be considered to have been brought home to him by disease, as is admitted freely in the later hymn vii. lxxxix., but even on this assumption the hymn is not without moral value. It confesses sin, even if it seeks to explain it; it assumes the justice of the divine anger, which it seeks to remove by supplication, probably accompanied by offering, though the hymn does not expressly say so. On the other hand, it is impossible to find in it any great depth of moral feeling, and it is certainly unnecessary to see in it proof of the influence of Semitic religion on early Indian belief.³

Beside this comparatively elevated conception of sin as an offence against the divine majesty there appears, freely enough in the *Rigveda* and predominantly in the *Ātharvaveda*, the more primitive conception of sin as a pollution which can be removed by physical means. It is not difficult to trace remains of this earlier view in the hymns to Varuna: from vii. lxxxix. it is plain that the sinner was afflicted by dropsy, and the watery nature of the disease can hardly have failed to suggest connexion with Varuna, who is even in the *Rigveda* closely connected with the waters. Nor is it unlikely that Varuna's power to loosen the bonds of sin is derived ultimately from the cleansing power of the waters. In another hymn the waters themselves as goddesses⁴ are entreated to carry away the sin and untruth of the poet.

¹ *Abraham*, i. xix.

³ As suggested by H. Gildenberg, *Die Religion des Veds*, Berlin, 1904, p. 185, n. 1.

⁴ vii. 181.

So Agni is asked to loosen the bonds of the sinner,⁵ for fire by itself is potent to destroy, by burning, evil. In place of the more complicated conception of fetters imposed by a god, the sin itself is regarded as the fetter.⁶ The same conception of sin as a kind of disease is implicit in the view of inherited sin or sin which comes from contagion: sin can be obtained not merely from the father, but from the mother and other close kindred.⁷ In other cases the kinship of sin to a pollution is more evident: the black bird, the harbinger of Nirrti, the goddess of misfortune, by its excrement creates guilt on the person affected; the wailing of the women in the house of the dead creates a pollution on the kin; the howling of the victim at the sacrifice lays on the sacrificer the burden of a sin which he must expiate.⁸ Even the sins of other men may pass over to a guiltless man,⁹ and in this category perhaps must be reckoned the mysterious sins caused by the gods which appear in the *Yajurveda*.¹⁰ Sin, therefore, it is legitimate to suppose, was to the Vedic Indian primarily the actual pollution of disease present in his body, and only by a gradual process of moral development was the disease interpreted as the punishment inflicted for an act, or thought, or word, displeasing to gods who exacted obedience to moral laws.

In the methods prescribed for the removal of sin, of which the later *Saṁhitās* give full details, the material character of sin and its apiritual nature are constantly recognized in close union. The former aspect is prominent in the simple process of sin-transfer, which is one mode of removing guilt: the gods themselves set the example by transferring the guilt of the blood of the sacrifice to one man after another until it rested finally with the slayer of an embryo, the most guilty of sinners.¹¹ So a man seeks to transfer his own sins to others.¹² At the end of the *śrautaveda* the sins of the sacrificer are removed by an offering made on the head of a bald repulsive-looking man who stands in the water of the concluding bath; this man at the end of the whole rite is driven away into the forest, bearing with him the sins of the village out-castes.¹³ Another version¹⁴ attributes to the water of the bath, after the sacrificer has bathed in it, the power to drive away sin from those who have offended, although they themselves have taken no part in the sacrifice. Even more elaborate is the scheme of the *śrautaveda*,¹⁵ one of the four-monthly sacrifices. The wife of the householder is enjoined to confess to the priest what lovers she has had, the declaration serving as a mode of expiation; cakes in platter form are baked, one for each member of the household, and offered in the fire, thus removing the sins of the members of the house, which are deemed to be transferred to the cakes; the ceremony is closed by a bath in which husband and wife wash each other, clearly as a species of purification, while the moral side is brought out in a prayer to Varuna for forgiveness for any sin committed by the sacrificer and his household, in public or in private. In the ritual of the *śrautaveda* there is a curious rite: the priest offers in the fire splinters of the post to which the animal victim has been tied, and with each he utters a formula asking remission

of the sin which has emanated from the gods, from men, from the fathers, and from one's self.¹ But cases occur also in which an ordinary sacrifice is offered to remove sin, without recourse to magic, such as the expiation of a false oath by an offering to Agni Valévānara prescribed in the *Taittiriya Samhitā*.²

This external view of sin, which clearly was the most prevalent in Vedic thought, explains the failure to rise to any distinction between neglect of ceremonial duties, natural defects, and real offences against the moral law. The only difference which is ever recognized in the texts of this period is in the relative gravity of crimes: in the *Yajurveda*³ we find a list (varying in detail in the different *Saṁhitās*) which exhibits a scale of offenders ascending in heinousness, from the man who has allowed the sun to rise before he has performed a ritual duty, or to set before he has completed such a duty, through the man with black teeth or bad nails, the man who has married before his older brother and the latter (ranked, however, as the more guilty), the slayer of a man, and the slayer of a Brāhman, to the slayer of an embryo. In accord with this the *Gṛhya* and *Dharmasūtras* reveal no trace of distinction between ceremonial and moral duties, though they differ for the better from the ritual of the Avesta by observing, as a rule, some degree of moderation in the penalties which they impose on sins of either kind. Naturally the tendency to invent remedies for every form of sin was developed by the priest, who found profit in these performances, and already in the Vedic period in such works as the *Sāmavedhāna Brāhmaṇa* appears a literature of *prāyaścitta* rites intended to avert the evil consequences of error, moral, social, and ritual, by processes which in the main are those of magic, eked out with prayers and confession of fault.

It would be natural to expect to find in the *Upaniads*, which on the whole represent a decided reaction against the ritualism of the *Brāhmaṇas*, a careful examination of the real nature of sin and a distinction between ceremonial and morality. But the outlook of the *Upaniads* is almost wholly intellectual; the problem of conduct is not raised as the starting-point of discussion and inquiry, which is instead the question of the relation between the individual and the absolute, and the fundamental doctrine of the *Upaniads*, which merges the individual at death in the absolute, renders it difficult to find a place for considerations of moral action in the seeker of true knowledge with its resulting release from the bonds of transmigration. In contrast to knowledge, all action is of inferior worth, since it leads to rebirth. To the older view, which rewarded good deeds with heaven and punished evil with hell, there is now added the doctrine that all actions lead to their deserved fruits in the form of rebirth on earth, with or without an interval; but the moral value of this principle is greatly diminished, not merely by the fact that all action is ultimately regarded as evil, but also inasmuch as no criterion is proposed by which a man may discriminate between acts good and evil, the distinction being left to the ordinary views of men. Moreover, there does appear, though in an isolated passage,⁴ the dangerous and immoral doctrine that the most evil deeds are annulled by the possession of true knowledge.

2. Post-Vedic.—In its attitude to sin Jainism is a faithful exponent of the prevailing view among the ascetics of the Brāhman community at the

time when the system of Mahāvīra took definite shape. The ideal aimed at by the ascetic is to suppress all natural desire, and to Mahāvīra belongs the distinction of carrying the principle to its most complete extent. Such a doctrine, however, clearly precludes in theory the development of a sound ethical system, since it rests on the twofold basis of pure egoism and of a conception of the Ego which regards all its desires as evil and its true aim as the negation of all earthly interests. Thus Jainism has accumulated an extraordinary system of complicated restrictions, violation of any of which is a sin to be expiated; these restrictions so cover the field of human action that a layman bent on following the path of salvation must not practice agriculture or make a living by military service, a trade, crafts, teaching, singing, or music; and the avoidance of taking insect life is carried to an excess which is burdensome and irrational. But Jainism avoids the possibility inherent in the view of the *Upaniads* which allows knowledge to outweigh sin; its restrictions on conduct are an essential part of the system, and obedience to them is an integral element of the effort to attain enlightenment and freedom from transmigration.

In early Hinduism, as expressed in the *Mahābhārata* and the earlier *Dharmasūtras*, such as those of Manu and Yājñavalkya, the principle is accepted that each deed brings its recompense, sometimes on earth, but more normally in a future birth; but no effort is made to set out a rationale for the distinction between meritorious and evil acts. Nor is the doctrine of *karma* without exception; there are traces of the old belief in sin-transfer: the evil king must bear responsibility for the sins of his subjects;¹ the priestly guest who meets with want hospitality transfers to his host his evil *karma*.² More important is the doctrine of the effects of parental sin: it is expressly asserted that a deed may not bear fruit at once, but may defer its effect until it bears fruit in a son, grandson, or other descendant,³ and a modification of this idea ascribes to the child a character derived from father or mother or both.⁴ A wife too absorbs *karma* from her husband, and does not stand necessarily on her own merits—a doctrine expressly asserted in the *Rāmāyaṇa*⁵ and implied in Manu.⁶ Moreover, the epic mentions cases where the justice of the rule of retribution is assailed. Thus Kṛṣṇa asserts⁷ that her misfortunes are due to the *grāsa* (*pramāda*) of the creator, who has thus recompensed an error against the gods committed by her in childhood, in a way clearly out of all proportion to the sin, while the sage Māṇḍavya⁸ is so impressed by the action of Dharmā, the personification of justice, in causing him to be impaled by the king as retribution for his ill-treatment of an insect in his childish days that he curses Dharmā to be reborn as a Śūdra. In strict accord with this imperfectly ethical view of sin is the multitude of means by which it can be atoned for. All the sin of a king's conquest of the earth can be wiped out by sacrifices, if accompanied by large gifts to the priests such as cows and villages; and presents to a sacred bull expiate a king's breach of his oath.⁹ Confession and penance avail to remove sins, even intentional crimes, but the same effect is accomplished even more simply by gifts to the priest and resort to places of pilgrimage.¹⁰

A further conception of the destruction of sin is

developed in the *Rāmāyaṇa-Gītā* (q.v.), from which it passes over into the sectarian religions as a common property. The *Gītā* in effect enunciates the doctrine that the grace (*prasāda*) of the lord, coupled with the antecedent loving faith (*bhakti*) of the devotee, has power to cancel the results of actions committed in a previous birth. This doctrine attained favour through Rāmānuja (11th cent. A.D.), but he left the question of the exact relation between the devotion of the worshipper and the grace of god to become the basis of the distinction between the Tēngal sect and the Vēlāṅgalāia. To the latter the process must begin with the act of the man who seeks liberation, while the former make grace proceed spontaneously from the god. The latter view is clearly the more common opinion of the sectarian cults generally, but, even when effort is demanded from the devotee, in no case is there an attempt to devise a moral code binding on the devotee as an essential preliminary to the exercise of grace, and the doctrine of grace in effect overthrows the whole rationale of the *karma* theory, without substituting for it any basis of a moral system.

The defect in the religious systems is not remedied by the philosophies, which in their intellectualism approach the doctrine of the *Kauṣītaki Upaniṣad*, that knowledge avails to counterbalance any and every crime. To Sāṅkhya the recognition of the identity of the self with the absolute and the unreality of the whole empirical universe from the *lāvāra* downwards is essentially an action which cannot be explained by causal categories above which it stands, and all action alike, good or bad, is therefore in no essential relation to this knowledge. The empirical world remains, indeed, and Sāṅkhya accepts it fully as real for conventional purposes, but the fact that its reality was conventional was doubtless sufficient to prevent him from seeking to examine the nature of moral judgments as actually formed by men. The other systems were equally indifferent to questions of conduct.¹

The result of this negative attitude on the part of religion and philosophy alike can be clearly seen in the later Hinduism of the *Purāṇas* and the law digests which devote their energies to multiplying the number of sins, ceremonial, social, and moral, between which they make no distinction, but at the same time regard all these offences, of whatever degree, as capable of expiation by *pratyakṣitas*, of which doubtless the most important point was often the profit to be derived by the priest by whom the penance was enjoined and under whose direction it was carried out, or by the saving grace of a sectarian deity whose favour can be won by acts of pilgrimage or devotion of purely formal character—doctrines wholly incompatible with the development of any deep moral sense of the heinousness of wrong-doing in itself. Characteristic of this period is the glorification of all manner of sacred places, more presence within whose limits is enough to remove all sin; there is practically no limit to the creation of *śāntīdhāmas*, legendary accounts of the origin of the sanctity of these places and celebration of their powers, though few of them have attained such wide celebrity as the Ganges, which has sanctity above all other rivers. The mere reading of *Purāṇas* and hearing them read destroys sin—a doctrine which brings from Kabir the indignant protest² that a man cannot be freed from the guilt of killing by hearing scores of *Purāṇas*. Equally efficacious, and less troublesome than pilgrimage, is the repetition of the names of the

god, and *Aṣṭottarāintandana* and *Sahasrāntandana*, claiming to be parts of *Purāṇas*, exist for all the greater and even some of the minor deities. Nor is it merely a man's own evil deeds that can thus be undone; prayer and offerings avail to rescue ancestors and descendants from the effects of their own actions. A true Vaiṣṇava, according to the doctrine of the *Brahmaśaṅkara-Purāṇa*,³ who is thoroughly devoted to Kṛṣṇa, not merely acquires all knowledge and virtue, enjoys on earth superhuman powers, and goes to the world of Kṛṣṇa on death, but liberates from rebirth seven generations before and after himself. Any person who meets him on the road is cleansed by the mere fact from all the sins committed in seven previous existences, and to attain this position no course of religious exercises or devout penances is necessary; all that is requisite is the love of Hari or Kṛṣṇa and constant thought of him, subject, however, to the condition that the necessary initiatory *mantra* has been acquired from the teacher, whose profit is thus adequately secured.

A. BRADFIELD KNITH.

SIN (Iranian).—I. Introductory. — Speaking generally, it is chiefly in the matter of the respective teaching about sin (though also in some other momentous points of doctrine) that the Iranian stands in marked contrast to the Indian religious systems and approaches near to the general Christian idea. In the list we find certain well-defined elements as necessary constituents of the theory of sin. These are: (1) the idea of a Supreme Being, endowed with a will, which will requires certain acts to be performed on our part and other acts to be refrained from; (2) consequently, the idea of a moral law, which is the expression of this divine will, formulated and delivered to us as a complete system by which we, as creatures, are bound; (3) the idea of a creature having also a will, endowed with freedom of choice, i.e. having the power to choose between willing obedience to the moral law (or divine will) and its opposite.

Sin is nothing but a refusal, on the part of the free choice of the human will, to conform to the divine will. If one or other of these conditions is wanting, we cannot be said to have the Christian conception of the term 'sin.'

Here it must be noted that the moral law and the will of God are taken as identical terms. To express the idea in a familiar way, we may say that a thing is good because God wills it, and God wills it because it is good. In other words, God could not will a thing unless it were good in itself, and no thing could be good unless it were in accordance with the will of God.

It is evident that some of the Oriental systems recognize one or other of the elements of this conception of sin. But, on the other hand, we find that there are some in which the fundamental idea is a supreme law, though one that is impersonal—a blind force—yet eternal and unconscious, a kind of *fatum* or *moira* overruling the gods themselves, to which these divinities, even those in the highest rank, are subservient, and only agents. This law, influencing alike the physical and the moral order of things in the universe, evidently cannot be taken as the equivalent of the supreme and conscious will of a God who is the creator and governor of the worlds. Being unconscious, this law does not presuppose a personal will.

It will be readily understood that all such religious systems, in fact, are either entirely founded on a basis of pantheism or incline towards pantheism. It is precisely in pantheism that this

¹ See A. E. Keith, *The Aśvaka System*, London, 1910, pp. 571, 591.

² See *ibid.*, p. 592.

³ See H. H. Wilson, *Works*, London, 1861-77, III. 107 f.

'order' of things—physical and moral alike—the constant march of nature, or of the great All, to which belong and from which proceed the gods and lesser beings, perforce becomes a 'law,' a 'wheel,' an impersonal and unconscious 'way of life.'

Again, no system which fails to recognize the free choice of the human will as a necessary basis of morality can be said to possess such a conception of the idea of sin as Christians have. Such religions are nothing but systems of fatalism or systems with the tendency towards fatalism.

These remarks are true of all the Indian religions from the Vedic downwards. The striking exception is the very limited and early-forgotten system connected with the Vedic deity Varuna, essentially the deity of the moral law, whose *dharma* (decree) and *vyatani* (wills or laws) are the foundations of the moral (as of the physical) law. Sin is the breaking of these laws; 'we men daily do violence to thy will.'¹

All this is singularly like the Iranian moral doctrine in both its more ancient and its more recent forms, and has been the main reason leading many scholars, from Darmesteter onwards, to equate, if not to identify, the Vedic Varuna with the Iranian Anra Mazda—Ahura Mazda.² But, whether the deities themselves be identified or not, it is clear that their ethical systems, especially as regards the doctrine of sin, are practically the same.³

Passing now to consider the Iranian system, we remark that the doctrine of sin in all its aspects plays a very large, we may say—at least with regard to the later epochs of its history—a preponderating part in the Mazdayasnan or Mazdean religion and philosophy. We may consider this doctrine in three presentations: (1) in the Old Persian inscriptions of the Achaemenian kings, (2) in the sacred books of the Avesta—*Gāthās* and later Avesta, (3) in the Pahlavi exegetic and theological literatures.

2. The religion of the Achaemenian kings.—Extremely limited in extent and brief in expression as are the religious beliefs preserved in the rock-cut inscriptions of the great Darius and his successors (532–336 B.C., approximately), they yet clearly contain the notion of sin, i.e. of evil as a transgression of the will of the supreme deity, the creator Anra Mazda.

'Ohrman!', says Darius, 'disobey not the commands of Anra Mazda. Turn not away from the right path. Sin not.' The last sentence, *na starana*,⁴ contains the verb *star*, meaning 'to sin,' which occurs frequently also in the Avesta.

Of all the sins condemned by the morality of the Achaemenids the most serious is undoubtedly the lie (*drauga*). On this point the truths expressed in the inscriptions are in wonderful accordance with the notions on the subject given by Greek historians, and also with Iranian tradition itself.

E.g., Darius cries out: 'O thou who shalt be king after me, keep thou from lying! Should a man be found to be a liar, deal thou with him severely; if thou desirest to keep thy kingdom whole.'⁵ All evils are attributed to lying.⁶ Darius

tells us that during Cambyses' absence in Egypt 'the people became hostile and lying became widespread in the land.'⁷ In another scene the same king, relating how a rebellion had taken place in many of the provinces of his vast empire, states that 'these provinces had broken into rebellion; it was lying that had made them rebellious.'⁸ Therefore the king prays to Anra Mazda to guard his kingdom from lying, as it was one of the three chief scourges of a people: 'May A. protect this land from the hostile herds, from bad heresies, and from lying.'⁹

Indeed the importance attached to this evil of the lie led J. H. Moulton to the belief that we may regard Drauga as a proper name and as representing the Angra Mainyu, or Evil Spirit, of the Avesta, whose absence from the royal inscriptions has been urged as one of the objections to the identification of the Achaemenian with the Zoroastrian faith.¹⁰

The other sins condemned by the kings are, on the one hand, rebellion of the subject against authority, on the other, despotism or cruelty on the part of the ruler.

Thus does Darius break forth with pride and rage: 'A. has been my help . . . for I have neither been a tyrant nor a tyrant.'¹¹

3. The Avesta.—Whether the form of Mazdaism preserved in the Avesta was a religion exactly identical with that of the Achaemenian kings or a different one, it is certain that the worship of the god Ahura Mazda is its most essential feature, and that Zoroaster and his followers have as good a right as the Persian kings to boast of being 'Ahuramazdeans.' This Avestic religion—especially in its most ancient form, as preserved in the *Gāthās*—is essentially a religion founded on a basis of morality, in the sense which we apply to the term. In spite of the dualism which is its most notable characteristic, the Avestic system of morality differs but little from what we term the Christian conception. Evil, it is true, is conceived as produced, in the moral and physical order alike, by an independent principle, an evil creator, eternal, and independent of the good God, and termed Angra Mainyu. But the good law is that of Ahura Mazda, as revealed by him to man. The Avesta contains the whole of this code, in both its moral and its ritual aspect. Besides, there is a special and technical term continually used to describe moral good, holiness, purity, conformity to the good law (*vanahi dānā*): the term is *asha*, which, according to phonetical rules, is etymologically identical with the *rita* of the Vedas.¹² The opposite term *anasha* gives the adjective *anashatan*, as in the Vedic *anrita*.

The Avesta treats the whole life of man, and the whole history of the world, as a 'spiritual combat.' Man is born endowed with free will, and at the start finds himself in the presence of two hostile armies, one of which is that of the good God, the other that of the Spirit of Evil. He must choose which of these he will serve, precisely as St. Ignatius Loyola pictures the Christian placed between the 'two camps,' or 'two standards,' of Christ and Satan. The whole life of man is a warfare, a perpetual struggle in the choice between good and evil. The Spirit of Evil may even tempt man, as he tempted the prophet Zarathustra himself, by calling upon him to renounce the good Mazdayasnan law, and promising him a great reward, even the sovereignty of the world:¹³ 'No,' the prophet replies, 'I will not renounce the good law, not even if soul and body and life shall part.'¹⁴

Here we have clearly the picture of the free will

¹ Thus *dharmā prapipṣme* (*Rigveda*, VII. lxxvii. 1).

¹² The curious exact analogy existing between *āša dānā*, 'source of justice' (cf. *Rigveda*, x. xxviii.), and *ashaka Kāsh* of the Avesta (*Y. x. 4*) has often been remarked.

¹³ *Vend. av.* III (ch. 6 in *SSS* IV, [1896] 211).

¹⁴ *Id.* 35, 36 (7 in *SSS* IV, 912).

making a choice between the divine law and sin. In fact, the whole of the Avesta bears witness to this doctrine.

The Vedic names for sin (*dharm*), 25 times in the *Rigveda*, *Apna*, 18 times in the *Yajur* and *Saṁhitā* appear at all in the Avesta: *manah*,¹ *apah* (only in derivatives, perhaps in *apah* *manah*),² *sin* of *sin* (*sin*).³ But the more recent Iranian languages (see below) lead us to conjecture also the existence of a term **sin*. The verb *sin*, 'to sin', which occurs in the inscription of Darius quoted above, is frequent in the Avesta, whilst a substantive *sin*, 'sin', seems to have existed.⁴

Throughout the Avesta we find specific sins enumerated with the punishment which they involve and (in the later Avesta) the temporal penances which can expiate them.

It must be noted that the moral law of the Avesta extends not only to external acts and words, but also to thoughts. This is very rarely the case in ethical religions. It is also the reason why it is so frequently expressed in the sacred texts by the well-known formula: *humata, hukhta, huvarshta* ('good thought, good word, good deed'). Sin, on the other hand, is described by the three opposite terms: *dushmata, dushukhta, dushvarshta* ('bad thought, bad word, bad deed').

Certain sins which are reckoned as of peculiar heinousness in the Avesta are said to render the one who commits them *pashōtanus*, or *perōtōtanus*—a term variously explained as signifying 'whose body (*tanu*) is steeped in iniquity or has morally perished' (de Harlez), 'one who pays with his own body' (Darmesteter), or 'one whose body is forfeit, i.e. guilty of a sin for which there is no atonement' (Bartholomae, Moulton). The word reappears in Pahlavi in the inverted form *tānpūhar*. What kind of sin is this, for which, be it noted, the maximum penalty is 300 stripes? In *Vendidad*, xv, 1-5, we are told that there are five sins which, unconfessed and unatoned for, make one *pashōtanus*. It is a strange list indeed: teaching one of the faithful another religion; giving bones too hard or food too hot to a dog; striking, frightening, or kicking a bitch with young; having intercourse with a woman during menstruation; having intercourse with a pregnant woman. But, heinous as these sins are, they can be expiated: whilst the *uniperōtan* sins are inexpiable.

¹ For each there is no punishment, no expiation, no purification: for these acts are heinous for ever, for eternity.⁵

As such are reckoned both burning and burying dead bodies, eating of the carcass of a man or a dog, unnatural sin, self-pollution. Probably these sins, at least in the beginning, were punishable with immediate death here and eternal punishment hereafter. Otherwise it seems strange that capital punishment seems indicated for a very few sins, such as throwing a corpse into the water, carrying a corpse alone, illegally attempting to carry out a ritual purification. The guilt of other sins is reckoned in terms of the number of stripes by the *aspah* *nātra* (horse-goad) or *aroshō-carana* ('obedience-maker') arranged in ascending scale from five for a simple *āgarēpta* (act of violence) through graver assaults up to 200; breaches of contract (*mīthō druf*), up to 1000; violations of mortuary rites, up to 1000; sexual sins, 30 to 1000; ill-treatment and killing of animals, 50 to 1000; and, most astounding of all, killing an otter, 10,000.⁶ Whether these 'stripes' were ever inflicted or not, they had become little more than

the degrees on the thermometer, indicating the comparative guilt of various sins.⁷

4. The Sasanian religion.—Instead of becoming weaker, as might have been expected, by the lapse of time, the moral system of post-Avestian Mazdaism developed further. The principal points are these:

(1) The basis of all morality is to be sought for in man's intellectual nature, and consequently in his free will. This is why children who have not yet come to the use of reason and adults bereft of reason are irresponsible. The age of reason varies from seven to eight years, inasmuch as before that time of life 'sin does not take root.'⁸

(2) All which is not according to the will of Ahura Mazda is sin.⁹

(3) Man is naturally created good, but Aharman (the Spirit of Evil) blinds him, hiding from his sight future retribution.

(4) It is owing to the fact of the soul being in the body during life that, not seeing future retribution, it commits sin; otherwise it would not commit it for any earthly consideration.¹⁰

(5) Aharman deceived the first human couple, *Māshya* and *Māshyōi*, and led them to commit sin by persuading them to eat the flesh of animals. So with every sinner. Thus the life of man is a spiritual conflict, an unceasing warfare.¹¹

A system of moral theology and casuistic science grew up in the Sasanian schools. Here were compiled long lists of virtues including a code of duties for every state of life, as well as classified lists of sins.

For sin the generic term is *vanah*, from which is derived *vanastar*, 'sinner,' words which have passed into the Armenian language, as *van*, 'sinister.' In modern Persian and in Kurdish the word *vanah* appears, according to phonetic law, in the form *vanak*, borrowed in the Arabic of the Qur'an as *fanak*.¹²

The summary of the contents of the original *Nashk*, or parts of the Avesta now lost,¹³ shows that some of the *Nashk* were veritable treatises of moral theology and of criminal jurisprudence, for in the Mazdaean, as in other Oriental religions, no distinction is made between sin and misdemeanours of even purely civil or ceremonial nature. Hence endless chapters containing enumerations of such transgressions, their effects, and their appropriate chastisements, whether of a spiritual or of a civil nature. The enumerations of sins of all kinds are so constant and of such great length in the various Pahlavi writings that it would be tedious to repeat or even summarize them. A few examples must suffice.

One list of 30 sins is found in the *Mainog-i K'ert*, xxxvi, as follows:

(1) *bedony*, (2) *podrasty*, (3) murder of a just man, (4) the destruction of *Aspōd-das* (nest-of-sin marriage), (5) *natash-tahme* towards an adopted son, (6) destruction of the sacred fire, (7) destruction of the otter, (8) *violyat*, (9) religious indifference, (10) violation of trust, (11) support of wickedness, (12) *lazimes*, (13) *horay*, (14) witchcraft, (15) *spontay*, (16) *deyōn-worship*, (17) theft and abetting thieves, (18) violation of promises, (19) *malhommes*, (20) oppression in order to obtain another's goods, (21) persecution of the righteous, (22) *shander*, (23) *atrogancy*, (24) adultery, (25) ingratitude, (26) *shandhood*, (27) persecution of the helpless (or the dead?), (28) *shandure* in distrusting the good, (29) *shandure* of sin and blundering of good work, (30) regret at having done good to others.

A shorter and somewhat more intelligible list is that of *Dinkart*, III, cix, 3:

Avaries, fraud, ingratitude, discontent, disobedience, violence,

¹ See art. *Law* (Iranian).

⁹ See C. Bartholomae, *Altiran. Wörterbuch*, Strassburg, 1904, s.v.

¹⁰ *Ferd*, III, 30.

¹¹ *Fa*, xiv.

¹² This seems impossible—'the spirit of sin', says Darmesteter. The only explanation (surely an improbable one) we have seen suggested is that of V. Henry (*Le Pahlavi*, p. 104) that perhaps the ancient Iranians named the otter and used it to catch fish! See also *Ferd*, I, xlii, xvi, xviii, etc.

mercilessness, tyranny, force, spiritual blindness (*šāhā*), spiritual darkness (*šāhā*), opposition to the law (*šāhā*), and other faults.

The *Mānōg-i Kərəd*, li., has an interesting division of predominant sins according to the four primitive 'castes' or classes of the population.

Thus the characteristic sins (1) of the priests are hypocrisy, negligence, idleness, attention to trifles, religious indifference; (2) of warriors, oppressions, violence, unfaithfulness to promises; (3) of encouragement of evil, ostentation, arrogance, insolence; (4) of agriculturists, ignorance, envy, ill-will, malice; lastly (5) of artisans, dishonesty, ingratitude, improper talk, meanness, abjectness.

Certain sins specially condemned are pride and contempt of others, adulteration of food-stuffs, unjust weights and measures, cruelty to animals, useless destruction of cattle. Intemperance and drunkenness are condemned, curiously enough, because excess in drink causes excess in eating, and the latter hinders the recitation of the *Gāthas*.¹

Two mysterious sins or faults often mentioned in the last-quoted book and other treatises are *faršāb* and *abihāt*. It is not clear what these are, though great importance is evidently attached to them. According to the *Dinkord*, the former is intellectual pride ('I know no one superior to myself'), the latter contempt of others ('This other person knows nothing, he is backward and inferior,' which recalls the Pharisee of Lk 18¹²). Quite different explanations are given by other writers. Attempts are made at other classifications of sins; thus two classes are distinguished, one of sins which injure one's neighbour (entitled *hamēnāšān*) and one of sins which injure only one's own soul (*rūdānāš*);² or, again, 'antecedent vices,' such as concupiscence and anger, and 'consequent vices,' such as idleness and murder—apparently what we may term internal and external sins.

5. Trend of Mazdean teaching.—Glancing over the whole mass of Mazdean teaching, Avestan and post-Avestan, concerning sin, we cannot fail to notice that, whilst that ethical system condemns practically all those forms of moral evil which we and, we may say, mankind generally hold to be deserving of reprobation, there are other acts which to us seem strangely out of place. Of course some of them are violations of religious or ritual precepts, to which the Avesta and the Mazdean priesthood attach great importance. Under this head we can easily understand why it is sinful to let the sun shine on the fire.³ Other apparently grotesque or at least puerile condemnations of actions as sinful are those of walking with only one boot,⁴ or barefooted,⁵ or, still stranger, 'uno pede stando mingere' ('—for which crimes Artā-Virāf, the 'Persian Dante,' saw a man suffering atrocious torment in hell,⁶ as well as another tortured for eating whilst talking.⁷ Of these it may be said that possibly they were originally condemned for hygienic reasons. But the most astounding condemnation as of one of 33 most heinous sins, second only to unnatural lust and murder, is that of 'breaking off a *khvātāk-das*,' i.e. a next-of-kin (to an incestuous) marriage.⁸ This of course is only in strict accordance with the exaltation of that abominable practice, at least in post-Avestan times, to the rank of one of the most meritorious good works.⁹

(a) Merit and responsibility.—Exact idiom was

¹¹ See art. *Manakos* (Iranian), § 2.

held as to merit and demerit and the responsibility of the sinner. Good deeds done unconsciously or on the spur of the moment have little if any merit. The sacrifices offered in divine worship are always productive of merit (*kerfād*). Should the minister, by reason of want of attention, fail to receive any merit, the merit finds its way into a treasury of merits (*ganj*), placed in the hands of the spirits (*yasān*), who have the power to bestow the contents on the souls of the just. The merit of good deeds, lost by sin, can be born anew in the soul after the confession, contrition, and good resolutions of the sinner. Parents are responsible for their conduct towards their children, husbands for their wives, superiors for those under them, in the event of their failing to instruct and correct them. A just man is also bound to instruct his fellow-man who is a sinner; otherwise he shares the latter's guilt and will incur great shame at the judgment;¹ similarly the husband who does not correct his wife.²

Proper fasting is fasting from sin, not from food³—a maxim in thorough agreement with Mazdean views on mortification and asceticism.

In cases of doubt as to sin the high-priest is to be consulted.⁴ Elsewhere, when one is in doubt whether an act is a sin or not, the act must not be done.⁵

(b) Effects of sin.—Sin produces demons. 'Various new demons arise from the various new sins the creature may commit,' and apparently these demons even introduce confusion into the heavenly bodies and here on earth.⁶ All ruin and misery among mankind and animals come from man's sinfulness.⁷ It would even appear that grievous sin could actually turn men into actual demons; a case in point was that of the wicked Afraiyab (the Avestan Frašayān, the great Turanian foe of Iran, who thus became a *dēv* and will not be saved at the end of creation.⁸ Very wicked men, who have only the name of humanity and whose lives are all sinful, are called '*dēv-dān*.'⁹

(c) Punishment in hell.—After death the unrepentant sinner is punished in hell (Av. *dabāhēn*, from *das*, 'evil,' *āhu*, 'being,' 'life'; Pahl. *dābākē*). Whether this hell was considered as eternal is doubtful; certainly many of the later schools contemplated its final destruction at the end of all things, and apparently the purification of those suffering in it. But in the earlier Avesta such epithets are used—especially *vairōi vīspātē*,¹⁰ *atayāšē*—of both heaven and hell as seem to leave little doubt that the original idea was that of a real eternity of misery.¹¹

In the post-Avestan literature it is the celebrated 'Inferno' of Artā-Virāf, with its minute and crude description of the gruesome sufferings of the damned in hell and its enumeration of the sins for which they are tortured, that supplies the most complete summary of late Mazdean teaching about sin and its chastisement.¹²

(d) Contrition and confession.—The means by which sin and its fatal consequences can be got rid of are contrition, purpose of amendment, and confession. True repentance (*patīk*) is necessarily both internal and external. External duty, it is said, requires that the sin which the penitent knows that he has committed should be specifically confessed in words (*berd gūšnād*); mental duty

consists 'in his renouncing it': 'in future I will sin no more.' There are two formulae of confession, called *patite*; one is the great *patite*, the other the little *patite*. Sins must be confessed in detail, according to the manner in which they have been committed, whether 'by thought, by word, or by deed' (*minishnik, gubishnik, kinishnik*).¹

LITERATURE.—The ideas connected with sin permeate so widely the whole Masdian system, Arætan and post-Arætan, that it suffices to indicate all the translations of the scriptures and the commentaries upon them, and especially the *Public Treats* of E. W. West, in *SEB* v. (1880), xviii (1882), xxiv (1885), xxxvii (1887), xliii (1891). A useful brief summary of the chief points is in V. Henry, *Le Parsien*, Paris, 1900 (sup. ch. vi); see also L. C. Casartelli, *La Philosophie religieuse du Masdien avec les Nomsantes*, Louvain, 1904, and Eng. tr. by Fritz Janszapp, Bostley, 1905, as quoted in text, sup. chs. vi and vii.

L. C. CASARTELLI.

SIN (Japanese).—1. Definition.—The old Japanese word expressing the idea of sin is *tsunni*. But *tsunni* is both less and more comprehensive than our word 'sin': on the one hand, the deeds which the most ancient Shintō enumerates as *tsunni* form only a short list, which does not cover the vast field of the actions which we regard as sins; on the other hand, the notion of *tsunni* includes three distinct categories, viz. *kegare*, 'uncleanness,' *ishiki waza*, 'ill deeds,' and *wazowari*, 'calamities.' The *nishiki waza* category corresponds in a certain degree to our idea of sin. But from the mere fact of the combination of those three things under the single word *tsunni* we see that the ancient Japanese drew no clear distinction between ritual impurity, moral faults, and certain calamities. Ritual impurity—e.g., being dirty in body and clothing—was a want of respect for the gods; and calamities were regarded as signs of the displeasure of the gods for some offence, conscious or unconscious. Thus impurities and calamities became combined under the same title as actual sins, for the psychological reason that they were equally displeasing to the gods.

2. Different kinds of *tsunni*.—The chief sins of the oldest Shintō are enumerated in the following passage of the *Ōho-korai no Kotoba* ('Words of the Great Purification'):

'As for the various sorts of offences which may be committed either inadvertently or deliberately by the heaven's increasing population, that shall come into being in the country, a number of offences are distinguished as heavenly offences: (viz.) breaking down the divisions of the rice-fields, filling up the irrigating channels, opening the food-plates of sluices, sowing seed over again, planting bands, flaying alive and flaying backwards, evacuating excrement; these are distinguished as heavenly offences. As for earthly offences, there will be furthermore a number of offences: (viz.) cutting the living skin, cutting the dead skin, white men, excrucious, the offence of (a son's) cohabitation with his own mother, the offence of (a father's) cohabitation with his own child, the offence of (a father's) cohabitation with his step-daughter, the offence of (a man's) cohabitation with his mother-in-law, the offence of cohabitation with animals, calamity through crawling worms, calamity through the gods on high, calamity through birds on high, killing the animals, the offence of performing witchcraft.'²

According to this text, the sins that might be committed by 'the heaven's increasing population' (*ami no mizu Aite-ro*, 'heavenly-surplus population,' a very old expression meaning the Japanese people, the origin of which appears in one of the most ancient myths of the *Kojiki*)³ are divided into two large classes, viz. *ami tsu tsunni*, 'heavenly sin,' and *kuni tsu tsunni*, 'earthly sin.'

The seven *ami tsu tsunni* have enumerated are grouped under this generic title because they are

the crimes which, in the mythology, were committed in heaven by the wicked god *Susa-no-wo* against the sun-goddess. This is easily seen from a simple comparison with the accounts in the *Kojiki* and the *Nihongi*, which, although differing in some minor details from each other and from the list in the Ritual of the Great Purification, are none the less essentially in agreement with this list. Breaking up the narrow embankments which separated the rice-fields and at the same time served as dams for keeping back the water, filling up the channels which conducted the water (indispensable to native cultivation), opening the ponds where it was most carefully preserved till the proper time—these were the most execrable crimes for a population of agriculturists; and that is why they put those crimes at the head of their list. No less hateful is the sowing, on a field already sown, of bad seed which will ruin the harvest.⁴ The planting of wands (in the rice-fields) has already been explained.⁵ As to the crime of flaying an animal alive, from the tail to the head, it is no doubt condemned not on account of its cruelty, but because of some magical reason which remains obscure, perhaps because of the evil use which might be made in sorcery of the skins thus obtained. However that may be, this crime, as well as that of evacuating excrements (i.e. in places not meant for the purpose) appears also in the number of wicked deeds committed by *Susa-no-wo* against his sister.

He broke down the divisions of the rice-fields laid out by the Heaven-Shining Great-Angust Deity, filled up the ditches, and moreover stepped excrement in the palace where she partook of the great food.⁶ And again: 'As the Heaven-Shining Great-Angust Deity sat in her awful weaving-hall seeing to the weaving of the sacred garments of the Deities, he broke a hole in the top of the weaving-hall, and through it let fall a heavenly pishad horse which he had flayed with a backward flaying.'⁷

The *kuni tsu tsunni*, according to the Japanese commentators, are those which have been committed since the time of Jimmu Tanno, the first legendary emperor; and it is almost certain that the difference between them and the *ami tsu tsunni* rests on a mythological basis. This explanation, if we interpret it historically, may be connected in a very real way with the diversity of races that appear successively at the origin of the Japanese people.⁸ In any case we cannot agree with the simple explanation of W. G. Aston, who did away with the difficulty by attributing to the author of the Ritual a rhetorical device, viz. the breaking up of 'the long list of offences into two balanced sentences.'⁹

The list of sins in this second category comprises, first of all, 'cutting the living skin' (*kūi-hada-tachi*), which includes murder and wounding; it should be noticed also that every effusion of blood meant pollution, even for the victim. The sin of 'cutting the dead skin' (*shini-hada-tachi*) is easily understood when it is remembered that, according to primitive ideas, it was particularly impure to touch a dead body, and much more so to cut it up. The next two offences concern two diseases which are repulsive and therefore displeasing to the gods: 'white men' (*shiro hito*), i.e. doubtless men afflicted with white spots on their skin, like lepers, and also albinos; and 'excrecences' (*akusumi*, 'superfluous flesh,' 'proud flesh'), a disease which we cannot specify more definitely from the text—unless we accept the interpretation of a Japanese commentator, who combines the two crimes into one, *shiro-ki toki-kumi*, 'cohabitation in broad daylight' (*shiro*, 'white'; *ki*, 'day'; *toki*, 'bed'; *kumi*, 'to unite,' 'to interlure'):

⁹ See *Kojiki*, tr. H. H. Chamberlain, Tokyo, 1906, p. 44; and cf. art. *CONSCIOUS AND UNCONSCIOUS* (Japanese), vol. iv, p. 169, and Beron, p. 41.

this view gains support when it is recalled that even the emperor could not have sexual intercourse except in the depth of night, before the first glimmer of dawn had appeared. The obscurity of the writing of those texts, in which the Chinese characters may be taken sometimes in their ideographic meaning and sometimes phonetically to represent Japanese words, prevents any elucidation of this point. There follow various kinds of incest and the sin of bestiality.¹ Then come several 'calamities,' viz. 'through crawling worms' (*kafu mushi*), i.e. the bite of serpents, millepeds, and other venomous creatures, all the more to be feared as the primitive had had no floor; 'through the gods on high' (*taka-tsu-kami*), i.e. especially being struck by lightning; and 'through birds on high' (*taka-tsu-tori*), because, entering by the holes which every house had for the escape of the smoke from the fire, they could salfie the food.² Next there is mentioned 'killing the animals' (*konono tofushi*), i.e. not animals in general, as in Buddhism, but only the domestic animals of one's neighbour, perhaps by means of evil spells; and lastly comes witchcraft (*magi-mono yori tsunni*)³—a prohibition which becomes particularly clear when we think of the story in the *Kojiki* which shows that the casting of spells was known in the most ancient Japanese magic.⁴

These are the essential sins according to the primitive Japanese conception. Obviously this list does not include all possible crimes, e.g., in the case of heavenly sins, if the *Kojiki*⁵ is not so complete as the Ritual, on the other hand we notice some additional sins of the same kind in the mythical accounts of the crimes of Susa-no-no, as they are given in the *Nihongi*.⁶ But the list in the Ritual is the one which authentically represents the real tradition, as is sufficiently proved by the fact that it corresponds exactly with the list of heavenly sins given in a third important book of mythology, the *Kogoshū* (A.D. 807), a work compiled by Hirumari, a Shintōist priest belonging to the old sacerdotal family of the Imibe. On the other hand, it is obvious also that Japanese morality did not condemn these few crimes only; the study of the oldest criminal law shows that its field was much wider;⁷ and there is a sure proof that, besides the old religious offences, the social conscience prohibited numerous deeds not mentioned in the Ritual, viz. the fact that a single individual who at the same time had violated both the divine law and the human law was logically condemned both to a ritual expiation and to a civil punishment.⁸ But, lastly, in this necessarily vague domain of morality it is the text of the Ritual explained above that gives us the most original and at the same time most correct idea of the notion of sin in pure Shintō.

3. **Avoidance of sin.**—*Tsunni* may be avoided by the means corresponding to the notion of *imi*, antagonistic to that of *tsunni*. This conception of *imi*, 'avoidance,' 'abstinence,' and the various religious practices connected with it, have already been explained.⁹

4. **Deliverance from sin.**—When once *tsunni* had been committed, deliverance from it could be obtained by the magical proceedings indicated in

the Ritual of the Great Purification itself.¹ And, in fact, since the *tsunni* were regarded as infractions which must be expiated whether there was any evil intention or not (see the beginning of the text cited above), the Japanese thought that such sins must be cleansed, not by inward repentance, but by external rites, i.e. magical rites.

The notion of purely moral sin, as we conceive it, did not gain supremacy in Japan until Buddhism was introduced, which, along with the mystic doctrine of a superior religion, brought to the distant archipelago a new morality founded no longer on ancient magic, but on the discriminations of conscience, and thus revealed the true idea of sin, which consists not in actions but in intentions, which man avoids by virtue and atones for by repentance.

Illustration.—The references are given in the footnotes.

MICHEL REYON.

SIN (Muslim).—There are various words used in the Qur'ān to express the ideas of fault, crime, sin. The shades of meaning with which they are used seem to vary with the context. Thus, *sayyi* means evils which may happen to a man.

'So God preserved him from the evil they had planned.'¹ It expresses the evils which God's punishment brings.² It also expresses moral guilt.

'Whoso death evil and is recompensed with his iniquity, they shall be the companions of hell fire.'³

The word *dhamb* expresses all forms of unbelief and wrong actions proceeding from such unbelief. The commission of a *dhamb* constitutes one a *dhambi*, or sinner.⁴ The word *dhamb* seems to imply a wrong attitude to others and so injustice.

'Avert frequent suspicion, for some suspicions are a crime.'⁵ It denotes a wrong attitude towards God.

'He who united the gods with God hath devised a great wickedness.'⁶

The Qur'ānic idea of sin seems to be that it is pride and opposition to God. Thus Satan (Iblis), who refused to obey the command to prostrate himself before Adam, is described as swelling with pride and becoming an unbeliever.⁷

The punishment of this rebellious pride is that those who possess it must remain in it.

'The unjustly proud ones of the earth, will I turn aside from my signs, for even if they see every sign they will not believe them.'⁸

This opposition to God may lead a man to be an atheist, a polytheist, or a simply careless irreligious person. Man does not inherit a sinful nature, but simply a weak one. Sin is not so much a disposition as a habit which men acquire because of their weakness. The willing desire of the natural heart to sin is referred to in what Joseph says of himself:

'Yet I hold not myself clear, for the heart is prone to evil, save those on whom the Lord hath mercy.'⁹

The Qur'ān marvels at the sin of man, his obstinate disobedience, and calls upon him to exercise faith and repentance, but it is deficient in its call for a broken and contrite heart.

'All through the Qur'ān, the message is that while repentance must be sincere, it is a very easy matter, while forgiveness is a question scarcely worth troubling about, so simple is its attainment. Muhammad nowhere displays anguish of heart and contrition in the sight of a pure and holy God, and therefore does not demand that others should experience that of which he himself had no knowledge.'¹⁰

According to Muslim theologians, sins are of two kinds, little (*sayyi*) and great (*kabih*). This distinction is based on the text:

'In those who need the great sin and pardon, but cannot

only the lighter faults, verily the Lord will be diffused of mercy.¹

Lesser sins, mere faults and imperfections such as are inherent in human nature, are all forgiven, if some good act is done.

¹ Observe prayer at early morn'g, at the close of day and at the approach of night: for the good deeds drive away the evil deeds.²

Opinions vary as to the number of greater sins, but in all lists there occur: infidelity or the ascribing of partners to God, murder, theft, adultery, unnatural crimes, neglect of the Ramadan fast and of the Friday prayers, magic, gambling, drunkenness, perjury, usury, disobedience to parents, false witness, defrauding orphans, despair of God's mercy, continued commission of little sins, and cowardice on the field of battle before an infidel enemy. The last, however, is said not to be a sin if the enemy outnumber the Muslims by more than two to one. It is said, further, that the number of great sins has not been definitely laid down, so that men may exercise the greater caution.

If a learned man commits a little sin and thereby misleads those whom he should guide, it becomes great. If small sins are repeated inadvertently, they do not become great; but, if knowingly, they change into great sins. The greatest of all sins is the associating of another with God (*shirk*). Other sins may be pardoned, but not this. A Muslim, although he commits sins small and great, will not be left in hell for ever, provided he does not commit this sin, or declare lawful what God has forbidden.

Sins require no atonement; repentance immediately after the commission of the sin is enough.

² They who, after they have done a base deed or committed wrong against their own selves, remember God and implore forgiveness of their sins—and who will forgive sins but God only?—and persevere not in what they have willingly done unless: as for these, pardon from their Lord shall be their recompense.³

True repentance implies sorrow for sin, full purpose of amendment and restitution if wrong has been done to another. If, after repentance, a man again sins, the repentance is not lost, for sins repeated of are no longer reckoned. Some deny the validity of repentance at death; others say that God accepts it even then. Infidels may be forgiven:

³ Say to the infidels, if they desert from their misbelief, what is now past shall be forgiven them; but, if they return to it, they have already found their doom of the misbelievers.⁴

With some theologians, when an infidel becomes a Muslim, the act of conversion is equal to repentance. Others say that repentance is a separate action and must be separately and definitely made. A believer who commits a mortal sin does not, in the opinion of the orthodox, become an infidel.⁵

An interesting question arises with regard to the sinlessness of prophets. The orthodox belief is that they are free from sin. The Ash'arites hold that even the power of sinning does not exist in them; the Hanbalîyyah, a sub-section of the Shi'ahs, in order to exalt the *imāms*, hold that prophets can sin: 'The prophets sin, but the *imāms* are pure.'⁶ The Mutazilites deny this, but admit that they possess some quality which keeps them from sin. All are unanimous that prophets do not commit the greater sins. As regards the lesser, some say that they may commit these before inspiration (*wahy*) comes upon them; others that they may do so even after inspiration has come, but that such little sins in them are mere frailties and slight imperfections not really amounting to sin. To a Muslim this disposes of a difficulty in the Qur'an

itself, for there the greater prophets are spoken of as sinning. Adam's fall is referred to thus:

⁷ And we said, O Adam, dwell thou and thy wife in the garden, and eat ye plentifully therefrom: wherever ye list, but to this tree come not: it is a tree of transgression; and Satan made them slip from it, and caused their banishment from the place in which they were.⁸

But it is said that Adam did not really sin; he only committed a slight fault, which after all proved beneficial to mankind; for, had he remained in paradise, the world would not have been peopled, and the will of God, 'I have not created men and *jinn* except for worship,' would not have been fulfilled.⁹ Further, Adam and Eve, on being convicted of sin, said:

¹⁰ O our Lord, with ourselves have we dealt unjustly: if thou forgive us not and have not pity on us, we shall surely be of those who perish.¹¹ Noah said: 'Unless thou forgive me and be merciful to me, I shall be one of the lost.'¹² Abraham said: 'When I am sick, He healeth me, and who will cause me to die and quicken me, and who, I hope, will forgive me my sins in the day of reckoning?'¹³ Moses killed a man—an act described as a work of Satan. He repented and said: 'O my Lord, I have sinned to my own heart, forgive me.'¹⁴

The references to sins committed by Muhammad are numerous:

¹⁵ Be thou steadfast and patient, for true is the promise of God: and seek pardon for thy sin.¹⁶

Various explanations are given of this verse. Some say that it refers to remissness in the propagation of Islam; others to neglect in rendering thanks to God; but one popular explanation is that the Prophet was to seek pardon for sin merely as an act of worship and as an example of that confession of sin which was to be a portion of the worship rendered by his followers.¹⁷ If this explanation is not enough, then it is said that the word for sin (*dhanb*) conveys the idea of a fault only, or what is technically called a little sin. The objection is that this word (*dhanb*) is used to describe the sin of ordinary people.¹⁸ It is quite clear, in general, that the word used to describe the sin of Muhammad does not denote a more trivial offense, but a great sin. Again, 'Ask pardon for thy sin and for believers both men and women'¹⁹ is similarly explained. The Prophet was ordered by God to ask pardon for his sin, not because he really had committed any sin which needed pardon, but because, if he thus asked, then, in accordance with the principle that his actions form the *sunnah*, or rule of faith and practice, it would become the duty of all Muslims to confess their sins and seek pardon.²⁰ Another passage is:

²¹ Verily, we have won for thee an undoubted victory, in order that God might forgive thee that which went before of thy fault and what followed after.²²

This reference to an earlier and to a later fault has led to many ingenious explanations, such as the fault before and after the descent of inspiration (*wahy*); before and after the taking of Mecca; before and after the revelation of this verse. But all these still leave the fault with Muhammad; so a further explanation is given. The 'former sin' refers to the sin of Adam when Muhammad was yet in the loins of his great ancestor and the 'later sin' refers to the sin of the followers of Muhammad. Both are connected with the Prophet, as Adam was forgiven by the blessing of Muhammad and Muslims will be pardoned through his intercession. The traditions also record the fact that Muhammad prayed for the pardon of his sins. On the authority of 'A'isha it is said that Muhammad used often to say: 'By thy praise O God, pardon me'; 'O God,

I ask pardon of thee for my offence, and I ask of thee thy mercy.' On the authority of Abū Huraira it is recorded that Muhammad said: 'I ask pardon of God and repent (return) towards Him more than seventy times a day.'¹ It is said that Muhammad felt such remorse when he had committed slight faults that he called them sins when they were not really such. The reply to this is obvious. From a Muhammadan standpoint, the Qur'ān is the word of God and not of man; so it is God and not Muhammad who speaks of the Prophet's sin. Whilst, however, the Qur'ān lends no countenance to the idea that prophets cannot sin and indeed refers to their sins, there is no mention whatever of sin in connexion with Jesus Christ. He is the one sinless prophet of Islam.

The Muhammadan view of sin looks upon it as the neglect of the arbitrary decrees of an absolute Ruler rather than as an offence against an immutable moral law of right or wrong. This is the real defence for many of the actions of the Prophet. In other men they would have been sin; but they are not to be considered so in him, as God commanded him to perform them. This also accounts for the absence of any moral gradation of the great sins. Adultery is a great sin, but so is flight from a field of battle; murder is a great sin, but so is the neglect of a fast. All this shows how the Muhammadan conception of God as a despotic ruler, who lays down laws for no apparent reason but that He wills so to do, has led to a false notion about the real nature of sin. *E.g.*, associating others with God in worship is the first and greatest of the great sins; yet the angels were ordered to worship Adam. Iblis (Satan) refused and was, in consequence, driven out of paradise.² The sin here did not consist in the breach of the eternal law that worship belongs to God alone, but in disobedience to a command, arbitrary in its nature and contrary to the great law of man's relation to God. Again, sin is looked upon as a weakness of human nature. The sinner is not much to blame, and God is merciful. The spirit of fatalism also deadens the conscience and makes a man accept even his failings as decreed for him. The sensual descriptions of paradise, looked upon by a few purer-minded Muslims only as allegorical, deaden the moral sense. It is difficult for the man inclined to give way to his passions to see that what is right in heaven is wrong on earth. Sin, also, is too often regarded as an external pollution which the performance of certain good actions and attention to the prescribed religious ritual can cleanse. The giving of alms is said to 'do away sins.'³ The ceremonial ablution before the stated prayers is such a meritorious ceremony that the Prophet said: 'When the Muslim performs his ablutions, all his sins will be forgiven him.' The *hajj*, or pilgrimage to Mecca, 'cleanses the hearts of men and makes them innocent like new-born babes.'⁴ There are numerous traditions⁵ on the subject of sin, the result of belief in which has been to lessen the idea of its evil nature and to make the means for its removal very mechanical. Doubtless there are Muslims who have a deeper sense of sin and who believe in repentance and amendment of life, men who place little faith in all the puerile stories handed down by tradition; but the tendency of the whole system of belief and practice, of the dogmatic statements and of the alleged usage of the Prophet, is to make the Muslim attitude to sin mechanical, with outward formalism as the

general rule and inward spiritual experience the rare exception.

EDWARD SELL.

SIN (Roman).—Sin, in the Christian world, implies a personal and moral relation between man and the divine power which was never realized in anything like the same degree in ancient Roman life. The sinner is to moderns not only a breaker of superhuman law, but a contemner of the majesty of a divine person. The sense of being at enmity with superhuman forces was of course conspicuous in primitive Roman religion, as in primitive religions of all ages and all lands. The condition of hostility is declared by the god against the human being for some offence which may have been given by him quite unwittingly; but the punishment which he suffers is not the less believed to be merited. Although the tragic conception of the Greek *kyō* is foreign to native Italic and Roman beliefs, yet they included the persuasion that divine vengeance often falls on a human being for some merely mechanical error apart from blameworthiness of a moral character. In the Roman *ius divinum* of early days, as in the secular law, a casual slip in ceremonial action or utterance might entail dire consequences, comparable to those assigned to arrogant defiance or neglect of the deity. The rigidity of the religious formula was parallel to that of the legal formula, and the maxim of the Twelve Tables, 'ut lingua nuncupasset, ita ius esto,' applied in both spheres. In the field of early ancient civilization deities were realized as essentially civic; and as concerned only with the members of particular communities. It was natural therefore that offences against them should be on the same level with the offences against secular law. Each man was related to the divinity of his city rather as a citizen than as a mere person. When deities came to be conceived as non-local, the idea of offences against them grew to be larger and more refined. The old civic cults were felt by the most cultivated spirits to be crampingly formal and narrow, and men turned away from them, finding satisfaction for their needs in those more emotional and spontaneous forms of worship which spread from East to West and to a large extent supplanted immemorial civic usage. In Italy the new influences were first felt among the Greek settlements, but they had so far affected the Italic peoples that in 186 B.C. the Roman senate, as the supreme religious authority in Italy, felt constrained to suppress those 'Bacchic' brotherhoods which were regarded as constituting a 'conspiracy' against society and the State. The decrees then issued are contained in the famous extant inscription.¹

It may be said, however, that to certain offences of special enormity the notion of sinfulness did attach in very early days among Romans, as among Greeks. An offender guilty of a crime to which the vague but awful penalty 'Sacer esto' was assigned was outlawed and might lawfully be slain, as odious to the gods, by any man's hand.²

The consciousness of personal defilement, as caused by the perpetration of acts forbidden by the deities, was stimulated in Italy by the Graeco-Oriental worship, which became ever more popular. A feeling spread that for the welfare of the soul it was needful to seek reconciliation with heaven and deliverance from the bondage of error, by

special services and practices which would ensure divine pardon and relief from the stains contracted by the soul. The mysteries, as a special means of escape, never held the same importance in Roman culture as they acquired for the Greeks.¹ In the West the conception of sin was vivified in a high degree by the prevalence in late antiquity of the Stoic philosophy, which drew much of its spiritual effectiveness from the mystical religions of the East, transmitted through a Greek atmosphere. The ethical aspects of philosophy became dominant over the speculative teaching in the Stoic as in all the late schools of Hellenas. The idea of sin was especially developed by the Stoics (q.v.), whose ethical doctrines took a strong hold of the later culture of Rome as of Greece. These philosophers, paying little heed to many insuperable antinomies, contrived to combine a pantheism which was technically materialistic with the conception of a personal relation to a Supreme Being, and to tinged with emotion an intellectualism which in some of its aspects remained as dry and barren as it could well be. The Stoic law of life for the individual was summed up in unswerving loyalty to a divine order of the universe, and in the composure of the will to perfect harmony with the will of God. A healthy state of the will, according to the Stoics, ensures happiness, while a recalcitrance against the divine purposes, as expressed in the ordered universe, brings misery. The Stoics brought into general use the term for 'sin' which established themselves in the Greek world, viz. *hamartia* and *hamartia*, and these were rendered in Latin by *peccatio* and *peccatum*, which passed into the language of Latin Christian theology. The whole duty of man was declared by the Stoics to lie in self-discipline, to the end that the will might be brought into complete accord with the will of God. A religious fervour was thus infused into the pursuit of virtue, which was a new influence in culture, and the away of Stoic religious and moral teaching over the civilization of the Roman Empire, with its action on early Christian thought, was immeasurably powerful. This was achieved in the paradoxical manner of the Stoics, in spite of their theoretic doctrine that sin has its origin in erroneous intellectual judgment. The whole field of education in imperial Roman times was permeated by a Stoic colouring, which entered deeply into early Christian literature and into all the later developments of philosophy, in which the corruption of the human soul and the need for a divine deliverance were accepted as axiomatic. This great practical achievement of Stoicism in the Roman world was accomplished in spite of some doctrines which might have been expected to work against general acceptance. Opponents of the school ridiculed their admission that the appearance in the world of the perfect man had been rarer than that of the phoenix. Again, the Stoic thesis that 'all sins are equal' (i.e. are of the same heinousness) was difficult to accommodate to ordinary life, and indeed it was more or less ignored in Stoic literature, as may be seen in the writings of Seneca (q.v.). The attractiveness of man's proper aim, in the Stoic view, was great enough to overcome the weight of the paradoxes which encumbered it. Many utterances are to be found in the later classical literature, above all in the Stoic, relating to the subject of sin, which have an almost Christian ring. The idea of 'salvation' from sin is often found in connexion with the different divinities who were customarily designated as 'saviours' (*soter*). The notion of a 'new birth,' so eminently Christian, is encountered in connexion with the ceremony of the *taurobolium*

(q.v.), whereby, as one inscription records, a man was 'reborn for everlasting life' ('renatus in aeternum').

LITERATURE.—Information on this subject is widely scattered in works bearing on ancient philosophy and religion. Especially may be mentioned E. Zeller, *Die Philosophie der Griechen*, II., 'Nacharistologische Philosophie', Leipzig, 1908-09, and E. V. Arnold, *Roman Stoicism*, Cambridge, 1911, ch. xiv, 'Sin and Weakness'. J. S. REID.

SIN (Teutonic).—In the old Teutonic languages, especially in the Gothic, there is no clear concept of sin as a conscious nonconformity to, or transgression of, an ideal standard of right or duty as revealed in conscience or divine law.² The word *syn* entered the North from western Germany. It was a derivative from *syna*, a root of several compounds with the implicated idea of a denial or an apology. Its meaning when used in cognate languages was rather uncertain. In the Saxon Law³ it was used in establishing a plea of 'Not guilty' before the court, while later it came to stand as a technical and abstract expression for the matter of the accusation itself, as we notice in *Heliand*, the Old Saxon epic of the Saviour from about 825. In the Northern languages this usage also became established by way of accommodation as Christianity was introduced. The word generally used for sin in *Ulfilas'* translation of the New Testament, from about 350, was *fræ-cunræta*, 'misdeed'—an idea which was readily comprehended by the Gothic peoples among which he worked as a missionary.

Thus, while it must be granted that it is difficult exactly to make out the early Teutonic idea of sin in a manner which would meet the philosophical and religious requirements of our times, and even if we allow that Teutonic literature reveals character rather than principles of conduct, this does not mean that the Teutons were careless to moral requirements. Their convictions about right and wrong were very decided, at least on certain points. With them blasphemy, e.g., was a great sin, as were also perjury and adultery. There is therefore evidently a moral value placed upon man's conduct as noticed in the *Philippa* and other Eddic songs, in the *Gylfaginning*, and in the Northern and Icelandic sagas. In the *Nidungensaga*, the great German epic from the Middle Ages, there are few traces of strictly moral sentiments, for, while this *Lied* in its subject-matter has much in common with the *Eddas*, it brings out less of the humane character and more of the valiant and heroic.

With the earliest Teuton, as known to Tacitus, the case was different. When treating of crimes and courts he says:

—The nature of the crime determines the punishment. Traitors and deserters they hang on trees. Cowards and those given to debauchery they smother in filthy bogs and fens, casting a hurdle over them. In these different punishments the point and spirit of the law is, that crimes which affect the political organization may be exposed to public scrutiny, while the infamous vice and the debauchery cannot too soon be removed from the light of day.⁴

The classification which is here brought out could be arrived at only from a moral point of view. That cowards were counted infamous is evident to every student of Teutonic life and literature. Cowardice was the sin of all sins, for which there was no pardon.⁵

The eschatological views which are abundant in the later songs of the *Edda*, in the *Gylfaginning*, and in the sagas agree entirely with the grouping of sins and punishments as obtaining in this life. In Saxo's *Danish History* the place where the condemned are kept and tortured is described in the most repulsive terms, while the

⁵ *Id.* 91.

innates are depicted accordingly.¹ In the *Gylfaginning* we have it set forth that the consequences of all misdeeds and crimes will follow the sinner after death, and that he will have to meet with due punishment in Nastrand, one of the dismal halls below Niflheim, where Hel rules.² Those who arrive at their dreadful destination are sinners of various descriptions and classes, of which nine or ten are enumerated in the *Song of the Sun*—if this poem, standing almost on the borderline between heathendom and Christianity, may be taken as a witness. From it as well as from many other records, some of undisputed heathen character, we learn that enemies of the gods, deserters, the unmerciful, perjurers, murderers, adulterers, the covetous, the proud and the arrogant, violators of laws, and breakers of covenants are doomed to Niflheim for ever, or at least for a very long time.³

In the *Völunga* Nastrand and its woeful prisoners are described as follows:

She saw a hall standing,
far from the sun;
in Nastrand;
its doors are northward turned,
venom-drops fall in
through its apertures:
enwined is that hall
with serpents' backs.
She thence saw streaming
the sluggish streams
bloodthirsty men
and perjured,
and him who the tar beguiles
of another's wife.
There Nidhogg rooks,
the corpse of the dead,
the wolf tears men.
Understand ye yet, or what?⁴

From all this it seems perfectly clear that the concept of a coming retribution in another world was fostered and entertained by the Teutons and especially by those of the north. It also goes without saying that man's moral responsibility had to be reckoned with, even though the very idea of sin was not altogether like ours. It referred less to the religious life itself—something of which we know very little in regard to the Teuton—and more to the external behaviour. The reaction upon the sinner himself from the evil deed in the first place made him an outcast from his own people and an object of punishment, while in the second the doom will follow him after death and into the dismal regions of Hel, where he will be chastised according to his deserts. Sin as a condemnation will cleave to him for ever. In the light of this, those two well-known strophes from *Hávamál*⁵ may be easier of interpretation as presenting the Teutonic summing-up of the value of man's deeds and the result of his entire life:

'Cattle die, kindred die, we ourselves also die;
but the fair name never dies of him who has earned it.

Cattle die, kindred die, we ourselves also die;
but I know one thing that never dies,—
judgment on each one dead.'

SIND, SINDH.—The province of Sind forms the extreme north-west portion of the Bombay Presidency, consisting of the lower valley and delta of the Indus, with an area of 46,968 sq. m. and a population of 3,513,455.

1. Name.—It takes its name from Skt. *sindhu*, probably connected with the root *syand*, 'to flow,' 'the ocean,' afterwards specially applied to the river Indus.

¹ *Sindhu* in the *Rigveda* and the *Atharvaveda* often means 'a stream' merely, but it has also the more exact sense of 'the stream' *par excellence*, the Indus. The name is, however, rarely mentioned after the period of the *Saphinas*, always then occurring in such a way as to suggest disuse.

2. History.—Sind formed an early Aryan settlement and a seat of trade with E. Africa and the Persian Gulf (c. 1000 B.C.). It was conquered by Darius Hytaspes (521-485 B.C.) by Alexander the Great (330 B.C.) formed part of the Mauryan empire, and was occupied by the Epistathides or White Huns in the 5th cent. A.D. It was the first part of India occupied by the Muhammadans under the leadership of Muhammad bin Qasim (A.D. 712). Mahmud of Ghazni occupied the valley (1025-26). After this it became the seat of a Hindu dynasty, that of the Siamas (1025). who were overthrown by Ala-ud-din Khilji about the end of the 13th century. They were followed by another Hindu dynasty, the Siamas. Finally (1752), the Moghul Akbar united the province to the empire at Delhi. Towards the end of the 17th cent. the Kalbaisa rose to power in the lower Indus valley, and ruled till the invasion of Nadir Shah (1739). Subsequently it was held by local princes, the Talpur Mirs, who were defeated by Sir C. Napier at the battle of Miani in 1843, when the whole valley, with the exception of the Khairpur State, was annexed to the British dominions.

3. Ethnology.—The province is distinguished from other parts of India by the great predominance of Muhammadans, who, at the census of 1911, amounted to 75.14 per cent of the total population, Hindus being 22.83 per cent, and the balance being made up of animists, Christians, Parsis, Jews, and the so-called Hindu Muhammadans, who follow both creeds.² The Sindis may be regarded as descendants of the original Hindu population, who were converted to Islam during the reign of the Umayyad *Khalifas*. When the province was invaded by Muhammad bin Qasim, there was a large and flourishing Hindu kingdom, provided with an efficient army.³ The foreign elements are represented by Sayyids, Afghans, Baluch, Jat, Memon, Khwaja, and African slaves.⁴ The Hindus occupy a position analogous to that of the Muhammadans in the rest of the Presidency, being in a minority and greatly influenced by the former predominance of Muhammadan ideas and culture. The Brahmins, consisting of Peshawars (or Peshawars) from Rajputana and Saraswats from the Panjab, are illiterate and degraded. There are no Katriyas, those claiming that position being generally Banyas who have partly conformed to Sikhism, and are really heterodox.⁵ The most important Hindu caste is that of the Lohanas, of whom the Amil section are clerks and writers, early immigrants from the Panjab, as is shown by their language and its alphabet. They wear the Brahmanical cord (*jones*), worship the god of the Indus, Vignu, or Siva, or follow the faith of Nanak Shah (q.v.). The other important Banya caste is that of the Bhatis, who are strong in Gujarat and Cutch.⁶ There are few castes of the Sudra group, those that exist wearing the Brahmanical cord, applying the Hindu sectarian marks to their foreheads, and in all other respects imitating Banyas. They generally worship Siva and his consort Devi, and employ Brahman priests. The Sikhs include the Akali Khalsas, or pure Sikhs, and the Lohanas. The former imitate the Panjab devotees—never cut their hair, eat various forbidden meats, such as the domestic fowl, have the usual tabu against tobacco, smint their hair with butter instead of

off, and eat flesh only when the animal has been killed according to the ritual (*ghatka*).¹ The local Hinduism is thus of an impure type, only a few Brahmans studying Sanskrit, while the popular faith is mixed up with Islam and Sikhism.²

4. The fusion of Islam with Hinduism.—We find Islam and Hinduism amalgamated here in a more remarkable way, perhaps, than in any other part of India. The Hindu will often become the disciple (*murid*) of a Muslim, and vice versa; not only are the same saints respected by members of both religions, but each faith uses a different name for the same holy man. The Hindus know the river-god under the name of Sind Pir (*zindak*, 'the living one'), while Muhammadans call him Khwajah Khidr; in the same way Uddhero Lal of the Hindus becomes the Musalman Shaikh Tahir and Lal Jauri becomes Pir Mangho. The Hindus, probably with justice, claim these worthies as their own, and the Musalmans have only applied new names to them.

5. Worship of saints.—The distinguishing feature of Islam in Sind is the wide-spread worship of saints (*pir*, *swaki*).³ This is largely due to the influence of Sufism (*y. n.*), and is opposed to the original form of the faith. But, though they may have lost touch with orthodoxy, the Musalmans are a religious people.

The mass of the Sind peasantry, though they may be unacquainted with the cardinal articles of their faith, are careless of ignorant of its precepts; but, upon the whole, they strike a stranger as being more religious according to their lights than Muhammadans of almost any other part of India. They are also pre-occupied for object devotion to Pirs and Sayads, living or dead.⁴

The most eminent of these saints are Lal Shabbaz and Pir Mangho, or Mangi.

Lal Shabbaz, the head of the Jafali order, whose original name was Umāy-i-Murwadi, from his birthplace, was a qalandar and a rigid celibate who died at Sehwan in 1274. He was called Shabbaz, 'the red falcon,' because, as in the legend of Abraham,⁵ his colour was changed to red by his persistence of sitting in an iron pot over a burning fire for a year.⁶ His tomb is much respected, and every year a girl of the Khattak, or warrior, caste is married to his tomb, with music, dancing, and other solemnities. She is never allowed to contract a real marriage. The rite of initiation into the order is made as humiliating as possible, in order to prepare the religious asceticism (*zayir*) for the life which he is about to adopt. All hair on his person is removed; the teeth are blackened by lime, and a cord wound round his neck, shows him a looking-glass, and ask him how he likes his appearance. His reply, 'Very smooth.' Then his shoulder is shaved with a hot iron, his body is stripped and smeared with cowdung, and he is told to go forth into the world and beg his bread.⁷

The cult of Pir Mangho at Nagri Taluk, or the Crocodile Tank, near Karachi, is more remarkable. In the tank a number of tame crocodiles (*Crocodilus palustris*) are kept, and goat's flesh is given to them by pilgrims. Here, about the middle of the 13th cent., a Musalman hermit caused a stream to trickle out of the rock, and Lal Shabbaz in like manner produced a mineral spring. Pilgrims visit the tomb of Pir Mangho, and Hindus venerate the place out of reverence for the warm water.⁸

6. Worship of the river Indus.—The cult of Khwajah Khidr, or Khir,⁹ is common in Sind, where the saint is regarded as the owner of the Indus. His shrine at Rohri is said to have been built A.D. 925 by a Delhi merchant, whose daughter a wicked king tried to abduct; when she prayed to the saint, he changed the course of the river and saved her honour.¹⁰ He is known as Jenda, or Jinda, 'the living' (*zindak*) saint. Closely connected or identical with him is Uddhero Lal, known as Vaher's Lal in the Panjab, said to be prime minister (*sezar*) of the Khwajah. A long tale is told how he saved the Hindus from persecution by a *qazi*, or law officer, in the time of the emperor Aurangzeb. He is also known as Shaikh Tahir, and is much respected by Musalmans, who

deny that he has any connexion with the Hindus. In another story Uddhero Lal was an incarnation of the river Indus who rose from the water in the form of a spearman, mounted on a white horse, and was then reborn from a Banya, or merchant woman. He overcame the Musalmans in a religious controversy and was honoured by an annual fair.¹¹ This saint, in his various manifestations, is worshipped by a sect of river-worshippers (*Daryapanthi*) by means of water and lights; a lamp always burns at his shrine; and at the new moon he is worshipped at the river, canal, or any piece of water, with offerings of rice, sugar candy, spices, fruits, and lighted lamps.¹² Worship of this holy man is common among the Jafali, a Panjab fishing caste, and among the Lohanas of Cutch, because he is said to have saved them when they fled from Multan.¹³

7. Magical powers of saints.—Saints in Sind are regarded as workers of miracles.

They cure barrenness and diseases usually incurable by ordinary means, the remedy being to give the patient a drop of water to drink, or to pass the hand over the part affected at the shrine; they cause prayers to be granted; protect mariners and travellers; appear to a person at a distance to save him from some unseen danger; calm storms, especially those that are distant; change female into male children; convert sinners and infidels to the true faith; turn men's hearts by a look, thought, or word; compel inanimate objects to act as if they possessed life and volition; benefit friends and destroy foes; exercise dominion over beasts, birds, fishes; make youths' hearts grow and restore vigour to aged men; raise the dead; put the fiend to flight, and exorcise angels and spirits; cause trees to produce butter and honey; reduce sensual to spiritual love; know men's thoughts and plans; break chains, fetters, doors, and walls; live without food, drink, or sleep; cause a single pot of water to support a caravan without sensible diminution; commute the death of a person by providing a substitute; give learning to fools.¹⁴

The method of venerating a saint is as follows:

The votary comes to the sepulchre (*turban*) and makes the invocation: O Qalandar! O Dost with a great name, well-known in both worlds! Thou listenest to thy friends! Only grant me my desire, and I propose to distribute a pot (*dog*) of rice-flour, cooked with sugar and butter, to the poor in the market! He visits the shrine morning and evening, and, if his need be urgent, takes up his abode at the spot, because his only chance of success lies in his perseverance, and the saint needs to be reminded of the wants of the suppliant.

SIN-EATING.—Sin-eating was an ancient custom at funerals in Wales and the Welsh Marches. The earliest allusion to it is by John Aubrey in the reign of Charles II. He says:

'In the County of Hereford was an old Custom at funerals to hire [have] poor people, who were to take upon them all the sins of the party deceased. One of these I remember lived in a cottage on Rose-high way. (He was a long, lean, ugly, lamentable poor rascal.) The custom was that when the Corps was brought out of the house and laid on the fire; a Load of bread was brought out and delivered to the Minstrel over the corps, as also a Mass-bowl of maple (Glossa berries) full of beer, with her was to drink up, and sixpence in money, in consideration whereof he took upon him (upon facts) all the Sins of the Deceased, and freed him (or her) from walking after they were dead. . . . This Custom (though rarely used in our days) yet by some people was observed (continued) even in the strictest time of 3^d Presbyterian government; as at Dynder, where some called the Parson of 3^d Parish, the hired (relations) of a woman deceased there had this ceremony punctually performed according to her Will; and also the like was done at 3^d City of Hereford in those times, when a woman kept many years before her death a Mass-bowl for the Sin-eater; and the like in other places in this County; as also in Brecon, e.g. at Llangora, where Mr. Gwin the minister.

about 1660 could no longer perform the custom. I believe this custom was hitherto used over all Wales. . . . In North-Wales, the Sin-eaters are frequently made use of; but there, instead of a Bowl of Beer, they have a Bowl of Milk.¹

Again, writing of offertories at funerals, he says:

These are mentioned in the History of yr. ch. of Engl. Custom-Prayer-books; but I never saw it used, but once at Beaumaris, in Anglesey; but it is used over all the Counties of North-Wales. But before them the corpse is brought out of Doors, there is Cakes & Cheese, and a new Bowl of Beer, and another of Milk with yr. Anno. Dai. Ingraved on it, & yr. parties name deceased, with one accepts of on the other side of yr. Corps; & this Custom is used to this day, 1686, in North Wales.²

Andrey is also related to have given to a Mr. Bagford the following account of the ceremony as practised in Shropshire:

Within the memory of our Fathers, in Shropshire, in those villages adjoining to Wales, when a person dyed there was notice given to an old Sire, (for so they called him), who presently repaired to the place where the deceased lay, and stood before the door of the house, when some of the Family came out and furnished him with a Crickit, on which he sat down facing the door. Then they gave him a Groat, which he put in his pocket; a Groat of Bread, which he eat; and a full bowl of Ale, which he drank off at a draught. After this he got up from the Crickit and pronounced, with a composed gesture, the *read and rest of the Soul departed*, for which he would receive *Ata seu Son*.³

In more recent times Matthew Moggridge of Swansea gave an account to the Cambrian Archaeological Association, at their meeting at Ludlow in 1852, of the custom as lately surviving in the neighbourhood of Llandeilo, about twelve or thirteen miles from Swansea.

He related that, "when a person died, the friends sent for the Sin-eater of the district, who on his arrival placed a plate of salt on the breast of the defunct, and upon the salt a piece of bread." He then intimated an imprecation over the bread, which he finally ate, thereby taking up all the sins of the deceased. This done, he received his fee of 3s. 6d. and vanished as quickly as possible from the general gaze; for as it was believed that he really appropriated to his own use and behoof the sins of all those over whom he performed the above ceremony, he was utterly detested in the neighbourhood—regarded as a mere Pariah—as one irredeemably lost.⁴

Moggridge's account was afterwards challenged by Canon Silvan Evans and others. But, if we turn again to N. Wales, we find a ceremony there described corroborating Andrey's account. In the *British Magazine*, vii. [1835] 399, there appeared a description said to be taken 'from a MS. book of a bishop of St. Asaph' written about a century earlier, which runs as follows:

When the corpse is brought out of the house and laid upon the bier, and covered before it be taken up, the rest of kin to the deceased—widow, mother, daughter or cousin (never done by a man)—two or three white loaves of bread and a cheese with a piece of money stuck in it, and then a new wooden cup of drink, which soon will require the poor body that receives it immediately to drink a little of. When this is done, the minister (if present) with the Lord's prayer, and then they set forward towards church.⁵

Pennant, writing about the year 1780, describes the same custom as practised in Carnarvonshire. He apparently uses the source used by the writer in the *British Magazine*, but adds details of his own.⁶ In 1820 Robert Jones, a Calvinistic Methodist minister of N. Wales, describes it also, adding that the poor man to whom the loaf, cheese, and beer had been given over the corpse 'in return blessed and prayed fervently and earnestly with [or for] the dead man's soul.'⁷ Twenty years earlier Ringier speaks of the custom, which he assigns to Carnarvonshire and some other parts of N. Wales, as having been diverted to a gift of money for procuring slips of yew, box, and

other evergreens to strew over and ornament the grave during a certain period after the interment.

But still the money was 'given to the person on a plate at the door of the house where the body is standing on a bier. The gift is called *diolops*, for formerly, instead of it, the person used to receive from the hand of the family relative a cheese with a piece of money stuck in it, and some white bread, and afterwards a cup of drink, but this practice is now entirely discontinued; the gift however still retains its old name.'⁸

The word *diolops* refers to the gift of the drink, as also do other Welsh words for the custom: *diolops* or *diolops*, *diolops* (which Sir J. Rhys conjectured to be partly English, meaning the drink lifted over the dead), and *cepan y mair*, meaning the cup of the dead.

What appear to be remains of the practice have lately been found in Herefordshire and Derbyshire.

A resident in the neighbourhood of Hax 'was invited to attend the funeral of the sister of a farmer near Cransall (Herefordshire), and to his surprise was invited to go upstairs to the room where the body was lying. He went, with the brother and four bearers. At the bottom of the bed, at the foot of the coffin, was a little box with a white cloth covering it. On it were placed a bottle of port wine, opened, and six glasses arranged around it. The glasses were filled, and my informant was asked to drink. This he refused, saying that he never took wine. "But you must drink, sir," said the old farmer; "it is like the sacrament. It is to fill the sin of my sister." Traces of this custom are to be found at Walsingham; and near the Welsh border from Hay to Longtown port wine is drunk, exactly as described, by the bearers in the room where the body lies. Finger biscuits are provided.⁹ At a funeral in Derbyshire wine is first offered to the bearers who carry the corpse. This custom is strictly antiquated, the guests not receiving any wine until the funeral party has returned from church. Adly, who reports this, was told by the daughter of a farmer near Newark, formerly residing near Dronfield, "When you drink wine at a funeral, every drop that you drink is a sin which the deceased has committed. You thereby take away the dead man's sins and bear them yourself."¹⁰

In Yorkshire the custom was long preserved (and perhaps still is) of handing round wine and a special kind of sponge-cakes known as 'avril-bread' to friends attending the funeral, immediately before the procession starts from the house for the churchyard.¹¹ The word *avril* is derived by Skeat from *avril*, 'succession-ale,' 'hail-ale,' the name of the feast given by an heir on succeeding to property in Iceland. The shape of the biscuits differed according to locality. They were often wrapped up, that the guests might take them home, in paper printed on the outside with coffins, cross-bones, skulls, and similar emblems of mortality,¹² or (probably under the influence of the Evangelical Revival) with pious verses. The custom seems to have spread even as far afield as the island of Antigua, in the West Indies, where species of pastry called 'dyer-bread' and 'biscuit-cakes' are said to have been formerly handed round at Negro funerals, enveloped in white paper and sealed with black wax.¹³ It is not known how or whence the custom was introduced. In Wales a custom is described of giving to the guests before proceeding to the churchyard spiced ale in pewter vessels somewhat larger than those used in the administration of the Lord's Supper. It was administered 'just as the Lord's Supper is administered and almost with the same reverence' to the company, all of whom took their hats off as soon as it made its appearance.¹⁴ The custom was also observed on the Shropshire border, and in addition cakes, wrapped up in black-edged paper as in Yorkshire, were handed round.¹⁵

⁸ *Id.* p. 275.

A foreigner, describing a nobleman's obsequies which he witnessed at Rheimsbury in the early years of Charles II., states that the soldiers made a funeral station in the chamber where the body lay, and 'during the Oration, they stood upon the Coffin a large Pot of Wine, out of which every one drank to the health of the deceased. This being finished, six Men took up the Corps, and carried it on their shoulders to the Church.'¹

At Cwm Yoy, in the Black Mountain, on the way to Llanthony, the people have at a funeral what they call 'the Last Sacrament.' The coffin is brought out and placed on trestles, and beer and cake are then partaken of by the guests and persons assembled (evidently in the immediate presence of the corpse), before the funeral procession starts.²

The interpretation of the custom has been much discussed. Analogues are found in other countries. In the Highlands of Bavaria, when the corpse had been enshrouded in a linen shroud and placed on the bier, the death-chamber was carefully washed out and cleaned. The housewife then used to prepare the corpse-cakes. Having kneaded the dough, she placed it on the dead body to rise. When it had risen, the cakes were baked for the expected guests. To the cakes so prepared the belief attached that they would contain the virtues and advantages of the dead man, and that thus his vital power was transferred to the kinsman who consumed the corpse-cakes and so was preserved to the kin.³ Here the identification of the food with the dead man is not merely symbolic, as in the Welsh custom; the dough in rising is believed actually to absorb his qualities, which are transmitted to those of his kin who partake of the cakes. Moreover, the consumption of the food thus identified is not confined to one official; it is extended to the kinsmen who are present, and, as might be expected in such a case, it is held to be beneficial to them; they partake for their own advantage; they run no risk on behalf of the dead.

In India, however, the official practice of taking over the sins of another is well known.

When the king of Tanjore died in 1801, his corpse was cremated as usual, together with two of his wives chosen by the Brahmins. A portion of his bones, which had not been entirely consumed, was reduced to powder, mixed with some boiled rice, and eaten by twelve Brahmins. This act, 'had for its object the expiation of the sins of the deceased—sins which, according to the popular opinion, were transmitted to the bodies of the persons who ate the ashes, and were tempted by money to overcome their repugnance for such disgusting food.'⁴ About the year 1853, when the funeral party of a rent of Chamba reached the burning ground near Jai and the wife were placed in the hands of the priest and consumed by a Brahmin on payment of a certain sum.⁵ A British official was informed by a Brahmin at a village near Rajpur that he had eaten food out of the hand of the Raja of Rajpur after his death, and that in consequence he had for the space of one year been placed on the house at Rajpur. At the end of the year he had been given presents, including a village, and then turned out of Rajpur territory, and forbidden apparently to return. Now he is an outcast among his co-religionists, as he has eaten food out of a dead man's hand.⁶

The object of eating food from the corpse's hand is not stated in these cases. In the latter the Brahmin seems to have been thought to have become possessed by the soul of the deceased, as in Bavaria the qualities of the deceased are transmitted to the kinsmen who eat the corpse-cakes.

Among the lower castes and tribes in India an offender against the ritual prescriptions of his people is expelled, but may be re-admitted on submission and the provision of a feast for his caste-fellows or fellow-tribesmen.

Among the Orans of the Central Provinces the head of the

caste, *panchajay*, or council, is called the *gaman*. When an offender is excommunicated, the *gaman* first drinks water from his hand and takes upon himself the burden of the erring one's transgression.⁷ A woman belonging to the wandering tribe of the Kalkari, in the Central Provinces, who goes wrong with a man who is not a member of the tribe is excommunicated. But she may be re-admitted after being purified by a ceremony, part of which consists in being washed under a wooden shed having two doors. She enters by one of these, and the shed is then set on fire. She must remain seated until the whole shed is burning, when she may escape by the other door. A young boy of the caste then sits from her hand, and, thus purified, she is re-admitted to social intercourse.⁸

Usually the official or body re-admitting the offender eats and drinks with him. By so doing he or they take the burden of the sins of which the offender has been guilty.⁹

In India, when female infanticide is practised, the infant is destroyed in the room where it was born, and there buried. The floor is then plastered over with cow-dung, and, on the thirteenth day after, the village or family priest must cook and eat his food in that room. This is considered as a *homa*, or burnt-offering, and by eating it in that place the priest is supposed to take the whole *homa*, or sin, upon himself, and to cleanse the family from it.¹⁰

The ecclesiastical dominance of the Brahmins in India has probably affected more or less all castes and tribes of the population; rendering prominent the idea of sin and practices for its removal. If we turn elsewhere, we find similar customs in reference to the dead explained as in Bavaria.

The savage tribes inhabiting the valley of the Uaupes, a tributary of the Amazon, bury their dead beneath the floor of the ceremonial house. About a month later the survivors disinter the corpse, which is then much decomposed, and put in a great pot, or oven, over the fire, till all the volatile parts are driven off with a most horrible odour, leaving only a dark carbonaceous mass, which is powdered into a fine powder and mixed in several large conchs (shells made of hollowed trees) of a fermented drink called *ariari*; this is drunk by the assembled company till all is finished. They believe that thus the virtues of the deceased will be transmitted to the drinkers.¹¹ The same practice is reported of other S. American tribes, either at the present day or up to quite recent times. Among these the Gobaes are expressly said to observe the custom for the purpose of incorporating in their own persons all the energy of the deceased. The Caribs do so for a similar reason. Some of the Brazilian tribes hold that the soul dwells in the house, and by means of this proceeding the departed live again in those who thus drink up the bones.¹²

So among the tribes of the Darling River, in Australia, in the course of the funeral ceremonies a piece of flesh is cut from a corpse, taken to the camp, and after being awarded is cut up into small pieces and distributed among relatives and friends of the deceased: some use the piece in making the charm called *Yeraboo*; others suck it to get strength and courage, or throw it into the river to bring a food and fish, when both are wanted.¹³ A European informant in whom A. W. Howitt had full confidence told him that when a boy he saw two old men secretly meeting and eating fat taken from a dead blackfellow, and they shivered to him that now they would have the strength of the other man.¹⁴ Among the Melanesian population of the Banks Islands a morsel of a corpse would be stolen and eaten by one who desired communion with the ghost. Such an one would then become a *talimoor*; the ghost would join in a close friendship with him and by his aid he could afflict any one whom he desired.¹⁵ The same name, *talimoor*, was given to one whom soul was supposed to go out and eat the soul or lingering life of a treacherously-dead corpse.¹⁶

In these cases the object seems to have been magical. The intention evidently was, by consuming a portion of the corpse, to appropriate some power or quality of the deceased and add it to that of the survivor. The belief in the possibility of acquiring qualities, mental as well as physical, by means of food is wide-spread in the lower culture.

Along the Kluai at the mouth of the Fly River, New Guinea, sharks, because of their ferocity, are held to be the proper kind of food for warriors in war-time; other fish are 'too soft'.¹ When a youth is initiated, among the Thonga of S.E. Africa, as a drinker, a vulture's heart is cooked with other drugs and given to him, so that he 'will be able to dream of things which are far away and go straight to them'.² The Omaha give a boy a turtle's heart to make his heart strong (like the shell of a turtle); the fat about a buffalo's heart was given to children that they might have strong hearts, i.e. be courageous; a buffalo's liver eaten raw was said to make a man courageous, and to give him a clear voice.³ The children of the Indians of the Punguyon Chico are forbidden milk, whether of the cow, goat, sheep, or mare, because it is supposed that the milk upon which they are nourished will influence them physically as well as in character, and the Indians have to desire that their children should in any way acquire the nature of such animals.⁴ The Caribs eat neither hog nor turtle, though both are plentiful on their islands, lest their eyes become small like those of the former, or lest they themselves become clumsy and stupid like the latter.⁵ On the other hand, the Kikoi of E. Nigeria hold that the manatee's flesh confers magical properties on those who eat it.⁶ The Suk of the Highlands of British E. Africa sometimes give the fat and heart of a lion to children to eat, so that they may become strong.⁷ The men of various Central tribes eat no deer-flesh lest they thereby acquire the shy, timid character of the deer.⁸ On the contrary, among the Massachus the blood of the deer is much drunk by hunters, with or without palm-wine, apparently with the object of becoming fleet as deer. At all events it is expressly asserted of the Tongans that their chiefs always drink in war a little blood of the foe whom they have slain, in order to become valiant and strong.⁹

But the qualities desired can also be obtained by appropriating and wearing the spoils of the dead.

The Aramaeans, we are told, 'imagine that any portion of the body is endowed with the qualities of the whole. Here we have the reason of their wearing the skins or heads of wild animals: that if the power to give them strength and valour: of the lion for cunning; of the snake to enable them to crawl among their enemies; eagle feathers to make them rapid and fearless in attack. They believe that the wearing of these articles endows the wearer with the qualities they represent'.¹⁰ The belief is by no means confined to the Aramaeans. It is probable that in the old Armenian Church the priests clothing themselves even at the altar in the hides of wolves, foxes, and other animals did so in order to invest themselves with the valour of the animals from which the hides were taken.¹¹ This seems to have been a continuation of an old Egyptian rite.¹²

The wearing of the spoils is, however, only one method of substitution for the more complete rite of eating the creature, whether human or non-human, in order to appropriate its qualities. Of all varieties of cannibalism (q.v.) the eating of dead relatives is likely to be the earliest discarded. In such a case various devices would be adopted for securing the aim of the practice.

On the island of Viti in the New Hebrides the aged were put to death by burying them alive. A hole was dug, and the victim placed within it in a sitting posture, a live pig fed to each arm. Before the grave was closed, the cords were cut, and the pigs thus liberated were killed and served up at the funeral feast. In this way they seem to be identified with the corpse.¹³ Among the Totis and the Suk of the Nilgiri Hills, at a funeral, a buffalo is killed and brought into contact with the corpse. It is afterwards eaten at the feast.¹⁴ In Kanak, on the Upper Sulu, at the funeral feast (*grubhu*) in honour of the dead, a hog, reared in the dead man's name, is dressed in his clothes, sacrificed, and eaten by members of his kindred.¹⁵ The Dikagars and Bawors of the United Provinces, after burying a corpse, return to the dead man's house, kill a

hog, and, after separating the hams to be cooked for the funeral feast, bury the trunk in the courtyard of the house, making an invocation to it as the representative of the deceased, and ordering him to rest there in peace and not worry his descendants.¹⁶ In the Balkan peninsula mules, called by the Greeks *dolmas*, made of bodied wheat and other ingredients, are eaten at funerals. These are either carried, as in Albania, in the funeral procession and eaten on the tomb, or, elsewhere, eaten at the funeral feast immediately on the return to the house. In many places they bear the image of the dead stamped upon them. It is usual to indulge in expressions of sorrow while eating them. As such sorrow takes his share, he says: 'May he (or she) be forgiven?' or 'God rest his!' In Calypso, among the Greeks, the *dolmas* cakes are carried the day after the funeral from the house of death to the tomb, on which they are set to be distributed. The eating of *dolmas* takes its place with similar ceremonies on the third, ninth, and fortieth days and again at the end of three, six, and nine months and of one, two, and three years after death, when the death rites cease.¹⁷ In Sicily annually, on the festival of All Souls, *avvelmentu*, impressed with images of skulls, bones, skeletons, souls in purgatory, and the like, are eaten. This is called 'eating the dead'.¹⁸ There is a similar custom at Perugia and probably at other places in Italy.¹⁹ Elsewhere the intention is hardly less manifest. It is customary among the Leks to serve the relatives, on the grave itself, with bread and cheese, or with beans and peas, beer and bread.²⁰ In the government of Amudarya, White Russia, when the grave is filled, a white cloth is spread over it, on which a feast composed of flour, poppy, and honey is served, every one taking a spoonful.²¹ In Brunswick—where the funeral meal is regarded as a pious duty to which the departed has a right, the last honour that can be paid to him—the tables are laid by ancient custom on the very spot from which the coffin has just been removed.²² An American custom, witnessed by Donald Heath some years ago at the village of Arding, goes further, and remains as of the Bavarian corpse-cakes. He saw there a corpse lying in the middle of the church, laid out for burial the following day. Two large flat loaves had been placed upon the body. On inquiry he learned, after some difficulty, that in former days the custom was to eat the bread, dividing it up amongst the friends of the deceased—a custom which the people were apparently beginning to outgrow.²³

The custom of sin-eating, therefore, would seem to be derived from that of eating the corpse. In all the customs just cited there is an attempt to identify the ritual food with the deceased. The same attempt is obviously made in both the British and the Bavarian customs, although the effect of consuming the food is differently interpreted. Under ecclesiastical influence, and specifically in Great Britain under influences derived from the Mosiac legislation, prominence has been given both in India and in this country to the idea of the scapegoat (q.v.), which is absent from the ritual elsewhere. There can be little doubt that this idea has been imported into the custom, which is probably represented much more nearly to its original form by the Bavarian rite. A funeral meal is a common incident everywhere. It is the reunion of the kin after the shock of the severance of one of its members. It does not everywhere suggest a primitive feast on the corpse itself; rather it takes the form in most cases of a feast at which the deceased is, though unseen, one of the convives—a feast given to speed the parting soul. Such may have been the feast in classic times provided at the tomb, and that at Argentière, in the department of the Hautes Alpes, France, where the table of the dead and the family is still placed in the cemetery upon the grave itself, and after the meal every one, led by the next of kin, drinks to the health of the departed.²⁴ But where a special kind of food or drink is provided, and where it is brought into immediate connexion with the corpse, the case is different, and we may reasonably conclude that it represents the flesh of the dead, especially where it is expressly believed

that some qualities, good or bad, of the deceased are transmitted to the eater.

Cannibalism of the kind referred to—namely, the eating of dead kinsmen—is reported from Asia, Africa, Australia, S. America, and the E. Indian Archipelago. In Europe it is reported by Strabo¹ of the ancient Irish, though he admits that his evidence is not wholly satisfactory. Nor was it always customary among peoples who practised it to await the convenience of the aged to die. They were slain and devoured. Herodotus² attributes this custom to the Massagetae. Savages all over the world have been wont to put to death the aged and infirm. The traditions of the 'holy man,' with which the son was wail to knock on the head his old and useless father, point to this custom as once practised in Western Europe. There is no direct evidence to connect it with the eating of the dead. But there is a custom in Scandinavia, which was witnessed by Du Chailly at Husum, whereby the son formally dispossesses his father and takes his place at the head of the table in spite of the father's pleas and protests. That the ceremony is performed at the table prior to partaking of a common meal is noteworthy in this connexion.³

LITERATURE.—In addition to the authorities cited in the footnotes reference may be made to a lengthy correspondence in *The Academy*, 9th Nov. 1886–23rd May 1890, in which the evidence on which the Welsh custom rests was fully considered; and E. E. SIDNEY HARTLAND.

SIOUANS.—While the tribal units of the Siouan family of American Indians have many ethical and religious traits in common, yet each separate tribe possesses certain highly individualized characteristics, often not at all in keeping with the views of its nearest relatives and associates. For convenience we may divide the Siouans into three great cultural groups: (1) the Plains division, including the various sub-tribes of the Dakota, Assiniboin, and Crow; (2) the village Siouans, made up of the Mandan and Hidatsa; and (3) the Southern Siouans, the principal component tribes of which are the Omaha, Ponca, Osage, Iowa, Oto, and perhaps the Winnebago.

1. Ideas of deity.—Among all these groups there are found certain fundamental concepts, which indeed are not confined to the Siouans alone. While none of these, e.g., have anything corresponding to the true European thought of God, yet all hold ideas of a great supernatural power or complex of powers which controls the universe. The Dakota believe in a celestial hierarchy made up of the sun, sky, earth, and rock, each of which is called *wakons* (*wakos*); and each has control over certain things necessary to the existence of mankind. Among the Omaha, however, the cognate term *wakonda* has a different meaning. It is used with reference to all objects or phenomena which are regarded as supernatural, and at the same time this term is also applied to the sacred and mysterious omnipresent power which animates them. This power is not infrequently personified, and is addressed in prayer as the 'power that moves,' for movement and life are to the Omaha synonymous. There can be little doubt that these ideas permeate the religious beliefs of all the Southern Siouans, and are closely related to the Algonquian *manito* concepts.

The various agents through which the American Indian believes mysterious power to be manifested are termed *wakonda*, or, among the Dakota, *wakons*. These include a host of beings of greater or less importance, chief among whom are the

Thunderbird, Whirlwind, Tree-dwelling elf, and the panther-like Water-monster. These beings are able to transfer their supernatural power to mankind, under certain conditions.

The method of approaching these deities is the same among all the Siouans. At the age of puberty the aspiring youth retires to some solitary spot, where he proceeds to fast, and in some cases, as among the Dakota, to mortify his flesh by undergoing self-torture and even mutilation accompanied by incessant prayer. This period of self-castigation is prolonged for several days, generally not ending until the supplicant has brought on a vision in which one of the *wakonda* appears to him and offers to grant him certain privileges, usually concerned with success in war and the chase. In return for this, the recipient is enjoined to observe certain taboos and always to carry about some memento of his guardian-spirit, such as the skin of the animal in whose form it appeared, or a small symbolic trinket. This object itself now becomes the seat of much, if not all, of its owner's *wakonda*, and its loss renders him helpless and no more than a common man. It also receives sacrifices and feasts and even the prayers of its owner, as being the abiding-place of his *wakonda* and the symbol of, if not the intermediary with, his dream-guardian.

It sometimes happens that an individual receives from his guardian instructions that affect the religious life of the whole tribe.

An Oto now (or very recently) living was ordered by a *wakonda* in a dream to make a shrine in which were to centre certain ceremonies that were to benefit the entire people. Accordingly, the shrine was made and the songs, prayers, and dances which this Siouan received from his mysterious source were introduced into the ceremonial and religious life, not only of his tribe, but among the Iowa and others as well. Thus have grown up societies and ceremonies of a religious nature throughout the entire Siouan stock.

2. Religious ceremonies.—Among the Siouan tribes forming the Prairie group the great religious ceremony is the Sun-dance. This function is divided into a secret and a public performance. The former takes place in a secluded *tipi*, where the *palists* gather for the holding of their rites, such as praying, fasting, and making ready the objects which are to form part of the paraphernalia of the participants in the public ceremony, or are to be used on the altar in the Sun-dance lodge.

On the last day of the secret observance a great ceremonial structure is erected in the centre of the camp circle; the obtaining and bringing in of the material is attended to by certain warrior societies of the tribe; the selection of the centre pole being peculiarly the task of the braves; and all is accomplished with many plausible observations. When completed, the structure is a huge spool-like edifice of circular form with a tall central pole. The priests now come out of their seclusion and enter the lodge, which is decorated by elaborate rites, generally including parades by the societies of warriors. The next day the altar is set up on the west side of the lodge. Its construction differs from tribe to tribe. Among the Ponca it is a mere buffalo-skull placed with a pipe on a rectangle of clean earth from which the sod has been cut. Among the Mandan, in their cognate *stupa* ceremony, it is a large symbolic structure made in reference to mythic incidents. When the altar is completed, the priests decorate the bodies of the dancers with paint and wreaths of sage or willow-leaves about the neck, waist, breast, wrists, and ankles. The performers then dance in line, gazing at the sun and incessantly blowing on eagle-bone whistles, while the dance music is sung to the tune of a drum placed near the south side of the lodge. The dances usually last during the entire ceremony. They also extend to painful forms of self-torture. The commonest types of this ordeal consist of splitting the skin of the breasts and inserting skewers to which thongs are attached, the thongs being made fast to the central lodge pole, and the victim then endeavouring to tear himself loose. Others drag buffalo-shells, fastened to their backs in the manner described. The Crow, in particular, chop off joints of their fingers as offerings to the sun. These practices reached their greatest development among the Mandan, who carried the torture to great lengths. Among these individuals were often suspended from the top of the lodge by thongs and skewers. Other less physically painful sacrifices were made—e.g., throwing away blankets, clothing, and other goods.

The Crow Sun-dance, unlike that of the other

Siouans, was not a periodical ceremony. It was held only when a mourner was especially eager to avenge the murder of a close relative by the death of a member of a hostile tribe. He was first obliged to obtain a vision of a conquered foe, which was an implied promise of his success. He was able to have this vision only through the aid of a sacred doll, which was the most important object in the entire ceremony. The owner of one of these dolls (there were several in the tribe) was hired by the person desiring to hold the dance, to take charge of the ceremonies.

Among the Southern Siouans there are many esoteric religious societies. Of these the chief was the Medicine-dance society, as it is known among the Iowa, Oto, Winnebago, and Eastern Dakota. It corresponds closely to the Mide'wihin of the Central Algonquians. The Omaha form of this society is called *Wacicka*, and is based on a ritual founded on a long secret origin-myth. The object of the society is to teach its members how to secure long life on earth through the knowledge of healing herbs and medicines, and to secure their safe arrival in the hereafter through ethical and religious teachings.

The tribal religious rites of the Omaha were called *wecowape*, a term which had reference to bringing the people into thoughtful contemplation. These rites partook of the general nature of prayer, and were intended to be intermediaries between the Omaha and *wakan*. An error could be adjusted only after a ceremony of contrition and retribution, as they believed that any interruption of the prescribed order of a ceremony made the culprit liable to divine punishment. All *wecowape* rites were considered institutional and were distinct from individual rites. They were both private and public. Except for the ceremonies of the *Ac'be scatei*, or night-dance, the performances of the esoteric societies of the tribe were not looked upon as *wecowape*. The *wecowape* ceremonies included those for corn or maize, those pertaining to the yearly buffalo-chase, the introduction of a child to the supernatural powers, the consecrating of male children to the thunder, and the calumet ceremony.

3. Eschatology.—Siouan beliefs as to a future existence vary greatly. The Omaha have certain theories in common with the Central Algonquians. The Dakota think that each person has four spirits: one resides in the body, and dies with it; the second always remains near the body; the third accounts for the deeds of the body, and travels south after death; the fourth always lingers with the lock of hair which the mourners cut from the head of the deceased; this lock is kept until the opportunity offers itself to the mourners to throw the bundle away in the enemies' country, when the spirit becomes a wanderer sowing death and disease among the foe. From this theory arose the custom of wearing four eagle-plumes for each enemy killed in war, one for each spirit. There are some Dakota who claim the right to wear a fifth feather for another spirit which transigrates to the body of a child or an animal. The Dakota seem to have no theory as to what is the final abode of the four spirits, except that they travel to the south.

The Hidatsa, on the other hand, believe that, when one of their people dies, his spirit stays four nights around the camp or settlement where he breathed his last, and then goes to the lodge of his departed relatives in the village of the dead. When he has arrived, he is rewarded for his conduct on earth with the same things as are valued in this life. The 'village of the dead' is located under the earth, but, in order to reach it, the soul must cross a broad swift river on a narrow

pathway. Those whose life has been evil slip off and are hurried into oblivion. In the other world the shades pursue and kill the shades of buffalo and other animals that have died.

With the Omaha the belief was held that spirits travelled over the Milky Way to the hereafter, which was a land where the environment resembles that of this world. The journey required four days and as many nights, so the mourners kept a fire burning on the grave for four nights after the interment of the deceased, that its light might cheer and guide the departing soul on its way. After a toilsome trip the spirit came to a fork in the road of the dead, where sat an old man closely wrapped in the folds of a buffalo-robe. If the deceased had been a righteous and peaceable person, the road-keeper directed him a short-cut to the hereafter. If, on the other hand, the soul was that of an evil-doer, it was sent over a rough and dreary road, where it wandered on for ever. By exception, however, the souls of the members of the two Omaha buffalo gentes were supposed to return to their eponymic ancestors.

4. Disposal of the dead and mourning customs.—While many of the Siouan tribes practised scaffold-burial, the Omaha buried their dead on hill-tops, placing the corpse in a flexed position on its side and erecting a mound over it. Some of the belongings of the deceased, such as the knife, tomahawk, or club, kettle, and the like, were placed in the tomb. In some cases a horse was strangled over the grave. Food was also placed near by. Often the male mourners met in a lodge near that of the deceased, and cut the flesh of their arms and thrust willow-twigs into the wounds. Then, with the blood dripping from their cuts, they went to the wake and sang certain funeral-songs. They then withdrew the twigs and threw them on the ground. Mourners often went on the war-path to obtain relief from grief. A man who had lost a child carried its little moccasins and placed them at the side of the body of a fallen foe, whom he had killed, in the belief that the soul of his slain enemy would guide the spirit of the dead hute to its relatives in the hereafter.

XI (1915) no. 12.

ALANSON SKINNER.

SIRENS.—The symbolism of the sirens, *Zeupheri*, in literature and art is of more significance for the history of moral ideas than the etymology of the name or the pre-historic origin of the myth would be, even if we could ascertain them. We cannot. The prevailing view is that they are primarily 'the stranglers,' 'würgende Totengestalten,' akin to the Keres, Erinyes, and Harpies. This, like many prevailing views of the science of mythology, is confirmed by over-stressing the evidence of Greek vases and by the assumption that the fragmentary testimony of Alexandrian and Roman writers always preserves the genuine pre-Homeric popular belief.¹ Already at their first appearance² the two³ Sirens embody a conscious allegory,⁴ as Circe⁵ and Horace⁶ perceived. Ruskin's explicit

¹ See G. Weidner, 'Die Sirenen,' in *Bowdler*, where all the testimonies are collected.

² Homer, *Od.* xii. 24, 165 ff.

³ Dual in *Od.* xii. 167; for the three or more of later tradition, their transparent names, and varying personalities, see A. C. Pearson on Sophocles *fract.* 381; G. W. Mooney on Apollonius Rhodius, iv. 323 ff.; and Weidner, p. 602 f.

⁴ See F. M. Staveland, *Homer and the Dead*, London, 1900, p. 150, where, however, the rendering 'a spirit had put the waves to rest' is fanciful.

⁵ *De Fin.* v. 12.

⁶ *Eg.* i. li. 22; cf. *Sat.* ii. li. 14.

allegorization of their song as the lure of the thirst for unmanicured knowledge and the immodesty of science,¹ for all its modern sound, is merely a development of what Homer and Cicero tell us—that they promised Odysseus, not love or pleasure, but knowledge. The notion of the fatal songstress, the larer, the temptress, the *Lorelei*,² arises naturally in the human mind, and we cannot now recover the particular association of ideas that first clothed it for the Greek imagination in the form of the Sirens. In the earliest Greek vase that represent the scene from the *Odyssey* they are portrayed with the wings and body of a bird and a woman's head.³

It was a plausible hypothesis, then, that they were originally birds, symbolizing either the widespread association of the fleeting soul with the wings of a bird or the magic of the bird's song.

"That tell us
What life is, so clear.
—The secret they sang to Ulysses
When, ages ago,
He heard and he knew this life's secret
I hear and I know."⁴

Or as singers they may signify the spell of all song and eloquence, and for this reason perhaps the image of a Siren was later placed on the monuments of poets and orators—e.g., Sophocles and Isocrates.⁵

Again, they are in a sense sea-nymphs inhabiting a lonely ocean-isle, somewhere in the western fairyland of Odyssean adventure.⁶ And the treacherous lure or the magic spell of the smiling sea was a commonplace of Greek poetry and has been familiar to the human imagination from *Laurelinus*.⁷

"Subdolus enim risu placidus perfertur ponti"
to Keats⁸

"Magic elements, opening on the foam
Of perfidious seas; in fairy lands forlorn."

Or, again, the Sirens may have blended in the Greek imagination with the wailing women who sang laments for the dead at funerals. Weicker confirms this connexion of ideas by the regret with which the souls of Homeric heroes leave "the warm precincts of the cheerful day."⁹ It would be far more pertinent to Homer to quote Gray's *Elegy*, the last line of the *Aeneid*, Matthew Arnold's *Solara and Buzum*, and John Massfield's *August, 1914*. However that may be, the association with death opens up infinite possibilities for speculation and sentiment. "Before Plato could speak, the soul had wings in Homer," says Sir Thomas Browne.¹⁰ The primitive conception of the soul-bird is the theme of a modern monograph.¹¹ The analogy of the Harpies has also been used in confirmation of this association.

None of these fancies admits of proof, but their suggestions for the poetic and the moral imagination can never pass away. The name of one of the Sirens on the British Museum amphora, *Isopora*, recalls Aleman's "maidens with voices that wake desire," and Dante's "siren of sensual pleasure" repeats in verse of more than Greek loveliness the

¹ *The Eagle's Nest*, § 29.

² "Mortuo quo caelo in naufragio deducantur" (Servius, on *Aeneid*, i. 564).

³ Amphora, Brit. Mus. E. 140, reproduced in Weicker's article, p. 698. This article is now the most convenient repository of the monumental evidence. But much of it can be found also in A. Baumstark, *Denkmäler des Altertums*, 3 vols., Munich, 1904-08, and in the full and learned article of O. Michel in *Darstellungsgeschichte*.

⁴ R. Browning, *The Englishman to Italy*.

⁵ *Vita Soph.* § 11a, line 13.

⁶ Their original home shifts with the localization of the Homeric story. The late testimonia are collected by Weicker in *Bucheler*, p. 696. Strabo, v. 240, tells of a cult of the Siren Parthenope at Neapolis.

⁷ *Il.* xvi. 438, xxiii. 302.

inscription ΣΙΦΗΝΕΙΜΙ on the Tyrrhenian Hydria, Louvre E. 803:

"Idem caritatem in suo dolos athena
Ose i maritimi in mense maritimo."

The Sirens are not mentioned except by modern inference in Hesiod, the Homeric hymns, Pindar, or Aeschylus. In the Greek lyrics they are named only in Kriem's reference to the Sirens on the tomb of her companion Baucis, and in frag. 7 of Aleman, and a new fragment of Archilochus. Sophocles speaks of them as the "songstress of death" and "daughters of Phorkys." Euripides' *Helena* invokes them as "winged maidens, daughters of earth," to sing her sorrows.¹² And in his *Andromache* "Sirens' speeches" is rhetoric for the words of the woman who lead Hermione astray.

In the fragments of Greek comedy (Epicharmus, Theopompus) it is perhaps they who tempt the famished Odysseus with descriptions of a Gargantuan feast, while he checks the eagerness of his companions by the remark that their flute-playing is rotten (*corrupt*).

In Plato's *Republic*¹³ the music of the spheres is produced by the concerted notes of eight Sirens, one on each circle. Plato's *Cratylus*¹⁴ allegorizes the myth in what Ruskin¹⁵ calls "the divine passage in the *Cratylus* of Plato about the place of the dead," which he renders exquisitely:

"And none of those who dwell there desire to depart thence, —no, not even the Sirens; but even they, the seducers, are there themselves beguiled, and they who lulled all men, themselves laid to rest —they, and all others—such sweet wings death hath known how to sing to them."

Ovid¹⁶ merely says that the Sirens were playmates of Proserpine, and that the gods granted them wings that they might continue their search for her over the sea also. In the legend of the Argonauts, as the mythographer Apollodorus¹⁷ and Hyginus¹⁸ tell us, Orpheus sang against the Sirens who, being defeated, cast themselves into the sea and were transformed into hidden rocks.¹⁹ This is the origin of the long modern literary tradition, from Samuel Daniel to William Morris's *Life and Death of Jason*, in which Orpheus (or Odysseus) sings the song of virtue against the allurements of the Sirens of temptation. In the language of the LXX (*Job* 30¹⁸, 1s 34¹⁸ 45¹⁸, *Jer* 50¹⁸) Siren is a synonym for the wild creatures and spirits that inhabit waste places. The AV renders it by "owls" or "dragons." The Christian Fathers variously allegorized these passages, and also interpreted Odysseus lashed to the mast as a symbol of the Christian clinging to the Cross of Christ to resist the allurements of the world. Bacon pronounces Orpheus' remedy of song better than Ulysses' device of stopping the ears of his crew with wax:

"For meditations upon things divine exceed the pleasures of the sense, not in power only but also in sweetness." Light and conscienceless literature aims "at taking the wings away from the Muse's crowns and giving them back to the Sirens."²⁰

In Daniel's *Ulysses and the Sirens* Ulysses answers the Siren in this edifying strain:

"Fair Nymph, if Jason or Hercules were
To be allured with ease,
Thou would'st I come and reel me there
And leave me toils as these."

Though not expressly named, the Sirens are clearly meant in the *Fairie Queene*²¹ by the mermaids who

"fondly stir'd"

With the Basconian moides for mastery,
and who invite Sir Guyon to find his "Port of rest" in

"The worlds sweet In, from paines and wearisome torments."

This is a favourite motive of Renaissance epics, recurring in various forms in Ariosto, Camoëns, and Tasso. The *Sea-Fairies* of Tennyson is a lyric development of the same theme with touches taken from Catullus' *epyllium* of Peleus and Thetis. The appeal of Matthew Arnold's *New Sirens* is to scepticism and emotionalism—

'Only, what we feel, we know.'

Lapwell's Sirens echo Tennyson's sea-fairies and his *lotos-eaters*, and their lure is

'To be at rest for evermore!'

LITERATURE.—See the sources quoted in the footnotes.

PAUL SHORRY.

SIVA.—See SAIVISM, DRĀVIDIANS (North India).

SIVA NĀRĀYANIS.—The Siva Nārāyanis, or Sio Nārān, are a monotheistic sect of N. India, having their centre in the Districts of Ghazipur and Ballia. They profess unqualified monotheism, have no formal ritual, and pay no regard to the objects of Hindu and Musalman veneration. Their worship consists in the members gathering at a *dham*, or monastery, where one of their *Granthas*, or sacred books, is read. Adoration is then offered to the Para Brahma, or the Supreme, and offerings are made, which are devoted to the upkeep of the establishment.

They accept converts from all classes of the community—Hindus, Muslims, or Christians—and many of these adhere outwardly to the forms of their original beliefs. It is specially reported that some Indian Christians of the District of Shahabad belong to the sect. At the present day most of the members are low-caste Hindus, but the chief *sants*, or leaders, are generally Rājputs or Brāhmins. According to Risley,¹ the large majority of Bengali Chamars belong to it.

The acceptance of a convert is a matter of small ceremony. No *guru*, or spiritual guide, is required. A few Siva Nārāyanis assemble to meet the postulants, sweetmeats which have previously been deposited on one of their holy books are distributed, a few passages are read from the book, and the ceremony is complete.

The sect was founded in the reign of the emperor Muhammad Shah (A.D. 1719-48) by one Siva Nārāyana, a Naraini Rājput of the village of Chandrawar in the present Ballia District. He is said to have written sixteen Hindi works,² viz. *Lāca Granth*, *Sant-vilas*, *Sant 6 jan Granth*, *Sant-sunder*, *Guru-nyās*, *Sant-achār*, *Santopades*, *Sat-dāvali*, *Sant-parvāna*, *Sant-mahimā*, *Sant-sagar*, *Bajā stotra*, *Barā parvāna*, *Patī parvāna*, and *Barkhō Bāyā*. The most important of these are the *Guru-nyās* and the *Sant-vilas*. The former, compiled from the Sanskrit *Purānas*, gives an account of the ten incarnations of Viṣṇu, and is subdivided into fourteen chapters, of which the first six treat of the author, of faith, of the punishment of sinners, of virtue, of a future state, and of discipline. The latter is a treatise on moral sentiments. The opening lines are: 'The love of God and His knowledge are the only true understanding.'³ In addition to these fifteen there is one more, sealing the whole, which has not yet been divulged, and which remains in the exclusive charge of the head of the sect.

The unitarianism of this sect is of the strictest kind. They acknowledge one Supreme Deity, the creator (*kartā*), whom they call the Nirāṅkar Par Brahm (i.e. *nirākārāṇa param Brāhma*) and the Sant Purn (*Sat-purnam*), an whose nature 'light was thrown by Siva Nārāyana.' The moral virtues of truth, temperance, and mercy are inculcated,

¹ *Tribes and Castes of Bengal*, i. 178.

² Wilson says twelve. In the above list the last four are not mentioned by him. He calls the *Sant 6 jan Granth* the *Vajra Granth*.

³ Risley, i. 178.

polygamy is prohibited, and sectarian marks are not used.

They claim that the emperor Muhammad Shah was one of Siva Nārāyana's converts and that he gave him a seal. This is still possessed by the sect, and used on *parvānas*, or precepts, issued by the heads to the faithful.

Crooke¹ and Risley² identify the Siva Nārāyanis with the Rāi Dāsīs (q.v.), but this is not borne out by inquiries made by the present writer. The Rāi Dāsīs are all Chamars, but among the Siva Nārāyanis all castes are admitted. Quite possibly the Rāi Dāsīs, whose tenets are not dissimilar, claim to be Siva Nārāyanis, but they by no means form the whole sect.

LITERATURE.—Except the articles of Risley and Crooke above mentioned, the only published account of this sect which has been seen by the present writer is that contained in H. H. Wilson, *Sketch of the Religious Sects of the Hindus* (vol. I. of *Sacred Works*, ed. R. Root), London, 1851, p. 3551. The present article is based on this, but his statements are corrected and supplemented by inquiries specially made from the head of the sect at Ghazipur; see *J.R.A.S.*, 1915, p. 114 ff. H. H. Risley, *The Tribes and Castes of Bengal*, Calcutta, 1891, i. 173, and W. Crooke, *The Tribes and Castes of the N.W. Provinces and Oudh*, do. 1896, ii. 186 ff., describe at length the Siva Nārāyana customs, as those of the Chamars Rāi Dāsīs. The traditions described differ in a few details from those given above.

G. A. GILLESPIE.

SKIN.—The significance of the skin for the history of religion springs from three principal sources: (a) its natural pigmentation, (b) tanning, etc., (c) sacrificial rites.

(a) The colour of the skin affords one of the most obvious tests of racial difference. Three recognizable pigments are found in the mucous layer between the dermis and the epidermis, viz. yellow, reddish-brown, and black.¹ But any classification of the many varieties of skin-colouration must be more or less arbitrary. A typical scheme is that of Paul Topinard,² who enumerates ten varieties, by dividing the white into pale, florid, olive-white, the yellow into clear, olive, and dark; the dark into coppery-red, chocolate-brown, sooty-black, and coal-black. In some countries the colour-distinction is still of great social and political importance; this may help us to realize the religious influence of colour in earlier periods.

The Sanskrit word for caste is *varṇa*, that is 'colour'; and this shows how their distinction of high and low caste arose.³

As a precise morphological distinction, the colour of the skin is of secondary value.

Used alone . . . the test of colour will lead to serious misapprehensions of the real relations of various races.⁴

(b) The alteration of the appearance of the skin by tattooed marks and patterns is a very wide-spread custom. Lubbock⁵ collects a number of examples, ranging from simple ornament to serious mutilation. He remarks that 'ornamentation of the skin is almost universal among the lower races of man.' Some would regard all these customs as springing primarily from a desire for ornamentation. Thus Westermarck says:

'We have seen how savage men and women in various ways endeavour to make themselves attractive to the opposite sex: by ornamenting, mutilating, painting, and tattooing themselves. That these practices essentially subserve this end appears chiefly from the fact that the they selected for them is the age of puberty.'⁶

The motive to which he refers is certainly contributory, but hardly primary. It is safer to agree with Achelli, who says:⁷

¹ *Tribes and Castes of the N.W. Provinces and Oudh*, ii. 285 ff. & l. 178 ff.

² W. L. H. Duckworth, *Morphology and Anthropology*, Cambridge, 1904, p. 348.

³ Quoted by Duckworth, p. 351.

⁶ *Origin of Civilization*, London, 1900, pp. 55-56. See also art. *Tattooing*.

⁷ *Hist. of Human Marriage*, London, 1901, p. 461.

⁸ P. D. Chantepie de lassaix, in *Lehrbuch der Religionsgeschichte*, Tübingen, 1899, i. 45.

¹ There is no doubt that the operation has a religious significance; it is performed by the priests during the chanting of religious songs, and its origin is ascribed to the gods. . . . The custom stands in close relation to Totemism, especially since the incised figures so often represent animals: snakes, lizards, fishes, birds.

We may also note that 'the marks or scars left on legs or arms from which blood had been drawn were probably the origin of tattooing.'

(c) With totemism (g.v.) we may also connect the various sacrificial ceremonies in the ritual of which some use is made of the skin of the slain animal. A typical case is that reported by Herodotus in his account of the festival of Zeus at Thebes. He gives the current legend of an appearance of Zeus to Herakles in the disguise of a ram's fleece, with the ram's head held in front, and proceeds:

'The Thebans then do not sacrifice rams but hold them sacred for this reason: on one day, however in the year, on the festival of Zeus, they cut up in the same manner and flay one single ram and cover with its skin the image of Zeus, and then they bring up to it another image of Herakles. This done, all who are in the temple beat themselves in lamentation for the ram, and then they bury it in a sacred tomb.'

Here the legend has obviously sprung from the annual institution of killing the animal totem, or (if we doubt, with Frazer, the totemistic stage in this case) from the institution of killing the divine animal.³ Frazer compares with the example given by Herodotus a custom once existing among the Indians of California of preserving the entire skin and feathers of their sacred bird, the great buzzard, when one was slain annually, to make a festival garment, also a W. African custom (Fernando Po) of hanging the skin of the sacred cobra-capella on a tree to be touched by all the children born during the previous year. It has been suggested that the OT reference to 'the horns of the altar,' in connexion with the application of the blood and the right of asylum, should be traced back to the custom of spreading the skin of the victim; with the horns still attached to it, over the altar.⁴ In these and many similar practices⁵ we can trace two principles of primitive thought: (1) the sacred animal is conceived as standing in the most intimate relation to the life and prosperity of the worshippers; (2) the skin is thought to contain within itself a portion of the life of the animal even after separation from the body. With such premises, it is quite natural to reason that closer communion with the animal-god can be gained by the priest or the worshipper putting on the skin of the flayed animal as a sacred garment.⁶ Robertson Smith⁷ traces a survival of this in the coming of Jacob to his father in the skins of kids. Frazer⁸ points out a similar use of human skin in the Mexican ritual. The chorus of the Greek tragedy were originally called 'goats' (*tragōi*), and wore goat-skins to show their close relation with the goat-god,⁹ whilst it was the custom even of certain Christian catechumens to stand bare-footed upon a goat-skin.¹⁰ We may see the same circle of ideas extended to divine inspiration and divination; thus the god Panus was supposed to reveal the future through dreams to such of his votaries as slept within his precincts upon the fleeces of sacrificed lambs.¹¹ A further extension of these ideas may be seen in the

outstanding institutions of marriage and burial, so closely and universally linked with religion. In the Roman marriage ceremony known as *confarreatio* the skin of the slain victim was stretched over two seats, on which the bride and bridegroom had to sit;¹² Hartland¹³ refers to cohabitation upon a cow-hide in connexion with a Transylvanian gipsy tribe. In ancient Palestine burial in a sheep-skin seems to have been customary.¹⁴

In recent years, when the king of the Shakkala tribes (Abyssinia) died, 'he was sewn up in a green hide bag in a sitting position. . . . One tribe had a custom of sewing chance strangers up in green hides and leaving them to be killed by the contraction of the skin.'

The original idea of such practices is clearly to secure a closer union with the deity represented by the skin, whether for protection or for the more efficient offering of a victim. A late survival of these primitive customs among civilized peoples may be seen in the harvest custom of slaying a goat and wearing the skin to cure pains in the back;¹⁵ this may be paralleled with the making of the skin of the totem-animal into a medicine-bag among the Mosquito Indians.¹⁶

Frazer suggests that the use of images may have arisen through the habit of preserving the skin of the sacred animal.

¹ The skin in fact was kept as a token or memorial of the god, or rather as containing in it a part of the divine life, and it had only to be stuffed or stretched upon a frame to become a regular image of him.¹⁷

An example of this may be seen in the manufacture of an image in human form from the skin of some animal by the hands of the Samoyed shaman.¹⁸ Another interesting transitional case, which seems to support Frazer's suggestion, is seen in the practice of the pearl-fishers of the Persian Gulf:

'Each boat has a sort of figure-head, called the *inkab*, generally covered with a skin of a sheep or goat which was sacrificed when the boat was first launched.'

There can be little doubt that the belief in the psychical qualities of the skin, which forms the connecting link in the religious customs exemplified, has operated in many instances less easy to detect, such as the shining of the skin of the face of Moses (Ex 34¹⁰), and the general attitude to skin diseases such as leprosy, in ancient times.

SKY AND SKY-GODS.—I. Universality and antiquity.—Through endless transformations and disfigurements (mythological or functional) the sky-god is found to be at the base of all the systems of the great civilized religions of the classical Mediterranean and Oriental worlds. He occupies the same place in the great systems of Asia and in the semi-civilized religions of pre-Columbian America. As we find him in all the groups of so-called non-civilized religions without exception, we may safely presume that the concept of sky-god belongs to the most ancient period in the history of religious feeling, and that it is at least as ancient as primitive naturism and animistic fetishism. Whether it is even pre-anthropism in its fundamental aspect is a question which must be reserved in the meantime.

The nature, rôle, and characteristics of this

universal sky-god may be concealed under the most diverse forms, but he is always more or less clearly recognizable to the historian of religions and always identical in essential definition. America shows him in the mythologies of the Toltecs, the Mayas, and the Incas,¹ as well as in Brazil, in the Andes, among the Caribs, in Tierra del Fuego, and at the extreme north among the Eskimo. The shamanist groups of N. Asia and the cosmogony and dualism of the Ainus show him (Pase-Kanui) similar to the sky-god (much more distinct) of the religions of China (Ti-en) and of primitive Japanese Shintô. He is related to the ancient Paluga of the Andamans, to the Varuna of primitive India, and, towards the west, to all the pantheons of the ancient classical East. Towards the south, Australia, Polynesia, and Melanesia sometimes present deformed characteristics, as in the myths of N. America, but comparative study soon disentangles his fundamental characteristics, which are those found long ago in Chaldees and in the Semitic and proto-Semitic world. But nowhere does his physiognomy appear more distinctly than in Africa—whether in the pantheons of ancient Egypt or in the many savage religions of the black continent. From the great Killima of the Bantu groups to the Negritian Mahin we recognize him as always the same under a hundred different names: Ibantzu of the Congo among the Bangala, Fidi Mukulu ('the supreme being') of the sky among the Basanga, Kalaga among the Warea, Uletit among the Kuku, Kabesya Mpuign and Vilye Mukulu among the Baholes and the Bahaba, etc. Drakuta, the 'thrower of celestial stones,' of the Yorubas is only another aspect of the same sky-god; so also Waka of the Gallas is the thunder aspect of the sky-god; and Lubari is the rain aspect of the sky-god, just like Denguit among the Dinkas, Iankupong among the Aquapina, Ropi on the Gold Coast, Olorun in Benin, Nganguo on the Ivory Coast, and hundreds of others (Ituri in Kilimanjaro, the Bumba of the Bushongo, the great Kongola of E. Africa, the Mutabuni of the Batutsi, the Kafir Inha-Ankulu, the M'ba of the Alabua, etc.). If we ascend to the cold regions of the Finnish races, we find him again under the names of Yumala (Lapps), Yuma (Chereniss), Yuhmel (Samoyed), Tengri (Mongol), Bonga (Tunguses), and Ukko (Esthonians).

The sky-god has reigned everywhere; his kingdom still covers the whole of the uncivilized world. No historical or proto-historical motive can be assigned as the cause, and neither the migrations of races nor the diffusion of myths and folk-lore affords the slightest justification of this fact. The universality of the sky-god and the uniformity of his essential characteristics² are the logical consequence of the constant uniformity of the primitive systems of cosmogony. The sky-god is connected with the most ancient ideas on the composition of the world and its forces (not the universe, which is too vast for the mind of the savage, but the corner of earth which is for him the whole world). Now, everywhere we find the sky conceived in the same way—as a huge liquid mass, supported above the earth by a solid transparent substance, below which are the air, the winds, and then the terrestrial plane. Frequently this liquid mass is thought to surround the solid earth also and to form another liquid abyss below it. It is not within the scope of this article to enumerate the secondary varieties of this general structure, such as 'upper and lower abysses, vaulted skies, with superimposed compartments, divided into quarters,' etc. But, in order to understand the subject, we must emphasize the constant bond that materially united

the waters of the sky either to the sea or to the fabled sources of the great rivers; so that finally all water, as well as the liquid masses which fall from the clouds, is a product of the celestial plane. The function of rain-god and water-god (sea or river) and of so many sky-gods is thus explained. The essential rôle of water in the general life of nature justifies the attributing to the sky-god of all the great natural phenomena. The power and the remarkable characteristics of the various meteorological phenomena of which the sky is the theatre are a secondary, though not less efficient, cause of the pre-eminent part assigned to it by all primitive religions.

There is such close resemblance between the sky-god and the vital manifestations of the sky that, according to the various peoples, we find the same linguistic root meaning simultaneously the material sky, the rain, the clouds, and the sky-god (or meteorological phenomena and the sky-god), or, again, the storm, the thunder, and the sky-god (cf. Jupiter Pluvius and Zeûs Keraun in classical mythology).

Altogether of the single sky-god we find in several systems two or more gods—e.g., a god of the upper sky and a god of the lower sky (i.e. on the terrestrial plane); or four (or more) sky-gods in charge of quarters or geometrical divisions of celestial space; or several sky-gods, each having one of the superimposed skies as his kingdom. The study of these different systems shows that they are not primitive. Some are the product of astronomical speculations or very rudimentary myths; others are the result of historical circumstances having agglomerated into a single political civilisation religious groups which were at one time distinct (e.g., Chaldees, Egypt, Mexico). In such cases syncretism tends to amalgamate these gods into a single being (e.g., Hathor-Maut-Net-Neith-is for Egypt); or theology attributes distinct characteristics and functions to each of them. Thus, among the Africa the sky-god Tazalipoca, Taïco, the Quetzalcoatl of Chobolan, and the Huastecopochtli (blue sky) of the Tecochoas were originally single sky-gods, peculiar to the peoples subdued by and incorporated in the empire of the conquerors.

2. Nature and personality.—If the importance and antiquity of the concept of the sky-god are explained by the importance of the material sky, is the conception of sky-god itself explained by an exclusive application of the processes of pure and simple animism or by the usual mechanism of naturism? Neither animism nor naturism entirely explains the particular nature of the sky-god. Animism may bestow a personality on the most varied natural phenomena or on any inanimate object in nature, from hunger, plague, or a mountain-peak to a spring, a water-spout, a cyclone, or an artificially manufactured object. The sky is something more than simple matter personified. Naturism in itself would only partly explain the nature of the sky-god. It has long been observed that the personal beings emanating from naturism have often a special aspect quite distinct and different from the objects or phenomena of which they are the personifications (e.g., the waters, winds, sun, etc.). Personification, in its fundamental processes, starts from the idea that under the appearance and within or behind the material exterior there exists a being or, rather, a personal force (of course it cannot yet be conceived as immaterial), closely bound to the substance of which it is the energy and the life, unable to exist without this substance, but distinct from it and, if necessary, separable from it—at least momentarily. The sky-god is therefore radically different from the substance which forms the material sky. He lives in it; he lives by it; he is mingled with it; the physical sky is not merely his habitat—it is his very substance; but the personification of a substance is distinct and separable from the substance which it animates; it is superior to it, and yet the substance is indispensable to its existence, for without it it would return to the vortex of the impersonal forces of chaos. Does this imply that

¹ See below, § 6.

² See below, § 5.

³ See art. PERSONIFICATION (Introductory and Preliminary).

primitive man imagines a time when, as the sky was not yet in existence, the sky-god could not exist? This vital question cannot be definitely answered in the present state of ethnological information. Numerous myths of savage and semi-civilized races seem to show a sky-god existing even in primordial matter and releasing the sky by his effort. But are these myths primitive? Can primitive reasoning reach the problem of the origin of the sky? Provisionally and with great reserve, we may suggest the following solution: in the formless mass of impersonal forces there spontaneously appeared forces endowed with personal consciousness; the most efficient of these released the liquid mass from the universal chaos and formed the material sky, which has ever since been its vital substance and its special property. Such an outline, however, must be subject to constant revision, for no savage tribe has formulated the theory in explicit abstract terms; and it requires for basis the exposition of a great mass of myths, folk-lore, theogony, cosmology, and even traditional ceremonial.

3. *Role and functions.*—It is much easier to draw up an inventory of the functions and attributes of the sky-god. The essential characteristics are constant throughout, and this identity, both in characteristics and in evolution, is one of the points most firmly established by the comparative method in the study of religions.

The data of primitive man's actual experience and the exercise of rational (or pseudo-rational) search for its causes logically led to the series of functional attributes of the sky-god. The physical phenomena of the sky and their ascription to the personality living in the material sky were always and everywhere the starting-point, the only variations resulting from local geography and climatology.

Rain and its effects on the terrestrial surface are naturally in the first rank. As a logical result, the rôle of giving the rain, and with it the storm, thunder, lightning, and their consequences, led men to conclude that the sky-god was the author of a certain number of manifestations of life and death. Several mythologies, civilized and savage, ascribe the ownership of life (regarded as breath or as a force) to the sky-god. Sometimes they even reach the stage of regarding him as the source of every vital principle, although frequently also he shares this ownership with the earth-god. The question of death is more obscure. Primitive man does not imagine one death; to him there are as many kinds of death as there are material manifestations of the destruction of living things. We may say, briefly, that death as a rôle is not the work of the sky-god. It is an impersonal force, superior to him, like fate; and he often seems even to oppose it. As an almost absolute rule, only death by lightning is his direct action.¹ Beyond this, the rôle of the sky-god in ordinary life approximates to the type of 'the office supreme being.' As a matter of fact, to his activity as first cause is ascribed all that is inexplicable, beyond the capacity of such-and-such a special spirit, all that is abnormal or specially impressive. But in practice the constant search of the human spirit for the explanation of the unknown and the infinite always tends gradually to strip the sky-god of his prerogatives or special qualities in favour of more definite and more accessible beings of secondary rank. A universal result of this is the paucity of definite worship and the almost complete absence of liturgy, sacrifices, and sacerdotal organisations connected with him,

because the religious systems which have reached this stage of organization address themselves to deities already more specialised in definite functions.

Nevertheless, by the contrary phenomenon, which, however, is very logical in its consequences, the same progressive human reflexion results in attributing more and more the origin of the sensible world (or rather the organization of animate matter) to the old sky-god. By this means the conception of the greater sky-god was rebuffed, who, once his task is finished, seems to lose interest in it and leave to other beings the duty of governing and controlling the struggling mass of living beings and the whole world of nature.

The word 'create,' of course, must here be understood in a simple and unphilosophical sense. The very idea of this restricted 'creation,' understood in the sense of modelling, making, and vivifying matter, is not a primitive speculation. It developed slowly, by the gradual addition to the original stock of the sky-god's powers of a series of new acts of reasoning and the growing search for the principle of causality established new connections and made new deductions therefrom. The creation of the sky-god never appears as complete or absolute. He is the oldest demigurge, but he is neither anterior to nor the author of all life.

The nucleus around which has gradually accumulated the mass of facts which combine to constitute a creation seems, in the majority of cosmogonies, to be the double operation of (1) separating the luminous mass from the dark mass, light and darkness being henceforth distinct and opposed, and (2) releasing the solid elements from the liquid mass—these two operations being, in a sense, quite naturally suggested by the material appearance of the sky and the successive luminous phenomena observed by man in it, and by the universal belief in the liquid consistency of the sky resting on the transparent but solid vault of the firmament. This first series of acts of creation has a permanent influence afterwards on the appearance of the first dualistic systems.²

A list of the sky-gods regarded as the authors of the creation (quasi-complete or partial) of the universe would involve an enumeration of all known mythologies. To give an idea of them as briefly as possible we shall adopt the following classification.

(a) *Systems in which the sky-god is regarded as the sole agent in creation.*³—These systems may be conveniently divided into three chief groups. (1) Those in which the sky-god is asexual and has, simply on account of grammatical termination, a tendency to be conceived as a male principle. To this group belong the most elementary cosmogonies, in which living beings are supposed to be the direct product of some portion of the physical substance of the sky-god. The myths of savages all over the world, both at the present time and in the past (e.g., Egypt), give us all varieties of the supposed processes: the beings are the product of the sweat of the god, of his tears, of his humours, of his vomit, etc. We have to come fairly high up to find systems that conceive the sky-god as creating by means of action, forming matter, and communicating to it by his material breath a portion of his vital substance.

(2) Those in which the sky-god is positively regarded as being of the male sex. In such cases the isolation of the god leads to the necessity of imagining that the 'creation' issues from his substance, either by drops of blood or, more frequently, by the effusion of the seminal fluid (e.g., the Egyptian Tani and the Baniwa of the Bushongo).

(3) Those, much more developed, in which living beings (in whole or in part) are derived by childbirth from the womb of the sky-deity—which presupposes the deity to be female. Sometimes this birth takes place directly for all (e.g., the myths of the Upper White Nile); sometimes it takes place in two stages, the goddess giving birth to a

¹ See *art. Deities*, and below, § 3.

² It must be noted, of course, that 'to create' always means essentially to organise and vivify or fashion already existing substances. Creation *ex nihilo* is unknown to the intellect of primitive and semi-civilized man and even of civilized man at the stage of the ancient religions of the classical East.

³ Sometimes death by drowning is assimilated to death by celestial fire, chiefly in the systems in which the sea or the river is regarded as a dependent of the material sky.

certain number of agents, who, in their turn, couple and reproduce the chief classes of beings (e.g., the Egyptian sky-goddess Hathor). This seems to be the most frequent type. We must mention that in every case the sky-goddess conceives of her own accord, without the help of a male principle (cf., e.g., the most ancient Sumerian conception). Her animal or human form¹ has nothing to do with the question.

This initial position leads, in advanced religions, to the most subtle theological theories when the work of the sky-goddess has to be reconciled with the necessity of a vivifying principle anterior to her and fecundating her. The inextricable difficulties of the sacerdotal account of Theban Egypt, with Ra, the bull-god, as husband of his mother, borne by her and continually fecundating her, give a sufficient idea of these systems, whose outlines we find in more than twenty known religions.²

(b) *Systems in which the sky-god is associated with another god in the work of creation.*—Without examining the question of simultaneity or later appearance, we find a second important series of religions, in which the sky-god, in order to accomplish his work as demiurge, has associated his activity with that of another being, usually the earth-deity. We may distinguish two chief groups.

(1) The first (and the most numerous) includes cases in which the sky is a god and the earth a goddess. The world is born from their union. This is the type of the Polynesian myths of Rangi and Pēpē, that of Tangaroa, and that of the Greek Gaia and Ouranos.

(2) In the second group the sky is regarded as the matrix in which beings are formed, and the earth is the fecundating principle—a sky-goddess and an earth-god (e.g., Seb and Nut of the Egyptian myth, etc.).

A great number of secondary types suggest the demiurge sharing his task with several companions. He himself is sometimes relegated to the very beginning of the work in the most vague role (e.g., in N. American cosmologies, in which the elaboration of the world seems to belong specially to certain animals, often of low species; these systems require careful study and often appear on analysis to be composite and deformed products of earlier mythologies).

We must pass over the cosmogonies in which the sky-god creates or organizes the world without producing it directly from his substance, fashioning its various substances by means of his word alone, which seizes and models the different formless energies vibrating and trembling in the universe (e.g., creation by the words of the Egyptian Thoth). These belong to a period when the sky-god no longer possesses his specially celestial characteristics and is rather a supreme god.

In order to understand the sky-god, we must notice a result of the constant confusion of the primordial celestial water with the water of the sea. In a great number of religious systems, both savage and advanced, the sky-god is confused with the sea-god, whether he takes up his abode in the sky or the sea indifferently, or whether he unites in his person sky-myths and sea-myths. This phenomenon is very marked, e.g., in the Indian mythology of Varuna and, among savage races, in the aquatic sky-god of the Ainus (p. v.) and in the fugitive-god of the Bealin; it is conjectured also in the Chaldean Oannes and in the various fish-deities of the E. Mediterranean (e.g., Aphrodite, mother of the world). The sea is in every case regarded as bound to the celestial mass. The latter is separated from it only above the terrestrial plane by the vault of the firmament (the 'firmament' of Genesis). The same reasoning leads unclassified men in the interior of the continents to believe that certain large organisms of water, lakes and rivers, are derived from the celestial water (e.g., the Egyptian Nile, the Congo, the Wells, the Zambezi). The sky-god, the creator of the world, often therefore dwells in the bed of their waters. In the extreme west of Africa we find the sky-god living in the lagoons on the coast, and the Ibans of the Bangala living at one end and the same time in the sky and in the depths of the river; so also Kilian in the Wells of the Maroum of the Abakus, etc. Such

were the crocodile Sakh of ancient Egypt and the crocodile of the Shilluk or Dinkas of the present-day White Nile.

The confusion of the sky-god with the chthonian gods, which is rare, is more difficult to explain and would require too long treatment. It is traceable in New Zealand and Polynesian myths, but its mechanism appears more clearly in Africa (e.g., Ekaga of the Warega and the sky-god (of the same type the volcano-god) of the Ibari; according to the (distorted) myth of the Hamaric secret society. To put it briefly, the bond between the celestial world and the chthonian world is due to water (deep sources), fire (volcanoes), and celestial metal (iron).

4. Specific aspect and representations. — (a) *Natural phenomena.*—The most remarkable visible manifestations of the activity or power of the sky-god seem everywhere to have been chosen for the material expression of the god (we must say 'material expression' and not 'image').

Exceptional manifestations have naturally been in the first rank. As a matter of fact, we find lightning (all known religions), thunder (*psaum*), the rainbow (e.g., the Abakus), the *aurora borealis* (Eskimo), St. Elmo's fire (classical Mediterranean), the zodiacal light (ancient Egyptian delta), etc. These natural manifestations have gradually tended to become 'aspects' of the sky-god, and are the starting-point of fetishistic representations, in which the object, sometimes natural, sometimes of human manufacture, is not yet regarded as the image of the god, but as his habitat, or rather as a material covering sympathetically bound to the essential force of the 'spirit.' Such objects naturally are of infinite variety, according to the human group and the geographical position. In general, we may say that in the choice of fetiches the reasoning has been the same all the world over: the principle of material expression, e.g., may be the representation of the effect to express the cause (or vice versa), or perhaps the part for the whole (or vice versa), either in time or in space. It is a curious fact that fetishistic expression has almost everywhere obeyed the same laws which separated the magic ideogram from simple photography and thus erected all over the world the first written characters based on magical value.

The most important class of natural phenomena is found in the supposed effects of the material action of the sky-god. Thus the sacred fire, the emblem of this god, is supposed to be lighted by him; detached rocks and sharp mountain-peaks are supposed to be caused by the thunder in direct relation with the force of the sky-god; and translucent stones, rock crystals, and precious stones are regarded as fragments of the celestial vault (the same principle later connected gold and silver with the solar and lunar gods). Hence also—and this throughout the whole world—the cult of the sky-god as manifest in meteorites, 'thunder-stones,' fragments of shooting-stars, 'eagle-stones,' in the meteorite fire supposed to be detached from the sky, and, by extension, in stones supposed to have fallen from the sky, standing-stones, etc. (e.g., menhirs). Belief in the presence of celestial fire (and consequently of the sky-god) in flint, combined with the notions about aerolites or meteorites, gives rise later to the world-wide cult of palaeolithic or neolithic tools, weapons, and instruments which are worshipped as having fallen from the sky and which become emblems of the sky-god. Two equally interesting developments are the stones on mountain-summits becoming the first altars for sacrifice to the sky-god and the worship of sacred trees regarded as celestial trees.

(b) *Idolatrous representations.*—(a) *Africanic.*—

We now pass to the representations of the sky-god by modelled or drawn imitations of his activity—e.g., mimetic signs meant to reproduce the signs of the lightning, the contours of the sky, the triangular projection of the zodiacal light, etc. In

¹ See below, § 4.

² Some Polynesian mythologies avoid the problem by imagining that the single deity issues from his sides the first units necessary for making beings.

the same connexion we find strings with curls, knots, twists, etc., and gradually there develop the thousand different forms of aniconic representations of the sky-god by magical symbolism. The fetiches formed by combinations of substances connected with celestial forces vary infinitely. Among representations of a higher character we may cite the axe, the emblem of the sky-god (e.g., Minoan Crete), and the mirror, image of the sky-goddess (Japan).

(5) *Iconic*.—The representation of the sky-god tends in this way gradually to become the reproduction of characteristics regarded as those of the material spirit (if we may be allowed to use such an expression). But iconic representation begins, in every place where it can be verified, by a process of pictographic expression (the term 'symbolic' is beyond the conception of primitive man) of his power or his nature, embodied in an animal figure. We cannot trace here the evolution of the zoolatrical cults. But, as far as the sky-god is concerned, we may state that his zoomorphic representation has always been the product of conventional speculation and not of a crude idea that he bore the special form of such-and-such an animal. We may suggest, with great reserve, the possibility that this god may have been invested momentarily and under certain circumstances with the aspect of the animal. But this is never his absolute and permanent material form.

It is impossible to give the animal representations of the sky-god in extenso here. The chief groups may be conveniently classified according to the supposed sex of the world-creator sky-god.¹ We find (1.) the great inhabitants of the celestial heights—e.g., the vulture (conceived in Egypt as exclusively female and bearing without the help of a male, the female eagle (classical Mediterranean), the condor (S. America), etc.); (2.) the females of domestic animals, and in the first place, universally adored, the celestial cow; (3.) in the domains of sea, lake, or river (i.e. the aquatic region) the female shark or crocodile, the female serpent, and especially the fish. All these representations suited in hybrid forms, the best-known types of which, in the advanced religions of the classical world, are the Chaldean *Qannas*, half-man and half-fish, and the Aonian *Aphrodite*, *Dereeto*, etc.

The sky-god regarded as of the male sex has given rise to identical series, also too long to enumerate. Among the most wide-spread we may mention the hawk or eagle (Egypt, classical Greece and Italy, Asia Minor, Central America, etc.), and the goat or ram (Egypt, Sudan, N. India, Dahomey, etc.). The constant association of the eagle or the ram with thunder, lightning, etc., is one of the religious phenomena most generally found in iconography.

In the composite forms the symbolic animal form remains necessary as the plastic means of expressing the rôle and power of the sky-god, but it is combined with the human aspect. The well-known series of the classical East (Egypt, Chaldean, Assyria, Asia Minor, Greece) cover among savage and semi-civilized races all over the world. According to the usual process, all merge in two series of representations: (a) those in which the sky-god is gradually confused with the solar, lunar, and astral forms; (b) the anthropomorphic pure and simple, which corresponds to an already high type of religious civilization. The sky-god, purely male or female in form, is, however, rare, precisely because one of the effects of this development of religious civilization is to relegate him to second or third rank in the divine hierarchy.²

5. *Characteristics*.—The comparative study of savage races proves that the characteristics of the sky-god (as they appear to-day among semi-civilized or as they crop up sporadically in advanced religions) are everywhere identical.

Naturally the question whether he is uncreated or self-created is beyond the scope of savage thought. It is the same with the conception of eternity. 'Indefinitely renewsable duration' seems the extreme limit of the primitive mind. Even Egypt, saying of Atum Khopers 'I am yesterday; I am to-morrow,' did not reach the theoretical definition of eternity.

Nor by definition is the sky-god anterior to any other god, spirit, or demon. The creation, partial or complete, of the material universe does not in any way imply that of the forces embodied in the

names of gods, spirits, genii, demons, etc. He is neither omnipotent nor omniscient, but simply stronger or cleverer in certain special spheres. Certain gods or spirits may fight against him, and often successfully. His victory in the event of a struggle does not preclude future defeat. The most remarkable characteristic of such a sky-god is that, in all the cases that have been examined, he is manifestly weaker than a certain mysterious, impersonal, diffuse force, which among primitive races often has a name analogous to what we mean by destiny.³

In principle the sky-god has no moral characteristics; by definition he is indifferent. Nevertheless his constant association with the rain and the light has the universal result of giving him a beneficent aspect. At first disinterested and inaccessible or deaf to all prayer, he sometimes becomes susceptible of intervention in human affairs, and man strives to develop and define this intervention. Dualism, organizing the strife of darkness and light, of drought (or death) and fertilizing water (or life), gives him a much more definite character in more advanced religions. Nevertheless, as a general rule, the sky-god takes no interest in the material world produced by his activity and never controls the progress of this earth's various elements or the struggles of its inhabitants. Again, the development of dualism frequently results in giving him a gradually more precise activity. At this stage, however, in the progress of knowledge of the forces of the world and the principles of causality the sky-god tends to be robbed of his activity or to be divided up into new beings.

6. *Evolution*.—If we carefully consider the nature and character of the primitive sky-god, we find that, on the whole, he is the incarnation of the sum of primitive man's ignorance and inexperience, combined with his knowledge that the other material beings (whether they are called genii, gods, spirits, or any other name) are not powerful enough to govern the world, to have formed it, or to direct its great forces (celestial, meteorological, and hydrological phenomena, death, etc.).

The study of magic and of primitive rites leads to more definite knowledge of the forces retained by the sky-god and of the rudiments of cosmogonies explaining the mechanism of creation, and gives everywhere identical results: (a) the acts of the sky-god become separate personalities and gradually dismember his personality, which was originally formed of vague elements; the clearest example occurs in the series of thunder-gods taking the place of the sky-god in the rôle of 'father of beings' (e.g., the *Zeus Kepareios* of Hellenic myths, the *Mahu* of Dahomey, etc.); (b) the beings produced by the celestial energy—sun, moon, stars—tend to take the place and the rôle of light (conceived originally as something quite independent of them, and the direct product of the sky-god) and relegate to the background the beneficent rôle of the sky; (c) on the terrestrial plane the activities of various spirits and of their representations (fetichistic or iconic) take a more and more conspicuous part in the world's struggles. Their actions and the relations of cause and effect belong to the domains of water, air, earth, and under-earth rather than to the sky. But by these activities they grow in importance; their cults and magic tend to be established; organized polytheisms become possible, and they capture a portion of the vague attributes belonging as yet to the old sky-god. (Two good examples may be given: (1) among primitive races the system of

¹ See § 3 (a) (3) above.

² Cf. below, § 6.

³ Cf. below, § 6.

⁴ The terms *mana* and *orenda*, largely employed by ethnological sociology, cover only a part of this conception.

the Bushongo in Africa, (2) in advanced religions the system of the Toltecs.)

The result of these three elements is that, at different rates according to the different peoples and according to the proportion in which the elements are found, there is a constant tendency to the suppression and gradual disappearance of what constituted the very distinct physiognomy of the primitive sky-god. The most striking proof of this weakening or gradual disappearance is seen in the cosmogonic and creator rôle. The progress of the religious system almost always results in substituting for creation by the sky-god the organization of the world by the sun-god, the moon-god, or one of the stellar gods. Sometimes in fact the sun-god is supreme creator. Ancient Egypt presents a very complete schema of this type of evolution. It tends to substitute Ra (the sun) for the sky-gods (such as Atum, Hor, Nut, Hathor, Anhur, Sebek, etc.); but it does not completely realize this evolution, and consigns to the more or less vague beginning the primitive activity of the sky-god. The general process in the various religious systems is from the rôle of light, the direct emanation of the sky-god, to that of the stellar groups, substituted for the initial force of this god, then to that of the separate stars, and finally to the sun, the last arrival in the series of author-gods of the world and of life.¹

The same evolution, with the same effects, recurs when there appears, with dualism, the first representation of a moral or quasi-moral world. The sky-god, stripped of his definite beneficent activities, is superseded in the struggle against evil by the sun or by an anthropomorphic aspect of himself (usually his son—e.g., the Osirian myth). The details of this evolution would require a whole volume. One of the most remarkable examples of it is the myth of Heh-ti-Eh-bi of the Kheh-Kheh, of whom we have accounts by ethnologists as early as the year 1655. We find in him all the characteristics of the primordial sky-god rôle of rain-god, antioptic worship of rude stones, fetishism of a little kind, etc. Then he becomes associated with the dawn; and mythology invents a terrestrial incarnation for him. Similarly we can follow the confusion of the sky-god with the lunar cults. We find, as in the case of the Osirian myth, a later confusion with the parallel myth of Tani-Goab. Just as we see the dualist myth developing in Egypt under the double form Ra-Apépi and Horus-Set, so we see the sky-god Heh-ti-Eh-bi struggling with Gaunab, who has become the principle of darkness and evil, while Heh-ti-Eh-bi becomes the light which dies each day and is reborn in the east. He finally incarnates the good principles struggling against evil. This parallelism with ancient Egypt proves decisively the general direction which the evolution of the concept of the sky-god is bound to take in similar cases all over the world.

On the other hand, where circumstances have hindered this higher transformation, the rôle of the sky-god has gradually disappeared. His primordial creative activity has become as vague and fluid as the pale distant figures of Saturn, Ouranos, or Chronos in classical mythology.

In a word, after having united in himself the attributes of a supreme being, of an elementary kind, the sky-god had two chief fates—either, transformed and brought nearer to us under other names, he became the main resort of the divine activity of this world or he retained his primitive physiognomy, and his importance and his worship have been in inverse proportion to the progress of man's conceptions of the sensible world.

¹ Cf., e.g., the Peruvian system and the evolution of the Chaldean system.

LEMANUS.—There is no monograph on the subject. Observations of a general character in ancient ethnological and anthropological literature should be examined—e.g., A. Bastien, *Recherches sur les religions primitives*, Paris, 1888; E. B. Tylor, *Primitives*, 2 vols., London, 1889; and A. Lang, *Myth, Ritual, and Religion*, 2 vols., do. 1887. For details the reader should consult the articles in the present *Encyclopædia* under the names of the different nations and races.

GEORGE FOUCAULT.

SLANDER.—Slander has been defined as 'the utterance or dissemination of false statements or reports concerning a person, or malicious misrepresentation of his actions, in order to defame or injure him,'¹ the term being used to denote not only the act itself, but also the statement circulated, and even the consequential discredit suffered. The last meaning is, however, now commonly conveyed by the word 'scandal,' of which 'slander' is etymologically only a variant form, though in modern usage 'the word [scandal] differs from the etymologically identical "slander" in not implying the falsity of the imputations made.'² With slander as a technical term in law we are not concerned; we shall consider only its ethical use and import.

Instances of the word are found in English books as early as A.D. 1370. In the *Long Poets Collection* (1375) we read of 'Slandre for to fordo a mannes gode name,' and in Chaucer's *House of Fame* of 'His other clamour / That light shaloude in every town.' The term has substantially the same meaning in Shakespeare, *Much Ado*, II. i. 145: 'His gift is in devising impossible slanders'; the corresponding verb occurs in *The Two Gentlemen of Verona*, III. ii. 31: 'The best way is to slander Valentine / With falsehood, cowardice, and poor descent'; while of the derived adjective a forcible example is found in Milton, *Par. Lost*, xii. 588: 'Truth shall retire / Bestuck with slanderous darts.' Jeremy Taylor (1615-67), who in *The Great Exemplar* speaks of 'killing a man's reputation by calumny or slander or open reviling, elsewhere (*Serm. xxi. xiv.*) defines slander, properly so called, as 'the inventing evil things, falsely imputing crimes to our neighbour.' This he co-ordinates, as our form (d) of calumny, with (a) tale-bearing, (b) detraction proper, (c) railing or reviling, and (e) cursing; calumny, or slanderous and detraction speech in general, being in his view one species (ii.), co-ordinate with (i.) idle speech, and (iii.) battery, of that 'enormous communication' which, as reproached by St. Paul (Eph. 4.29), forms the text of his trilogy of sermons 'On the Good and Evil Tongue.'

These quotations will suffice to indicate how slander, as understood by classical English authors, stands related to, and how far it can be distinguished in meaning from, such terms as 'calumny,' 'detraction,' and 'evil-speaking.' While no two of these terms are exactly synonymous, it is hardly possible to mark off their several denotations by any fast line. They are to a large extent interchangeable, especially 'calumny' and 'slander,' which, as distinguished from 'evil-speaking' and 'detraction,' imply falsehood in addition to more or less of either positive malice or reckless indifference to the injurious effect of defamatory words. Even to slander and calumny it is perhaps not essential that the allegations made should be definitely known by the speaker or writer to be false. A man is none the less a slanderer if he utters and disseminates regarding his neighbour injurious matter which he has no reason whatever, or no approximately sufficient reason, for believing to be true. If, on the other hand, it is true, he is not a slanderer, though the utterance, if superfluous and unprovoked, may still be fitly accounted 'evil-speaking' and reprehensible as such. And it nearly always is superfluous, if it is not likely to do any positive good, or if no third party would be wronged or discredited by silence. The latter condition is, indeed, apt to be overlooked; and denunciation of indefensible conduct is often improperly censured as evil-speaking, when in reality reticence or disbelief regarding it would be grossly unfair to some wholly innocent, and perhaps actively beneficent, and deeply injured, person.

¹ OED, s.v.

² *Sermon*, *Exemplar*, *Diet*, Oxford, 1810, s.v., and OED.

³ OED, s.v. 'Scandal.'

Thus, on the whole, disclosure of ascertained truth is morally safer than a timid reticence, though often legally perilous. While, however, the actual truth of a statement is (on the whole and subject to important exceptions) a good reason morally for not withholding it on occasion, a mere belief on the part of the speaker that it is true is, if it be in fact untrue, a very poor defence. There is indeed a measure of malevolence, if not of dishonesty, in all readiness lightly to believe what is evil concerning one's neighbour, though there is scarcely less in perversely disbelieving palpable evidence of grievous wrong inflicted upon an inoffensive, or clearly well-intentioned, neighbour by another who is manifestly unscrupulous. In practice the false belief and the perverse disbelief are apt to go together. The same person, i.e., who readily slanders a good man will often be stolidly blind to the atrocious deeds of the evil-minded. It is of the essence of slander to call good evil; and this normally finds its complement in calling evil good.

The act, or habit of thought and speech, denoted in English by 'slander' was in the languages and literatures of Greco-Roman antiquity, which were so large a factor in the constitution of European morals, represented most completely by the Greek word *δυσκολία*. This word, in the sense of false charge or slanderous imputation, was used by the historians Herodotus and Thucydides, by the poet Euripides, by Isocrates and other orators, and somewhat acutely by the philosophers Plato,¹ Aristotle,² and Cleanthes the Stoic. The corresponding verb-form had a similar range. In no instance would the term seem to be technical. For purposes of ethical study the most interesting occurrences of the word are the few cited from the philosophers, and more particularly that from Cleanthes, who wrote:

"There is nothing that ever was, more mischievous than slander (*κατασκευασμένη δὲ τοῖς ἀνθρώποις ὁρμή*); secretly showing the man whom see it has won, it works up odium against the gullible."³

A more trenchant epitome of the vice could hardly be given. Three centuries later Plutarch writes of the fellow-countryman of an exiled, but prosperous, statesman as 'from envy' (*διὰ τὸ φθονίαν*) readily accepting the various 'slanders' (*δυσκολίας*) circulated concerning him, thus incidentally marking what has been perhaps the most frequent, though by no means the universal, motive of calumnious allegation.

Meanwhile the term *δυσκολία* had been employed by Greek translators of the Hebrew Scriptures and other Hellenistic writers to represent a type of speech and intention which, though not covered by any one Hebrew name, is recognized in the OT as eminently sinful, and which might be described as motivated and systematic violation of the spirit of the Ninth Commandment. The noun occurs in Nu 14²⁷ (Aq.), Ps 31² (Syn.), where Eng. AV gives 'slander' (PBV 'blasphemy,' RV 'defaming'), 2 Mac 14²⁷, and six times in Sir (19¹ 28¹ 28² 39¹ 51¹ 51²), the verb (*δυσκόλλω*) in Dn 3⁶². The noun, which is thus fairly frequent in the Greek OT and in the English versions is often (Sir 19¹ 28¹ 51¹), though not uniformly, rendered 'slander,' is not found in the NT. The corresponding adjective (*δυσκόλος*) is, however, used thrice in the Pastoral Epistles (1 Ti 3¹, 2 Ti 3¹, Tit 2¹), where RV, following the precedent of Wyclif in the last passage, rightly restores 'slanderer' for the less exact 'false accusers' of AV and most previous versions, while the same word, with the article prefixed, is of frequent occurrence and appears in the English versions as 'the devil.' It is probable that we may safely connect with this fact the

exceptionally stern warning of Mt 5²², and the still more tremendous language (Mk 3²⁹ = Mt 12³¹ = Lk 12¹⁰) touching 'blasphemy of the Holy Spirit'—an extreme form of wickedness, which, it would appear, consists in a set and wilful determination to call good evil, in despite of evidence that to any heart not utterly depraved from honesty is overwhelming. For 'blasphemy' (*βλασφημία*), though not identical with, is nearly akin to, 'slander.' Actually it is the more general term, signifying generically 'evil-speaking.' It becomes theological blasphemy when it has as its object God or the manifestations of His will and beneficence. And this occurs whenever works of love and mercy, due to the agency of His Holy Spirit, are perversely and malignantly attributed to the agency of the powers of evil. If, then, slander be regarded as evil-speaking envenomed by falsehood, the worst conceivable slanderer will be a personality uniting consummate ability in falsehood with unlimited readiness to speak evil of the Holy Spirit of God. While it does not fall within the scope of this article to discuss the personality of the devil, it is relevant to note that 'the devil' of the NT is before all things a 'slanderer,' an intensely malevolent perverter of truth and fabricator of untruth.

It follows that in any system of ethics claiming to be distinctively Christian no form of evil practice can be thought graver or more deadly than that of habitually traducing and slandering the guiltless and the beneficent. Nevertheless it found no place among the 'seven deadly sins' of mediæval theology, and so apparently escaped being denounced either by the scholastic doctors of Latin Christendom or even by Dante. All the more is it to the credit of English moral insight that in the last of Chaucer's *Canterbury Tales* 'the Parson' brings in 'backbiting or detraction' as a specific sin bred by the recognized 'deadly sin' of envy, and sets forth tersely and with perspicuity the several shapes that it may assume. But, notwithstanding the efforts of individual moralists, it has at no time either officially or in popular estimation ranked, as it should, with breaches of the sixth, seventh, and eighth Commandments as sin of the first magnitude. Theory apart, experience of life, justly interpreted, might warn us that, as civilization becomes more complex and more highly equipped, the slanderer's capacity for evil becomes more terrible. It may be true that modern institutions have improved the means of combating and disproving calumny. But the rapid multiplication of opportunities for censorious and derogatory comment outside the peril of the law has more than counterbalanced that advantage. And there has certainly in the last 200 years been no amelioration of the virulence either of envy or of other passions prompting to calumny. On the contrary, in the 18th cent. we find Butler, a singularly cautious observer, in his sermon 'Upon the Government of the Tongue,'⁴ holding that a main source of much 'evil-speaking' was nothing more than 'unrestrained volubility and wantonness of speech,' which, however, 'is often of as bad effect upon the good name of others, as deep envy or malice.' And a century later Thomas Brown († 1820) taught that 'defamation' and slanderous talk arise less often from envy and malice than from 'mere flippancy' and 'the necessity of filling up with amusement of some sort a conversation that "else" would flag.'⁵ This was probably true of his own, as of Butler's, age—an age of 'conversation.' But in the present age of relentless competition and equally relentless pleasure-seeking slander has once again become, as of old, a serious

business, now often elaborately organized, needing therefore to be vigilantly detected and refuted, alike in public and in private life, by all lovers of truth and justice. From the individual heart the vice, or vicious propensity, whether originating in envy or, as not seldom, in contempt, or in the mere pleasure of saying pungent things, calculated to attract attention or amuse, can be extirpated only by the counteracting presence and prevalence of a love which honours one's neighbour as oneself, and, in the words of St. Paul, 'rejoiceth not in unrighteousness, but rejoiceth with the truth' (1 Co 13⁸).

J. M. VAIZEY HOPE.

SLAVS.—I. **DEFINITION OF THE TERM.**—The term Slav, Slavic, Slavonic, does not correspond to the term German, which denotes a group of people united by cultural and national ties, but to the term Germanic or Teutonic, which is applied to all people speaking Germanic tongues, irrespective of nationality or culture. Comparative study of the Slavic peoples and their neighbours shows that neither in physical type nor in culture and religion have the Slavs, either in modern days or in the earliest times, formed a unit or shown a greater likeness than that which is manifested by any neighbours living under the same geographical and historical conditions.

The name Slav is derived by Western writers from *slavi*, 'slaves.' This derivation, however, does not hold good in Slavic languages, and the Slavic names for Slav, *slavians* (Russian) or *slawians* (Polish), is more obviously derived from *slava*, 'word meaning all people who use the same words.' Still another derivation is suggested from *slava*, 'glory.' The first historical mention of the Slavs does not call them Slavi, but Vinitii, Veneti, Venethi: the south-eastern Slavs were known as Antes, Anties; not till the 6th cent. A.D. do we meet the name Sclavi. It is difficult to decide whether the Romans imposed the name Sclavi on the Slavs or whether the Slavic name coincided with the Roman, in sound if not in meaning. There are no proofs that the Slavs were ever subjected to the slave-trade to the extent that the Greeks or the people of Asia Minor were, and the fact that, as T. Pöschke's explains, some Slavic tribes were ruled by the Scandinavian Vikings (Slavized into *slaz*, *ritlar*) or Turkic leaders (*trapan*) does not necessarily imply that they were slaves to their kings, any more than any other subjects were slaves of their king at the beginning of European history.

II. **HISTORY.**—Historical mention of the Slavs, as of other European nations outside the Mediterranean area, is not found much before the Christian era, but the archaeological evidence reaches much farther back. Still, it is very doubtful whether we have remnants of any Neolithic culture among the Slavs, or much evidence even of the Hallstatt period. We find the first historical reference to the Slavs in the *Naturalis Historia* of Pliny the Elder (1st cent. A.D.), who mentions the Venethi or Venedi, who were undoubtedly Slavs; but it must be remembered that there are also theories connecting the Scythians with the Slavs, as well as the Neuri, Budini, and Sarmatians of Herodotus, which, if accepted, will take the historical Slavs back to the 5th cent. B.C. But what we know about these races will not stand scrutiny by the searchlight of modern ethnological study, so we shall count the whole period before Pliny as forming part of the archaeological era. In this way the history of the Slavs, or rather the history of the people speaking Slavic tongues, will be subdivided into the following periods: (1) the archaeological period, to the 1st cent. A.D.; (2)

the classical period, from Pliny to the 6th cent.; (3) the Byzantine period, from Procopius to the 7th cent.; (4) the period of independent Christian Slavic states, from the 7th to the 13th cent.; (5) the period of political dependency, from the Turk-Mongol invasions and the subjugation of the Eastern and Southern Slavs by the Turks to the middle of the 10th cent.; (6) the period of the realization of various Slavic-speaking peoples, from the national revivals to the present day.

For the purposes of this article we need consider only the four first periods, when the Slavs had more than mere linguistic community through their early religious beliefs and customs. In the last two periods the history of the Slavic peoples runs in separate national channels which became racially less Slavic, and politically and culturally farther apart, if we take the successive Pan-Slavist movements as springing entirely from the imperialistic propaganda of the various governments. Without going into the history of the last two periods, we shall, however, deal with the folk-lore of the Slavic people to the present day.

I. **The archaeological period (to the 1st cent. A.D.).**—In 1837 appeared the monumental work of P. J. Safarik on *Slavonic Antiquities*,¹ in which he gives a picture of the Slavs of the archaeological period. This work marks the beginning of scientific investigation of the early history of the Slavs, as all former works on the subject were full of serious misinterpretations. It is still a subject of discussion which of the old tumuli in Central and Eastern Europe can be ascribed to the Slavs. None of the Stone Age tumuli have any peculiarly Slav characteristics, least of all the dolichocephalic skulls found in them. The so-called Slav period of these tumuli begins in the 9th century. According to Pytheas, in the beginning of the 3rd cent. B.C. Germanic tribes were already round the Baltic, so it may be assumed that the Slavic branch of the Aryan linguistic family had then already separated from the Germanic branch, and their separation from the Iranian branch of this family must have occurred even earlier, at least before the Scythian period (5th-3rd cent. B.C.). While the Slavic archaeology of this period has not been sufficiently investigated to allow us to draw conclusions from it, and is bound up with the early archaeology of the Aryans in general, the historical evidence of the period is only one degree better.

(a) *The Scythian problem.*—We find no mention of the Slavs as such in B.C. times, and can only conjecture their existence under the name of various tribes belonging to the Scythian or Sarmatian political units. Hence the early history of the Slavs is closely connected with the Scythian problem. The somewhat debatable assumption that the Scythians or Sarmatians must have left some descendants or other, and that 'there was no more obvious ancestry for the Slavs to be discerned among nations mentioned by ancient writers,'² is the chief ground on which the Scytho-Slavic theory is based. On the other hand, as Minns justly observes, 'this theory naturally appealed to the tendency of chroniclers to push the ancestry of their own nation back as far as possible.'³

Broadly speaking, the following solutions have been suggested for the Scythian problem:

(1) That all the Scythes were Turanian.—Suggested first by H. G. Nitzsch, *Kleine Schriften*, Bonn, 1824-42, I, 343 ff.; supported by K. Neumann, *Die Hellenen im Skythienlande*, Bonn, 1855; George Grote, *History of Greece*, London, 1851, II, 315-342.

¹ *Slovanské Starožitnosti*, 2 vols., Prague, 1837, Germ. Tr., *Slavische Alterthümer*, Leipzig, 1843-44.

² E. H. Minns, *Scythians and Greeks*, Cambridge, 1913, p. vi.

³ *Id.*; see also art. SCYTHIANS.

¹ After the great migration of the Slavs to the 7th cent., we find the name Slav in almost the same form near Norgorod (Slovenia), in N. Hungary (Slovakia), in Pomerania (Slovians), and in the Balkans (Slovyeni).

² 'The Expansion of the Slavs' (*The Cambridge National History*, Cambridge, 1911-12, vol. II, ch. xiv.).

(2) That the Scythian nation was an artificial product evolved from the nomads of the steppes.—H. W. Macan, *Herodotus*, London, 1896, II, 112.

(3) That all the Scythians were Iranian.—Originated by K. Zeuss, *Die Deutschen und die Nachbarstämme*, Munich, 1827; supported by A. Schiefeler, 'Sprachliche Bedeutung gegen das Mongolenstamm der Skythen', *Mittheilungen der Russisch-Asiatischen Gesellschaft*, II, [St. Petersburg, 1886] 631 ff.; K. Müllenhoff, 'Ueber die Herkunft und Sprache der pontischen Scythen und Sarmaten', *NRW*, 1880, p. 349 ff., reprinted in *Deutsche Alterthumskunde*, Berlin, 1879-1900, II, 101 ff.; M. Daneker, *Hist. of Antiquity*, Eng. tr., London, 1877-82, II, 228-244; W. Tomaschek, 'Kritik der ältesten Nachrichten über den skythischen Norden', I, 'Ueber das armenische Gedicht des Aristeas', *SWAN* (Pall. hist. Class.), civi. [1882] 715-730, II, 'Die Nachrichten Herodots über den skythischen Karawanenweg nach Innerasien', *ib.* civi. [1882] 1-70; A. von Gutschmid, 'Die Skythen', in *Kleine Schriften*, Leipzig, 1899-1904, II, 421 ff. (his art. 'Skythen, Scythians' in *EBR* is an epitome of this).

(4) That the Scythians were an Aryan people who have now disappeared.—O. Rawlinson, *Hist. of Herodotus*, London, 1822, II, 167 ff.

(5) That the Scythians were Germans.—I. Wille, *Internat. Centralblatt für Anthropologie*, VII, [1882] vi, 332, and 'Skythen und Perser', in *Archiv für die Organ der deutschen wissenschaftlichen Gesellschaft*, II, [1902]; J. Prehn, *Die Skythen-Sagen die Urväter der Germanen*, Munich, 1886.

(6) That the Scythians were Slavs.—J. G. Gieseler, *Forschungen im Gebiete der alten Völkerkunde*, Berlin, 1871; J. E. Zabyella, *Hist. of Russian Life* (Russ.), Moscow, 1871, I, 242; H. J. Samokhvalov, *Hist. of Russian Life* (Russ.), Warsaw, 1894, pt. II, pp. 1-60.

(7) That the Eastern Scythians were Mongolian and the Western Scythians Iranian and possibly ancestors of the Slavs.—F. T. Müller, 'Epigraphic Traces of Iranian Population on the North Coast of the Euxine', *Journ. Min. Edu.*, St. Petersburg, 1888, p. 227; T. I. Mischukov, 'Concerning the Geography and Ethnology of Herodotus Scythia', *ib.*, 1888.

(8) That the Eastern Scythians between the Dniester and the Don were Iranian, while the Western Scythians between the Dniester and the Carpathians and the Lower Danube were Slavs.—P. J. Safarik, *Slavonic Antiquities*.

Recent study of Scythian archaeology and customs makes it more and more clear that the Scythians were a political unit composed of various ethnical elements. The distinction of three different kinds of Scythians had already been made by Herodotus, besides which he distinguishes various other tribes which he considered non-Scythian. Recognizing his distinctions, and assuming that the W. Scythians were Slavs, we find it impossible to class as Slavic the non-Scythian tribes of Herodotus, as, e.g., the Neuri. In this case the Neuri must be considered as one of the neighbours of the Slavs, probably the Letto-Lithuanians. This, however, is not realized by Safarik, who considers the W. Scythians and Neuri, as well as others, to be Slavs. Such inconsistencies deprive his Scytho-Slavic theory of any profound historic or ethnological value. Another argument against identifying the Slavs and W. Scythians is brought forward by T. G. Braum.¹ He says that the first historical mention of the Slavs in Ptolemy, Tacitus (1st cent. A.D.), and Ptolemy shows them far away from the Lower Danube. Ptolemy says that they live east of the Vistula.² Tacitus places them somewhere between the Vandal hills near Novgorod and the Vistula.³ Ptolemy (2nd cent.) places them on the Vistula, in Sarmatia, and along the shores of the Venedic gulf (the Gulf of Danzig); but he also speaks of the Venedic mountains, probably meaning the N. Carpathians.⁴ Further, if we bear in mind that the territory of the W. Scythians was the battleground of every tribe migrating southwards, we can see that it would not be a very good nursery for a rapidly increasing race which was to overrun half Europe by the 6th century.

But, if we are not to find ancestors of the Slavs among the Scythians, we have still to consider whether they are to be found among the non-Scythian tribes described by Herodotus, such as the Neuri and Budini.

(a) *The Neuri*.—Herodotus (5th cent. B.C.) tells

us that the Neuri live along the rivers Hypanis (Bug) and Tyras (Dniester), north of the Scythian Arotres;¹ and that they had been driven from their land a generation before by a plague of snakes, and had taken refuge with the Budini.² In the same place he tells us that once a year they became wolves for a short season. Of the land which lay beyond them he confesses his ignorance, but believes it to be desolate. Ephorus of Gyra³ (2nd cent. B.C.), quoted by Strabo Chius,⁴ follows Herodotus, saying that they live beyond the Arotres, and that the country beyond them is desolate. Pomponius Mela⁵ (1st cent. A.D.) mentions the Neuri as living on the Tyras. He also relates the wolf-story. Claudius Ptolemy⁶ (2nd cent. A.D.) speaks of the Νεαίβοι or Νεαίνοι as inhabiting S. Podolia. Ammianus Marcellinus⁷ (4th cent. A.D.) says that they live in the mountains north of the land of the Borysthenes (i.e. near Kiev).

Safarik was the first to propose the identification of the Neuri with the Slavs.⁸ He considers that their territory was just where the Wends (Slavs) originally settled. He is supported by L. Niederle,⁹ Braun,¹⁰ Tomaschek,¹¹ and Minns.¹²

(b) *The Budini*.—In iv. 21 Herodotus tells us that the Budini are living in the great country north of the Sauromatae, east of the Tanais (Don); in iv. 108 that they are a powerful nation, with blue eyes and red hair. With them live a people called the Geloni, whom Herodotus believes to be fugitive Greeks. These people have built for themselves a town of wood called Gelonus, with temples and shrines in which they worship gods whom Herodotus believes to be Greek. Pomponius Mela¹³ also mentions this wooden town of Gelonus in the land of the Budini. Rawlinson¹⁴ gathers from the data given by Herodotus that the Budini inhabited the region round about Zadonsk and Woronetz (Saratov).

Many theories are suggested concerning the ethnology of the Budini. Rawlinson¹⁵ holds that the Budini were either the ancestors of the Germans or else a remnant of the Chimerians, whom he believes to be Celts. F. Lammert¹⁶ considers the town Gelonus to be the Argard of Scandinavian mythology. C. Ritter¹⁷ goes so far as to say that Budini is a religious title, and that the Budini were Buddhists. Minns¹⁸ thinks that they were probably Finns of the branch now represented by the Votians and Permiaks. Of course Safarik¹⁹ regards the Budini and Gelonus as both Slav peoples, and derives their name from *soda*, 'water' ('waterfall'). Grote²⁰ supports this view. E. R. Rieu²¹ suggests that Herodotus' informant may have confused Greek and Slavic methods of worship in his account of Gelonus. Niederle²² is also inclined to think that the Budini were a Slavic people. It is certainly more likely that the Budini were Slavic.

(c) *The Sauromatae, Sarmatae, etc.*—Herodotus²³ says that the Sauromatae were living on the east bank of the Tanais (Don), which divided their land from that of the Scythians. They stretched northwards from Lake Meotis (Sea of Azov) to the forest land belonging to the Budini. He relates the legend that they were descendants of Amazons conquered by the Greeks on the Thermodon, who, having been embarked for Greece, slew their

capture, and drifted to Kromni on the shores of Lake Maeotis, whence they advanced up the Tanais. Hippocrates¹ (468 B.C.) places them on the shores of Lake Maeotis. The *Periplus of Scythia*, dated by K. Müller about 338 B.C., mentions in § 69² a tribe of 'Syrmatæ' in Europe close to the Tanais; but in § 70³ the Sarmatæ are still in Asia on the eastern side of the river. In connexion with this we may note that Stephanus Byzantinus cites this rare form 'Syrmatæ' from Eudoxus of Cnidus (4th cent. B.C.), and says that it is identical with 'Sauromatæ', 'Sarmatæ', etc. The first definite mention of the Sarmatæ as in Europe is that of Polybius⁴ (210 B.C.), where Πάρκας ὁ Σαρμάτης joins a great league of states in Asia Minor on the shores of the Euxine. This is the first occasion on which the term Σαρμάτης takes the place of the form Σαρπάρτης. Ephorus (2nd cent. B.C.), quoted by Szymon Chius,⁵ says that they live on the shores of Lake Maeotis. Strabo (2nd cent. B.C.)⁶ has the Iazyges Sarmatæ on the Ister (Danube). His Sarmatian tribes are Iazyges-Sarmatæ, Royal Sarmatæ, and Uirgi, and the Rhoxolani, Aorsi, and Siraci beyond the Tanais. Ovid (1st cent. A.C.)⁷ places the Iazyges on the Danube and the Sauromatæ in W. Sarmatia. Diodorus Siculus (1st cent. B.C.)⁸ says that the Sauromatæ are still on the Don, and that they come from Media.

Before going on to the notices in writers of the Christian era, it is well to remark that it is not clear exactly when the Sarmatæ crossed the Don. In the 11th cent. A.C. the Sarmatæ were either east of the Don or just crossing. After that we get no definite information for a century and a half. Minns⁹ suggests that the reason of this is that the Scythians were then fighting a losing struggle with the Sarmatæ. The Scythians, contrary to the opinion of Herodotus,¹⁰ were good neighbors to the Pontic Greeks, but it was not safe to travel near the Euxine when the Sarmatæ were first in the ascendant. We may also notice two main divisions of Sarmatæ by the 1st cent. A.C.—the Iazyges-Sarmatæ, Royal Sarmatæ, and Uirgi on the Danube, and the other division, Sarmatæ-Rhoxolani, Aorsi, and Siraci, on the Don and the shores of the Sea of Azov and in the Caucasus.

In the 1st cent. A.D. Pomponius Mela¹¹ places Sarmatia between the Vistula and the Danube. Pliny the Elder¹² has the Hamaxobii (or Aorsi) and Rhoxolani on the Danube and Hercynian Marsh, and the Iazyges in Dacia, having previously driven out the Dacians. This is confirmed by Tacitus, who tells in *Hist. I. 70*, how the Rhoxolani, having occupied W. Sarmatia, which had been left vacant by the Iazyges, made an unsuccessful raid into Moesia in A.D. 70.¹³ In *Ann. xii. 20* he has the Iazyges-Sarmatæ in Pannonia.¹⁴ In *German. I* the Iazyges-Sarmatæ are between the Danube and Theiss, having driven out the Dacians,¹⁵ and in *German. 43* we find the Sarmatæ imposing tribute on the Odi in Pannonia.¹⁶ In the 2nd cent. A.D. Ptolemy¹⁷ has the Sarmatæ along the coast of Lake Maeotis, and the Iazyges Metanastæ between the Theiss and the Danube, but this is probably, as Minns points out,¹⁸ the result of combining information of two different dates. Another 2nd cent. historian, Polyannus,¹⁹ tells the story of Amage, queen of the Sarmatians, who reigned on the shores of the Pontus. She allied with the Cher-

onesians against their neighbours the Scythians. In the 4th cent. A.D. the *Hist. August. Scriptores* tell us of war waged against the Sarmatæ by Hadrian, Marcus, Maximus Regalianus, and others.¹ The 4th cent. historian Olympiodorus² shows that the Sarmatæ have overrun Thrace and Illyricum. Jordanes³ (6th cent. A.D.) says that Dacia was formerly bounded on the east by the Rhoxolani, on the west by the Iazyges, on the south by the Sarmatæ and Bastarnæ, and on the north by the streams of the Danube. In the *de Get. xxxvi* we find the Sarmatians on the side of the Byzantine Romans against Valentinian, emperor of Rome.⁴ Procopius, however, in the 6th cent. A.D., merely mentions the Sauromatæ as a tribe of Scythians.⁵

Of the customs of the Sarmatæ Herodotus has a good deal to say. In *iv. 110 f.* he tells us that the Sarmatian women hunted, went to war, and wore the same clothes as the men. Every woman had to kill a man in battle before she could marry. They spoke a language which Herodotus believed to be broken Scythian. These customs put together amply account for the myth of Amazonian origin.

Hippocrates⁶ notes the difference between the Sarmatæ and the other 'Scythian' tribes around them. He gives the same account of the activities of the Sarmatian women as Herodotus, adding that they were not allowed to take part in religious ceremonies till they were married, and that they had no right breasts, since it was the custom of their mothers to cut them off in early childhood, to make their right shoulder and arm stronger by concentrating the strength there. When married, they gave up riding in general, but were still liable to be called up when a crisis necessitated universal tribal service. This is interesting, since these two accounts must have come from independent sources.

Ephorus⁷ gives the same account of the Sarmatæ as Herodotus, from whom, most probably, he got his information.

Strabo gives a very full account of their customs. In *Geog. 7. 2*,⁸ he says that they are a mare-milking, milk-drinking, simple people, who have mixed with the Thracians and Bastarnæ beyond the Ister. In *Geog. 7. 17*⁹ he says that they are mostly nomads, though some practise agriculture, and he gives a detailed account of the Rhoxolani. They wear very little armour, and are almost naked. Their helmets and breastplates are made of ox-hide, their shields of wicker-work. They also use spears, bows, and swords. On the top of their waggon wheels are fastened felt tents. They eat milk, cheese, and meat. They winter in the marshes round Lake Maeotis, and move up to the steppes in summer.

Diodorus Siculus¹⁰ says that women ruled among the Sarmatæ, and he gives the usual account of their habits.

Tacitus¹¹ gives an account of the Rhoxolani: they use swords and poles of an extraordinary length, and wear coats of mail made of steel plates and ox-hide; they are almost impregnable to a charge, but, if knocked over, they cannot get up again. In *German. 11* he says that the Sarmatæ have flowing garments like the Parthians; in *German. 40* that they live in waggon, and are dirty and lazy.

Pomponius Mela says that the Sarmatians are rather like Parthians, their greater roughness being accounted for by the greater harshness of their climate; they are nomads and very fierce. He also mentions the strange habits of their women.

Nicolaus Damascenus¹² (1st cent. A.C.) tells that the Sarmatæ have a habit of eating hard for three days till they are full up.

Pausanias¹³ (late 2nd cent. A.C.) gives an account of the Sarmatian breastplate, which was made of pieces of horse's hoofs. He says that the Sarmatæ, though the most isolated of the barbarians, were skilful craftsmen. They had no iron in their country and did not import any, so they used bone for the tips of their arrows and spears. They used to leave their armour in battle. They were nomads, and had many horses, which they used to eat and sacrifice to the local gods. In *VIII. xiii. 4*¹⁴ he says that they were warlike and wicked and imitates how Antiochus II. punished them for wantonly breaking the peace.

Many scholars, including Šafarik and Rawlinson, have believed the Sarmatæ to be Slavs; but this theory seems weakened by the ample evidence as to the Turanian character of the Sarmatian people.

Moreover—a fact which Safarik ignores—it is impossible to regard both Scythia and Sauromatae as Slavic, since Herodotus most definitely distinguishes the Sauromatae from the Scythia. They have all the characteristics of the Turkic nomads of the steppes, milking mares, living on meat, milk, and cheese, wearing flowing garments, living in waggons, and using felt tents. On the other hand, that important characteristic of the Turkic people, the use of iron, is lacking.

2. The classical period (1st–6th cent. A.D.).—We have very little information about the Slavs from the classical authors. Pliny mentions them under the name of Venedi or Venedae.¹ He only says vaguely that they, among other tribes, are reported to live east of the Vistula. He also mentions the Sirbi (Serbs), who, he says, live with the Gimmerians.² Tacitus³ mentions the Venedi as living near what H. Furneaux⁴ considers to be between the Valdai hills near Novgorod and the east bank of the Vistula. He hesitates whether to call them Germans or Sarmatians, but is inclined to class them with the former, because they have fixed houses, use shields, and are swift of foot—all very unsarmatian characteristics. He also says that they are dirty and sluggish by nature. We must remember, however, that in this case the reading of the MS is 'Veneti.' In the 2nd cent. A.D. Ptolemy⁵ places the Venedae on the Vistula, in Sarmatia, and along the shores of the Venedic gulf, which seems to have been the Gulf of Danzig. He also mentions the Veltos on the Baltic, the Sudini and Saboli in Prussia, which tribes Minns⁶ considers Slavic. Minns suggests that Ptolemy's 'Stavani,' which he places in Prussia, might be read 'Silavani.' Ptolemy⁷ also mentions the Serbi, whom he places in Asiatic Sarmatia between the Ceraunian mountains and the river Rha.

3. The Byzantine period.—The first definite use of the word Slavini is to be found in the pseudo-Caesarius dialogue⁸ early in the 6th cent. A.D. The first account of the Slavs under the name of Slaventi is given by Jordanes.⁹ He says that the Winidae, Slaventi, and Antes live in Uscia, from the town of Noviodunum and Lake Murianus to the Danaster (Dniester), and northwards to the Vistula. They dwell in woods and marshes instead of houses. The Antes are the bravest tribe, and live round the shore of the Pontus from the Danaster to the Danaper (Dnieper). Farther on he says that the Winidae, Antes, and Slavini formed part of the subjects of Hermanreich; they were very warlike tribes, who were then subdued, 'but now range wheresoever they will through our neglect.'¹⁰

The most useful of the authorities is Procopius (6th cent.). His important remarks on 6th and 6th cent. Slavic institutions are worth quoting.

'For these tribes, the Antes and Slavini, are not ruled by one man, but have lived from olden times under democratic rule, and for this reason they deliberate in public all that concerns their weal and ill. Both these peoples have the same laws and customs. . . . They live in miserable hovels very far apart from one another and often change their abode. They go to battle on foot and charge the enemy with small shields and javelins in their hands. Some wear neither tunic nor cloak when going to battle, but merely short breeches. They all speak the same barbarous language, and are very like one another to look at. Their mode of living is hard and uncultured like that of the Massagetae; they are always dirty. They are not malicious or doubtful, but have something of the simplicity of the Huns. At one time the Slaventi and Antes had only one name; for they were called the Speri in ancient days, because, I take it, they were scattered so sporadically over the land they lived in; indeed they inhabit the greater

part of the banks of the Danube. That is all I have to say about these people.'¹¹

Procopius also gives a good deal about the history of the Slavs.

The Slavs during the 5th and 6th centuries are constantly trying to cross the Danube, and becoming more and more successful each time; the Slavs cross the Danube, and overrun Illyria as far as Dyrrachium; 3 Slavs again cross the Danube and Eurus. They divide into two hords, one of which ravages Illyria and the other Thrace. The latter take the town of Topercon on the Thracian coast, and commit horrible atrocities there.¹² A number of Slavs larger than had been seen before cross the Danube and attack Naesos with the intention of invading Thessalonica. Through fear of the Germans, however, they halt at Thessalonica, and, going through the Illyrian mountains to Dalmatia.¹³ At this time on, the Romans are less able to repel them. In ill. 14¹⁴ Justinian offers the Antes the town of Tourra and land on the Danube, if they will protect the empire from the advance of the Huns. In ill. 10,¹⁵ however, they are in the pay of Totila, the Hun leader, and attacking the empire. Towards the end of the 6th cent. they have overrun the whole of Greece, and are in such numbers that the Romans can make no way against them.¹⁶ In fact, in ill. 14 Procopius admits that since the death of Chludimirus (5th cent. A.D.) nothing has been able to protect the empire from the barbarians.

Towards the end of the 6th cent. Menander tells us that the Slavs made a raid into Thrace.¹⁷ The next year (A.D. 578) they were ravaging the whole of Greece. Tiberius, the Roman, not having sufficient forces to meet them, persuaded Balarus, leader of the Avars, to attack them in their own country, and so force them to go back and defend it. Balarus accordingly crossed the Danube and burnt the Slav villages there, whose inhabitants had fled to the caves and woods. Balarus was the more ready to attack the Slavs since he had a private grudge against them; for they had refused to pay him tribute and killed his ambassadors shortly before.

Mauricius (6th cent.) has much to say on the characteristics of the Slavs. Physically they are strong, well able and accustomed to endure cold and lack of clothing and food. They have great reverence for the laws of hospitality, and are very kind to strangers and prisoners. They are armed with two javelins, wooden bows, and small poisoned arrows; some use shields. Their method of attack is by sudden raids and incursions; they rarely fight a pitched battle. They are ingenious in the art of defence; when pursued by enemies or suddenly attacked, they dive under the water, and, lying on their backs at the bottom, breathe through a long reed, and so escape destruction. They live in a continuous state of defence, having several exits to their houses and burying all their superfluous goods.

Thus, in the 6th cent., we have the Slavs definitely settled in large numbers north of the Danube. There were also Slavs in the Mark of Brandenburg.¹⁸

There were Serbo-Croats in Dalmatia and Pannonia, invited there by the emperor Heraclius (610–640) to protect them from the Avars.¹⁹ The Danube Slavs were making constant raids into Greece, and had practically conquered N. Illyria.

Nicophorus Patriarchus (8th cent. A.D.) is our chief authority for the fate of the Slavs in the 7th and 8th centuries. In 626 the Avars, with large numbers of Slav auxiliaries, attacked Blacherna in Thrace. A number of Slav women were found to be in the forces.²⁰ In 670 the Boyars subdued the Slavs living in Moesia and Thrace,²¹ and in 638 the Slavs who had conquered parts of

Thessalonica submitted to the power of the Romans.¹ The same author tells us that in 763 a large number of Slavs crossed the Euxine and settled at the mouth of the river Artanas.²

Fredegar tells us of the foundation of a Slav state in Thuringia under Samo, a Frank, in the early 7th century.³

The period called Byzantine, because the chief authorities for it are the Byzantines, is the most important in Slavic history; in fact, it is the only period in which we can treat the Slavs as one race, though already varying according to locality and having different names in different places. It is certain that the rapid spread of the Slavs over the Eastern Empire was facilitated by its weakness, resulting from the incursions of bearded invaders from the north under Avaric and Odorater, and hairless hordes from the east under Attila. Whatever region it was in which the Slavs first broke away from the Aryan stock, they must have been somewhere in the forest region of the western part of E. Europe outside the route of the Asiatic steppe invaders immediately before their invasion of the Roman Empire. About the 5th cent. they had spread over the lands of the W. Scythians, Sarmatians, and Celts, and so encroached upon the territories of the Eastern Roman Empire, and later upon the Frankish Empire. In the west they crossed the Rhine and got as far as Spain; in the south-east they reached Asia Minor a century and a half later. In the north-east they were on the northern shores of the Baltic in the 1st cent., and on the Dnieper in the 6th cent. (the Antes).

Pending further archaeological discoveries, there is no exact information as to the date when the Slavs began to spread westwards. This lack of information has given certain Slavic scholars the opportunity of advancing a theory that the Slavs of the Elbe region were autochthonous.⁴ The views of the most prominent German scholar may be summed up by the following quotation:

... From the beginning of the 5th, and indeed for the greater part from the end of the 3rd century, A.D., the country westward to the Oder and southward to the Elbe-Elbe was abandoned by its old German inhabitants. ... It must be admitted that the Slavs found everywhere scattered remnants of the Germans, because they merely adopted the German names, *Oder, Elbe, Altus, Balda* (Waltz etc.), to their own mother-tongue, *Lab, Flava*. For certain times and in certain districts there was a mixed population, and it is to be particularly noticed that even in the 6th century the Germans, who had been withdrawn to the south, did not admit that the East as far as the Vistula had definitely passed to the Slavs. It had not been conquered by them—only occupied by loose bands of settlers.⁵

Since Peisker gives us a great deal of valuable historical information in this chapter on the expansion of the Slavs, it is the more important to point out where his preconceived ideas have vitiated his facts.

The axioms on which he bases his theory are: (1) that the rapid Slav conquest was due to either a Germanic or a Turanian (Avar) adventure, since the Slavs were merely the passive party; (2) that the organisation of the early Slavic states was due to these two elements.

(1) His first argument is based on a quotation from Theophylactus' 'epi story': 'Three captives were brought before the Emperor Maurice having neither arms nor any other weapon, but only chains with them. Being questioned they answered that they were Slavs from the coast of the northern ocean (Baltic Sea), whither the Khagan sent envoys with presents to ask for auxiliaries. They brought back an answer to the Khagan that he could expect no help from such a distance—they themselves had been fifteen months on the journey—and their people were absolutely perished. They played on the ruler because they were unacquainted with weapons, their land produced no iron and therefore they lived there still and peacefully, and so the war trumpet was not understood there they played on the ruler. These were

obviously slaves, but the notion of their entire helplessness could only disguise the Emperor when the story of the Khagan's embassy to the Baltic Slavs appeared natural. The whole mystification produced the widespread story of the slave-like nature of the Slavs.⁶

Since Theophylactus himself considers the Slavs not so blameless as they seemed, this will hardly support his theory. Against it we have the testimony of almost all the other writers that the Slavs are good warriors, especially in defensive warfare. Nor are they lacking in strategy. Peisker ignores this evidence, however, and, when he deals with the pre-Avar conquest of the Slavs in the west, he says that the Germans for some unknown reason voluntarily abandoned their territories. Again, when he tells of the Roman Slavs pre-empting over the Danube, he sacrifices it to the 'reputable fiction of the Viking pirates, Avarian barbarians and Slav peasants on the island of Rugen' in 1168.

(2) As to the founding of Slavic states which took place at the end of the Byzantine period, it is true that Samo, the founder of a Slavic state bordering on Thuringia, at the beginning of the 7th cent., was a Frank, but this 'empire' was a short-lived adventure, which played no role in Slavic history. Peisker ascribes to it the deeper significance of a rebellion of Slavic peasants against their foreign masters, but it was equally a rebellion of the Frank chief against his own king, Dagobert. All the Slavic states which were at all permanent—as the Carolingian (7th cent.), the Croatian, Serbian, Bohemian (Lemni), and Polish (Lachy)—were states developed from purely local origins, and could scarcely owe much in that direction to the Avars, who, like all other Asiatic invaders, were better fighters than statesmen. The Bulgarian-Asiatic element among the Slavs who adopted this name must have been very insignificant, if the original Bulgarians changed their language and adopted Christianity so soon after settling down (6th cent. under Simion and Samuel). Very little greater numerically was the Scandinavian element in the Kiev state, for in the third generation it amounted to the foreign dynasty, which, as is known from modern history, readily adopts the nationality of its subjects. Still Scandinavian influence in the formation of the Novgorod and Kiev states had been undoubtedly great, but its strength was due to the fact that the first Scandinavian flow soon became Slavified.

In the one case where Germanic influence was not sporadic, but permanent, it does not seem to have had the effect of forming a centralised state. This was the case of the most westerly Slavs, neighbours of the Germans, who lived between the Rhine and Mecklenburg—such as the Sorbs of the Saale and Elbe, and the Lychins and Obodrits further north—who never formed a state of any importance. Considering the constant disturbances coming from the steppes, we cannot but wonder how the Slavs succeeded in organising their states, and providing at such an early period such large collections of native law based on legal proceedings rather than force.

It may be questioned whether the Avar invasion made a cleavage between the Slavs, dividing them into Northern and Southern, or whether it helped to accentuate a division already there.

4. The period of independent Christian Slavic states (7th-13th cent. A.D.).—There are two sources of evidence for the period—historical and archaeological. The history of the Slavs during this period can be gleaned from local authorities of the 10th cent. or later. Among these are the Germans, Thietmar of Merseburg (10th cent.), Adam of Bremen (11th cent.), Helmold (12th cent.), and Otto of Bamberg (12th cent.), and the Danish Saxo Grammaticus (12th cent.), Fredegar, and the *Knyttlinga Saga*. Others are Slavic, such as the S. Russian chronicler Nestor (12th cent.), the Bohemian Cosmas, bishop of Prague (12th cent.), the Polish-Latin *Homilies* (12th cent.), and the Polish chroniclers, Marcellinus Gallus (11th-12th cent.), Vincentius Kallubek of Cracow (13th cent.), Yanko of Czarnkov (14th cent.), and Dlugosz (15th cent.). The chroniclers, though of a later date, deal with the period which we are now considering. Besides these local sources, the Arabian travellers, al-Mas'udi (10th cent.) and Ibrahim ibn Yaqub (12th cent.), and a Spanish Jew called Ibrahim ibn Laqub (10th cent.) contribute interesting information which is much more impartial and free from bias than the Germanic and Slavic contributions.

From a historical and archaeological point of view, this is the most 'Slavic' period in the history of the race, since at that time, between the advance of Attila and that of Jenghiz Khan, there were no invasions of any importance from the east or from the west—i.e., there was no great infusion of Turanian blood to the Slavic stock, since the Avars were a

military and political power, and did not amalgamate with or absorb those whom they conquered. In the west, though the Germans were by this time pushing the Slavs back before them, they were only politically supreme over the Elbe Slavs, who had never united to form a strong Slavic state, but lived in small village communities as Slavic islets in a Germanic sea.

III. DISTRIBUTION AND CLASSIFICATION OF THE SLAVS UP TO THE PRESENT DAY.—In dealing with the early Slavs we get more important evidence from archaeological remains than from the actual notices of ancient and Old German historians. The Slavic graves in Germany and Austria have now been thoroughly studied, and a map of their distribution was made by C. Toldt.¹ They date from the 7th to the 12th cent. and are characterized chiefly by metal ornaments of the shape of the letter S (*Schäferinge*), worn probably on the cap, which are not to be found in the graves of W. Germany, France, or Great Britain.² The graves not possessing this characteristic ornament have small urns without ears, ornamented with a design imitating waves. Rings are found chiefly in the graves in what is now Germany, the island of Rügen, Austria, as well as in Bohemia and Moravia, and less in Poland or White and Little Russia. Some 169 skulls have been found in the Slavic graves on the territory of what is at present E. Germany, and of these 151 are dolichocephalic and only 15 brachycephalic. As to the 'Slavic' graves of Austria, 46 out of 148 were dolichocephalic, but it is not certain how many of these can be described as Slavic. Some archaeologists, among them Niederle, suppose that the Slavs formed the bulk of the population of the Danube, Styria, and Carinthia; others (chiefly Germans) think that the Slavs formed small groups among Roman, German, and Illyrian elements.

From the Elbe to the Volga in 5th cent. graves we meet with Arabian silver coins, which R. Virchow³ considers particularly associated with the Slavic graves.⁴

The skulls from Slavic graves in the territory of the present-day Russia were also dolichocephalic, but it is difficult to say which of them can be ascribed to the E. Slavs and which to the Finns, who lived in that district before the Slavs. The population of Little Russia was dolichocephalic until the Tatar invasion. The dolichocephals of Great Russia, whether of Slavic or of Finnic origin, were affected in modern times by a fair brachycephalic 'Vandal' type from Polesia and a dark brachycephalic Little Russian type.

IV. LANGUAGE.—The relation of the Slavic languages to the other European tongues was clearly defined for the first time by F. Bopp,⁵ but, even before, other philologists had noticed points of likeness between the Slavic tongues and Latin, Greek, German, Celtic, Letto-Lithuanian, etc. Since the publication of Bopp's work it has been generally recognized that the Slavic family of languages has developed from the original Indo-European (Aryan) common language, just as the Germanic, Celtic, Italic, Letto-Lithuanian, Albanian, Greek, Armenian, Indian, and Iranian branches did.

V. RELIGION.—When we speak of the religion of the Slavs, we mean their religion at the time

when the term 'Slavs' meant more of a unity of language, customs, and beliefs than now—in other words, before they adopted Christianity.

1. Sources.—There are no Slavic records written in the pre-Christian era of the beliefs which the Slavs held before they became Christians, but the Slavic chronicles of the 11th-15th centuries frequently refer to the earlier religion. These chronicles, however, were already looking at things from the point of view of either Byzantine Christians (in the case of the E. Slavs) or Roman Christians (of W. Slavs), and hence they purposely depreciated the pagan era of Slavic history. This is true of the earliest Slavic chronicler Nestor of the Russ (a proto-Russian people), and also of the Czech chronicler Cosmas of Prague, and the Pole Gallus. Even more biased are the references in the early German and Danish chroniclers—e.g., Thietmar, Adam of Bremen, Saxo Grammaticus, Otto of Bamberg—and in the *Knytilinga Saga*. Further notices are found in the Eastern historians, Byzantine or Arabian, such as Procopius, Constantinus Porphyrogenitus, or Mas'udi, and Ibn Fadlān, but the latter often confused the E. Slavs with the Scandinavian Varangs, and possibly with the Finns and Turks.

In a sense more valuable evidence may be obtained from the existing folk-lore, such as the customs connected with the change of the seasons which may be called communal, and those connected with *rites de passage* in the life of the individual. Then there is linguistic evidence, which, however, has little value unless it is connected with a survival of ritual or belief; e.g., it will not do to conclude, with some folk-lorists, that, merely because *Bug*, the name of two different rivers, means in all Slavic languages 'God,' the two rivers were therefore objects of special worship. There is one more source of evidence, viz. the church records dealing with pagan practices which pass into Christian ritual, but these must be treated with no less reserve than such documents in other countries. Thus it is folk-lore with all its modes of expression—songs, sayings, epics, sculpture, drawing, dances, or games—that provides us with the most satisfactory material. This material has only begun to be utilized since the publication of Safarik's monumental work, *Slavonic Antiquities*, in 1837, and from the very beginning the study of the past of the Slavs has been impeded by national and racial prejudices. The German scholar Felsker starts his study of the past of the Slavs with the assumption that they are nomads of Scytho-Turanian religious conceptions, while almost all Slavic scholars take for granted that, because the Slavic languages belong to the Indo-Germanic group, their religion must have been also like that of the other Indo-Germanic speaking peoples. Further, their assumption that a distinct Slavic linguistic group corresponded to a distinct Slavic race led them to expect an equal originality in the early religion of the Slavs and their present folk-lore. These ready-made assumptions prevented collectors of Slavic folk-lore from presenting it comparatively with the folk-lore of other peoples, and, on the other hand, from seeing the variety of the Slavic beliefs; e.g., the god Sviatovit (spelt in various ways), known exclusively to the Slavs of Rügen, was ascribed to Slavdom, and so was also Perun, who was the Scandinavian Thor, brought by them to Novgorod and Kiev.

2. Gods.—The names of the ancient Slavic gods have almost all been gleaned from Russian, Polish, or foreign authors; the Czech and S. Slav writers have contributed little to our knowledge of names famous in Slavic mythology.

All the foreign writers on the ancient Slavs

⁴ The duty of Charlemagne on silver from the other side of the Elbe stopped the penetration of these coins to W. Europe.

⁵ *Vergleichen Grammatik*, 3 vols., Berlin, 1833-36, Eng. tr. E. S. Eastwick, London, 1844.

mention some names of deities that they came across among the Slavs whom they have known; e.g., Saxo Grammaticus speaks of the gods of the Slavs of Rügen—Rugevit, Perovit, Perenchu, and Svyetovit; Helmold mentions Svyetovit, Provo, Biel-Bog, and Cherno-Bog.

The authors of the 16th and 17th centuries, curiously enough, have a much larger collection of Slavic gods; thus Michaeli-Frencelli (1658) describes a far greater number of gods than were known to the native and foreign travellers of the earlier period when their worship might still have been tolerated in the newly Christianized states. Frencelli describes Porun, Martayana, Didila, Zolotaga-Baba ('golden woman'), Perenchu, Perovit, Biel-Bog, and Cherno-Bog. It is probable that the writers of the later period were influenced by the writings of the Polish historian Dlugosz, who was himself influenced by classical mythology as to be tempted to find parallels to it in the mythology of the Slavs. Even before Dlugosz, Cosmas of Prague found a likeness between the classical and Slavic Olympus, so that in speaking of the Slavic gods he does not give them their Slavic names, but calls them Jupiter, Mars, and Bellona. Dlugosz was the first to give the Slavic equivalents, most of which do not appear in the Slavic or foreign writers before him. It is open to doubt whether any pagan cult still existed in the time of Dlugosz, 500 hundred years after the introduction of Christianity to Poland; but his deductive genius may have revealed to him from contemporary folk-lore, which must have still been very rich in his time, evidence which escaped the notice of the earlier writers. Historians of a later date merely repeat and seldom amplify his assertions.

Some Russian authors (Glad, Popov, Glinka, etc.) believe that there were a great number of Slavic gods, and divide them into high gods, secondary gods, and spirits. Others (Nestor, Stroyev, Rumov, Priglashev, etc.) believe that there were only seven chief gods among the primitive Slavs. These were (1) Perun, the chief god, ruler of the lightning; (2) Volos (Vélus), god of cattle; (3) Dajd-bog, god of wealth and success; (4) Stri-bog, god of wind and sometimes war; (5) Semargli (Zimserik), goddess of cold and frost; (6) Khors (Hors), god of sickness, sometimes of hunting and shamanism; (7) Mokosh (Mokosh), god of trade, often a 'goddess'. The supporters of the seven-god system mention mostly the high gods known chiefly among E. Slavs; the supporters of Slavic polytheism mention sometimes as many as 40 (Glinka) gods and spirits, of the various Slavs, as well as names whose meaning they could not explain, and to which they could not assign any individuality—e.g., Didila, Provo, Yassa, Krash, etc.

The Russian historian N. M. Karamzin says that the old Slavs worshipped Biel-Bog ('white god') and Cherno-Bog ('black god'). This is the repetition of a statement made by Helmold that the W. Slavs made a distinction between a good and a bad god, and called the latter Cherno-Bog ('black god');¹ but we may look in vain for evidence of the cult of either of these gods in the archaeological remains or in the present folk-lore. According to the great Russian folk-lore scholar, who tried to introduce some system into this host of meaningless names of Slavic gods, the seven Slavic gods mentioned by Nestor ought to be called Eastern or Russ Slav gods. He attributes to the Lett or Polish Western Slavs the names of the following gods: (1) Mya, whose temple was in Gauran; (2) Ganes; (3) Lada; (4) Dulla; (5) Zvevanna; (6) Zivabo; (7) Lal; (8) Polei; (9) Pogoda; (10) Pohriat. He further considers that Svyetovit was worshipped by the Slavs of Rügen and the Wends, while the god Perkon originated with the ancient Prussians and Letts.

We may now consider the early authorities' accounts of these gods and their ritual.

The first authority to give a definite account of Slav religion is Procopius; he, of course, speaks of E. and S. Slavs. Of these people he says:

'They worship one god whom they conceive to be creator of the universe and maker of all things; to him they sacrifice cattle and other victims. They do not recognise "Deminy," nor do they admit that she has power over men, but when death seems near them, whether it be that they are attacked by pestilence or force of arms, they vow that, if they escape, they will straightway make a sacrifice to the gods in payment for their lives. Then if they do escape, they sacrifice as they promised to do, and believe they have bought their safety by

the sacrifice. However, they reverence rivers, nymphs, and other spirits, and sacrifice to them all; from these sacrifices they derive the future.'²

Our next authority is Thietmar, bishop of Merseburg, in the 10th cent., who speaks of the Elbe Slavs. He gives an account of the town of Riedegost, with its three gates surrounded on all sides by sacred woods and its wonderful wooden temple, the foundations of which are made of the horns of different kinds of beasts. Inside this temple are images of gods and goddesses with armour which makes them terrible to behold, and foremost among them is the chief god, Zuarasiri. They have banners, which are never moved save when they lead the way to battle, and specially appointed priests to guard the gods and their treasures. When the time comes to appease or supplicate these gods, the priests sit down—the congregation stands—and, muttering spells and incantations, takes lots. Then, with accompanying prayers, spears are fixed in the ground, and a sacred horse is led through them. If he steps through them, well and good; if not, trouble is imminent. The results of this augury are compared with the lots first obtained, and, if the omens agree, their fulfilment is inevitable. Thietmar goes on to say that there are as many temples in these parts as there are districts, and many single images of gods are worshipped by the people, but the city of Riedegost is the centre of the cult. Human sacrifices to appease the wrath of the gods is common.³ Thietmar also mentions a sacred and inviolate grave at Zntibure,⁴ and a sacred stick at Süvellum, in which place the people worship and sacrifice to *penates*, or domestic gods.⁵ At Glomuzi was a sacred well which produced blood and ashes when war was impending.⁶

Adam of Bremen (11th cent.) gives an account of the city of Reithra (Riedegost) which is probably based on that of Thietmar. He calls the chief god 'Redigost'.⁷ He also mentions the town of Imme inhabited by Greeks, Slavs, and barbarians, where Olla Vuleant and Neptune are worshipped.⁸ He tells us that in Great Estland the people worship dragons with wings, to whom they offer sacrifices of men without blemish, buying them from merchants for the purpose.⁹

Cosmas of Prague gives us information about the religion of the Czechs. He tells us that they worshipped Oreads, Dryads, and Hamadryads. Some worshipped streams, some fires, and some graves, trees, or stones. Some prayed to mountains or hills.¹⁰ He also mentions the cult of *penates*.¹¹

Helmold and Saxo Grammaticus are the chief authorities for the cult of Svyetovit, who was worshipped by the people of Rügen. His temple was at Arkona on the island of Rügen. Saxo Grammaticus describes the image as having four heads and necks, two facing to the front and two behind. The beards of these heads were shaved and their hair was cut short, as was the custom of the people of Rügen. In his right hand the image held a horn of diverse metals, and in the left a bow. He wore a tunic of wood reaching to the knees. Saxo describes the cult as follows. 'Once every year, after the harvest, a motley crowd from the whole island celebrated a ceremonial feast before the temple of the image and sacrificed animals as peace-offerings. The priest of the image, who was conspicuous for the length of his hair and his beard, which he wore longer than is the custom in that country, on the day before that on which

he was to celebrate, carefully cleaned out with a broom the sanctuary, which he alone was allowed to enter. He was careful not to breathe in the building, and, as often as he was forced to inhale or exhale, ran to the door lest he should contaminate the presence of the god with the pollution of mortal breath. The next day, while the people watched before the doors, he took the horn from the hand of the image and looked at it carefully; if any of the liquid in it had disappeared, he judged that this portended a scanty harvest next year. With this knowledge he ordered the people to preserve their present corn for future use. If it seemed to be as full as it usually was, he predicted that the next harvest would be a good one. So then, according to the custom, he advised them to use their corn in the coming year lavishly or sparingly. Having poured the old wine at the feet of the image as a libation, he filled the empty cup with fresh wine and adored the image, pretending to be its cup-bearer. Thus doing, he prayed for an increase of wealth and victories for himself and his country in a set form of words. When he had finished he drained the cup dry at one draught with overmuch haste, and, refilling it with wine, put it again in the hand of the image.

Meat cakes were also brought forward as offerings, round in shape and almost as tall as a man. The priest put one of these between him and the people, and asked the people whether they could see him. If they said they could, he expressed the wish that they might not be able to see him next year. Then he greeted the people in the name of the image, and exhorted them to prolong their worship of the god with diligent sacrifice, promising them certain reward for their husbandry and victory by land and sea.

When these ceremonies were over, they wasted the rest of the day in luxurious banqueting, striving to turn the very sacrificial feast into conviviality and serving the victims consecrated to the god with intemperance. In this feast it was considered a religious act to get drunk, and impious to restrain oneself.¹

The temple of Svantovit was made of wood; it was gaily painted, and had two enclosures, the innermost having magnificent curtains instead of walls. Among the appurtenances of the god were a bridle, a saddle, and a wonderfully embossed sword. There was also a white horse, sacred to the god, which could be ridden and tended only by the priest. Since it was found covered with mire in the morning, it was concluded that Svantovit rode it during the night. Omens were taken by means of this horse in a way similar to that in which the worshippers of Zuarascl took omens with the sacred black horse; but in this case the omen was good if the horse stepped on the spear with the right foot first, and vice versa. Like Zuarascl, Svantovit had sacred banners which led his people to victory, the most revered of these being called *Stanitia*. Svantovit had 300 men-at-arms and horses attached to him, and always received one-third of their spoil. He was identified by the Christian monks with St. Vitus of Corvey.

Saxo Grammaticus mentions other deities in the island of Rugia closely connected with Svantovit. Such were Engle-Vitus at Karkenia (Gara), who had seven faces and eight swords, and was so tall that Bishop Absalon could only reach his shin with his axe; Per-Vitus, who had five heads and no weapons; and Por-Vitus, who had five faces, one of which was in his bosom. Rugia-Vitus was believed by the people to have the powers of Mars.²

Heimold also mentions Zvanterith, god of the Rugians, and says that he is the pre-eminent deity of the N. or Elbe Slavs. In comparison with him, they consider the rest demigods. Every year a Christian is chosen by lot and sacrificed to him.³

The king is held in very moderate estimation; compared with the priest of Svantovit. Merchants from abroad were not allowed to sell their goods in the market till they had offered part of them to the god.⁴

Herbord⁵ (11th cent.) mentions a god Geyostine who had his shrine at Hölkest, and was worshipped by the Pomeranians; he was said to have the attributes of Mars. Elsie⁶ mentions his enormous shield which must not be touched by mortal hands, and could be moved only in case of war. He is most probably an analogue to Svantovit.

Another god who is considered to have affinities with Svantovit is Triglav of Steclin. There were four temples in Steclin, one of which was far more important than the others. It had on its inner and outer walls such wonderful embossed figures of men, birds, and animals that they seemed to live and breathe. The colours of these paintings could not be dimmed by rain or snow. The temple was full of valuables, such as drinking-cups of gold and silver, horns decorated for the purpose of drinking or made into musical instruments. One-tenth of all the booty was stored in this temple. The three other temples were less ornate, and had in them tables and chairs for meetings, for on certain days and hours the inhabitants were wont to assemble there to drink, play games, or discuss matters of importance. Near the temples were a sacred oak and a sacred fountain. The image of the god had three heads and was made of gold. Its eyes and lips were covered with a veil. This god had a sacred black horse. Divination was made in the usual way with nine lances. If the horse, when led three times across them, did not touch them, the omen was favourable.⁷

Elsie⁸ tells the story of another image of this god from Wolin, which was saved from the iconoclasts of St. Olaf by the Slav priests, who gave it to a woman to hide in a lonely part of the country. He also tells us⁹ that the three heads of the god denote his three kingdoms—the heavens, the earth, and the under world. Triglav was also worshipped by the Slavs at Heidenburg.¹⁰

Heimold also mentions the names of several other gods, such as Peres, god of the land of Aldenburg, of whom there was no image.¹¹ He had a secret grove surrounded by a fence, where at a certain time the people assembled with their priest and ruler for judgment.¹² This grove was so sacred that even those in peril of death could not take refuge there. Then there was Siva (Synna), goddess of the Potali, and Podge, an image which was worshipped at Fluna.¹³

Heimold says that at feasts the Slavs prayed to a divinity of evil as well as to one of good, 'professing to receive prosperity from a good god, and adversity from a bad one. Therefore in their language they call the bad god Diabol or Zerneboch, which is Black God.'¹⁴ He adds: 'Indeed, among the many forms of the gods to whom they attribute fields, woods, sorrows, and pleasures, they do not deny that one god rules over the others in the skies, who cares only for celestial things, the rest performing their various functions, proceeding from his blood, and enjoying distinction in proportion as they are nearer to that god of gods.'¹⁵ He does not, however, give the name of this god.

Długosz¹⁶ attempts to identify the old Slavic gods with the Greek and Roman deities. Jesso he identifies with Jove. He is the highest god, from whom is all temporal good and protection from one's enemies. Honour is paid to him above all other gods and he is worshipped with more frequent sacrifices. Linda corresponds to Mars; he is a leader and god of war. Men pray to him for triumphs over their enemies and that their hearts may be fierce; they propitiate him with a very rude sort of worship. Dziadziella is the same as Venus, the goddess of marriage and fertility. To her men pray for sons and daughters. Nla, or Pluto, is worshipped as god of the under world and of souls when they leave the body. He is propitiated to persuade him to admit souls to the more favourable parts of his domain. Pogoda (Zylvie, Dziawanna) is like Diana. She is worshipped as a woman and virgin by wives and

virgins, and as Ceres by settlers and those engaged in agriculture, who try to make corn grow by sacrifices. She is also venerated as goddess of the weather under the name Pogoda ('giver of a favourable wind'). Marzanna was, like Ceres, worshipped as the mother and goddess of corn, and held in very special reverence. Diogenes goes on to say that these deities had shrines, images, sacred precincts, and priests allotted to them, and were offered as sacrifices cattle, sheep, baggage-animals, and even human victims taken in battle. They had religious games at regular intervals, which survived in the form of the Polish celebration at Pentecost and the 'Stado' after fully 500 years of Christian influence.

3. *Spirits.*—(a) *Spirits of the dead.*—Leo Diaconus (10th cent.) gives an interesting account of the funeral rites of the Danube Slavs of his period. He describes the scene after a battle:

'Now had night begun, and when the moon shone full, they went out over the plain and sought their dead. These they burnt beside the wall with much fuel in heaps, and with them many captives, both men and women, whom they slaughtered after the manner of their nation. Thus did they feast the infernal deities, smothering babes smothered and cooks in the later, drowning them in the waters of the river. For they say that these people take part in Greek orgies and make sacrifices and offer libations to the departed after the manner of the Hellenes, having been initiated in those mysteries by Ananias and Zanolis, their own philosophers, or else by the "Comrades of Achilles."'

The Arabian traveller Ibn Fadlan gives an interesting description of the obsequies of a Russian chieftain:

'When a nobleman died, for ten days his body was laid provisionally in his grave, where he was left until his shroud was prepared for him. His property was divided into three parts, one-third was given to the family, another served to defray the funeral expenses, and the remainder was spent on intoxicating drinks which were served at the funeral banquet. On the day appointed for the final obsequies, a boat was taken out of the water, and round it were placed pieces of wood shaped to the form of human beings. Then the corpse was removed from its provisional grave and, being clad with a costly garment, was seated in a boat on a nobly ornamented arm-chair, around which were arranged the weapons of the deceased together with intoxicating beverages; while not only bread and fruit, but also flesh of killed animals, such as dogs, horses, cows, cocks, and hens, were put into the boat. Then one of his wives, who had voluntarily agreed to be burned together with her dead husband, was led to the boat by an old woman called the "Angel of Death," and was stabbed at the side of the corpse, whereupon the wood piled up under and around the boat was set on fire. After the boat with the dead bodies and all the other articles placed upon it had been consumed, the ashes were collected and scattered over the water, and a banquet, lasting for days and nights without interruption, closed the ceremony.'

Similar evidence is given by Mas'udi.¹ Testimony is supplied by V. Radluek² that young girls tore their hair, matrons their faces, and old women their garments.

It is obvious from these few notices that

ancestor-worship at a remote period was widely spread among the Slavs, who looked upon their dead ancestors as beings deeply interested in the fortunes of their children. Evidence of the persistence of this belief is to be found in the *desady* of White Russia and the *madunias* of Bulgaria in modern times. The drowned and suffocated children mentioned by Leo Diaconus are the origin of the *rusalky*, or water-spirits, of modern Russia.

(b) *The penates.*—Helmold³ says that, 'besides groves and household gods (*penates*) in whom the fields and towns abounded, there were powerful gods, etc.' alluding to the cult of *penates* among the ancient Slavs. Cosmas of Prague⁴ relates the story of Czech who carried the *penates* on his shoulders to the new country, resting on the mountain of the Rzip and saying to his followers: 'Come, good comrades, and make sacrifice to your *penates*, for it is by their help that ye have been brought to this new country destined for you by Fate of old.' The Slavic name for them (*ded*, *dedik*, *dedurka*, etc.), meaning 'grandfather,' shows that they had their origin in ancestor-worship. Survivals of this cult are the Russian *domovoy*, the Little Russian *didko*, the Bohemian *etek*, the Polish *strużnik*, the Bulgarian *stapan*, and the *haki* of the Lusatian Sorbs and Slovaks.

(c) *Genii of fate, the woods, water, etc.*—Of these we have few notices in the contemporary and early authorities. Procopius,⁵ as we have seen, denies that they pay any reverence to 'Destiny,' but affirms that they worship rivers, nymphs, and other spirits, and even make sacrifices to them. Cosmas of Prague,⁶ as we saw above, says:

'Oreads, Dryads and Hamadryads are objects of adoration and worship to this foolish and silly people'; and again: 'Some worship streams, some trees, some groves, trees, or stones. Some pray to mountains or hills.'

The modern Slavs have *genii* of fate, *rodjenice* (Croatia) and the Russian *dolya* (Serbian, *aroda*); *slizy*, nymphs; *lesizy*, Dryads, and the *poludnica*, who is almost an Oread. The Russian *rodynnik* is a sort of Slavic 'old man of the sea.'

LITERATURE.—Modern authorities on the religion and mythology of the Slavs include the following: A. Brückner, 'Fascinati Kultury Słowianinów,' in *Encyklopedia Polska*, vol. IV, pt. 2, Cracow, 1911; J. Diogenes, *Historia Polonica*, 2 vols., Leipzig, 1711-12; J. Máchal, *Slavic Mythology* (= *Mythology of all Races*, III.), Boston, U.S.A., 1913; P. J. Safarik, *Slovanské Starožitnosti*, 2 vols., Prague, 1827, Germ. tr., *Slavische Alterthümer*, Leipzig, 1843-44; T. R. Georgevitch, 'Parthénogénese in Serbian Popular Tradition,' *J.L.* xlix, [1916] 34 ff.; N. M. Karamzin, *Hist. de l'Empire de Russie*, French tr., 11 vols., Paris, 1819-26; L. P. SLAVERY (Primitive).—I. INTRODUCTORY.—1. *Definition and scope.*—The most generally accepted definition of slavery is that it is a social system in which one person is the property of another. Westermarck takes exception to this definition:

'The owner's right over his property, even when not

Hindu (J. JOLLY), p. 618.

Roman (W. J. WOODHOUSE), p. 621.

absolute, is at all events exclusive, that is, nobody but the owner has the right to dispose of it,' whereas 'the master's right of disposing of his slave is not necessarily exclusive; custom or law may grant the latter a certain amount of liberty, and in such case his condition differs essentially from that of a piece of property.'

Now those who speak of a slave as property admit that restrictions on the exercise of the master's power are indeed common, but would say, with Nieboer:

1. 12 (*MGH* xii, 37).

2. *Chron. Bohem.* i, 2 (*MGH* ix, 35).

3. *De Bell. Got.* III, 14, 3.

6. 1. 1 (*MGH* ix, 34).

¹ Any restriction put upon the free exercise of his power is a mitigation of slavery, not belonging to its nature.¹

By 'property' this Dutch writer, who is the foremost authority on the economics of primitive slavery, means

'a power that, however rudently exercised in many cases, is in principle unlimited.'²

We are reminded of the following rule in Roman and Romanized modern law:

'The proprietor has had the right to do with his property whatever he is not by special rules forbidden to do.'³

Property in a human being, i.e. slavery, is equivalent to a right to all the labour of the slave.⁴

The view which regards a slave as the property of the master is not then, it seems, inconsistent with Westermarck's own position, that the essence of slavery is to be found in the compulsory nature of the slave's relation to his master; in other words:

'Slavery is essentially an industrial institution, which implies compulsory labour beyond the limits of family relations.'⁵

All would agree with the statement of this authority:

'The master has a right to avail himself of the working power of his slave, without previous agreement on the part of the latter.'⁶ 'Voluntary slavery, as when a person sells himself as a slave, is only an imitation of slavery, true and proper; the person who gives up his liberty confers upon another, by contract, either for a limited period or for ever, the same rights over himself as a master possesses over his slave. If slavery proper could be based upon a contract between the parties concerned, I fail to see how to distinguish between a servant and a slave.'⁷

We may combine the two kinds of definition and define a slave as a human being who is the property of another and subject to compulsory labour, beyond the limits of the family.

The expression 'primitive' is difficult to define with precision. By 'primitive peoples' we may understand certain ethnic groups which occupy a relatively little advanced position in the scale of cultural development. The groups included in the present survey will be confined to those which live in 'tribal society'—i.e., that have kinship (a social relation not always synonymous with physical consanguinity) as the basis of membership in the group (clan, gens, phratry, tribe), in contrast to citizenship in political states. Admission of an outsider into the group is by 'adoption,' in contradistinction to 'naturalization'. Another criterion is the possession or lack of literary records, of history in the strict sense. Under 'primitive' will be included not only 'savages,' but also groups in a state of 'barbarism'. Our present discussion will not embrace the early stages of nations that have developed into 'civilization'. We shall consider as primitive, not only hunting tribes, but most pastoral and many agricultural societies.

2. Slavery distinguished from similar phenomena.—(a) *Subjection of wives*.—The status of wives among primitive peoples is often referred to as 'slavery'. Without considering here the question whether the subjection of women, particularly of wives, in primitive society is as abject as is popularly supposed,⁸ it may be said that slavery as a social institution and industrial system does not exist when there are only female slaves. When women only are enslaved, the reason probably is that they are valued as women rather than as labourers; otherwise men also would be enslaved.⁹

(b) *Subjection of children*.—In primitive societies every family has its head, who exercises more or less authority over its members, including, of course, the young. But, no matter how complete

this subjection may be, it cannot be called slavery, which, as a social institution, has a very different origin and function. Slavery is a relation beyond the limits of the family, as stated in Westermarck's definition given above.¹

(c) *Subjection of members of a society to its head*.—The subjects of a despotic ruler are sometimes called his slaves. To this use of the term it is to be objected that, in order to have slavery, it is necessary that the master's power should be recognized by the society.

'The whole group must approve of the custom and must enforce it; otherwise it cannot exist.'²

The slave lives in a society that recognizes him as a slave; slavery can exist only where there is a society of freemen. The head of a community, no matter how great his power may be, is not as such a master of slaves. Of course, a chief, like other freemen, may keep slaves of his own.

(d) *Subjection of tribes, provinces, or classes*.—Where a population or territory is subject to an external power, this is not slavery. The latter is the subjection of men individually and a subjection which includes the whole personality of the slave. A slave cannot live in tribal relations; he would to that extent be free. J. K. Ingram observes:

'The lowest state may be a degraded and despoiled one, but its members are not in a state of slavery; they are in collective, not individual, subjection to the members of the higher classes.'³

This is true also of subjected tribes. Subjection of tribes as such sometimes serves as a substitute for slavery proper, making the latter superfluous.

(e) *Serfdom*.—Ingram says:

'The transition to serfdom took place in civic communities when the master parted with or was deprived of his property in the person of the slave, and became entitled only to his services, or to a determinate portion of them.'⁴

This is a correct statement, with this important exception, that the right, not to the services of the labourer, but to 'a determinate portion' of them, is the real differential of serfdom. For, as Nieboer points out, he who is entitled to all the services of another is his owner:

'The slave-owner may do with his slave whatever he is not by special laws forbidden to do; the master of the serf may require from his man such services or tributes only as the law allows him to require.'⁵

It may be remarked that, while it is necessary, for the purposes of discussion, to draw theoretical lines of demarcation, practically there is not a single social institution that is strictly separated from kindred institutions. The student of social phenomena still recognizes the truth in Spencer's observation:

'As the distinctions between different forms of slavery are indefinite, so must there be an indefinite distinction between slavery and serfdom, and between the several forms of serfdom. Much confusion has arisen in describing these respective institutions, and for the sufficient reason that the institutions themselves are confused.'⁶

II. ORIGIN AND EARLY GROWTH OF SLAVERY.

1. Extra-tribal slavery in relation to war.

Slavery in early society may be divided into intra-tribal and extra-tribal, depending on whether or not the slave belongs to the same kinship-group as the master, i.e. to the 'in-group' as distinct from the 'out-group,' to use Sumner's terminology.¹ Extra-tribal slavery is first both in time and in extent. In the primitive group all members are on a footing of equality; they are 'all-one-flesh,' and practice conformity to theory. 'Custom everywhere, as a rule, forbids the enslaving of tribesmen.'² It is only in extraordinary cases, and after slavery of the extra-tribal form has become

prevalent, that a person is permitted to enslave a member of his own community.

All available evidence confirms the view, held by all students of the subject, that slavery is a sequence of war, that the earliest slaves were captives in war.¹ Now it is necessary to revise radically the traditional view that war is the constant and normal state of earliest human society. The data from pre-historic archaeology (implements, art, etc.), as well as from the ethnology of latter-day 'savages,' indicate a decidedly peaceable life among primitive mankind. This is even more true if we distinguish, as it is often difficult to do, between blood-fends and wars of communities as such. In the correlation made by Hobhouse and his collaborators it is found that the groups under the heading 'no war' were confined mainly to the lowest grade of hunting tribes.² As one would expect, the same groups are among those in which slavery is quite unknown.³ When war had become a feature of the relations of human groups, the rights and immunities which prevented the enslavement of tribesmen would not operate in favour of captives from hostile bands. While there are at times mitigating circumstances, in the main it is true that 'the defeated enemy is rightless, and is treated as best suits the victor's convenience.'⁴ Quarter may be refused altogether and the vanquished foes exterminated. Or, if prisoners are taken, they may be tortured, eaten, adopted, ransomed, exchanged, liberated, or enslaved. In the actual practice of existing tribes there are instances of all these modes of treatment.

Adoption, a custom which is especially common among the N. American Indians,⁵ is the main exception to the rule that the life of the captive is spared in order that he may become a slave. It may be remarked here that a distinction is often made between the adult males among the enemy on the one hand and the women and children on the other. The men may be killed, while the women and children are adopted or enslaved. Adoption is probably intimately related to the beginnings of slavery. According to the theory of J. W. Powell,⁶ for which there is much to be said, the latter institution is a development of the practice of adoption. The motives for keeping captives alive are not likely to have been, in the beginning, the shrewd calculations usually ascribed to primitive man, as in the following statement of Hobhouse:

'There comes a time in social development when the victor sees that a live prisoner is after all better than a dead one.'⁷

Nisboer's criticism is much to the point:

'It is not to be supposed that man, convinced of the utility of some new kind of labour, began to procure slaves in order to make them perform this labour; or that, finding some work tedious, they invented slavery to relieve themselves of this burden. Modern psychology does not account for psychical and social phenomena in such a rationalistic way. Social institutions are sometimes made; but this is the exception; generally they grow.'⁸

Whatever the primary motives for enslaving vanquished enemies may have been, it is doubtless true that slavery marks 'a humanitarian improvement in the laws of war.'⁹ Also, as Hobhouse observes:

'The vindictive passions must be sufficiently held in check to prevent their gratification in the moment of victory.'¹⁰

2. **Internal conditions of the growth of slavery; occurrence in various states of culture.**—No matter what may be the external relations of the group, slavery could not exist unless it conformed to the

requirements of the social life of the tribe both in its purely economic and in its more distinctly moral aspects. This appears clearly from the study of the actual appearance and distribution of slavery among the uncivilized peoples of various cultural grades.

(a) *Among hunting tribes.*—Human societies in the hunting stage hardly ever keep slaves. Among 'lower hunters,' the representatives of the real 'primitive man,' slavery is entirely unknown.¹¹ Even among 'higher hunters' it is extremely rare; and its occurrence is due to certain extraordinary circumstances. Of the 83 hunting groups analyzed by Nisboer there are 65 negative and only 18 positive cases. Of the latter 18 are Indian tribes on the N.W. Pacific coast of N. America (see below). The remaining three are the Tehuelches and Abipones in S. America and the Kamchadales in Siberia.¹²

The reasons for these facts are not far to seek. As Westermarck says:

'Slaves are kept only where there is employment for them, and where the circumstances are otherwise favourable to the growth of slavery.'¹³

Now the economic state of hunting societies is decidedly unfavourable to the development of slavery.

'In the absence of industrial activity, slaves are almost useless: idle, lodged, where game is scarce, are not worth their food.'¹⁴

In the desperate daily struggle for existence it is necessary for every man to exert his powers to the utmost, and each man, even then, can produce barely enough for himself and his family. Hence slaves, even if they were as efficient as their masters, could not produce any surplus for the use of the latter. But slave-labour is essentially inefficient in work, such as hunting, which requires great skill and application.

As Nisboer expresses it, 'a compulsory hunting system cannot exist. If a man is to exert all his faculties, there must be other motives than mere compulsion.'¹⁵ Spencer also observes that 'the relative lack of energy, the entire lack of interest, the unintelligent performance of work, and the greater cost of supervision, make the slave an unprofitable productive agent.'¹⁶ So too J. S. Mill: 'It remains certain that slavery is incompatible with any high state of the arts of life, and any great efficiency of labour.'¹⁷

This applies equally to the primitive hunting life and to modern industrialism; it is a striking instance of the correspondence between extremes.

But, even if slaves were profitable, it would be very difficult to keep them in subjection or prevent their escape. Hunting supposes a nomadic life, and the hunter who roams over vast stretches of country in pursuit of his game has not much chance to watch over the movements of his slave. And, if the slave himself were set to hunting, as he would have to be (all men being needed in that work), this difficulty would amount almost to impossibility. Moreover, a hunting slave will be much more inclined to run away than a soil-tilling slave; for the latter, during his flight, has to live upon the spontaneous products of the land, whereas the former can continue hunting, just as he has done before; his flight would not be of the nature of a flight.

Another cause for the non-existence of slavery is that primitive hunters generally live in small groups—at the most, of a few hundred persons.¹⁸ Now such a small group would not be able to develop coercive power sufficient to keep in sub-

¹ Under this head are included the Australians, Tasmanians, Andamanese, Negritos, Veddas, African Pygmies, Bushmen, Kalina, Boscoides, and Fongians. They correspond to A. jection slaves introduced from foreign parts. A fugitive slave would very soon be beyond the reach of his master's tribe, and a relatively small number of slaves would be a danger to the power of the free tribesmen.

But there are still other, more psychical, reasons militating against the introduction of slavery among primitive hunters. Both in emotional interest and in social evaluation hunting is an agreeable and noble occupation.

Nieboer describes it as 'occupying the whole soul and leaving no room for disinterested thought; offering the hunter a definite aim to which he can reach by one mighty effort of strength and skill; uncertain in its results like battle, and promising the glory of victory over a living creature. . . . It is not a work fit to be imposed upon men who are deprived of the common rights of freemen and are the property of others.'¹

Not only the intrinsic character of the work of the hunter, but also its social worth, takes it out of the forms of labour suited to enslaved persons. Among a primitive hunting people hereditary nobility is unknown and wealth does not exist; personal qualities are the only basis of social differentiation. Besides generosity, hospitality, and wisdom in council, strength, courage, and skill form the primitive patent of nobility. The activities in which these qualities are expressed and demonstrated are hunting and (though not universally) warfare.² Now, to admit slaves as hunters and warriors would be to place them on a footing of equality with freemen. Public opinion could not consider as slaves those who are successful in the noble occupations of hunting and fighting; and without public opinion the masters would be unable to keep them in subjection. And a poor hunter would be of little or no use as a hunting slave.

This attitude of respect for the hunter prevents the growth of intra-tribal slavery, for no member of the tribe is so superior to any other member that he can reduce him to a state of complete subjection, unless perhaps the latter is a physical or mental weakling, in which case he would be of no value as a hunting slave. It also tends to prevent extra-tribal slavery, though here what Sumner has called 'ethnocentrism,' with the common accompaniment of contempt for people who do not belong to the 'we-group,' would act as a neutralising force in many cases; it would be a case of contempt for the enemy and stranger against respect for the hunter and warrior. There are, however, not a few instances on record where enemies, though they are hated and feared, are not despised. Among the Indians of the central parts of N. America captives were, as a rule, either killed or adopted; in the latter case they were regarded and treated as members of the tribe.

The study of the life of the simplest grades of human society leads to the conclusion that, in the strictest sense of the word, slavery is not a primitive institution; its appearance and growth depend on social conditions which are absent in the lowest forms of human association to-day, as they undoubtedly were during by far the greater portion of the time that man has existed upon the earth.

Attention is again called to the fact, noted above, that 15 out of the 18 positive cases of slavery among tribes in the hunting stage, according to Nieboer's tabulation, are found among the Indians of the N.W. Pacific coast of N. America. Now, while these tribes are classed in the general economic and cultural grade of hunting groups, on the negative ground of their being unacquainted with cattle-breeding or agriculture,³ they have

some very important characteristics which mark them off rather sharply from hunters in the strict sense. The principal and underlying characteristic is that they get their subsistence from fishing, not from hunting land-animals. The study of these particular aborigines is of special value in that it brings out, in a notable way, several of the general causes which account for the growth of slavery. They possess many features of economic and social life the absence of which tends to prevent or retard the growth of slavery among hunting peoples. Food is abundant and easy to procure. They have fixed habitations and live in comparatively large groups. They are enabled to do so by preserving food for future consumption. Also a settled life makes the escape of slaves more difficult. Living in larger groups brings about a higher organisation of families, and hence greater coercive power. And the preserving of goods demands additional labour, which is fit to be performed by slaves, as it does not require much skill and has to be done in or near the dwellings, so that supervision is easy. Moreover, as Nieboer remarks: 'The hope of partaking of the stored food is a tie that binds the slave to his master's house, in much the same manner as a modern labourer is bound by having a share in the insurance funds of the manufactory.'⁴ Slave-trade is carried on. This facilitates the keeping of slaves. Captives taken in war usually belong to neighbouring tribes and have more opportunity to escape to their native parts than have purchased slaves, who have often been brought from a great distance. Fishing implements have been brought to a high degree of perfection; fishing has become more remunerative; and the product of a fishing slave's labours exceeds his primary wants. The more freemen devote themselves to trade and industry, the more need is there for slaves to do the roder work of fishing, sewing, cooking, etc.

(b) *Among pastoral tribes.*—Pastoral nomadism has been considered favourable to the growth of slavery. There is 'the mystical belief,' as Nieboer calls it, 'that the taming of animals naturally leads to the taming of men';⁵ i.e., it is supposed that the nomadic herdsmen who have learned to domesticate animals begin also to domesticate, to enslave, men.

Thus J. Lippert holds that slavery 'first arises in the pastoral communities of pastoral peoples'; the slaves 'were the object of an appropriation entirely similar to the appropriation of the domestic animals.'⁶

A study of the actual origin and distribution of slavery dispels speculations of this kind. Nieboer's survey shows that only one-half of the pastoral tribes of the globe keep slaves. It may be noted here that the positive cases are all found in a few definite areas, mainly N.W. and N.E. Africa, and a few tribes in the Caucasus and Arabia, while the pastoral nomads of Siberia, Central Asia, India, and S. Africa do not have slaves.⁷

The fact is that slavery is of little moment to pastoral peoples as such; among some of the slave-keeping tribes slaves are kept as a mere luxury. The chief reason for this is that, in pastoral life, subsistence depends almost entirely on capital, i.e., cattle, and comparatively little on labour, and for the small amount of labour demanded free labourers are available.

'Among people who live upon the produce of their cattle, a man who owns no cattle, i.e., no capital, has no means of subsistence. Accordingly, among pastoral tribes we find rich and poor men; and the poor often offer themselves as labourers to the rich.'⁸

But, on the other hand, Nieboer continues:

'There are no causes preventing them from having slaves. These tribes are, so to speak, in a state of equilibrium; a small additional cause on either side turns the balance.'⁹

The most important of such additional causes favouring the growth of slavery are the slave-trade and the neighbourhood of inferior races. It is found that the regions mentioned above as being those to which slavery among pastoral tribes is confined are exactly those where the slave-trade has for a long time been carried on on an extensive scale. The slaves are often purchased from slave-traders, and in several cases they belong to races with an inferior culture.

(c) *Among agricultural tribes.*—Three stages in the development of agriculture may be distin-

¹ P. 188. J. Dewey points out that 'game and sport are still words which mean the most intense immediate play of the emotions, running their whole gamut' ('Interpretation of Savage Mind,' in *Psychological Review*, ix, [1902] 217; this art. is an admirable study of the nature and effects of the mental life of the hunting stage).

guished in the tribal societies coming within the field of our present consideration: (1) in the first stage agriculture holds a subordinate place, subsistence being derived chiefly from other sources (hunting, fishing, gathering wild-growing plant food);¹ (2) tribes in the second stage carry on agriculture to a considerable extent, but not to the point of exclusive dependence upon it; (3) the third stage is that in which agriculture is by far the principal source of subsistence; the other, more primitive, means of livelihood hold such a subordinate place that, if they were entirely wanting, the economic state would be practically the same.²

A survey of the agricultural tribes of the world shows that slavery prevails extensively among them. On the other hand, there are many agricultural tribes without slaves, so that the practice of agriculture does not necessarily lead to the keeping of slaves. It is found, furthermore, that slavery is much more common among such tribes as subsist chiefly by agriculture than among the incipient agriculturists, who still depend to a considerable extent on hunting or fishing. In the first stage of agriculture a minority of tribes has slaves; the more agriculture develops, the more common slavery becomes, until in the third stage it exists in the great majority of tribes. Now it may be noted that agricultural societies of the most primitive stage bear a strong resemblance to tribes of the more specifically hunting type. Generally the business of the men is still largely hunting and warfare; the tilling of the soil is carried on mainly by the women.³ This division of labour does not in principle differ much from that which prevails among such hunting peoples as the Australian aborigines, where the women gather fruits and dig roots. These primitive agricultural tribes are often nomadic.⁴ When the products of the fields are scarcely ripe, they reap them and move on to some other place. Or they may sow something in a favourable spot as they pass, and return later to reap the fruits. The best examples of this type of agriculturists are found among some of the Indian tribes of S. America.⁵

Where agriculture is carried on without the aid of domestic animals, subsistence does not demand much capital. Where the population is scarce, as it generally is, only the most fertile and most accessible grounds are cultivated; very primitive implements are used; even the plough is used by very few tribal societies; they usually content themselves with a hoe or pointed stick.⁶ And, even where agriculture is carried on in a more skillful manner, as by means of irrigation, it is not capital that is wanted, but labour. The construction of irrigation works may be a long and laborious task, but the materials cost nothing. Since subsistence is independent of capital and easy to procure, nobody offers his services to another.

'All freedom in new countries,' says Bagehot, 'must be pretty equal; every one has labour, and every one has land; capital, at least in agricultural countries (or pastoral countries

are very different), is of little use; it cannot hire labour; the labourers go and work for themselves.'⁷

Hence, under such conditions, if a man wants another to work for him, he must force him to do so—in other words, he must make him a slave. This holds true of most primitive agricultural communities, i.e. of all those that have at their disposal more fertile land than is needed for cultivation, in order to support the actual population. But this state of things does not always exist.

In some areas every piece of arable land has been appropriated. In that case a man cannot procure his subsistence independently of a landlord. Hence 'free labourers' are available, slaves are not wanted, and slavery is not likely to exist. And, even where there are no poor persons, but every one has a share in the resources of the country, the use of slaves is not great when all land has been appropriated. When there is free land, a man can, by increasing the number of his slaves, increase his income to any extent. But, where the supply of land is limited, a landowner can employ only a limited number of labourers. As soon as there are lands enough to till his land, an increase in the number of labourers would be unprofitable. Perhaps the operation of this economic principle in primitive societies is best illustrated by conditions in Oceania, where slavery is confined to a few islands. The fact that all land had been appropriated led to a state of things inconsistent with slavery as a social and industrial system.⁸

It has been pointed out above that the need of skill and application, the intrinsic interest and excitement, and the social worth of the occupation are among the hypos preventing or retarding the development of slavery among hunters. These factors are absent in agricultural life. As compared with hunting or sea-faring or even manufacture, agriculture is likely to be rather dull work, requiring patience rather than strength or skill. And there is not a single instance discovered of influence or power depending on agriculture (as distinct from ownership of land). It is an occupation that has been regarded as especially fit for women and slaves. These facts, together with the more material causes, tend to make the social life of agricultural groups favourable to the existence and growth of slavery.

3. Intra-tribal slavery.—After slavery had come to exist in its original form of extra-tribal slavery, it was extended also to some classes of cases in the in-group. The two principal causes of intra-tribal enslavement are debt and crime. In some exceptional cases a debtor who cannot pay is put to death. Much more frequently he becomes the slave of the creditor. Often, though not always, the debtor-slave or pawn has a right to become free again by paying his debt. Such is the case with the debtor-slaves (known by the Dutch name of *pausdelingen*) in the Malay Archipelago. Here the creditor cannot refuse to accept the money.⁹ In some cases a man will pay a debt by giving one or more of his kindred, usually children or women, into slavery to the creditor.

Slavery may be imposed as a punishment for crime, either directly or when the compensation (*wergild*) is not paid. Members of the offender's family may likewise be liable to enslavement.¹⁰

III. POSITION AND TREATMENT OF SLAVES.—

While slavery may in principle involve an absolute power of the master over his slave, in practice there are undoubtedly many and marked limitations on the exercise of this power. It is found also that slaves may have certain 'rights,' determined by custom or public opinion, which the master is bound to respect. With regard to 'the power of life and death,' it may be expected that, when the slaves are war captives, the right of killing an enemy would pass into the right of killing the

slave; and this seems to have been true to a great extent. Yet it is to be noted that, while in descriptions of primitive peoples one repeatedly finds it stated that the master may kill his slave at pleasure, or that he is not accountable for killing him, as Westernmark says,

'This seems to mean rather that, if he does so, no complaint can be brought against him, or no vengeance taken on him, than that he has an unconditional moral right to put to death a slave whom he no longer cares to keep.'¹

In many cases the master is expressly prohibited from killing his slave at his own discretion.² The slaying of another man's slave is regarded largely as an offence against the property of the master, but not exclusively so. Where the master himself is not permitted to kill his slave, the slave has the right of life, sometimes with little difference in this respect between him and a freeman.

In a surprisingly large number of instances the master does not have even an unlimited right to sell his slave. This is true especially of slaves born in the house; sometimes he may sell at will only slaves captured in war or purchased. In several instances a slave, especially if he be a domestic slave, can be sold only if he has been guilty of some crime. The cases, referred to by Westernmark,³ where the master is entitled only to a limited portion of the services of the slave would come more strictly under the head of serfdom, though we have here border-line phenomena hard to fit into a theoretical system. Sometimes a slave is said to have the right to possess property of his own; in some of these cases he may buy his own freedom. Among several peoples it is even permissible for a discontented slave to change masters. In other instances a slave, in order to secure a new master, needs only to cause a slight injury to some one's property or commit some trifling offence, and he must then be surrendered to the 'injured' person.

'It is astonishing,' says Westernmark, 'to notice how readily, in many African countries, slaves are allowed by custom to rid themselves of tyrannical or neglectful masters.'⁴

In some places a slave becomes free by simply leaving his master, or, if he escapes from one master and selects another, it is presumed that he has been badly treated by the first one, and consequently cannot be reclaimed.⁵

On the treatment of slaves by their masters in tribal society descriptions and opinions vary widely, and there are no doubt marked actual differences among various peoples in this regard. Thus we find this judgment by two American sociologists:

'No pen will ever record the brutal history of primitive slavery through generations and even centuries of which mankind was taught to labor. The bitterest scenes of an Uncle Tom's Cabin would be an agreeable relief from the contemplation of the stern realities of this unwritten history.'⁶

While undoubtedly cases could be found of which such a description might be given, taken as a generalization about primitive slavery, it is a gross exaggeration. More consistent with a far greater mass of data are these words of Spencer:

'The current assumption is that of necessity a slave is a down-trodden being, subject to unlimited labour and great hardship; whereas in many cases he is well cared for, not overworked, and leniently treated. Assuming slaves everywhere to have ideas of liberty like our own, we suppose them to be intolerant of despotic control; whereas their subjection is sometimes so little onerous that they fear at times of their race who have no masters. Assuming that their feelings are such as we should have under the same circumstances, we regard them as necessarily unhappy; whereas they are often more light-hearted than their superiors.'⁷

It appears from the available evidence that the condition of slaves in primitive culture is certainly better on the whole than in civilized states, ancient or modern, especially in the negro slavery of recent centuries; of the last Westernmark says truly:

'This system of slavery . . . at least in the British colonies and the Slave States surpassed in cruelty the slavery of any pagan country, ancient or modern.'⁸

Concerning the slave among the lower races we can accept the conclusion of this authority that as a rule 'he is treated kindly, very commonly as an inferior member of the family.' Of the slavery among the fishing tribes of the N.W. coast of N. America we are told that it was of a rather mild type.

'Slaves, as a rule, were well-fed and well-treated, as was natural with valuable property' (a significant remark, of wide application). 'The condition of the bondsmen indeed seems generally to have been little inferior to that of his master.'⁹

After considering the evidence with regard to slavery on the Gold Coast of Africa, Westernmark declares:

'The lot of a slave is not generally one of hardship, but is on the whole far better than that of the agricultural labourer in England.'¹⁰

These conclusions could be confirmed by evidence from other parts of the globe.

A difference has been observed in the treatment of slaves captured in war or purchased from outside the tribe and that of slaves born within the group, especially in the house of their master. It appears that the latter are generally better treated than the former. Thus, in Central Africa, slavery is more severe in character among pastoral than among agricultural tribes, because the slaves of the former are for the most part war-captives, whereas those of the latter are slaves mostly by inheritance. Domestic slaves seem to be more favoured than slaves employed in the fields. Sumner's statement with regard to slavery in Africa would be equally true of other areas of primitive culture:

'Whenever slaves live in a family, sharing in the family life and associating freely with the male members of it in their work, religion, play, etc., the slavery is of a very light type and implies no hardship for the slave.'¹¹

We may give just one typical case, outside of Africa, in N. Borneo:

'In most cases [the slaves] have been brought up as ordinary members of the family, and have no wish to leave their home. Cases of unkind treatment are very few and far between.'¹²

IV. EFFECTS OF SLAVERY.—The effect of slavery upon human life is well expressed by Sumner, when he says:

'Slavery, wherever it has existed, has affected all the nerves of the society. . . . When adopted into the life-way it has dominated and given tone and color to them all.'¹³

We can speak here only of a few of its many far-reaching effects.

One result of slavery which has often been emphasized—perhaps too much so—is that, in the words of the same writer, slavery has been 'the great schoolmaster to teach men steady work': 'slavery is a part of the discipline by which the human race has learned to carry on industrial organization.'¹⁴ Now, while it may be true that 'man is naturally inclined to idleness,' this, as Westernmark points out, is 'not because he is averse from muscular activity as such, but because he dislikes the monotony of regular labour and the mental exertion it implies.'¹⁵ Now, outside of hunting and fighting, and to a certain degree trading, the labour in primitive times, as in later

civilisations, was monotonous and uninteresting. Men preferred to be idle if they could compel other persons to work for them, nor would any one do it unless compelled.

'The original problem,' Dealey and Ward hold, 'was how to make men work, and they did that "nothing short of slavery could ever have accomplished this".'

In another place, however, Ward criticizes the view expressed by Spencer¹ that without slavery the stage of discipline is never reached:

'The constant spur of want is sufficient of itself to accomplish this, as is evidenced by non-slaveholding industrial societies.'² It may be agreed that slavery played an important rôle in disciplining men to uninterrupted labour, but some prevalent theories as to the transmission of this capacity cannot be accepted.

Thus the sociologists just quoted set forth the view that the stronger and more adaptable persons, who could bear and survive the burdens of their enslaved existence, could 'transmit some small increment of their now-found powers of endurance to their posterity. For the capacity to labour is a typical "acquired character," that has been transmitted in infinite additions from parent to offspring and generation to generation of slaves, until great numbers of men were at last born with a "natural" or constitutional power to apply themselves to monotonous tasks during their whole lives.'

Now it should be observed that the contrasts so often drawn between native aptitudes of men in primitive life and in civilisation are, to say the least, very questionable.³ Even if any such difference should be established, it could not be explained in the manner set forth by Dealey and Ward. The trouble with their position is that, on their theory, capacity to labour is an acquired character, and hence, biologically considered, its transmission through inheritance is very unlikely. If there are any innate differences in regard to capacity for labour between contemporary mankind and our earliest ancestors, a more plausible kind of explanation would be found in the operation of a principle of selection, by which the more industrious type of man survived and those unfit for steady and irksome toil were, partially at least, eliminated.

The great fundamental effect of slavery on the economic activities of mankind, and through them on other social traits, is the division of labour. It is the original differentiation of human society into a governing and regulating and a governed and operating class.

Slavery 'creates a set of persons born to work that others may not work, and not to think in order that others may think.'⁴

Thus was made possible the leisure class, released from constant toil, and the historical function of this class, whatever that may have been.

'Leisure is the great need of early societies, and slaves only can give men leisure.'⁵

That the keeping of slaves furthered the augmentation and accumulation of wealth, with all the power and prestige that go with it, need hardly be said.

A further consequence of this division of labour and the social distinction based upon it is a contempt for manual labour, domestic and agricultural, and, in later stages of economic development, industrial.

To give but two typical instances: in Uganda the prevalence of slavery 'causes all manual labour to be looked upon as derogatory to the dignity of a free man,'⁶ and in Dahomey 'agriculture is despised because slaves are employed in it.'⁷

V. SLAVERY AND RELIGION IN PRIMITIVE CULTURE.—Slavery, like other features of the *mores* of a people, has had the sanction of the prevailing religion. It is scarcely necessary to remind ourselves how recently slavery was not only recognized by the governments of leading nations professedly Christian, but also championed by eminent theologians as an institution of divine sanction and even prescription.

An interesting phenomenon in primitive slavery—how wide-spread has not been determined—is the securing of freedoms by a slave through his devoting himself to some duty.

Among the *Kwa-speaking* peoples of the Slave Coast of W. Africa, e.g., 'according to custom, any slave who takes refuge in a temple and dedicates himself to the service of a god, cannot be reclaimed by his owner,' but, we are told, 'as by paying a fee to the priests the owner can close the doors of all the temples to the neighbourhood of his fugitive slave, this provision of an asylum for an ill-treated slave is more apparent than real.'¹

A parallel to this is found in the emancipation of a serf in mediæval Europe through his taking holy orders.

A curious view of the relation between slavery and religion was put forth by A. Combe,² which would scarcely deserve attention or require refutation at the present time, except for the fact that it seems still to have adherents and has been repeated with approval by J. K. Ingram in his valuable work on the *History of Slavery and Serfdom*.³

Since, as this theory has it, the rise of polytheism was contemporary with or soon followed the formation of sedentary communities, it is concluded that that religious system was coincident in time with the system of slavery. To quote Ingram: 'There is, in fact, a natural correlation between them, as there is between fetishism and the manners of captives, and between monotheism and liberty'.⁴ I.e., 'fetichism, as a strictly local religion, tended to the extermination of prisoners, because it could not establish any spiritual tie between the victors and the vanquished sufficient to check the impulses to destruction. But each form of polytheism being of a receptive and accommodating nature, and not absolutely excluding the others, the conquerors and the conquered had sufficient community of religious ideas to admit habitual harmony, whilst there was yet a sufficient difference to maintain a certain distance between them. The submission of the vanquished implied an admission of the inferiority of his duties, and the acknowledgment sufficed to consecrate his permanent subordination.'

While there is an element of truth in these speculations, especially in the sentences last quoted, as an explanation of the cause of slavery it is wholly inadequate.

VI. DISTRIBUTION OF SLAVERY AMONG PRIMITIVE PEOPLES BY GEOGRAPHICAL AREAS.—Slavery is unknown in aboriginal Australia. In Oceania it is found in only a few islands and districts, being confined, in Melanesia, almost entirely to W. New Guinea, and, in Polynesia, to Tahiti and New Zealand; it probably does not exist at all in Micronesia. There is no clear evidence of slavery among the wild tribes of the Malay Peninsula, while it is of frequent occurrence in the Malay Archipelago and the Philippines. In the last-named group the most primitive and probably the aboriginal race, the Negritos, have no slaves. It is found among a considerable number of the aboriginal tribes of Indo-China and India; it is unknown among such very primitive groups as the Todas and the Veddas. In Central Asia and Siberia its existence has been proved only in the case of the natives of Kamchatka; some of the Bedawin of Arabia and N. Africa keep slaves.

Slavery was a well-established institution in the civilized states of the American continent, in Mexico, Central America, and Peru, before the European conquest, but was very uncommon among the other aborigines. In N. America it appears to have been unknown outside of the Pacific Coast area from Bering Strait to N. California. The institution is wholly foreign to Eskimo life.

³ P. 7.

though in Alaska it has, in a few instances, been borrowed from neighbouring Indian tribes. Its occurrence has been reported from a few scattered Central and S. American tribes.

Africa is intimately related to the institution of slavery, not only by its being the great source of supply of the slave-trade of modern European and American nations, but also by its being the continent where slavery prevails most extensively among native peoples of a primitive culture. Leaving out of consideration the civilized and semi-civilized peoples of N. Africa, Nieboer finds only two districts where there is no clear positive evidence of the practice; these are S. Africa south of the Zambesi, and the region about the Upper Nile to the south-west of Abyssinia. Particularly large aggregations of slave-keeping tribes are found on the coast of Guinea and in the district formed by Lower Guinea and the territory bordering on the Congo. It occurs equally among Sudanese and Bantu peoples. It does not exist among the Pygmies and the Bushmen, and there is no definite evidence of its occurrence among the Hottentots.¹

LITERATURE.—The following books will give more extended discussions of the subject and references to most of the literature: H. J. Nieboer, *Slavery as an Industrial System: Ethnological Researches*, The Hague, 1900, 2p10 (references in this art. are to first ed.); E. Spencer, *The Principles of Sociology*, London, 14, 1889, 2d, 1888, 8d, 1890 (esp. pt. viii. ch. xv.).

ALBERT N. GILBERTSON.

SLAVERY (Christian). — 1. Introductory. —

Slavery has existed from very early times and is hardly extinct in the world to-day. Few institutions have produced greater evil, and, though in primitive and semi-barbarous communities it may have been for a time and in certain places a necessary step in human progress, in its more developed forms in the Roman empire and the New World it has been the cause of an enormous amount of suffering, most of which must be unrecorded. The causes of slavery are at first sight manifold. It may be the result of capture in war; it may be a punishment for crime or debt; or a man who is starving may sell himself or his children to buy food. But, the more we examine the subject, the more we find that the primary cause is capture in war, particularly when the war is between different races. (We shall see presently that the racial element accounts for the perpetuation of slavery or the lingering of legal and social anomalies where they would otherwise probably have disappeared.) A stronger race captures a weaker, but does not exterminate it, and the vanquished become the thralls of their victors. Only as a substitute for slaughter can slavery be said to have been a step forward in moral progress. It must be considered historically and in relation to law, economics, ethics, and theology; and the Church, in this as in other things, affected and was affected by the social and political institutions among which it grew.

2. In the Old Testament.—Slavery existed among the Hebrews, as among all the peoples of antiquity, but it appears in milder forms and was inspired by a more humane spirit than in either Greece or Rome, and there was nothing in Israel to correspond to the vast pyramids of Egypt or buildings of Assyria reared by the ceaseless labour of thralls working under the lash of their oppressors.² In the Semitic forsworld slaves were

probably captives in war. The Israelites from being sojourners became bondmen in Egypt and owed their deliverance to Moses. Here, as elsewhere, what is properly called slavery shades off imperceptibly into what is not. The Hebrew *am* is used of the service of *servant*³ and of slaves to their masters, of subjects serving their king, and of serving God. Its cognates in other Semitic tongues have a like variety of meanings.⁴

The OT legislation as to slavery is given in art. SLAVERY (Jewish).

3. In the New Testament.—There is no explicit condemnation of slavery in the teaching of our Lord. It would even be difficult to say how much He refers to it, as the Greek can mean 'slave,' 'bond servant,' or 'servant.' The later differentiation into free, half-free, and unfree, or free man, serf, and slave, was not definitely evolved. But it remains true that the abolitionist could point to no one text in the Gospels in defence of his position, while those who defended slavery could appeal at any rate to the letter of Scripture. Our Lord accepted the political and social conditions of His time, leaving His teaching to work out its consequences in the Christian Church and in the course of history.

In St. Paul we find more explicit references and a more developed doctrine of the relation of man to man. Thus in 1 Co 12¹² 'were we all baptized into one body,' *ἐν ἑνὶ σώματι ἐν ἑνὶ πνεύματι*, and in Gal 3²⁸ there can be neither bond nor free . . . for ye all are one in Christ Jesus.⁵ But it is in the Epistle to Philemon that St. Paul's teaching is most clear. Onesimus was a runaway slave whom the apostle was sending back to his master Philemon.

The names Onesimus and Philemon are both Phrygian, and 'for some reason or other Phrygian slaves were regarded with contempt'; *ἡ δὲ λέξις ἀπὸ τοῦ ἀνδρὸς καὶ ὀνόματός ἐστιν ἑλληνισμένη* was an old saying.⁶ The name Onesimus is frequent in inscriptions.

St. Paul asks that Onesimus may be forgiven, that he may be received as he himself would have been (v. 17). But there is no condemnation of slavery. Nevertheless it has been rightly said that 'St. Paul does not seem quite to like the relation.'⁷ Why was it that he and others were slow to condemn an institution fraught with so much evil to mankind? Three reasons may be assigned: (1) our Lord left the implications of His teaching to be worked out in time, as we saw above; (2) the immediate abolition or attempted abolition of slavery in the Roman empire would probably have led to the collapse of the fabric of society;⁸ (3) the early Church was buoyed up with the hope of the immediate second coming of Christ; hence earthly things did not matter so much, and, whatever a man's condition in this world, it was generally better for him to remain in it, and be faithful to his duties towards those with whom he found himself in relation whether as a master or as a bond-servant.⁹

The more closely we examine the thought of the NT writers and understand the conditions under which they lived, the less shall we be inclined to

¹ See O. C. Whitehouse, in *HDB*, 2A, 'Servant, Slave, Slavery.'

² Cf. also Col 3¹¹.

⁴ H. M. Gunkel, *Early Church History*, London, 1908, I, 228, n. 1.

⁵ Perhaps this has suggested the use of the term 'Spiritualist' by the extreme spiritualists of the present day, as spiritualism was a leader of slave revolt.

⁶ Cf. Eph 6⁸, Col 3¹¹, 1 Th 5¹¹, 1 P 2¹⁸. We may probably infer that St. Paul felt that there was some change in the new sense of spiritual dignity, and of spiritual rebellion between Christians of all conditions, should tempt violently to destroy the old social order; he is afraid lest the conduct of Christian men should bring discredit or suspicion upon the religion of Christ.

⁷ A distribution-map is given at the end of the second edition of Nieboer's work.

⁸ For slavery in ancient Babylonia see C. H. W. Johns, *The Oldest Code of Laws in the World (Code of Hammurabi)*, King of Babylonia, 2300-2341 B.C., Edinburgh, 1905.

a slave had to gain that consent has generally been the rule in Catholic Christianity. But in Catholic Christianity properly understood the sacraments must be great levellers, though the implications of this were not fully perceived. So St. Gregory Nazianzus extols the nobility conferred by baptism.¹

As regards the monastic life there was less difficulty than about ordination. Free men or slaves were subjected to three years' probation.² If a slave fled from a monastery and sought to live elsewhere, his former master could claim him. The simple fact of sojourn in a monastery in order to enter there suspended servitude.³

As regards marriage, canon law annulled a marriage of slaves contracted without the knowledge of their servile conditions on the part of the priest; if this was known, the marriage remained valid. Pope Hadrian IV. (1154-59) proclaimed anew the validity of a marriage contracted without the assent of the master, but the slave must continue to serve him.

The general impression left by the study of the attitude of the Church is that it tended to make slavery milder, though not to abolish it, and, owing to its excessive care for the rights of the masters, even to perpetuate what would otherwise have passed away. But in patristic literature we meet with the exhortation to masters to treat their slaves kindly. Despite the worldly compromises with existing institutions, here as elsewhere the spirit of Christ was at work.

5. **Slavery and imperial law.**—It was, however, not only in the working out of the gospel precepts of the spiritual equality of all men that slavery was modified, but also because of its place in the fabric of ancient society. Slavery was the worst abuse of the Roman empire.⁴ It was a heritage from ancient times vastly increased in its evil nature and its extent, and made worse by contact with the corrupt elements of Greek and Oriental life. That the slave was often better educated than his master led frequently to additional evils, for it was his interest to pander to his master's lowest vices, and he had no rights of body or soul against his owner. The existence of a large class of freedmen was a further misfortune, for their freedom was not entire—it took several generations to remove the stigma of slavery, and the freedman still retained many of the vices of the slave. After Trajan the progressive manumission of freedmen was always resisted by the enlightened emperors as a permanent conspiracy against Roman society, but, when the freedman no longer had the taint of slavery or servile vices, the danger was removed. Christian influence on imperial legislation is seen as early as Constantine, who authorized manumission in the presence of Christian people. Those who had been enfranchised in church were to enjoy the full rights of Roman citizenship. Clergy were enabled to give by their wills complete liberty to their slaves in whatever terms they pleased. Constantine elevated from the enjoyment of the Latin right to the full Roman citizenship those who had been freed in church and subsequently converted to Christianity. One of his enactments declared free a slave who should denounce a ravisher. The work of Constantine was carried on in the East by his successors at Constantinople, while in the West it was profoundly modified by the barbarians.

6. **Slavery in the Eastern Roman empire.**—The legislation of Justinian here, as elsewhere, was important.

¹ We can perceive that between the age of Cato and the age

³ *Novella*, v. 2.

⁴ *Code of Justinian*, i. iii. 38.

⁵ Cf. art. **SLAVERY** (Roman).

of Justinian the feeling that man is naturally free has become stronger, and this feeling was in the spirit of Christianity. Florentius said that liberty was a natural faculty whereas servitude was a constitution contrary to nature; and this view is adopted by Justinian in his Institutes.¹

Justinian re-enacted the legislation of Constantine which made a master who killed or ill-treated his slave liable to punishment. Slaves who became criminals were punished more severely than were free men. He declared that slaves could not refuse enfranchisement, and forbade any Jew, pagan, or heretic to have an orthodox slave.

Basil the Macedonian (867-886) ordered the marriage of slaves to be celebrated with the benediction of the priest.

Constantine Porphyrogenitus (945-959) fixed the price to be paid for a slave who had been brought back.

Alexius Comnenus (1081-1118) re-enacted that the blessing of the Church should be given to a slave marriage; unless this was given, he decreed that the newly-married slaves be freed. This seems to indicate that the slaves also believed themselves freed by the ceremony. But Alexius declared that in the eye of God all men are equal.

Dreadful punishments might be inflicted on the slave—mutilation of the nose and ears, or gouging out of the eyes. But slavery was less rigorous in new than in old Rome, for with the consent of his master a slave might enter the army and thereby become free.

Various terms are employed by Greek writers for slaves and slavery. *Doúlos* was, of course, the usual word; sometimes *dehmadros* was employed, as the equivalent of the Latin *mancipium*, or *percipies*, or *dehmadros*; *domestici* was represented by *slaves*. After the 9th cent., *doúlos* is generally the equivalent of *famulus*. Constantine Porphyrogenitus relates how the Venetians, asked by Louis I. (844-849) to recognize his suzerainty, refused, asserting *in his* *servis* *doúlos* *slaves* *et* *non* *Francos* *servos*, *doúlos* *here* *being* *subjects*. *Hadapireis* is used for *manilla* (the ordinary flogging of slaves). From the 10th cent. we find a new term, *doúlos*. The fact that medieval Greek, like modern English, took its word for 'slave' from the Slav peoples shows that Slaves were often captured and made one of us slaves, as they seemed to possess the toughness and docility which fitted them for servile work. (*doúlos* was apt to be confused with *Zeppelin*, 'Servians,' as *seroi* with *Serri*.)

Slavery proper disappeared from the Eastern empire in the 13th cent.; but, as in Western Europe, *seris*, not personally chattels, but tied to the land, had existed from the time of Justinian. The regular word was *chôryes*, *colonus*. The emperor Nicephorus Phocas in 965 forbade religious communities to build new houses or monasteries or to acquire property with ground rents, for these estates were worked by *eletrai*, who were bought as true slaves independent of the land, but they soon came to be *seris* or *colons* paying a fixed amount, as this was more convenient for monasteries than to work them as slaves, needing continual supervision.

The emperor Manuel Comnenus (1143-1180) prohibited all forced labour, and so seems to have abolished the *colonus* throughout his dominions, like Louis X. of France.

Domestic slavery disappeared by degrees because of the Christian doctrine of the spiritual equality of all men, and at length by special laws forbidding the sale of an individual freeman and punishing the homicide of a slave like that of a free man.² Slavery certainly had as a rule merged into serfdom from the time of Justinian, though its disappearance may not have been as complete as is sometimes supposed. It was hastened by the

¹ J. B. Bury, *Hist. of the Later Roman Empire, from Arcadius to Irene*, London, 1899, i. 271. The emperor regarded himself as the protector of liberty: 'pro libertate quam et foras et tunc Romanis legibus et principibus nostris munimur penulce et' (quoted by Bury).

² For slavery in the Eastern empire see H. J. Bury, in *Cambridge Medieval History*, ii. 63-64 (a convenient summary of Justinian's legislation); E. Bloch, *De l'Abolition du F esclavage ancien en Occident*, p. 207 ff.

master to manumit his slave, but, if the slave fled of his own accord, the rights of the master were protected. It was decreed by canon law that a slave could not be ordained without the consent of his lord. Had the Church protected the fugitive slave in all cases, a great step towards emancipation would have been made.

9. **Disappearance of slavery in Western Europe.** In France the transition from slavery to serfdom took place from the 4th to the 10th cent.,¹ while serfdom went on to the Revolution. Before A.D. 1000 there are many references to slavery, but afterwards only a few.² It lasted longer in northern than in southern France. A charter of 1113 contains a donation pure and simple of a woman and her child to a monastery. In southern France the words *servi*, *ancillæ*, *mancipia* are not found later than the 10th cent., and even then there was no sale of individuals separate from the lands on which they worked.

In Germany a scheme of punishment was set forth by the statutes of the Council of Cologne in 1083, while the first privilege of liberty for fugitive slaves was granted by Frederick I. to Bremen in 1186. In 1230 Frederick II. pronounced against refuge in imperial towns for *serfs* and slaves, but in 1230 he granted it to Ratisbon and Vienna; his charter to Ratisbon leaves to the masters a period of ten years in which to reclaim fugitive slaves. But terminology is rather vague; in 1243 a donation is signed by many *serfs*, but these were *serfs*. In the 12th and 13th centuries personal slavery tended to be extinct in western Germany. Domestic slavery was totally extinct by 1300 at the latest.

In Spain slavery was a prominent feature of mediæval society. Among the Goths slaves were employed in the army and in administrative posts. Here, as elsewhere, the Church was a slave-owner. Donations of *mancipia* were made in 812 and 891 respectively by Alphonso the Chaste and Alphonso III. to the church of Oviedo. In 966 a Count of Barcelona freed in his will all the slaves acquired by him. Wars among the lords and against the Moors led to the abolition of domestic slavery, and it seems to have disappeared from Castile in the 13th century. The marriage of slaves was independent of the will of the master.³ Excommunication was launched against the sellers of men by tit. 24 of the national Council of Valadolid in 1222. In 1491 Moorish captives were set free, and in 1501 they were driven from Spain altogether. In 1558 an ordinance of Philip II. decreed the expulsion from Spain of Jewish slaves and those recently made Christian. Those whom Ferdinand and Isabella ejected were admitted into Portugal by John II. on the condition of emigrating after seven years under penalty of slavery. Many could not emigrate and became slaves. In 1529 all slaves were obliged to embrace Christianity, and the Moorish slaves diminished; but the slave traffic continued. Christian slaves were found in the 18th and serfdom continued to the 10th century.

The end of slavery came slowly also in Italy. The tumults of the 10th and 11th centuries prolonged personal slavery and drove small proprietors into the position of *serfs*. The Italian republics had Greek Saracen slaves, and the ancient annals of Venice show her as a mart of slaves bought in the East or exchanged into Eastern lands, and among these must be reckoned Christians who had been enslaved. From the 7th and 8th centuries

they brought back slaves from Africa, whom they sold to other Africans or to the Moors established in Spain. This traffic went on despite the prohibition of the Church.

It is recorded in the life of Pope Zacharias (741-752): 'Contigit plures Venetiarum hanc romanarum advenire in urbem negotiatores, et mercimoniis multis propagantes multitudine mancipiorum, viriles scilicet et feminæ genere omnes vix erant, quos et in Africam ad paganos gentes anabantur deducere. Quo occulto idem sanctissimus pater fieri prohibuit, datoque eidem Venetiis prelio, quod in eorum asymptis se dedisse probati sunt, cunctos a jugo servitutis redemit.'⁴

Towards 840 the emperor Lothair I. promised to prevent his subjects from making slaves in the duchy of Venice, keeping them, or selling them to the pagans. About the year 800, under the doge Ursio Participato, this species of commerce was forbidden under severe penalties, but the prohibition was little respected.

Sometimes the slavery was qualified, as in one case at least the consent of the slave to be transferred from one master to another was granted.⁵

In the 14th and even in the 15th cent. Venetians bought slaves in their colonies of Istria and Dalmatia. In 1323 the explorer Marco Polo freed one of his slaves by his will. There is a contract of 1423 for the sale of a young Russian woman of thirty-three, and a law of 1446 forbade the sale of slaves to the Ragusans and Dalmatians because they sold them again to the Mussulmans. The Venetians bought and sold slaves in Asia and Africa; they were only forbidden to sell Christians to Mussulmans. The existence of slavery and especially of the practice of mutilation was one of the causes of the moral corruption of Venice, and thus probably contributed in the long run not only to the decay of the moral stamina of her people, but also to the decline of her prosperity.⁶

Not only Venice but also Pisa and Amalfi traded in slaves. The *Opuscula* of Pope Celestine V. (1294) contain various regulations; e.g., the Jews can have only slaves that have been reared in the house—if they are Christians, they become free; if a priest has married a free woman, the children become slaves of the Church, which has been injured by the sin of their father. At Bologna enfranchisement was achieved in 1283; in Florence there are still traces of personal slavery in the 14th century. The statutes of Florence of 1415 permitted citizens to have slaves 'qui non sunt Catholicæ fidei et Christianæ.' The statutes of Lucca of 1537 declare that the master of a female slave can force one who has had intercourse with her to buy her at double the price which she cost, besides paying a fine.

In the kingdom of Naples rural slavery had been converted into the colonate which continued under Greek domination and was found there by the Normans.

As a sample of the emperor Otto II. in 943 speaks of free men who, in default of slaves, 'ex incipie servitute' are established as colonists in the domain of the Church 'in locis ecclesiasticis patrimonibus.'

In the 11th and 12th centuries many small cultivators of Naples and Bologna surrendered themselves to powerful proprietors. In Sicily slavery was disappearing in the time of Frederick of Aragon (1266-1337). His *Capitula Regis Sicilie* order the master of a slave baptized by him to treat him as a brother and to baptize him soon after birth; if he fail to do so, the slave is to be baptized in church and declared free; female slaves must not be prostituted. Rot squarely observes:

⁴ Hist. p. 732.

⁵ Traces of ancient barter appear—not only does the father enjoy all his life the goods of his son, but he is authorized to sell him, if he finds himself in danger of hunger—so it was not remarkable if a child could be sold (Hist. p. 417).

¹ 'The direct examples upon ancient Papyri and papyrus documents are in character Italian.'¹

It is clear, therefore, that slavery was not extinct in Europe at the close of the Middle Ages, but that commercial interests and the strife between Christian and Saracen or Turk had perpetuated it in the eastern Mediterranean. When Elizabethan adventurers and their contemporaries of other lands explored America and exploited Africa, they only transferred to fresh soil an institution which they found ready to hand. This perpetuation of a decayed ancient and medieval phase and its re-creation on a far vaster scale than ever before is one of the most remarkable and deplorable instances of historical continuity. Thus, when the emperor Charles V. took Tunis in 1535, thousands of men and women were killed or led away into slavery.² Christians and Muhammadans alike employed prisoners of war as galley-slaves. By this time negroes had already been brought from Africa to America. But slavery was destined to continue on the widest scale in English-speaking countries. In England, as in N. Europe generally, there is a gap in the institution between medieval and modern times.

10. **Slavery in Britain**³—The early history of slavery in Britain is obscure as everything else in primitive development, but it seems clear that slavery existed not only from Celtic but also probably from pre-Celtic times. When slaves appear, they are probably the relics of subject races. Thus it may be conjectured that the conquering Celts reduced to servitude some of the aboriginal Iberians, but it is not probable that this process was thorough-going, and more would be kept in a half-free condition or allowed to mingle with the conquering races. Early Celtic customs show us a number of slaves, but the structure of society is not really that of a slave economy, and at the English conquest of Britain slavery was rather a survival. There was hardly the clear-cut division between bond and free which marks the slavery of ancient Athens or Rome, or of the United States in modern times.

⁴ It appears that the arrangement of society on the basis of slavery or serfdom is not so easily carried out as many suppose, and that it is, perhaps, a more complex result of historical development than even primitive democracy.⁴

So in the undeveloped polity of pre-Conquest England slavery, though frequent, was not the economic basis of society. Slave-owning, therefore, became limited to kings and other important persons.

⁵ With the rest of the inhabitants of Scotch and Welsh mountains and of Irish bogs, slaves might be an exceptional commodity, female slaves might even be specially sought for different purposes; but there could be no slave-holding husbandry arrangements.⁵

We do not know enough of the details of the English conquest of Britain to be sure how the English dealt with those whom they conquered. The theory of the almost complete displacement by slaughter or driving west of the Celtic tribes is

¹ P. 441.

⁵ *Ib.*, p. 27.

now exploded—perhaps a larger number were made slaves than is often assumed, and, if so, this would account for the longer continuance of slavery in England than on the Continent, for slaves are continually mentioned alike in Old English literature and legislation and must have been fairly numerous at the Conquest. The old English term was *poole*, and sometimes *ama*. The story of Pope Gregory the Great and the sale of beautiful English slave-boys in the Roman Forum is too well known to need repetition,¹ but it shows that English slaves found a ready market abroad. Till after the Conquest Bristol was the chief port for the sale of slaves. But how far was Old English slavery an inheritance from early Britain and how far an importation from the Continent? Roman masters had lorded it over British slaves at Colchester and elsewhere.² Slavery among Teutonic tribes is described in the *Germania* of Tacitus; it is disputed whether the English tribes brought over large numbers of slaves with them to England.³

As the Celtic tribes were driven west, some men would doubtless be enslaved, and the survival of remnants of a former race would explain some anomalies, such as the half-free *leofs* of Kent, whose exact nature is not known.⁴ Many points indeed of early English slavery remain obscure. The greater number of slaves were probably in bondage to landowners.⁵ Various regulations are given in the *Penitentiary* of Theodore, archbishop of Canterbury (669-690). A father compelled by necessity can hand over his son to slavery for seven years, but, if for longer, only with the consent of the son. In Alfred's laws it is decreed that slaves should not have the same holidays as free labourers, only the Wednesdays in the four ember weeks.

In a bilingual dialogue written in the 10th cent. the slave complains of his thralldom: 'I ha I hard work it is, hard work it is, because I am not free' (*þæt, æg, wileð, godesf, æt luf, godesf, mætt godesf, æt 30, forþan in ælles freah*).⁶

The ravages of the Danes seem to have forced some monks to escape starvation by becoming slaves on large estates.

The manumission of slaves was common, being often done in a will—and, of course, at other times.⁷

Bishop Wilfrith, on receiving a grant of Selney from Oswald of Wessex, manumitted 120 slaves.⁸ A letter of Archbishop Britwald to Porticus, bishop of Sherborne, begs him to order Hænwald, abbot of Gloucestery, to release a captive girl.⁹

What percentage of the population were slaves is not known, but there were probably more just before the Norman Conquest than in the other countries of W. Europe.

¹⁰ If we turn to the Old English charters we shall have to recognize that up to the eleventh century, slavery and manumission from slavery are playing a most important part in social life.¹⁰

Domesday Book shows 25,000 slaves in England. These were spread over the country in very unequal proportion—none in Yorkshire or Lincolnshire, 9 per cent in Kent, 24 per cent in Gloucestershire, and 18 per cent in Devon.¹¹

¹ The narrative is in Bede, *H.E.* I, 1.

² Hodgkin, *Political Hist. of England*, I, 30.

³ Tacitus (*German.* 40) describes the immolation of slaves 'to ensure' success in the worship of the goddess Nerthus by the Continental Angli, in a 'hallowed grove' on an island, perhaps Rügen (see art. *Etymol.*, vol. v, p. 282). The slaughter of slaves may also have been part of the ceremony itself (see Tac. *German.* ed. ed. of R. F. Fox, Oxford, 1894) ad loc.

¹¹ Vinogradoff, *Growth of the Manor*, p. 272.

But personal slavery was beginning to disappear into villenage, and the villen was half-free; he was generally free as against all men except his lord, only attached to the land and not able to leave it. Instead of constantly watching slaves and spending care and thought in organizing their unwilling labour, the upper classes of mediæval society levied dues and services from villeins who were attached to the soil and held in order by the interests which they had in their own households.¹ Slavery properly so called became extinct in England in the 13th cent., though it still seems to have been possible from a legal standpoint. But the rural population was still 'largely unfree,' and in 1313 the bishop of Durham manumitted a scholar of the city.²

One feature differentiates the disappearance of slavery in England and in the Roman empire—that in England there were no *libertini*, or freedmen, though Vinogradoff thinks there may be some trace of them in the *coliberti*.

The gradual change from slavery to villenage was accomplished by the elimination of slavery, as for a time the two institutions had existed side by side; villenage was swept away finally at the Restoration, though it had been nearly extinct for some time before.³

A statute of 1340 (Edward vi.) ordered a runaway or one who lived idly for three days to be brought before two justices of the peace, marked with a hot iron in the breast, and adjudged for two years the slave of him who bought him. The slave was to be fed, and punished if he refused to work; if he absented himself for fourteen days, he was to be marked with an S on the breast and be his master's slave for ever.

Villeins in the 13th and 14th centuries comprised a large class including not only the villeins of early times but also the degraded freeman and the half-emancipated or now nearly freed slave.⁴ About 1240 there is a grant of freedom to the population of the vill of Kirby in Kendal who had previously been unfree.⁵

11. Slavery in the East Syrian Church—

Directions about slave-holding are found in the works of Ebedjesus († 1318), metropolitan of Nisibis, or Zoba.

He directs that, if any one have manumitted some of his slaves and not manumitted others, those still under the yoke shall be manumitted. If a non-manumitted slave dies, his lord shall be his heir.

This plainly shows that the slave could acquire property, presumably like the *peculium* of the Roman slaves. If the slave had sons, it would go to them, but, if not, then to his lord—not to the slave's other relatives.⁶

Mar Gregor of Melitene, known as Bar-Habreus or Abulpharagus (primate of the Jacobites in Chaldaia, Assyria, and Mesopotamia, 1261), issued instructions on the manumission of slaves:

If a lord shall say to his slave, 'O my lord,' or to his slave woman, 'O my lady,' or 'O my sister,' or 'O my wife,' the manumission shall not be confirmed by these phrases. But, if he shall say to the slave, 'O free man,' and to the slave woman, 'O free woman,' they shall be freed. He who is sick cannot

free a slave whose price exceeds a third part of his goods. If a slave belong to two lords and both say to him, 'When we die, thou art free,' he shall not be freed by the death of one, but only the half of him shall be free.⁷

The slavery here referred to may have been of a modified kind, as the slave was not devoid of property, but it is further evidence for the continuance of the institution in W. Asia in mediæval times.

12. The revival of the slave-trade in modern times.—It is remarkable that the Renaissance, which brought the minds of men back to the literature of classical antiquity, re-established in newly-discovered lands the classic institution of slavery. The first offenders were the Portuguese, but it is unlikely that the slave-trade would have developed as it did, if men had not been familiar with it in the Ottoman empire and the Mediterranean. In 1442 Gonzales brought back ten slaves and some gold dust to Prince Henry of Portugal. In 1443 Nunez Trestan sailed on an expedition to Africa and brought back fourteen slaves.

The African natives naturally resented slave-raids and resisted with all their might, but without much effect. European traders then tried to foment disputes among the natives as an excuse for making raids. In 1511 Ferdinand the Catholic gave permission to import slaves from Africa into Hispaniola. The Spaniards were led to import African slaves into America by the unsuitability of American Indian natives for labour in the mines, and also because the horrible barbarities which the Spaniards had committed nearly exterminated the American Indians in many places. The emperor Charles v. urged the importation of Africans 'because the work of one negro was more than equal to that of four Indians.' In 1517 he granted a patent to a Flemish gentleman allowing him to import each year 4000 Africans into Hispaniola, Porto Rico, Cuba, and Jamaica.

The Dominican friars in S. America protested against the cruel treatment of the slaves, but the Franciscans defended it. Pope Leo x. (1513-22) in a bull declared that 'not only the Christian religion, but nature herself, cried out against a system of slavery.'

In 1562 Sir John Hawkins sailed to Guinea, obtained 300 negroes, sold them in Hispaniola, and came back to England. Queen Elizabeth told him that, 'if any Africans should be carried away without their free consent, it would be detestable and call down the vengeance of Heaven upon the undertaking.' The French, Dutch, and Spaniards continued the trade, but there do not seem definite instances of English trading in slaves till the charter of Charles i. to the African Company in 1651, supplying negroes to the British settlements in the West Indies. In 1640 Louis xiii. issued an edict by which 'all Africans whatever who came into the French colonies, under any circumstances, were to be made slaves.' In 1655 Cromwell took Jamaica from the Spaniards and found there about 1500 whites and 1500 negroes—the natives had been exterminated. The Third African Company was established in 1692 to supply the British West Indian colonies with 3000 slaves annually, and in 1672 the Fourth African Company, but it has been estimated that at the time the Dutch trade in slaves was ten times greater than the English. Between 1679 and 1688 about 4500 slaves were imported annually to British colonies. The French supplied the Spaniards with African slaves.⁸

Francis Crow, an ejected minister who had emigrated to the West Indies, wrote from Port Royal to Jamaica (7th March

1887): 'The greatest trade of this place lies in bringing these poor creatures from Guinea hither, to sell them to the home plantations, and to the Spanish factors that buy them at 30*l*. per head or thereabouts. They come as naked as they were born, and the buyers look in their mouths, and survey their joints as if they were horses in a market. We have few other servants here but these slaves who are bought with our money, except some from Newgate.'¹

In 1713 the Asiento contract was signed between England and Spain. England agreed to supply Spain with 4800 slaves a year for 30 years. England was to advance 200,000 crowns and to pay a duty of 33*l*. crowns on each slave, and the monarchs of England and Spain were each to have a quarter of the profits. From 1713 to 1733 the number of slaves annually exported by the English from Africa was 15,000, of whom a third to a half went to Spanish colonies; from 1733 to 1753 it was 20,000. England, however, did not derive much profit from the Asiento, for in 1739 the English company was owing Spain 268,000*l*. War intervened, but by the Peace of Aix-la-Chapelle (1748) the Asiento was to be allowed to continue four years more. By the convention of 1750 George II. gave up the privilege of continuing the treaty for 100,000*l*.

In 1755 the negro slaves in the British West Indies numbered 240,000, while the white population was only 90,000. About 1761 feeling began to be stirred in England against the trade; the Quakers were prime movers in the agitation. In 1766 Bishop Warburton preached a sermon against the slave-trade, which 'infringed all human and all Divine law.' In 1769 Granville Sharp brought an action to decide whether a man could remain a slave in England, and it was decided in 1772 that a slave, if he set foot in England, became free. In 1787 William Clarkson, William Wilberforce, Granville Sharp, and others formed themselves into a private committee to try to abolish the slave-trade. It was soon joined by others such as William Paley and John Wesley. At this time and earlier various writers had protested against the trade, including Baxter, Pope, Sterne, and Adam Smith. In 1788 the king by an order in council directed that the Board of Trade 'should take into consideration the present state of the African slave-trade, the purchasing and obtaining slaves on the coast of Africa.' The feeling in favour of abolition gradually grew and was supported by Pitt, Fox, and Lord Grenville. In 1788 a bill was brought in for lessening the horrors of the 'Middle Passage'—the first Act of Parliament which checked the trade. It was estimated that then the annual export of slaves from Africa was 200,000, about 100,000 being sent from Africa to America and the West Indies, the remainder from the east coast of Africa to Persia and the East Indies and partly from the interior of Africa to Turkey and Egypt. In 1789 Wilberforce described the horrors of the slave-trade in the House of Commons, again emphasizing the suffering of the slaves and the loss of life in the 'Middle Passage'—about one-third of the slaves were lost en route. Some legislative improvements were effected in the West Indies, as public feeling had been aroused in England, but the planters resented much in the way of change.

In 1791 a Sierra Leone Company was started by Wilberforce, Granville Sharp, and Henry Thornton. The object was to form a colony of liberated slaves. Zachary Macaulay went out to the colony and became governor in 1793. On his return he became secretary to the company. He was editor of the *Christian Observer*, the periodical of the 'Clapham sect,' from 1801 to 1815. This was especially devoted to the abolition of the slave-trade at home and abroad.

The motion for abolishing the trade was rejected several times by a small majority between 1793 and 1799. Opposition was strong in various quarters.

¹ *The Monthly Repository*, 1811, p. 461.

² See his life in *D.N.B.*

Thus Lord Nelson in a letter addressed to a friend in Jamaica (10th June 1804) declared himself 'a firm friend to our colonial system,' which he was prepared to defend 'against the damnable and ungodly doctrine of Wilberforce and his hypocritical allies.'¹

In March 1807 the 'Bill for the Abolition of the Slave Trade' passed both Houses of Parliament and received the royal assent. A fine of 2100 was decreed for each slave dealt in.

At the Congress of Vienna of 1815 the various Powers agreed to abolish the slave-trade. But France 'was allowed to carry on a five years' traffic of insult and injury and rape and murder on the coast of Africa.'² The abolition took effect in 1820 and the following years, Portugal being the last in 1836. But, even after the trade was supposed to be abolished, it went on; like other evil customs, it died hard, and slavery itself was still a firmly-rooted institution.

In May 1823 Powell Buxton in the House of Commons spoke of the 'inconsistency of British laws which permitted slavery while they prosecuted the slave-trade.' He moved that 'the state of slavery is repugnant to the principles of the British constitution and the Christian religion; and that it ought to be gradually abolished throughout the British colonies.' Canning moved in favour of the amelioration and ultimate abolition of slavery. The anti-slavery feeling was increased by the fact that the colonial legislatures had not carried out the views of Parliament for the amelioration of slaves.

Thomas (afterwards Lord) Denman said in the House of Commons that 'judicial oppression is the saddest of all evils to bear by civilized man; and in Jamaica it had reached the highest pinnacle of its power; the most horrible atrocities were consequently perpetrated with impunity in open day.' He adverted to one case in which a female slave's head was absolutely twisted off in the presence of many persons; the offender escaped conviction because the witnesses were but slaves, and their evidence could not be legally taken.³ Two negroes were sentenced to be suspended in chains and starved to death.⁴ In Barbados there was a protest of the colonial assembly against concessions to slaves.

At length in 1833 the bill for the total abolition of slavery was passed, and the slave-holders were granted 20 millions sterling compensation. On 1st Aug. 1834 slavery came to an end throughout the British empire, and 770,280 slaves became free.

An instance of a slave-holder's mentality is related by Southey. A planter 'describes the refined and elegant manner in which the operation [of branding a slave] is performed, by way of mitigating the indignation which such an usage ought to excite. He assures us that the stamp is not a branding iron but a silver instrument; and that it is heated not by the fire, but in spirits of wine.'⁵

13. In the United States.—The history of slavery in the United States of America cannot be treated here in detail.⁶ The British colonies before the Declaration of Independence were all slave-holding, and it was unhappily to the mother-country that this state of things was due, for it was to her profit that slaves should be sent thither, though the colonies themselves protested.

Thus in 1709 S. Carolina prohibited further importation of slaves; the Act was rejected by the Crown, and the governors of all other colonies were warned against such legislation in future.

In the North slaves were the luxury of a wealthy few, though they were treated with great severity at times. After the slave insurrections of New York in 1712 and 1741 the culprits were broken on the wheel or burned alive. In the South, on the other hand, slave-labour was a part of the economic system. The Declaration of Independence was founded on the principle of the equality

of men. Did this apply to the slave? Two points seem clear: (1) that the founders of the new republic did not quite approve of slavery, while not seeing their way to abolish it; (2) that equality could be quite thorough-going only among whites, as the negroes were an inferior race. Soon after the Declaration it seemed as if slavery might be abolished, and again early in the 19th cent., but in each case it revived, only to gain greater power in the decade before its abolition. By then it was clear to many men that slavery could not continue indefinitely, but it was a complicated question for several reasons: (1) it was left by the constitution for each state to settle the question for itself, though the word 'slavery' was never mentioned; with the founding of new states, the question inevitably arose; (2) but it was much easier to abolish slavery in the North than in the South, as the number of slaves was so much smaller, and they were simply sold to Southern slave-holders; (3) the anti-slavery agitation became extraordinarily bitter, and the pro-slavery party was very violent. There was certainly something to be said for the slave-holders. They were not responsible for the institution, since it was an inheritance which they could not avoid. They naturally resented being viewed as blood-thirsty tyrants. If slavery was abolished, what was to be done with the blacks? If they were given the same rights as white men, Southerners naturally dreaded the result; if not, they might create equally a social, economic, and political difficulty. Slavery had become part of the fabric of Southern society, and it was very difficult to alter it.

But the abolition movement would never have gained the strength which it did nor have ultimately succeeded, had not the abuses of slavery been wide-spread and inevitably bound up with the system. No doubt many, probably most, of the Southern planters were humane men, but the slave had very little redress. He could not generally be a witness, and it was a crime to teach him to read and write. Slave insurrections occurred from time to time, though they were not frequent.

One in Virginia in 1861 was led by Nat Turner, in which 25 whites were killed. Turner was not an abused slave, but a religious fanatic; greater strictness in the administration of the slave laws naturally resulted.¹

As the cotton industry increased, slave-labour was more and more demanded. Continual difficulties arose when new states were founded—Texas (1845), Missouri (1845), Kansas and Nebraska (1854)—and a compromise was arranged. But the Fugitive Slave Act of 1850 was much more of a concession to slavery than to its opponents, for escaped slaves who imagined themselves to be in safety were ruthlessly hunted out from non-slave-holding states. In the ten years before the Civil War (1850-60) slavery, though more actively threatened, became stronger than ever, and, when war was declared, it was the avowed intention of the Confederate States to erect themselves into a slave Power. Abolitionists in the South were not allowed the right of free speech, so it is not surprising that at times their language became exaggerated. A few examples may be given of the attitude of divines on both sides.

W. E. Channing, the Unitarian anti-slavery leader, said: 'No power of compulsion can do justice to the evils of slavery. They are chiefly moral, they act on the mind and through the mind on the body. As far as the human soul can be destroyed, slavery is that destroyer.'²

Theodore Parker, also a Unitarian, wrote to Miss Frances Power Cobbe: 'You in England, I think, do not see how slavery corrupts everything. Politics, theology, literature, trade, it is the deluge which threatens to devour all the

stock.'³ His position is described thus from the pro-slavery side: 'Rev. Theodore Parker supports the case of a man who sells a slave to escape from his master and who is brought to trial for an offence against the law. He assumes he has taken the oath as a juror to try the man, and says, "If I have sacrificed my manhood by my juror's oath I shall do my business and find him guilty, but if I value my manhood I shall say not guilty; then man may call me forewarned and a liar, but I think human nature will justify the verdict." We have fallen upon evil times when the teachers of our holy religion thus debate themselves and their pupils to a level with the lowest rascals and their treacheries.'⁴

Other pro-slavery utterances are remarkable, and it must not be forgotten that the ministers and members of orthodox churches in the South held slaves to the number of at least 660,000.

A Southern slave-holder wrote to Theodore Parker in 1843: 'The Bible is either inconsistent—the Almighty a chameleon—or you are a horrid monster of inhumanity or blasphemy in your execrable spirit of Yankee conscientiousness against the South.'⁵

Robert N. Anderson, a Presbyterian minister, said: 'If there be any stray souls of a minister among you tainted with the bloodhound principle of abolitionism, let him be ferried out, silenced, excommunicated, and left to the public to deprive him in other respects.'⁶ Just Parker, of Philadelphia, was credited with saying: 'What then are the evils inseparable from slavery? There is not one that is not equally inseparable from depraved human nature in other lawful relations.'

The slave-holding South managed to get the Christian Church, on the whole, on its side.

Were the evils of American slavery as great as is popularly supposed? No doubt the exploits and execution of John Brown and the publication of *Uncle Tom's Cabin* aroused popular feeling in America and in Europe almost to fever pitch. The evils were exaggerated in that the exceptional was too often taken as normal. It was sometimes asserted that slavery was beneficial to the African as introducing him to Christianity and civilization. But in some states of the South slave-labour simply meant that the slave was worked to death, as it was most profitable to the slave-holder to use up his slaves quickly. Nothing, however, can alter the fact that American slavery meant very real abuses and was dangerous morally both to the slave-holder and to the slave, and, so long as it continued, all real progress, moral, social, and political, was impossible.

Slavery was abolished for ever in the United States in 1862, and negroes were declared completely equal with whites in 1870.

12. The final disappearance of slavery.—The abolition of the slave-trade in the British empire was followed by its abolition in other countries. Since the discovery of the New World slavery had continued in the French colonies. The *Code Noir* of Louis XIV. was more lenient to the slaves than were the codes of most British colonies. All slaves were to be baptized and instructed in the Catholic faith.⁷ But many cruelties were perpetrated here as elsewhere. J. B. Labat⁸ described the abuses of French colonial slavery. Spaniards seem to have been gentler and more successful in dealing with slaves than either the English or the French, and the Portuguese were often kindly in dealing with natives in Africa. But there probably was not any considerable difference between one nation and another. The *Code Noir* punished the first desertion on the part of the slave with ear-cropping and the mark of the fleur-de-lys on the left shoulder, the second with a fleur-de-lys on the right shoulder and the cutting of the leg sinew, the third with death. Slavery in French colonies was drastically reformed in 1835 and abolished in 1848. Other countries followed; the Dutch West Indies abolished it in 1863, Porto Rico in 1873, Cuba in

1880, Brazil in 1888. It lingered longest in Portuguese colonies and in Africa—which was natural, as Africa was the source of slaves. The Republic of Liberia for free blacks was founded in 1822. Slavery was suppressed in Zanzibar in 1897, though there has been sporadic slave-raiding in the Congo Free State and probably elsewhere since then. The later 19th cent. saw practical slavery revived in the South Sea Islands by Queensland adventurers till it was put down in 1884, and the Patumayo atrocities in S. America also involved practical slavery.

15. Slavery in Slavic countries.—As the very word 'slave' is of Slavic origin,¹ it is not surprising that slavery and serfdom lingered longer in Slavic lands than in W. Europe. It has been asserted by some Russians that there were no pure slaves in Russia in early times, but there were actually three classes in the rural population: (1) slaves, (2) free agricultural labourers, and (3) peasants. In the 18th cent. these were welded together into the slave class, and even then serfs were often more like slaves, as they were regularly bought and sold and advertised for sale. An extract from the *Moscow Gazette* of 1891 shows this:

'To be sold: Three workmen, well trained and handsome; and two girls, one eighteen and the other fifteen years of age, both of them good-looking, and well acquainted with various kinds of handicraft. In the same house there are for sale two hair-dressers—the one twenty years of age, can read, write, play on a musical instrument, and act as hairman; the other can dress ladies and gentlemen's hair. In the same house are sold pianos and organs.'²

Alexander I. (1801-25) prohibited advertisements of this sort, and Nicholas I. (1825-55) repressed them.

Again, the Turks raided Russian and Polish territory and sold their captives as slaves in the Crimea, till it was conquered by Russia in 1783. The men especially were badly treated and fed on putrid flesh; the women were employed to amuse their captors.³ They were sold to Saracens, Persians, Indians, Arabs, Syrians, and Assyrians.

In Poland serfdom in the 14th cent. became harsher and practically developed into slavery. It lasted till the 19th century. In Serbia slavery was legal, though serfdom was more common in the Middle Ages.⁴

16. Slavery and law.—The legal aspect of slavery is clearly of great importance, and, if we are right in the definition that a slave is a human being treated as a chattel, it is obvious that the question must arise: Should he ever be regarded in the light of a human being? Primitive jurisprudence did not always see clearly the exact position of the slave. To treat a person as if he were legally a thing requires a step in legal metaphysics of which a very undeveloped mind is incapable. If a slave is only a thing, his master cannot be punished for ill-treating or killing him; if he is a thing, the slave cannot be punished either; but most codes have punished a criminal slave with severity. If a slave is once fully recognized to be a person, slavery is doomed. So the mediæval jurists regarded it as contrary to natural law and as an institution of the *jus gentium* or *jus civile*.⁵ Slave codes show how far the rights of man and the facts of human nature can be perverted in the interests of selfishness.

17. Slavery and ethnology.—Where slavery has persisted, it has often been owing to the survival of a subject race, imperfectly assimilated. Where two races have been widely different and one has

been subject, it has been most difficult to abolish. Thus in the United States the question still remains: How far can white and black men live happily side by side? Inter-marriage of two races which are not meant to mingle, and the consequent existence of mulattoes and quadroons, only leads to further difficulties. These legacies of slavery exist to-day.

18. Slavery and economics.—This is largely outside the scope of this article, but the question arises: Is a system which puts society on a false basis likely to be economically sound? It seems clear that slavery has sometimes been the most profitable economy for the time, though the wastage of labour and of men generally brought its result in the long run; the economy of the Southern States of America before abolition was wasteful, and still more so was that of ancient Rome.

19. Slavery and morality.—In the long run slavery must have evil results alike in the master and in the slave, because it lowers the dignity of human nature, and because no man can fittingly be entrusted with absolute power; he will not always merit it, even if it is to his own interest to do so. Thus a favourite argument of slaveholders collapses.

In the narrower sense of sexual immorality slavery has been productive of untold evil. A master has power to gratify his lusts on his chattels, and it is to the interest of the slave to play up to the vices of his master. The very phrase 'The White Slave Traffic' is significant, and suggests what did and must take place under actual slavery. The corruptions of life under the Roman empire and the abuses of American slavery show that, while purity is always hard for man, slavery makes it much more difficult, and the evils which resulted from this aspect of it alone would have justified its abolition.

20. Slavery and war.—We have seen that conquest has been one of the first causes of slavery and that war has led to its recrudescence at various times. The deportations from Belgian and French towns carried out by the Germans in 1916-18 meant a species of enforced labour which may be called serfdom and seems akin to slavery.

21. Slavery and Christian theology.—Man is a spiritual being akin to his Maker. St. Paul says: 'In Christ is neither bond nor free.' Can then slavery be right? It can be shown to be contrary to the spirit of Christ's gospel, though the Church has often been too timid to deal drastically with it.⁶ It was sure sooner or later to disappear, and only traces of it now survive. Though it may have been a necessary step in human progress at certain times and places, and though the wickedness of slaveholders as individuals or as a class is often exaggerated, a detailed study of its records leaves the impression that it has been definitely evil, productive of untold misery for the slave, and of deep-seated corruption alike for the slave and for his master. But even slavery may not have run its evil course in vain, if its varied fortunes and final disappearance have shown that to treat a man as if he were no man but a beast is theologically false, morally wrong, economically unsound, and politically and socially disastrous, and that there is an essential unity of aim and principle between the moral and theological precepts of the gospel and the freedom and welfare of mankind.

II, ch. v, 'God under the Merovingian Franks'; G. W. E. Russell, 'A Priesthood of Freedom', in *Manchester Guardian*, 15th Aug. 1911 (sketch of Mrs. Stowe); Reinhold Schmid, *Die Gesetze der Angelsachsen*, Leipzig, 1906; Harriet Beecher Stowe, *Uncle Tom's Cabin*, 2 vols., Boston, 1852, and republished since in numerous ed., and ter. (a wonderful book, which, though a work of fiction, contains the best, if a somewhat highly coloured, presentation of American slavery); *The Key to Uncle Tom's Cabin*, do. 1853 (Mrs. Stowe here substantiates her statements); B. Wallon, *Hist. de l'esclavage dans l'antiquité*, 3 vols., Paris, 1870 (a very good monograph; emphasizes perhaps even too strongly the work of the Church in mitigating slavery); Eliza Wigham, *The Anti-Slavery Cause in America and its Martyrs*, London, 1880; James Williams, *The South Violated*, do. 1860 (an able but perverted pro-slavery work); H. Wilson, *Hist. of the Rise and Fall of the Slave Power in America*, 2 vols., Boston, 1873-77.

III. PAMPHLETS. — A vast number of pamphlets, especially those by anti-slavery reformers, are a most important source of information, though they may contain overstatements. Many volumes of *Traacts on Slavery* will be found in the Cambridge University Library and doubtless elsewhere. Among the most interesting are the following: Stephen Fuller, *Two Reports from the Committee of the Honourable House of Assembly of Jamaica*, London, 1789; John Jeremie, *Four Essays on Colonial Slavery*, do. 1821; Hannah More, *The Slave of Freedom; or, the Abolition of Domestic Slavery in England*, do. 1807 (a curiosity of literature); *Representation of the State of Government . . . in the Mauritius*, by a resident, do. 1809; John Kay, *The Slave Trade in the New Hebrides*, Edinburgh, 1872.

IV. ANNUAL PUBLICATIONS. — Statistics of the slave-building countries in America can be found in the various volumes of the *Annuaire de Gotha*, published annually (also in German as the *Hof-Nachricht*).

V. BIBLIOGRAPHY. — Works on American slavery will be found in the bibliography to *Cambridge Modern History*, Cambridge, 1905-12, vol. VII, esp. chs. 15 and 16. Much material must still exist in the British Colonies and also in America, and in print in the *Acts of the Privy Council and Colonial Office Papers, Colonial Series*.

Works noted above are either important works of reference or monographs, or are interesting from some special point of view. Other authorities are referred to in the text.

LEONARD D. ADAMS.

SLAVERY (Greek). — I. Introduction. — Slavery arose in Greece, as elsewhere, from two main causes—want and war, the one operative chiefly within the community, bringing about the subjection of individuals or whole families to other individuals or families of the same community, the other producing the same result mainly as between different communities. The tendency to

spare life in view of ulterior advantage would vary with the stage of culture.¹ A slave is of little use to the hunter, besides being troublesome to guard; he cannot earn his keep. In this stage the victor will mostly slay his enemy out of hand, though he may retain some of his captured women as wives, i.e. for domestic servitude. In the pastoral stage both male and female captives, even young children, can earn their keep by tending cattle and working up their products.² In proportion as the sedentary agricultural stage is reached, with its hard and more continuous toil at definite seasons, the demand for 'labour' becomes more insistent. The disadvantage is that in the slack seasons the slave is 'eating his head off.' Only as the industrial stage is reached is a more continuous and economical use of such 'living machines' possible. Moreover, it is in communities strongly organized for war that forced labour or slavery attains its highest development and importance, as it is at once a main product and a main support of military organization and activities. Applying this to ancient Greece, we find that in the historic period Greece is predominantly agricultural, but with pronounced local symptoms of transition into the mercantile and industrial phase, the whole being strongly overlaid by militarism of a somewhat aimless though highly specialized type.³ Under the conditions of ancient life, in which one must be either hammer or anvil, military organization was inevitable⁴ as a standing condition of existence itself; so that slavery in some shape was apparently equally inevitable. Sparta, the state which exhibited military organization in its most intense and logical form, was therefore constituted practically as a standing army supported by what was essentially slave-labour for the most part. Even in the ideal communities sketched by the Greek thinkers, military and servile institutions together constitute the very warp and woof of the entire fabric—though this fact is kept out of sight, partly by not calling things by their true names.⁵

If the special conditions and temper of a people be such as to allow it to devolve its military obligations upon some agency (mercenaries), in order to be free for wealth-production (e.g., Carthage), the result will be still the same. For, if the conditions be favourable, no limits, except such as are purely temporary in view of greater ultimate

¹ Cf. art. **SLAVERY (Primitive)**.

² Cf. Herod. II, 2: 'Scythians keep blinded slaves (cf. Ig. 1021); Samson blinded and kept at the mill; the Skythians would of course have other slaves, not blinded; to churn the milk—for they are not tillers of the soil, but nomads.'

³ It was of necessity an organization of society in which, to use the forcible words of Augustine, 'every intellectual gain was made use of—was inserted and taken out—in war' (B. Kidd, *Principles of Western Civilization*, London, 1902, p. 175, quoting W. Toynbee, *Papies and Politics*, etc. 1877, p. 69). Cf. Plato, *Laws*, 836 A.

⁴ Cf. Pol. II, 7=1287 A: *ἀνεύθυνος ἄρα τῆς πολιτικῆς ἀντιτάξου τῆς τοῦ πολέμου τάξεως*.

⁵ This is especially the case in Plato's *Republic*, which never mentions slaves as constituent elements of the constitution, though Plato nowhere impugns the principle of slavery, as applied to *ἀσθῆναί*, who are *κατασκευασμένοι* (Rep. 400 C). But the non-appearance in the *Republic* of the precise legal status and name of slavery matters little; the essential point is that of the real relationship between the elements—a dominant class set over against an inferior, and deliberately using the latter for purely self-regarding ends. No intrinsic excellence of these ends has any bearing upon the morality of their construction. Nor, again, can it be misalled, as it were by a side wind, by pretending that it involves an educative process both for the individual and for the race, or the like, which is but Aristotle's line of defence of openly recognized and confessed slavery—a defence which had not even the merit of novelty, having been invented by Parties in the interest of the Athenian empire as a whole (see Thuc. I, 62, and 76 f.). To say of Plato and slavery that 'in his ideal *Republic* he abolishes it silently by merely constructing a state without slaves' (G. Murray, *The Rise of the Greek Epic*, London, 1911, p. 37) is simply to forget both Aristotle's warning, *ἀλλ' οὐδ' αὖτε οὐρανοῦ τοι τοῦ ἀσθενέος καὶ τοῦ ἀσθενέος ἀσθενέος* (Eth. Nic., I, II, 13, and what Plato himself said, *ἀλλ' οὐδ' αὖτε οὐρανοῦ τοῦ ἀσθενέος καὶ τοῦ ἀσθενέος ἀσθενέος* (Rep. 886 D). The lowest class in Plato's ideal state is practically a servile class.

⁴ Thuc. I, 8 (speaking of primitive Greece). Cf. the experience of Athens before Solon (Aristotle, *Atk.* Pol. II, 2; Plutarch, *Sol.* 13).

advantage, are set to production—save by such factors as are themselves beyond human control.¹ Of controllable factors, one of the chief is the amount of labour available; and the problem of its supply is solved by the reduction of masses of men to serfdom, or by the importation of labourers either forced or only nominally free.

Military power, then, and the accumulation of material wealth both led, in the ancient state, directly, to the satisfaction of the unceasing hunger for a fully exploitable form of labour, i.e. slavery.² This demand is everywhere strongly reinforced by the almost universal natural distaste of men for the severer forms of labour, especially for those in which the activity demanded is of a sustained, monotonous, and unexciting type. As a matter of fact, in whatever parade of economic logic or philosophy of social evolution the historian may indulge about it, even sometimes to the extent of defending it, the institution of slavery, for the individual slave-owner, had its *raison d'être* in his own idleness and desire for self-indulgence,³ seeking gratification through the ruthless exploitation of the strength and capacities of others whom circumstances permitted him to control absolutely, without attendant responsibilities, except such as mere possession of a damageable property involved. As Aristotle puts it, if the shuttles could have set to work of themselves, we should have had no need of slaves.⁴ It is this claim of one man to exploit another to the utmost, under a converse minimum of obligation, that constitutes the fundamental vice of the institution of slavery.

2. **Slavery in Homer.**—Slavery is found already established as an immemorial usage in the Homeric period, and slaves of both sexes are a staple commodity to which the victorious warrior looks for his profit, just as he will on occasion replenish his flocks and herds by foray.⁵

The Homeric slave has no rights, and is powerless against the caprice and hat of his owner.⁶ Odysseus does actually execute his erring maids without reference to any other authority. Yet, as in historic times, custom has so far ameliorated the lot of the Homeric slave as to allow him to amass property on sufferance.⁷ The promise of Odysseus to give a wife and house and *ergasia* to the loyal Eumaios and Philoitios⁸ must be regarded as merely an extension of this customary tolerance, not as an indication of a practice of legal emancipation;⁹ at best it would mean elevation to the status of *serf*. The patriarchal character of Homeric society doubtless ameliorated the servile status, but without altering its legal aspect or essential nature.¹⁰ Though he draws these charming pictures of kindly social intercourse, Homer has also uttered one of the most truthful and famous judgments on the real significance of slavery in *Od.* xvii. 329 f.:

'Therail (*θεραί*) are no more inclined to honest service when their master's control is gone . . . for Zeus takes away half the worth (*ἀρετή*)¹¹ of a man when the day of slavery (*δοῦλος ἡμέρα*) comes upon him.'

¹ Cf. Aristotle, *Pol.* I. 2 = 1255 B: *ἀνθρώπων ἕνεκα καὶ ἀνὰ ἀνάγκην οὐκ ἔστιν ἀποφυγὴ τοῦ δουλείου καὶ οὐδὲν ἄλλο ἢ τὸ πλεονέκτημα καὶ τὸ ἐνδούλευμα.*

² Cf. Herod. I. 95; Paus. II. 21. 4.

⁷ Cf. xiv. 448 f. (Eumaios has a bought slave of his own, *σώφρονας*—whatever that may mean).

⁸ *Il.* xxi. 218 f.; cf. xiv. 62 f.

⁹ Though an unlearned boy (Plat. *Quaest.* gr. 14).

¹⁰ Cf. *Od.* vi. 34 f. (Nauplios reproaches the family washing and takes part in it with the slave *ἀνδράσδε*); xvii. 230 f. (Melanippe the post-horn site and sets with the sailors). See also *Od.* xviii. 325 f. xv. 323 f.

¹¹ *ἄρετα*, not to be taken here specially of moral qualities, but in the sense in which we say a man is 'no good' for a thing.

External appearance and demeanour alike were affected by servile status, in the popular conception.¹² This was also the historical Greek view, as formulated by Xen. *Mem.* IV. v. 2.¹³

3. **Types of slavery in historical Greece.**—In historical times Greece shows two main types of unfree status—imported slaves (*δοῦλοι*,¹⁴ *ἀνδράποδα*, *αἰχμῆναι*, often simply *σώματα*), and indigenous serfs (*ἐκκῆρες* in Laconia, *ἠεῖρες* in Thessaly; other names elsewhere)—which are associated typically with Athens and Sparta respectively. Although the historical origin of Greek serfdom was identical with one of the main sources of true slavery, viz. war, the primary distinction between the two types was that, while the slave was an alien without legal rights, who could be bought and sold at will, the serf was a descendant of an earlier population settled in the land before the Conquest, and was permanently and legally attached, with customary and legal rights, to what had been his ancestral soil (*ἀντιστοιχία γῆρας*). The two types were in general mutually exclusive, in fact though not in law. The Lacedaemonian social and political organization based upon serfdom hardly knew slavery in its ordinary sense, whereas in Attica, where there were thousands of bought slaves (*ἀνδράποδα*), serfdom was unknown—though the 7th cent. B.C. had some very near evolving and perpetuating its institution.¹⁵ In Greece, the distinction tended to coincide with that between agriculture (carried on by serfs) and industry (carried on by slaves).

(a) **The Helots.**—The Helots of Laconia and Messenia (*ἐκκῆρες*, *ἠεῖρες*)¹⁶ are the best known representatives of the serf class. They were state slaves (*δοῦλοι τοῦ κράτους*),¹⁷ cultivators attached as perpetual hereditary appendage to the lot (*κλῆρος*) assigned to individual Spartiates. Hence the individual in whose interest they laboured could neither emancipate nor sell nor slay the Helots on his lot, and was bound under a curse not to exact more than the specified annual amount of produce, which was paid in kind as a first charge on the estate, the balance belonging to the serfs. The state also had a paramount claim to the service of Helots in war as light-armed troops or as rowers, or even on occasion as heavy infantry,¹⁸ and sometimes emancipated them for good service.¹⁹ Helots were also liable for all manner of personal service to their lords in peace and war.²⁰ They enjoyed, however, by customary right, if not by express convention made at the time of the conquest, their own household and family life, with a large degree of personal freedom and power of amassing wealth.²¹ As they were the economic basis of the whole Spartan organization, it was imperative that they should be allowed to propagate and live in a certain measure of comfort, though doubtless there was no lack of cases of oppression.²² The general attitude of the Spartans towards them was one of jealousy in respect of efficiency; certainly not here 'mushiness,' as rendered by G. Murray, *Rise of the Great Sparta*, p. 37, any more than it is true to say that Homer 'speaks always of slaves with a half-puzzled tenderness' (H.),—pure imagination. Cf. D. R. Monro's note in *loc.* (*Homer's Odyssey*, bk. xii. xxiv., Oxford, 1901)—'probably the same (of *ἀρετή*) is very general'; 'Zeus takes out half the good of a man'; cf. *Od.* vii. 44.

¹² Cf. *Od.* xiv. 323; 'There shows nothing of the slave about thy face and stature.'

¹³ Cf. Theogn. 236, and Aristotle's half-pedantic lament that Nature after all often blunders in her stamp (*Pol.* I. 5 = 1254 B).

¹⁴ For the etymology of the word *δοῦλος* see M. Lambert in *Glossa*, vi. (Göttingen, 1914) 1-15, and E. Asmussen, *G.* ix. 119 f. 191 f.

¹⁵ Cf. *At.* A14, *Pol.* II. 2: *ἠεῖρες αἰεὶ καὶ οὐδὲν ἄλλο ἢ τὸ πλεονέκτημα καὶ τὸ ἐνδούλευμα*.

¹⁶ The name was, by the *ἀντικῆρες*, derived from the towns of Helos in lower Laconia (*Strabo*, p. 365), but is more probably connected with *ἡλός*, 'sea,' or with the root *ἡλ-*, 'to capture.'

¹⁷ Paus. II. 21. 4.

¹⁸ Thuc. v. 24.

¹⁹ Cf. *Phil.* *Klema*, 25.

²⁰ Xen. *Hell.* vi. 2. 23.

²¹ Cf. Herod. vi. 228, ix. 16.

²² Cf. *Athen.* 171 A.

unsleeping and perpetual watchfulness.¹ They felt that they held a wolf by the ears; for the Helots, says Aristotle, were ever on the alert to take advantage of any national disaster.²

(b) *True slavery in Greece*.—As known from the Homeric and Hesiodic poems, Greece is a land of free peasant cultivators, slavery, though a familiar institution, being of comparatively little economic importance, confined chiefly to female domestic slavery, so that the Greeks themselves easily imagined a Greece which once knew no slavery.³ Even Hesiod appears not yet to know rural slavery as a fact of any great importance in the social stratum with which he is chiefly concerned. For, in enumerating the items of capital outlay for the peasant, he mentions first the homestead, next the wife, and then the ox for the plough; and finally the 'things,' i.e. gear.⁴ This is in accord with the historical development, for Boeotia, as well as Lokris and Phokis, was predominantly a land of free farmers even in the 5th cent. B.C., as was also the Peloponnese.

Chios had the dubious honour of inaugurating the slave-trade on a large scale.⁵ It spread rapidly to the rising industrial and trading states of the Saronic gulf. As early as 600 B.C. Periander tried to check it in Corinth, probably in the interests of native labour;⁶ but in vain, for the Corinthians soon earned their mock-name of *xoivokratæi*.⁷ In Greece, therefore, slavery as a factor of prime importance in the national life was intimately connected with the economic revolution of the 7th and 6th centuries B.C. The transition from the agricultural to the industrial and mercantile system of national life, undermining the old static aristocratic society and the privileges of birth, and substituting a social stratification according to wealth expressed in terms of coinage (except in those states which, like Sparta, Crete, or Thessaly, applied special safeguards of the old régime), opened innumerable avenues for exploitation and stimulated a demand for cheap docile labour. The free citizen was ill adapted to meet this demand, by reason of his rapidly developing political freedom and his equality before the law with his employer.⁸ He did not readily accept the subordination implied by the relationship of employer and employed.⁹

The case stood quite otherwise with the slave—an alien, and therefore without legal rights, a mere live tool (*ψυχὴν ἔργον*), in some respects indeed the more valuable just because it was alive, yet with almost as little power of protest as a lifeless instrument.¹⁰ Hence the use of slaves became ever more prevalent, the heavier forms of labour being definitely abandoned to them (e.g., the mines), and slaves becoming a lucrative and favourite form of investment; for here was found a solution of one of the great problems of ancient life, viz. how to invest savings profitably and safely. Hence prosperity and the employment of slaves went hand in hand, as mutually cause and effect.¹¹ The essence of the demand was not for workers who were in a legal sense slaves, that is to say, not for slavery as an institution *per se* as desirable, but for cheap, docile, and fully exploitable labour; and such was to be had, in any degree

of perfection, only in the form of forced alien labour.¹² The slave class, therefore, held in the ancient industrial organization precisely the place held in modern times by free labour working under contract.

4. *Sources of supply*.—The sources of slave supply were chiefly war and commerce.

(1) *War*.—In dealing with a conquered town, whether Greek or foreign, Greek practice was to kill all bearing or capable of bearing arms, and to enslave the rest of the population without exception.¹³ It marked, therefore, some advance when Philip in 348 B.C., instead of slaughtering the men of the Chalcidic cities, sold the population *en masse*, and when Alexander in 336 B.C., upon the capture of Thebes, sold its 30,000 inhabitants into slavery.¹⁴

(2) *Commerce*.—Supply of slaves through war was of the nature of a windfall. There was in addition a systematic slave-trade catering for the constant demand. The market was fed chiefly from lands on the fringe of the Hellenic world,¹⁵ especially the hinterland of Asia Minor (Lydia, Phrygia, and Galatia), and the countries bordering the Euxine (Pontos and Paphlagonia, and above all Thrace). Syria, Egypt, Aethiopia, and even Italy,¹⁶ were also taken in toll. The great slave marts were Samos, Chios, and Ephesus for Asia, Pagasai and Byzantion for the Balkan area; Delos and Cyprus were the *entrepôts* for the human freights of the pirates and kidnappers working the eastern Mediterranean, while Corinth and Athens were the main emporia in Greece proper.¹⁷ Probably there were regular agents in frontier towns buying whatever was offered in this line and asking no questions. War and rapine among the hill-tribes, sale of families by natives,¹⁸ usual kidnapping, and apparently even the organized slave-raid, kept up a fairly steady stream of supply, which gradually attained enormous dimensions. It savours of irony to find that the sacred island of Delos became ultimately, perhaps as the most central, the main slave mart, so that a saying arose: 'Put in, skipper, unload—all's sold.'¹⁹

(3) *Minor sources* were: (a) natural increase among the slaves themselves, the status being hereditary; this was important mainly in later times; (b) sale of children—tolerated generally in Greece (but not in Athens, though an Athenian father might, and seemingly often did, refuse to rear a child, especially if a female,²⁰ and expose it); (c) sale into slavery, even of adults, due to the action of the law; e.g., before Solon's time an insolvent Athenian could be sold into slavery by his creditor (as in Rome) or be might be retained as a bond-slave on his estate.²¹

5. *Employments of slaves*.—One of the most striking differences between ancient and modern slavery is the great variety of *skilled* employments for which slaves were trained in Athens, apparently with success.²² Besides their employment, to a moderate extent, as personal attendants (*ἀκόμωτα*, both in and out of doors),²³ slaves of both sexes were used for all manner of domestic service and domestic production.²⁴ Naturally, agriculture

¹ Cf. Meyer, p. 197; Ar. *Gen.* 1. 6. So Polybius, describing the advantages of Byzantion, says: 'For those commodities which are the first necessities of existence, namely cattle and slaves, are abundantly supplied by the districts round the Pontos in greater profusion and of better quality than by any others' (ix. 28).

claimed many.¹ A large number were employed in all grades of public service—e.g., 1200 *Σκῆφοι* as city police in Athens. At one end of the scale are slaves employed in the higher professions and skilled trades (doctors, teachers, bankers, and business-agents), at the other those doomed to the tragic horror of the Laurion silver mines. This last class it is that stands closest to Roman as well as to modern proximal slavery; the former class, on the other hand, stands very close, in external aspect at any rate,² to that of the free alien, or even the free citizen. Artisan slavery was, in fact, a main factor in the development of Athenian industrialism and commerce in the 6th and 5th centuries B.C.; it is here that the most important, and at the same time most obscure, problems in the economics of ancient slavery lie, viz. in the co-existence of a free and a servile artisan population, working side by side in unrestricted competition.

A peculiar and early development, best known to us from Athens, was that of a class of slaves known as *ἀντιποικίλοι*. These slaves 'living apart' were allowed by their master to work in quasi-independence, bring upon the proceeds of their labour, under condition of paying him regularly a fixed sum (*ἀντιποικίλον*).³ Sometimes a group of such slaves worked together, under a foreman, himself a slave, mutually sharing the profits after paying the stipulated *ἀντιποικίλον*.⁴ These slaves, therefore, lived in practical independence, and were able to amass money, and so might ultimately be allowed to purchase their freedom. Legally, the master's rights remained unimpeded; the permission to so live was revocable, and the slave retained his earnings (so far as we can see) purely on sufferance. The system relieved the owner of responsibility, while guaranteeing him regular and high interest on his capital outlay; between him and loss of income through trade depression there stood the savings of the slave, and in the last resort the market value of the slave himself.

6. The economic problem.—Here arises a problem of particular interest, viz. that of the economic relation of slave-labour to wage-labour in Greek states, and the degree to which the latter was affected by the competition of a servile class probably greatly superior in numbers, and at least its equal in skill. Here it is necessary to avoid the exaggerations widely current in much popular exposition. Statements such as that of J. P. Mahaffy—'for each freeman with a vote there were at least three or four slaves . . . Even very poor Athenians kept a slave or two'—belong to a pre-scientific age.⁵ Equally unscientific is the sentimentalism of the 'New Hellenism,' which is bent upon 'clearing the name of Athens from one cruel reproach which has clung to it ever since the human conscience began to concern itself with these questions,' teaching that it was only late in the history of Athens, 'when the structure of her civilization became too heavy to be sustained by her own unaided efforts, that slaves and free immigrants crowded in to co-operate in the task. And these she treated in most cases, not as mere living instruments, but as "fellow-workers" with her citizens and free partners in the Empire.'⁶

We can only glance at the problem thus raised. How fundamental slavery appeared to its contemporaries, and how universally the social and economic effects which it entailed were accepted as part of the natural order of things, is shown by the fact that the most serious crisis in Athenian

economic history originated in the pre-Solonian age, i.e. before the great development of industrial slavery in Attica.⁷ It is true that 'the ultimate controlling fact in Greek politics of the 5th and 4th centuries is the evil economic condition of the lower classes, due to the competition of slave labour';⁸ but analysis of social and economic facts in this regard was almost impossible, because neither in dress nor, above all, in colour were Athenian slaves marked off from the free community. Hence the standing poverty of the middle and lower class in Athens—a poverty which co-existed with a high degree of prosperity of the state as a whole⁹—is rarely, if at all, traced to its real root in slave competition.¹⁰ From this point of view we may say that the expansion of artisan slavery, which by cheap labour took the bread out of the mouth of the free worker and threw him upon the street to subsist upon state pay,¹¹ with a large margin of leisure, but hardly any of wealth, closely resembled in its working the introduction of machinery into modern industry. But the bitter class war in ancient Greece¹² is waged not as between starving free artisans and their servile competitors; rather, the slave is the sign and source of the wealth which the lower classes covet, and for which the cry of γὰρ ἀνδραγαθὸν καὶ γὰρ εὐκλείας is raised. Hence the constant tendency of the lower classes actually to look for allies in the slave class, for the one partner desires freedom and the other wealth—both by the same means, and at the expense of one and the same foe.¹³ The discussion of slavery arises, therefore, as an ethical, not as an economic, question; it originates with poets and philosophers, not with the political champion of popular rights (*πολιτικὸν τοῦ δήμου*)—and this is in fact quite characteristic of the Greeks.

7. Treatment of slaves.—The readiness with which Greek slaves ran away is not to be taken as evidence of their general ill-treatment.¹⁴ For the mere natural instinct of freedom will impel the slave to flight, often aimlessly. The Greek proximal serfs, a permanent immobile population, speaking a common language and inheriting a common tradition of national life, older and richer than that of their lords, and, above all, sharing in the essentials of contemporary Greek culture equally with them as a recognized element in the political structure, though without political rights, found life upon the whole more intolerable and more offensive to dignity than was the case with slaves proper; hence the danger of Helot insurrection was a constant and notorious factor in Lacedaemonian politics.¹⁵

Demosthenes¹⁶ says that, if the barbarians who supplied the Greek slave markets could be told how civilized and humane the Greeks were¹⁷ in their treatment of slaves, they would officially constitute the Athenians their public protectors! Apart from the singular and intolerable bathos of the orator's conclusion, it is to be remarked that his statement is an example of those naïve delusions which in all ages pass current among peoples concerning themselves;¹⁸ it is, in addition,

⁵ Cf. *Archid.* 77 L.

⁶ *Problems of Greek History*, London, 1909, p. 68; Mahaffy's statement is disproved by Ar. Pol. vii. (v.) 1 = 1909 A: *οὐκ ἔστιν ἀποκρίματα ἀντιποικίλων καὶ γὰρ οὐκ ἔστιν ἀντιποικίλοι ἀνὰ τὴν πόλιν*. 'There can be little doubt that in almost all democracies a majority of the citizens were slaves' (Newman, *Pol. of Ar.* iv. 588), cf., for Athens, Plat. *Per.* 131 *ἀντιποικίλοι καὶ ἀσπίδοι καὶ ἄλλοι*.

⁷ A. E. Zimmerman, *The Greek Commonwealth*, p. 288.

deliberate sophistry, for Demosthenes well knew that the intention of the law which he quotes, and of which he makes so much, was quite other than the advantage of the slave as such—i.e., it protected him as another's property, not as being himself a person with inherent rights. Nevertheless, the comparative humanity of the Greek, and especially of the Athenian, treatment of slaves is indisputable.

The law protected the slave against ill-treatment by strangers, by allowing an owner to bring a prosecution for assault (*σπασή σφισσεα*)¹ against the assailant. The slave is protected as a chattel of his owner. Further, having no legal personality, an Athenian slave could not put the law in operation in his own behoof.² Although a slave was his master's absolute property, to be disposed of by sale, gift, or bequest at his pleasure, a death penalty could be inflicted upon him, even for murder, only by a legal tribunal.³ If a master killed his slave, he was subject to religious obligations of purification—which in practice meant little more than financial outlay.⁴ Against inhuman treatment by his owner the Athenian slave could get a doubtful and temporary measure of protection by taking asylum, if he could, at the temple of Theseus, or in the precinct of the Semnai, and perhaps there obtain the good offices of the priest to induce his master to sell him to another.⁵ It is clear, however, that the practical amount of legal protection was but slight, the only real restraining force being the owner's self-interest, reinforced by natural humanity, and to a certain extent by religion, which in Athens as elsewhere was very chary of interference with rights of private property.⁶ The lot of the state slaves was in this respect probably more tolerable than that of the ordinary slave, as being less exposed to individual caprice; and the state employees, of various grades, naturally tended to acquire a certain independence by virtue of their official status.⁷

8. *Modes of punishment.*—(1) The commonest naturally was flogging.⁸ This could easily become a death penalty (and is so used in Plato, *Lysis*, 872 B, in cases of wilful murder of a free man by a slave). Flogging is very often the statutory penalty for slaves in the inscriptions, usually 60 strokes.⁹ Sometimes flogging is combined with a fine, touching the slave's peculium, or with *στυγία*, 'working off the penalty.'¹⁰

(2) Short rations, and confinement of various types and degrees of painfulness.¹¹ Shackling was so ordinary a precaution as hardly to be classed as a punishment.

(3) Branding, applied especially to runaways.¹²

(4) Hard labour, at the mill, or, worse still, at the mines—reducing the culprit to the lowest grade of chattel-slave and practically dooming him to death.¹³

(5) Doubtless also tortures privately administered were not unexampled in the households of masters callous to public opinion.¹⁴ But Athens seems to have known little or nothing of the hideous scenes of private torture and expulsive cruelty with which Rome was familiar.

But there was nothing of the kind given about the generality of Greek slave-owners.¹⁵ Plato is dissatisfied with the older, patriarchal (i.e. Homeric) method, in which slaves were treated 'gently yet firmly'; he would have them kept in their place, 'not admonished as if they were freemen, which only makes them conceited.'¹⁶

9. *Slave-torture.*—Here falls to be mentioned the Attic rule, 'almost grotesque in its absurd cruelty,'¹⁷ under which the evidence of a slave was inadmissible in a court of law unless it had been extracted on the rack by responsible officials (*ἐπαχθεαί*)¹⁸—themselves of course slaves.¹⁹ Slaves who were themselves suspected of, or charged with, crime were tortured to secure a confession, but this sort of torture, frequent in all ages, even in the case of free men, needs no further remark here. Again, a master was free to torture his own slaves for his own ends, but the answers so obtained did not constitute legal evidence. The torture here in question is that applied to slaves of the parties in a suit. The views of the orators on the value of such evidence depend entirely upon the needs of the argument. Sometimes it is dismissed as worthless, but in general it is spoken of as final and unimpeachable, indeed as preferable to that given by a freeman, even under oath.²⁰ That citizens were exempted by Attic law from such torture²¹ may indeed prove the 'superior humanity of the Athenians,'²² but hardly in respect of their slaves.

10. *Emancipation.*—Aristotle, in flat contradiction of his own theoretical creed—for clearly a 'natural' slave, according to his definition, could only lose by being freed—recognized that the prospect of ultimate freedom was the slave's most powerful incentive to zeal and loyalty;²³ and the author of the Aristotelian *Economics* says: 'Slaves are willing to take trouble when freedom is the prize and the time is fixed.'²⁴ This principle was well established in popular usage, and various methods of emancipation were in vogue. The characteristic of these is their want of precision and the vagueness of the idea of personal freedom upon which they were based. Hence no univocal legal forms were evolved, and the practical result in many cases was the highly illogical one of creating a class intermediate between those of the pure slave and the free citizen, subject to all degrees and kinds of servitudes. With all their imperfections, however, these more or less regularized, easily available, and constantly employed methods of creating free or semi-free status constitute one of the principal features of distinction between ancient and modern slavery.

(a) *By the state.*—The state itself sometimes conferred freedom on individuals, or even on considerable numbers, for special services, especially those rendered in defence of the country.²⁵

(b) *By individuals.*—Emancipation by a private owner, either as an act of grace or upon payment by the slave of a sum agreed upon out of his pecu-

¹ As is clear from such passages as Xen. *Oec.* I. 22, *Mem.* iii. xii. 4, ii. 1-17 (see also *Mem.* iii. 17, *Mem.* iii. 17, *Mem.* iii. 17).

him, was effected either *inter vivos* or by testament.¹ Manumission *inter vivos* naturally involved publication, as by announcement in a law-court (*δικαστήριον*)² or other public place.³ Proclamation by the herald in the Athenian theatre before the people became a fashionable nuisance which had to be checked by the severest penalty.⁴

(c) *Through a deity*.—In many places the favourite method was manumission under the form of dedication to a deity, the slave thus becoming the god's property (*θεοδούλος*). This was perhaps historically the oldest method. Properly and originally it was not manumission, but substitution of ownership; and originally perhaps the slave was actually transferred to the service of the temple—certainly always lighter than that of a private owner.

By far the largest and most instructive class of manumission inscriptions is that dating generally from the end of the 3rd cent. B.C. to the 2nd cent. A.D., in which the deity named appears not merely as accepting or witnessing to a dedication made to himself, but as one of the principals in a purely commercial transaction, i.e. as himself purchasing the slave, not to retain him as *ἐπιδούλος*, but to set him free⁵—his freedom being generally conditioned in the instrument of sale by certain obligations towards his old master. Many hundreds of such records having survived, a study of them tends to dissipate all illusion as to the real significance of slavery among the Greeks. The sale to the deity is not fictitious, for real money passes into the master's pocket⁶—perhaps the full market-price of the slave, hardly less, as agreed between slave and owner; the purchase money is of course provided by the slave himself from his *peculium* or sufferance savings. As the slave, having no legal personality, could not enter into any legal contract with his master, he must rely upon the god to act for him, i.e. he must entrust his priest both with the purchase money and with the carrying out of the entire transaction (*καθὼς ἐξέτασεν τῷ θεῷ τὰς ἀνὰ τὴν ἀγορὴν* is the phrase used). Thus the owner could not touch the money deposited by the slave with the priest without first parting with his property in the slave to the god, under a legal contract of sale providing adequate secular safeguards against its breach. The transaction was profitable to the temple indirectly, and perhaps also directly; the owner secured his own price for his living property, and the slave got just what he was able to wring from a situation in which, in the last resort, he was absolutely powerless.

It is clear that this method of sale into freedom was simply a means of getting hold of the bulk of the slave's *peculium* and retaining his services during his best years, and of throwing him upon the world at the end of his days to fend for himself; neither humanity nor religion had much real significance in this connexion. The method is applied almost wholly in the interest of the vendor,

who of course could have found no purchaser so complainant as the deity with whom he deals. The vendor retained in effect what he professed to sell.⁷

11. *Freedmen*.—In Roman history freedmen (*liberti*, *liberati*, *liberati*) play a great part, but not in Athens or Greece generally. In Greece, freedmen were indistinguishable from ordinary domiciled aliens (*αἰετοὶ*). Even as early as Kleisthenes freedmen seem to have been numerous in Athens, for he made many of them citizens.⁸ Like ordinary domiciled aliens, freed slaves of Athenians must put themselves under a patron (*ἐκπαιστήριον*—their old master), and must observe certain obligations of service and respect towards him, details of which are unknown, and must pay to the state the alien's annual tax (*ἀποδομή*), with an additional three obols, besides performing all required military service by land or sea.⁹ Standing thus to the state as a metis, and to his former owner as a client, the Athenian freedman was worse off than the Roman freedman, being in a condition intermediate between slavery and complete freedom as a citizen—an ambiguity characteristic of the Greek incapacity for clear legal conceptions, and illustrative of the extreme difficulty of naturalization in the ancient state, with its inherent conception of exclusive citizenship. If a freedman was false to his obligations, he was liable to prosecution (*δικὴ ἀναστάσιον*), and, if condemned, sank again into slavery, or in the other event became finally freed of obligation towards his former master—i.e., he became a free metis, with freedom of choice as to his patron. A special vote of the assembly alone could elevate him to citizenship.

12. *Slavery and Greek thought*.—A discrimination between lower social functions (those of husbandman, artisan, trader, and the like) and higher social functions (those of administration, legislation, and war) is characteristic of Greek sentiment, though not everywhere made in practice. Of rigid coincidence of theory and practice, indeed, solitary examples were presented by Crete and Sparta, which 'sorted' the elements of the state with a thorough-going doctrinarism that appealed powerfully to the philosopher, but found itself, in Greece at large, with the exception of particular coteries, at ever greater variance with the facts of life. Nevertheless, even in such states as admitted the industrial and commercial classes to political power, popular sentiment, in its usual illogical and snobbish way, was thoroughly contemptuous of the so-called *παντοκρατορὶς*.

To do manual work, even of such sort as did not obviously impair health and vigour, and especially to do it for pay, implied acceptance of a relation of subservience,¹⁰ incompatible with the independence and leisure of a free man, and breeding a mean and sordid spirit. The real difference of intellectual and ethical level between some vocations and others was the solid core of truth upon which Greek philosophic thought seized, from which with unrelenting logic it developed a distinction between a professional ruling class and all such as engaged in the 'necessary' functions of trade and the manual arts. A separate class, or classes, must needs exist in the state for the discharge of these lower functions, and those so employed must, unless justice is to be infringed, be capable of nothing higher. The existence, in adequate numbers, of such a class is essential to

¹ See Aristotle's own will, in *Diog. Laert.* v. 1, 9; cf. *Diog. Chrys.* xlv. 440: *ἐν τῇ ἐκείνῃ τῇ ἀγορᾷ τῷ θεῷ ἐκπατήριον τὸν ἐλευθέρωσεν*, and *xxxi. 308*.

² *Diog. Laert.* v. 300.

³ Cf. *Suid.* s.v. *Καίριον* (*ἐν τῇ ἀγορᾷ ἀπὸ τοῦ Κείριον ἀπὸ τοῦ Κείριον*).

⁴ *Aeschyl.* *Chor.* 41.

⁵ Hence the confusion of thought and phrase in the formula in use: *ἐν τῇ ἀγορᾷ τῷ θεῷ ἐκπατήριον τὸν ἐλευθέρωσεν*, 'free and yet the god's property.' Doubtless this method was a development of a transaction in which the god, i.e. his priest, with the god's own money (the temple treasure), bought in upon market the slaves, male or female, required for service about the temple. Many, if not most, of the slaves donated to a temple as hierodouloi must have been, or must eventually have become, too old and feeble to be of much use; but the god could no more reject such dedications, or cast them aside, than he could refuse the cheap and timely offerings of the poor. Hence the Greek temples in this way served as almshouses.

⁶ Cf. the almost constant formula *ἐκ τῆς ἀγορᾶς ἐκπατήριον τὸν ἐλευθέρωσεν*, asserting this.

⁷ This is not to say that there may not have been numerous instances in which the transaction was genuine in spirit and form.

⁸ *Ar. Pol.* ii. 2=1273 B: *καὶ τὸν πᾶν ἐλευθέρωσεν* (*ὅμως καὶ ἐλευθέρωσεν* (see Newman's note in loc., and vol. i. p. 121).

⁹ *Dem. Phil.* i. 20.

¹⁰ *Isaevius* (*Plato, Laws*, 912 D); cf. *Ar. Pol.* i. 13=1280 A: *ἡ γὰρ βίαιος ἔργον ἐλευθέρων καὶ ἐκπαισθησάντων*.

the realization of the highest type of society, just as the household must consist of both slaves and free.¹ Unless, however, there was to be frankly accepted a dichotomy of the Hellenic race itself, such as would be fraught with the gravest menace of national disruption and chaos, there was nothing for it but to adopt the old standing division of humanity into Hellenic and non-Hellenic,² and to find therein the philosophic justification of the institution of slavery, while doing what could be done for the slave himself. The 6th cent., less troubled than the 4th with doubts, had not discovered the comfortable doctrine that slavery might be actually good for the slave, enabling him, under the mild yoke of the exponents of culture, to lead a higher sort of life than was otherwise possible for him.

The idea of Aristotle being, in general, at accord, with his own sentiments, the institutions and views in which the collective experience of the Greek race had crystallized, he retains slavery in his ideal state, but retains it in an ideal form which would make it spiritually as well as practically advantageous to the highest capacities of both master and slave. The slave is an article of household property, an indispensable animate instrument, of a superior sort—an instrument not of production, but of action, i.e. not coming solely within the sphere or purview of economics, but within that of ethics;³ being an article of property, he belongs wholly to his master. The facts of the world show that there is a natural, and therefore just, because actually existing, principle of rule and subordination, or scheme of co-ordination to nature, both animate and inanimate.⁴ There is, then, a 'natural slavery' (*physiske douleia*), in which the slave's bodily strength is complementary to the master's intelligence and 'virtue', just as the union of male and female is necessary for purposes of reproduction and continuance of the species.⁵ The natural slave is as far inferior to his master as the body is to the soul, or as the lower animals to man generally, so that the relation of rule and subordination which obtains between soul and body, or between man and animals, is applicable here also. The only difference, indeed, between such man and animals is that the former can listen to reason; but their best function is the obedient expenditure of their physical strength, making noble life (*eu zōē*) possible for their master. The moral possibility of the institution of slavery justifies it—justified as it is indeed already by the mere fact of its existence as part of the teleological scheme of things. Paradoxical as it may seem, it was not every one who could be a slave in the true sense;⁶ for the status properly connoted a certain spiritual as well as physical aptitude. It is less therefore upon the moral or economic necessity for slavery than upon the moral benefits which through it arise for both master and slave that Aristotle insists, and he postulates for the master an intellectual and moral endowment as high as that of the slave is low. Thereby, in effect, was condemned a great deal of current slavery, in so far as it included captives, not a few even of Greek blood, taken in war, i.e. men in whose case brute force was the basis of the status. The true test of just freedom and just slavery, according to Aristotle, lay in the relative goodness and badness, i.e. the intellectual and moral capacities, of men. Condemned on such lines, slavery would be, for the slave, no such unended bargain as in actual fact it was.

Aristotle's theory, though it started from fact and claimed to return to fact, yet made shipwreck upon the rock of fact. For, in the first place, there were in Attica tens of thousands of slaves who, being in no genuine sense elements of a household, were yet in mental and moral capacity and actual output fully on a par with the free citizens who owned them and claimed the main part of the fruits of their intelligence and conscientious labour. In the second place, the ultimate basis of their status, for the theorists say what they would about laws of nature and existent right, was mere force and violence collected in the service of ill-will and greed, and worse. Lastly, the actual moral effects of slavery, alike for slave and for slave-owner,

were as a rule very conspicuously different from those idealized by Aristotle; yet, if the institution was natural and right just because it was an objective fact, how could its fruits be logically condemned? The task of moralizing an essentially immoral institution was beyond his powers. Then as now rapacity and selfishness were apt to define right strictly from their own standpoint, and men were not slow, with grandiloquent phrases and stilted exhibition of capricious logicisms, to gloss national wrongdoings.

The noteworthy points are, not the precise amount of truth in Aristotle's attitude, but, firstly, the fact that 'the Greeks are characteristically the first human beings who felt a doubt or scruple about slavery' and that it was 'in Greece alone that men's consciences were troubled' by it, so that Aristotle found himself driven to defend the position with what force of argument he could muster; secondly, that he makes little or no point of any supposed indispensability of slavery to the maintenance of the economic fabric of Hellenic life. And practical philosophy itself was soon to demonstrate the illusoriness of his fundamental axioms. Aristotle was none the less a 'wise' man though he earned his living by the sweat of his brow in nightly toil as a drawer of water and kneader of bread, both reputed servile employments.⁷ The Stoics demonstrated that virtue and happiness were independent of social conditions,⁸ thus making it clear that slaves were not essential by way of bolstering up virtue in order to save supposed higher natures from deterioration through contact with the conditions of life; thus 'slavery lost its Aristotelian rationality'.⁹ Aristotle perceived dimly enough that slavery is incompatible with full human dignity, but, his thought being conditioned always by the vicious aristocratic attitudes of Hellenic and Hellenic (though Plato could have taught him better),¹⁰ he was unable to go on to perceive also that the concept of human dignity is either universally valid or everywhere equally worthless. He is honest enough, however, to confess that nature has left us without any practical criterion by which to distinguish the noble from the ignoble;¹¹ for the obvious criterion of colour, to which men in more modern times were fain to appeal, was to the Greeks unknown, or at least insignificant, and he was unwilling to fall back upon the 'variety of history' as given by war, for that, as all Athenians knew to their sorrow, often proves far too unkind.

For the influence of Stoicism on slavery see art. SLAVERY (Roman).

W. J. WOODROUSE

SLAVERY (Hindu).—Slavery is an institution fully recognized in the Sanskrit lawbooks of India. The Code of Manu (viii. 415) names seven causes of slavery, viz. capture in war, voluntary submission to slavery for a maintenance, birth from a female slave, sale, gift, inheritance from ancestor, and condemnation to slavery by way of punishment. Manu adds that wives and sons, like slaves, can have no property of their own,

¹ Eng. Lat. 106.

² Newman, I. 156.

³ Cf. Ar. Pol. IV. (viii) 7-1287 B. In Aristotle's own well-known comparison of Hellenic and Asiatic, the valuelessness of which is shown by comparing what Aristotle says on the same subject (de Arist. 1287) with Plato, Pol. 288 A. But Plato's formal prohibition of debt in this matter is just as unconvincing as Aristotle's (see Ar. 470 C).

⁴ Pol. I. 1-1254 B.

¹ Ar. Pol. I. 8-1258 B. *slava* is *slava* in Indian and *slava* in Greek.

² *Slava* is, cf. Ar. Pol. I. 2-1252 B. *slava* is *slava* in Indian and *slava* in Greek.

³ Ar. Pol. I. 1-1252 B. *slava* is *slava* in Indian and *slava* in Greek.

⁴ Ar. Pol. I. 1-1252 B. *slava* is *slava* in Indian and *slava* in Greek.

⁵ We must see industry not simply as a process of production but as a form of association, etc., simply echoing Aristotle. See A. E. Zimmern, 'Progress in Industry', in *Progress and History*, ed. F. S. Marvin, Oxford, 1912, p. 112 L.

⁶ Ar. Pol. I. 1-1254 B. *slava* is *slava* in Indian and *slava* in Greek.

⁷ Ar. Pol. I. 1-1254 B.

⁸ This is just the point at which Aristotle comes within hail of modern systems of 'scientific management', such as the notorious Taylor system, the inventor of which in his defence thereof (as is pointed out by Zimmern, loc. cit.) unconsciously paraphrases Aristotle's defence of slavery.

⁹ Ar. Pol. I. 8-1258 B. *slava* is *slava* in Indian and *slava* in Greek.

and that Śūdra, even when emancipated by their master, are not therefore released from servitude, because the state of dependency is innate in them. The perpetual slavery of the Śūdra class is one of the axioms of Brāhmanism, and may be traced back to the *Paruṣasūkta* hymn of the R̥gveda (x. 90), in which it is stated that the Śūdra issued from the feet of Paruṣa, the primeval male, feet meaning service. Nārada (v. 25 ff.) gives some further details regarding slavery, and enumerates fifteen kinds of slaves: one born (of a female slave) in his master's house, one bought, one received by gift, one obtained by inheritance, one maintained during a general famine, one pledged by his rightful owner, one released from a heavy debt, one made captive in war, one won in a stake, one offering himself for a slave, an apostate from asceticism, one enslaved for a stipulated period, one becoming a slave for maintenance, one enslaved on account of his connexion with a female slave, and one self-sold. The difference between these various slaves and the class of hired servants, according to Nārada, lies in this, that the former, but not the latter, do impure work, such as removing urine and ordure, attending their naked master, handling cows, cleaning the house and the road. The first four in the above enumeration of fifteen slaves, likewise an apostate from asceticism and one self-sold, can never be released from slavery except by the favour of their owners, but the others may obtain their release by giving a compensation in money or providing a substitute. One intending to emancipate his slave has to take from the slave's shoulders a jar with water and smash it, sprinkling his head with the water, and thrice declaring him free. One superior in caste cannot be the slave of his inferior, nor is it legal slavery when a man has been sold after having been captured by robbers, or has been enslaved by force. Here it should be observed that the ancient Hindu law contains important relics of the practice of selling children for slaves which obtained amongst ancient societies. Thus it is stated by Vasistha (xv. 2) that the father and the mother have power to give, to sell, and to abandon their son, and the son bought is generally mentioned among the various substitutes for a real legitimate son. It is true that Apastamba (ii. 13. 11) does not recognize the right to buy or sell a child, and the secondary sons generally were abolished in the more recent lawbooks, excepting the adopted son (*dattaka*; see art. ADOPTION (Hindu)). Adoption itself may be regarded as the survival of an archaic institution which owed its origin to the principle of slavery, whereby a man might be bought and sold, given and accepted, or relinquished in the same way as a cow or horse. The statements of the lawbooks on the subject of slavery are corroborated by the historical records, and V. A. Smith in his *Early History of India* observes that pradiat and domestic slavery of a mild form seems to have been an institution in most parts of India from very remote times. In the time of J. A. Duhols (in India, 1792-1823), the Pariahs 'were looked upon as slaves by other castes, and treated with great harshness' (see art. PARIAH). Under British rule, slavery was not abolished at once, but gradually. Regulation x. of 1811 prohibited the importation of slaves from foreign countries into the British territories. This rule was by Regulation iii. of 1832 extended to the provinces which subsequently came into the possession of the British Government. Later on was passed Act v. of 1843 prohibiting all officers of Government from recognizing slavery. And it was finally abolished in 1860 by the Indian Penal Code, which declared the equality of all men, and provided punishment for buying or selling any person as a slave.

SLAVERY (Jewish).—Slavery was one of the features of ancient and mediæval Jewish life, and there is a large crop of Jewish legislation on the subject. It is noteworthy that among the Jews treatment of the slave was never debasing or cruel. The Mosaic legislation, with its insistence upon the rights possessed by the bondman or bondwoman and its consequent limitation of the master's power over them, inculcated the duty of clemency in the master—a virtue which colours their mutual relations in all subsequent epochs. Besides this, the Jew at every turn was confronted with such injunctions as those in Dt 3^d, 15th, where the law of kindness to the slave is brought home to the Israelite by the duty to recollect how much his own ancestors had suffered during their servitude in Egypt.

1. In OT literature.—Gn 14th speaks of Abram 'arming his trained men, born in his house, three hundred and eighteen.' These 'trained men' were most probably hereditary slave property. That such slaves were, even in this early epoch, something more than the chattels of ancient Greece and Rome is evidenced by Gn 17th, where 'all that were born in his [Abraham's] house, and all that were bought with his money underwent the rite of circumcision—a clear proof that the master owed some sort of family obligation to the slave. Similarly in Ex 12th the circumcised slave, by becoming a member of the family, and thus sharing its religious duties and privileges, is permitted to eat of the Passover. But the fountain-head of ancient Jewish slave legislation is Ex 21st. A clear distinction is here drawn between the Israelitish and the non-Israelitish bondman or bondwoman, a distinction which held in all succeeding ages. An Israelite could buy a fellow-Israelite for six years only. In the seventh year he automatically received emancipation, unless he voluntarily decided to remain. Gentile slaves, however, whether male or female, could gain their freedom only if they had previously been the victims of certain specified acts of cruelty by the master. In the year of jubilee all Israelite slaves together with the children born to them during servitude were, according to Lv 25th, to be liberated without exception; but, if the children were born of a Gentile mother, then they, like her, must remain in slavery (Ex 21st). According to Lv 25th, the Hebrew slave of a non-Hebrew master had also to be freed in the year of jubilee, although he should previously be redeemed, if possible, by his kindred or by his own money, the redemption price being reckoned in accordance with the number of years that had still to elapse before the arrival of the jubilee. That the traffic in slaves led to numerous abuses, religious, moral, and economic, is seen from Jer 24th, where the princes, priests, and people of Judah are divinely warned of the dire punishment which will overtake them as a result of their breach with the ordinances of the Mosaic slave legislation. There are numerous points, both of resemblance and of contrast, between the Mosaic slave laws and those of the Code of Hammurabi.¹

2. In Rabbinic literature.—The status, rights, privileges, and manumission of slaves are subjects of elaborate discussion in the Talmud as well as in the subsequent mediæval code-books, such as—to mention the two principal ones—the *Mishneh Ṭorah* of Maimonides (q.v.) and the *Shulhan 'Arukh* of Joseph Caro (q.v.). From Lv 25th, 'And if thy

² See art. LAW (Babylonian), vol. vii, p. 212.

brother . . . be waxen poor, and be sold . . . ' the Talmudic authorities deduced the injunction that a Jew should sell himself into slavery only as a very last possible resort, as such an act was a stigma upon the honour of the Jewish religion, which declared through Lv 25³⁸ that the Israelites were to be servants of the divine, and not of any human master. He should not sell himself to a woman or to a convert or to a Gentile; but, should he do so, the sale is valid, and it then becomes the religious duty not only of his family but also of the Jewish community to effect his redemption. Such an act was always considered a highly meritorious one, and the social life of the medieval Jews is studied with instances of it on the part of individuals and communities in different parts of Europe—although it should here be said that the Synagogue forbade the traffic in Jewish slaves at quite an early stage, but placed no bar on the commerce in heathen slaves. The master was religiously bound to have his non-Jewish slave circumcised. In default of this, it was the duty of the ecclesiastical authorities to have the circumcision performed. But, should such slave have been purchased from a non-Jewish master, then circumcision was optional to the slave, who, if he refused to undergo it, was not allowed to be kept longer than twelve months, after which it was incumbent upon the Jew to sell him to a non-Jewish master.¹ The object of laws like these was to make the slaves an integral part of the Jewish community. Once circumcised, they were regarded as being 'received into the fold' and bound by all the 'negative' precepts of the Torah and by such 'affirmative' precepts as apply 'to stated times only.' But they were never more than a subordinate and inferior part of the community, as is proved by the limitations imposed by the Talmud and all the later codes upon their rights of intermarriage with the general Jewish population. When, however, as in the Middle Ages, the act of making Jewish converts was fraught with danger at the hands of Christian authorities (who in many places officially prohibited such conversions), the duty of circumcising slaves was entirely abrogated. According to the Talmud,² the master of a Jewish slave was compelled to accord him the same house comforts as he himself enjoyed.

As the *Shulhan 'Arukh* puts it, 'It is the quality of selfishness (*hasidut*) and the way of wisdom for man to be merciful to his slave, not to make his yoke heavy nor to distress him, but to give him to eat and drink of all manner of foods, not to censure him either by deed or word, not to multiply complaints and anger against him but rather to speak gently to him and lend a kindly ear to his grievances.'³

Self-redemption for the slave, whether Jewish or not, was always permitted, the conditions governing such an act on the part of a female differing in many material ways from those attaching to a male.

Jewish legislation, like all other systems which legalized slavery, refused to slaves all title to independent property. As the Rabbis laconically phrased it, 'Whatever the slave hath acquired, his master hath acquired.'⁴ Whatever he may receive from others, or find by the way, belongs to the master. Should he be assailed and injured, the damages—which were a five-fold compensation for (a) the blow, (b) the pain caused, (c) the cost of healing, (d) loss of time, (e) the indignity—were to be paid to the master.

A subject elaborated at great length in the Talmud and the medieval codes is the manumission of the non-Jewish slave, which became compulsory on the master's ill-treatment of him in certain

specified respects. A deed of manumission had to be drawn up, and, should the master refuse to sign it, he was excommunicated. It had to be handed to the slave in the presence of two witnesses; and, should the master have expressed a merely oral intention to manumit, he could not retract, as his words were binding, and the court could compel him to write out the official deed. A curious law is the following: if the master married his slave to a freewoman, or if he put phylacteries on his head, or if he bade him read three verses in a scroll of the Law before the congregation, or if he asked him to do any of those precepts which only a freeman might perform, the slave became free and the master was compelled to give him a document of manumission.⁵ To write in the future tense 'I shall manumit' was ineffectual. It must be in the past tense, 'I have manumitted.' According to Lv 25⁴⁰, it is the Jew's duty to retain his non-Jewish slave and transmit him as a heritage to his children. Hence it was that the Rabbis said that to manumit a 'Canaanite' (i.e. non-Jewish) slave was to infringe a negative precept.⁶ An exception, however, was made in the case of manumission *liber mitewah*, i.e. for the purpose of fulfilling a precept, as, e.g., to complete the number of ten males required for the celebration of public worship. Should the slave express a wish to go to Palestine, the master was compelled to go with him or to sell him to some one who would consent to take him there. If a slave fled from anywhere to Palestine, he might not be brought back into servitude; and the master was bound to manumit him. This law is based on Dt 23¹⁵, 'Thou shalt not deliver unto his master the servant which is escaped from his master unto thee.' He who, living in Palestine, sells his slave to a master outside Palestine thereby enables the slave to get his freedom, as the second master is compelled to manumit him.⁷ Should a Jew sell his slave to a non-Jew, the slave thereby acquires his freedom.

3. Jews and the slave trade.—The medieval Church's objection, from the time of Constantine, against the ownership of Christian slaves by Jews did not prevent the latter from becoming, at certain epochs, the chief traders in this class of traffic. Indeed, Christians openly defied the Church by co-operating with Jews in this commerce. In the reign of Louis the Pious the Jews imported large numbers of Christian slaves into Spain and N. Africa. Likewise they acted as middlemen, supplying Christian slaves to the Muslim world and Muslim slaves to the Christian. At the zenith of the Jew's prosperity in Spain (from the 10th to the end of the 15th cent.) many of the most wealthy Spanish-Jewish families amassed large fortunes by the importation of slaves from Andalusia.⁸ The circumcision of slaves often incensed the medieval Church authorities, and bitter protests were frequently heard. As the practice was looked upon as an infringement of the law prohibiting Jews from making converts, the Rabbinical authorities made the rite of circumcision optional on the part of the bondman.

SLAVERY (Roman).—Slavery among the Romans differs from slavery in Greece in respect of the scale and the application of the institution. To these differences must be added that of greater range in time, so that the historical development of Roman slavery is both more apparent and more complex than is the case in Greece. In spite of these differences, however, the essential nature and general characteristics of the institution remain the same, so that much of what is said under the head of Greek slavery is true here also.

I. FIRST PERIOD.—We must distinguish three periods in the history of Roman slavery. The earliest, a comparatively brief phase, is that of what Mommsen calls 'the old, in some measure innocent, rural slavery,'¹ under which the farmer tilled his moderate holding in person, assisted by his sons and his slaves, and occasionally by hired hands—a system under which the slaves were comparatively few, and mainly of Italian or at least Etruscan origin. They were either war captives or born of such. There was thus 'no striking distinction, and often no distinction at all, of race, appearance, speech, or manners, no instinctive repulsion between owners and owned, which, in other regions, have supplied some of the most painful chapters in the history of human relations. Chattels at law, ritual included them not only within the pale of humankind, but to a limited extent even of the family, and the simple households of earliest Rome may have witnessed little difference in the treatment of slaves and sons.'²

Traces of this older humanity of relations between master and slave still linger in the household of the older Cato in the middle of the 3rd cent. B.C., though he belongs in reality to the following period.³ Like the householder and headholder of old times, Cato shared the labour and course fare of his slaves, and his wife—'if she allowed her children to be suckled by female slaves, she also allowed their children' in return to draw nourishment from her own breast; one of the few traits which indicate an endeavour to mitigate the institution of slavery by the human sympathy—the common impulse of maternity and the bond of foster-brotherhood.⁴

II. SECOND PERIOD.—The second stage of Roman slavery was entered upon early in the 4th cent. B.C., when the national economy of Italy began to experience a revolution; the earliest evidence of which is the enactment of the law of 367 B.C., compelling a landholder to employ along with his slaves a certain proportion⁵ of free labourers. The centralized farming on a big scale which began after the Hannibalic war was probably derived from the Carthaginian slave plantation-system,⁶ with which the Romans came in contact in Africa and Sicily; perhaps also, as Mommsen

⁴ *Phil. Cato Major*, 2.

⁵ Probably to be understood not of the rank of the slaves, but of the permissive family of the *villicus* (cf. Varro, *de Re rust.* i. 17, 5).

⁶ Mommsen, iii. 118.

⁷ One-third, in the law as revised by Julius Caesar (*Senatus, Juliae Caesar*, 47). Appian, *de Bellis civilibus*, i. 8, is the only authority referring this provision back to the Italian law.

⁸ See Mommsen, iii. 307; cf. ii. 128.

suggests,⁷ it was not unconnected with the recent introduction of wheat-growing. The result was the rapid expansion of slave-owning as a mode of investment—a process which simply repeated the industrial development seen in Greece two centuries earlier. The new system 'was pervaded by the utter regardlessness characteristic of the power of capital,'⁸ and was 'just like that of America, based on the methodically-prosecuted hunting of man.'⁹ Concomitantly, special factors were at work to divert attention from agriculture to cattle-rearing as being at once easier, more profitable, and apparently capable of unlimited development, besides being more immediately available and lending itself to the spirit of an age in which the display and spending of wealth (in some respect actually enforced by law¹⁰) was more congenial than the making of it by personal industry, as in the old days.¹¹ But, in whatever direction speculation applied itself, 'its instrument was without exception man reduced in law to a beast of burden.'¹² This expanded slave-system was applied in two main forms—to pastoral husbandry carried on by means of armed, often mounted, slave-herdsmen on great ranches,¹³ and to the plantation-system proper, i.e. cultivation of huge estates (*latifundia*) by means of gangs of slaves,¹⁴ working often in shackles and always under the supervision of overseers, slaves like themselves. To these types a third may be added, that of domestic industry carried on for the profit of an owner by slaves skilled in various arts or trades, or by freedmen working in part for the profit of their *quondam* master.¹⁵

Time from the latter part of the 3rd cent. B.C. the slave-system of the Republic reached its acme. An enormous increase in the slave trade was the consequence of the sudden and universal demand for cheap labour—'occupies of State land required shepherds; the contractors required labour for public works or military equipment; the State required it for the public services; traders for the crews of their ships; the wealthy for domestic service or for gladiatorial shows; small proprietors and the middle class generally to relieve them of the more distasteful part of their daily work.'¹⁶ There can be no question that the work controlled by the public companies was done mainly by slaves, and that their operations were unhampered by the organized claims of free labour; they were therefore able to choose their instruments solely with a view to efficiency. For the more technical side of the various activities in which the Roman citizen was in general never sufficiently well educated, while for the life on the great cattle-runs and sheep-walks he was if possible still less adapted. Moreover, the frequent calls to military service, 'the real industry of the Roman freeman,'¹⁷ made it undesirable, from the employer's point of view, to use citizens even for such labour as they might be willing to undertake.¹⁸

The inherent viciousness of the situation was hardly felt at all at first.¹⁹ For, while the continual wars of plunder bred and fostered a capitalistic class crying ever for labour and yet more labour, they also directed towards Italy a ceaseless and, as it seemed, inexhaustible stream of the cheapest labour in the world,²⁰ in the tens of thousands of slaves torn from all parts of the Mediterranean area and the north. There was perhaps hardly

⁴ *Id.* iii. 71.

⁵ *Id.* iii. 307.

⁶ *Id.* iii. 307.

⁷ This pastoral husbandry on slave-managed ranches or sheep-runs was rapidly extended to the provinces as they became available for exploitation; e.g., Balmatia in 125 B.C. was no longer acquired than the Roman capitalists began the rearing of cattle there on a big scale. E. Pomponius Atticus possessed enormous cattle-runs in Spain (Cornelius Nepos, *Africus*, xiv. 8). It was the vast military needs of the time that made these so profitable.

⁸ Especially in Etruria (*Phil. Tib. Gracchus*, 4, and cf. Ferrero, iii. 305 f.).

⁹ Cf. the case of Cressa, who made much of his wealth by buying unskilled slaves and having them trained to various professions (Ferrero, i. 292 and 293; cf. H. J. Gressidge, *Hist. of Rome*, i. 241).

any branch of trade better organized than the slave trade itself, the foster-mother of all other trades of the time.

1. *Sources of supply.*—The Negro-land of that period was western Asia,¹ where the Cretan and Cilician corsairs, the real professional slave-hunters and slave-dealers, robbed the coasts of Syria and the Greek islands.² To such a pitch was the hunting pursued that about 100 B.C. the king of Bithynia pleaded, as a reason for his inability to supply the required military contingent, the ravages of the Roman revenue-farmers among the able-bodied population of his kingdom.³ At the great slave-mart in Delos, where the Eastern nations disposed of their human cargoes to Italian middlemen, as many as 10,000 head were said to have been landed and sold off in a single day.⁴ Many regions must thus have been permanently depopulated and permanently depressed below the margin of cultivation.

After the overthrow of the Macedonian kingdom at the battle of Pydna (168 B.C.) under the senate's orders, sold into slavery, i.e. to the speculators or wholesale agents (*recupratores*) who accompanied Roman armies for that purpose, 120,000 free inhabitants of 70 communities in Ephrus which had sided with Perseus.⁵ The defeat of the Cimbri and Teutones contributed a like number to the Roman slave-market.⁶ Caesar, as a single common sold into slavery 24,000 of the Aduatuci;⁷ and similarly, at the opposite extremity of the empire, Cnæus, after his own petty campaign in the Taures and the capture of the hill-fort of Pandionia, wrote to Atticus telling him how much the sale of the captives brought.⁸ Thus sold 30,000 Jews into slavery in the conquest of Palestine.

2. *Legal position.*—In law the slave was a chattel; he was the one human being who could be owned. He is not only a chattel (*res*), but is treated consistently in the legal texts as the typical chattel. Under the republic there were no legal limitations to the master's power; *in re gentium* his rights were unrestricted. Public opinion,⁹ however, and self-interest, combined with the religious sentiment connected with family life, exercised a powerful influence to the slave's advantage at a time when slaves were few and in closer relations with the master than was the case in later ages. The consens could also take note of outrageous cruelty to slaves as of other conduct unworthy of a citizen. In political and civic life the slave had no share; he could hold no public office nor sit in any public assembly; nor could he serve in the army.¹⁰

3. *Public slaves.*—A considerable number of slaves were employed in various public departments in subordinate duties. These formed a class standing somewhat apart from the rest of the slaves, and were known as *servi publici populi Romani*. They formed in fact a sort of rudimentary lowest grade of a permanent civil service, as at Athens, serving as messengers, magistrates' attendants, clerks, servants in temples,¹¹ assistants in the fire-water, and sewerage services, under the control of the *ediles*.¹² Under the empire the employment of *servi publici* diminished, and they were superseded by freedmen, except within the capital, as early as the time of Augustus.

4. *Status in religion.*—The exclusion of slaves

¹ Slaves from that region were regarded as being especially fitted for slavery owing to their great powers of endurance. Plautus comments the Syrians ('*gens quæ patitur in tantum et hunc mundum*' (*Trinummus*, 382)). Sardinians, on the other hand, were little worth (cf. Cicero, *pro Plancio*, 27-28); Plautus, p. 302: '*Sardi venales, alius alio asinus*'.

² Mommsen, *ll.* 204.

³ Strabo, *l.* 602.

⁴ Livy, *Epit.* 83.

⁵ cf. *Ant.* v. 22-3.

⁶ So even under the empire (see *Sen. de Clem.* 1, 28).

⁷ Death was the penalty for enrolment: cf. Livy xxi. 58 for the crucifying of 35 slaves, 'quod in campo Martio convenerunt'. See *Pliny, Resp. ad Trajanum*, 32 and 39. The state itself could of course override this rule, as was said to have been done after Cannæ.

⁸ Livy, *l.* 29; Tac. *Hist.* i. 61.

from the public culta was not due to any denial of their claim to divine protection, but simply to the fact that the gods were divinities of certain special groups, *gentes*, etc., to which slaves neither did nor could belong. Hence they could not share in the *astra* of the *gens* of their master. But slaves had a special cult of Diana, and were given special consideration at the festival of the *Saturnalia*, the most remarkable feature of which was the temporary licence granted to slaves in the household—slaves and free for the *nones* exchanging *roles*.¹ Within the household, slaves shared in the worship of the *Lares* and *Penates*. In the burial customs their common humanity is fully recognized, and the grave of the slave is declared as sacred as that of the *freeman*; he rests there with the other departed members of the family of which he was the humblest element. Hence memorials to slaves are among the commonest of funeral inscriptions. Slaves are also members (with their master's consent) of burial clubs (*collegia*).

5. *Marriage.*—Legally slaves were incapable of marriage, but it is abundantly clear from the literary and legal texts that they habitually entered into permanent unions, which were marriage in all but their legal aspect, and were in general respected as such by their masters; and the names of legal relationships arising through legal marriage—*uxor*, *pater*, *filius*, *frater*, and the like—were freely applied in the case of slaves, even in the legal texts, but, as is expressly said, by analogy only and without legal significance. In strictness, however, any such connexion between male and female slave, or between slave and free, could only be 'cohabitation' (*contubernium*), not *matrimonium*. Hence, in the case of free persons, enslavement of either party broke the marriage tie.

6. *Torture.*—A slave could not be party to civil proceedings, either to sue or to be sued; this must be done through his master. Nor could a slave be accused in a criminal case;² but he could 'inform,' i.e. make *delationes* of criminal offences, though not against his master (except, from the time of Severus, for certain specified offences; cf. the rules regarding slaves' evidence against their masters).

As a rule, the evidence of slaves was not admissible in civil cases, but there were some exceptions. Where it was admissible, it had to be taken under torture (*questio*), as in Greece; but recourse was not to be had to such evidence unless there was already independent evidence before the court. In criminal cases also the evidence of slaves must be elicited by torture, pronounced out of court under the supervision of the *questor*; it might be applied more than once.³ But a slave could not be examined under torture to elicit evidence against his own master, or, in the case of jointly-owned slaves, against either joint-owner.⁴

7. *The peculium.*—Though slaves were *pro nullis* in the eye of the civil and the praetorian law,⁵ they were in practice far from being nullities. Practical needs compelled recognition of a slave's individuality, and suggested those illogical com-

¹ See *Ulp.* p. 11, *The Sponsus*, London, 1913, p. 377; and cf. Seneca, *Ep.* xlvii. 14: '*homines illi in domo patris, his diuersis permixti sunt dominis, possident rem publicam esse indifferenter*'.

² The *Lex collegii*, *Legislatio* of A.D. 122, has survived, and shows slaves as members (Q. G. Brown, *Plautus and his Roman background*, Tabletes, 1909, 1, 684 f.; see S. Hill, *Roman Society*, p. 22 f.).

³ Hence, to save the principle, Hadrian enacted that complaints lodged by slaves, of cruelty on their master's part, were not technically 'accusations.'

⁴ Valerius Maximus, viii. 2: '*oculus tortus*'.

⁵ Tac. *Ann.* ii. 30.

⁶ But not at natural law (Ulpian, *Digest*, i. xlv. 20: '*Quod attinet ad ius civile, servi pro nullis habentur; quod ad ius naturale attinet, omnes homines aequales sunt*'). Slavery is the only case in which, in the strict sense of Roman law, a conflict is declared to exist between the *ius gentium* and the *ius naturale*. It is part of the *ius gentium* because it originates in war. The Romans therefore frankly admitted that slavery was inconsistent with the highest ideals of human society. The views of Aristotle, on the contrary, was that slavery realized the purpose of nature as formulated in those ideals.

promises which are inherent in the Roman conception and law of slavery, and in the Greek also, though there less striking because of the paucity of documentary evidence. In Rome, as in Athens, almost any industry now carried on by free men might be and was carried on by slaves;¹ in imperial times it is hardly an exaggeration to say that Roman commerce was mainly in the hands of slaves; they carried on business (e.g., banking) for their master, or were partners in firms; the whole sphere of private trading was shared by slaves in competition with free men, freedmen, and peregrini, before the development of the free procurator, or agent. It is this activity of slaves in the higher walks of mercantile and professional life—an activity which is at variance with the strict law of their status—that constitutes one of the most striking, and indeed hardly comprehensible, differences between ancient and modern slavery. For these activities demand for their exercise precisely those qualities of intelligence, industry, integrity, and mutual respect which in the conventional literary estimates of the slave are *totidem verbis* denied, and seem to moderns, partly on the basis of experience and partly through mere prejudice, incompatible with a status so degraded.

The institution which enabled the rich Roman to engage in commerce without that personal intervention which would have offended the social prejudices of his age, and at little risk, was that of the slave's *peculium*. The *peculium* was a fund which masters allowed slaves to hold and, within certain limits, to deal with as they pleased; in law it was the master's, but *de facto* it was the slave's. Originally it was simply the small savings of food and such like that a slave had a mind to make by cheating himself. Under the empire it might imply a great sum, and be in any form, even including other slaves (*securi*) and their *peculia*, to a total value greater than that of the principal slave in whose *peculium* they were held, and whose stock-in-trade they constituted. In dealing with it commercially the slave appears as quite distinct from his master, though his capacity is purely derivative from him, technically and in ordinary parlance dealing for himself, but in the eye of the law for the master's account. The *peculium* was thus a sort of property of the slave, so that upon his manumission by a living master, whether *voluntate* or *testamento*, he took the *peculium*, unless it was expressly reserved;² by manumission by will it did not pass to the slave unless expressly given in the will. But alienation of the slave did not carry with it the *peculium* unless it was expressly so granted.

8. Treatment.—The mutual goodwill and even familiarity of intercourse marking the earlier domestic slavery of the Romans gradually gave place to harshness and cruelty, though the legal position of the slave remained in essentials unchanged. Life, however, does not necessarily move always on the lines of strict logic and law, and it is always open for the individual to rise above the standard of his age, so that the actual position of the slave was no doubt very often much better in fact than it was in theory.³ In this later period also examples of happy relations between slave and master are not unknown, such as those between Cicero and his slave (later his freedman) Tiro⁴—though Cicero's general views on slavery seem to have been on all fours with those of Aristotle.⁵ Such also were the relations between Atticus and his slave Alexis,⁶ and between the younger Pliny and his *libertus* Zosimus.⁷ But such humanity was purely personal, or at best confined to limited and cultured circles,⁸ and represented neither the law nor average opinion and practice.

¹ Cf. Cicero, *de Officiis*, I. 42.

² In Greece apparently the rule was that the master manumitting or selling took the *peculium* unless he expressly waived his right (L. Mitteis, *Rechtsgeschichte und Papyri*, Leipzig, 1893, p. 226).

³ Cf. G. Buisson, *La Religion romaine*, II. 311.

⁴ See Buisson, *Cicéron et ses amis*, Paris, 1884, p. 115; R. V. Tyrrell and L. C. Purser, *Correspondence of Cicero*, Dublin, 1888, I. 100.

⁷ *Ep.* V. 70; and ad. VIII. 16.

⁸ Cf. Buisson, *Cicéron*, p. 118.

For with the economic revolution and the resultant broad distinction between the *familia urbana* and the *familia rustica* a greater distance had been put between master and slave.⁹ The slaves working on the estate, the stronger, rougher, less cultured and less tractable element, with which the master had as a rule little personal concern or contact,¹⁰ came to stand, in comparison with the slaves of the town house, somewhat as a penal establishment, degradation to which could be held in less esteem over the heads of the more favoured class.¹¹ The fact that the slaves on the country estate were now controlled by a *villicus*, himself a slave, was probably but an aggression of their condition.

Cato expressly withheld the sale of old, worn-out, or sick slaves for what they would fetch—the system he applied to cattle and the inanimate tools.¹² Balthus of sick slaves, he suggests, should be docked—a maxim adopted on other than hygienic grounds.¹³ The practical application of this advice must generally have meant the callous abandonment of ailing slaves to their fate. A slave, Cato held, should either be at work or be asleep, i.e. he must be as far as possible be reduced to the condition of a machine.¹⁴ Though he ate with his household slaves, his after-dinner leisure was devoted to administering to peasant slaves 'the proper number of lashes with a thong wielded by his own hand.'¹⁵ In the same business-like spirit, he allowed indeed the union or quasi-marriage (cohabitation) of his slaves, but only at a tariff, paid out of their *pecunia*—a practice which doubtless would not lack imitators.

What in Cato's régime was the outcome of a mean and unsympathetic nature was in later times the calculated product of systematic policy.¹⁶ Although it was universally recognized that harshness and injustice failed of their end,¹⁷ the very numbers of the slaves led to the adoption of extreme cruelty in their punishments¹⁸ and the application of the harshest methods of control.¹⁹ No limits were set by law, until long after republican times, and very wide limits by custom and the tone of society, to the lengths to which enmity, passion, fear,²⁰ or innate love of cruelty might go in punishing even the most trifling offences.

Among other things, the use of chains, no longer as a penal measure,²¹ but as a normal and constant precaution, and that not only for the slaves whom at work in the fields under the eye of overseers, but also when they were huddled at night in the *sepiæ cryptulae*, and even for women, became common.²² In Ovid's time even the house-parier was, by old custom, a chained slave.²³

Against such treatment the slave was, until the empire brought him a measure of relief,²⁴ quite impotent. Flight within Italy was in general hopeless,²⁵ and, even if effected, could at best but

⁹ The distinction between the *familia urbana* and the *familia rustica* was one of occupation (and therefore of type of slave), rather than of place (*Ulp.* I. xvi. 106: '*urbana familia est rustica non loco, sed genere distinguatur*').

¹⁰ Cf. Welton, *Hist. de l'économie*, II. 228. For monstrous exaggeration of despotism towards slaves by the unpaid freedman see the behaviour of Fallos (*Ulp.* I. vi. 14; *Tab. Ann.* xiii. 22).

¹¹ Cf. Lucian, *Phaedrus*, I. 170: '*longa enim ignotia extendere rare colunt*'; cf. Petronius, *Sat.* 37 and 48.

¹² *Hor.* *Sat.* II. vii. 117; *Sen. de ira*, II. 29. Condemnation to the mill (*gustulæ*) was perhaps as bad, to the quarries much worse (*Plautus, Captivi*, 681). The extremity of misery was reached by the slaves condemned to labour in the mines (cf. the mines at Laurium, and see Strabo's account of the Pontic mines, p. 602).

¹³ Cato, *de Agric.* II. 7: '*boves vetulos, armenta delenda, oves delenda, laborem, pellem, pistrinum vestes, ferramenta vasa, serum, semen, curram, arborum, et si quid aliud superfluum sit*'.

²⁵ Through the right of asylum at the emperor's statue (*Tab. Ann.* III. 20).

²⁶ The laws concerning *fugitivi*, and the legal interpretation of the term *fugitivus*, were very severe (see Buisson, *Roman Law of Slavery*, p. 101). *Fugitivi* were punished by law and cry, their manumission being annulled and reward offered. Professional *fugitivarii* were employed to hunt them

lead eventually to the violent end of the highway-man,¹ and, if unsuccessful, to the doom of the arena or the cross, or to the more fearful forms of private execution which were among the grim secrets of the slaves' prison.² Mommsen has summed up the facts of this later slavery:

'The abyss of misery and woe, which opens before our eyes in this most miserable of all proletariats, may be fathomed by those who venture to gaze into such depths; it is very possible that, compared with the sufferings of the Roman slaves, the sum of all Negro sufferings is but a drop.'³

9. **Gladiatorial slaves.**—Amid the general misery of this slave world two classes, doomed to a yet blacker depth, are to be distinguished—(1) the wretched property of the *lone* ('qui cogit invitas pati stuprum'),⁴ and (2) the gladiators of all varieties, kept either by private persons or by a *lanista*⁵ in his training-school (*ludus*).⁶ They were bound to their master by an oath (*auctoramentum gladiatorium*) to endure burning, bonds, flogging, and death by the sword, or anything else that the master ordered.⁷ Prisoners of war, slaves, and criminals (especially brigands and incendiaries) condemned to death formed the bulk of the class, which numbered in its ranks also a proportion of voluntary combatants (often freedmen).⁸

Men even of the type of Cicero⁹ and the younger Pliny¹⁰ speak approvingly of the gladiatorial combats as an education in bravery and contempt of death. 'Even a man of high moral tone like Tacitus, while he condemns Drusus for gloating over his gladiatorial shows, has only a word of scorn for the victims of the butchery.'¹¹ Among the Romans Seneca here also showed himself far in advance of his age, and a noble exception to its lust for cruelty.¹²

The rewards of the successful gladiator were great, exceeding even those paid in modern times to men of brawn and sinews and skill of this sort—the popularis auro, the praises sung by famous poets,¹³ and the favours of fair admirers.¹⁴ His fighting days over, the champion gained the wooden foil (*rudis*) of honourable retirement—fortunate if he escaped the honour of dying by the hand of a innate emperor;¹⁵ more often in a last unlucky contest he heard the blood-maddened crowd roar '*Habet*' as some younger and more

down (cf. Petron. Sat. 97). When caught, they were branded on the forehead (cf. 100) or nailed or sent to the arena (cf. the story of Androchus [Aulus Gellius, v. 14]).

¹ Cf. Petron. Sat. 111.

³ Ill. 308.

⁴ See art. *Prostitution* (Rome).

⁵ *lancista* of Servius (Origo 10) says this is an Etruscan word meaning 'torturer' or 'executioner'. The gladiatorial spectacles were introduced from Etruria; they were a survival of the practice of immolating slaves and prisoners at the tomb of a chieftain; at Rome also they were for long confined to funerals. Even Atticus invested in gladiators (as did others) to let out or to sell again to the nobles for the public games, or to such as wanted a game of roughs as bodyguard (cf. Cic. ad Att. iv. 4, ad Q. Fratrem, II. 4, 5).

⁶ Cf. Quintilian, Inst. 12. 31; 'in ludis fili, qui puerum nullum pariterum scilicet auferunt, nullus ad questionem veritatis est est.'

¹⁵ Cf. Sen. *Contagata*, 22.

agile arm got home, and saw the pitiless thumbs give the signal for the fatal stroke.¹

10. **Murder of a master.**—Not infrequently ill-treatment or an overpowering sense of degradation drove a slave, or even an entire household, to a desperate and bloody revenge.² 'As many loes as slaves' was held to be a truism,³ even by a naturally merciful master. This led to the atrocious rule that the death of a master by the hand of one of his slaves was the signal for the summary execution of every slave in the house.⁴

Apparently this rule was so far modified that there was substituted a general liability to torture with the object of discovering the murderer, who thereupon alone would be executed. Hadrian definitely limited the torture to such slaves as had been under the same roof, or hard by, or actually in the ship-mast's company—those who had presumably been near enough to render help ('*armis, manu, clamore at obsequio corporis*').⁵

A fearful instance of the operation of the old practice was given in Nero's reign, upon the murder of the city prefect Pedanius Secundus in A.D. 61. The monstrous horror of the proposed wholesale execution of the families of all the slaves of the senator—400 slaves of both sexes—caused an outbreak of popular sympathy.⁶ By this date a large proportion of the population of Rome was tainted with servile blood. Although apparently the actual perpetrator was known to have acted alone on purely personal grounds, the senate refused to make an exception, and Nero was compelled to guard by troops the roofs of the condemned slaves to the place of butchery.

11. **Servile revolts.**—Slave conspiracies directed against the state itself, as distinguished from outbreaks against the tyranny of individual owners, were familiar to the Romans from an early date. In respect of both kinds of servile outbreak the history of Rome is in striking and instructive contrast with that of Athens.⁷ Tradition carried back servile unrest even to the 6th cent. B.C.⁸ and to the social and political struggles of the Roman Commons⁹—just as at the end of the republic the warring factions relied in part upon slave support. As time went on, servile insurrection became ever more possible, and ever more dangerous, through the increase in the servile and semi-servile classes.¹⁰

It was in Sicily, where the servile revolt on a really great scale took place. The island was full of slaves herded in great gangs, branded like cattle, overworked under the lowest possible conditions of life, and in just expected or even urged to maintain themselves by violence and rapine, as was also the case on the great pastoral domains in Italy.¹¹ At the same time, the measure of precaution instituted by Plato and Aristotle,¹² against bringing together men of the same race, had been quite neglected; for the great mass of Sicilian slaves were of Syrian, or at least Asiatic, origin—a source which was reputed moreover to furnish the hardiest type of slave. The rising under Eunus, in 135 B.C., was suppressed by the consul P. Rupilius only after three years of warfare and the slaughter of over 60,000 slaves.¹³ Then came the great slave war in Sicily, lasting five years, under Tryphon (Syracus) and Athenion, from 135 to 130 B.C.¹⁴ Even more formidable was the insurrection of gladiatorial slaves¹⁵ under Spartacus, in Italy.

12. **Slaves in the civil wars.**—Naturally, the slave communities of powerful houses became an instrument of political warfare also, as waged in the

streets and environs of Rome by men like Milo and Clodius.¹ Clodius controlled the streets and the Comitia by means of his *operæ*, or 'gangs'.² In 68 B.C. he legalized the so-called *Collegia Compitalicia*, or religious guilds of the lower orders, to which slaves also were admitted;³ these received a semi-military organization.⁴ In the civil wars slaves also were called into play, as by Saturninus (100 B.C.), who tried to rouse them by the offer of freedom.⁵ 'The turning of slaves into soldiers is the proper work of civil war. . . . This is the final desperate act of a political party.'⁶ Sulla relied largely upon the 10,000 slaves whom he had called to freedom and citizenship.⁷

The last desperate throw of Milo was his attempt to raise the pastoral slaves of S. Italy.⁸ The senate itself, at the time of Catiline's conspiracy, determined to call out the gladiators of private citizens.⁹ Caesar goes out of his way to boast of the protection afforded himself by the gladiators bought by Milo.¹⁰ The assassins of Caesar were guarded by the gladiators of Decimus Brutus.¹¹ In the struggle between Octavian, Antonius, and Pompeius gladiators and other slaves were freely employed, and were not seldom tricked to their destruction when they had served their purpose.¹²

III. **THIRD PERIOD.**—The second period of Roman slavery extends into imperial times for about a century. It passes insensibly into the third period, which is marked by the cessation of the military expansion of Roman power,¹³ and consequently by a partial failure of the sources of slave supply. Being thus to a great extent thrown back upon the human resources already accumulated, the Roman slave-owners 'were reduced to the milder but more tedious method of propagation',¹⁴ and to a more careful conservation of their human property. Hence the prominence now assumed by questions of status where one or other parent was a slave. This enhanced interest in the practical problems of slavery, to which the legal genius of Rome had always given much thought, is from henceforth further complicated by the new factors calling for recognition. The result is that legislation in regard to slaves exhibits a sort of ebb and flow of humanitarianism. Although there is observable under the earlier emperors a tendency to ameliorate the servile status by legislation punishing various forms of cruelty to slaves (e.g., the decrees of Claudius in reference to the exposure of sick slaves), yet the legislation of Trajan was in this respect distinctly reactionary—a fact which may perhaps be connected with his renewal of external conquest. It is in Hadrian's time that the new spirit of humanitarianism and cosmopolitanism—that great social and spiritual change of so deep significance for the future of the world—in the main an outgrowth of Stoicism (q.v.), becomes a real factor in legislation. Hadrian is the first imperial representative of this new spirit, the operative principles of which had long before been formulated by Seneca (q.v.) and put in practice by that 'noblest type of a true Roman gentleman',¹⁵ Pliny the younger. Of Seneca it has been truly

said that 'no modern has more clearly discerned the far-reaching course of slavery.'¹⁶

It is significant of the mental quality of the mind of Hellenism, although the first reserved utterance of her philosophy on the slave question had been in defence of the 'peculiar institution', a development of that philosophy in the fulfurn of time formulated just as clearly and unambiguously the moral principles upon which the humanitarian legislation of Hadrian and the Antonines in this field was based; for these principles were no discovery of Seneca's, but had been in the air for generations before they had expression in the 'Stoic sermons' addressed to Lucilius or in the earliest documents of the Christian Church. They are of course but the simple development of that assertion of the natural equality of bond and free, upon the common plane of rational humanity, which had been promulgated by the unnamed critics against whom Aristotle argues. By then slavery had been attacked, not on grounds of its inexpediency, whether social or economic, but on those of a natural justice which slavery violated or definitely impinged.¹⁷

1. **Stoicism and slavery.**—The theory of life elaborated by Stoicism was that of a spiritual city with a spiritual law, a city not made by hands, the citizenship of which was gained through spiritual insight, whether of bond or of free. Thus the classical and Aristotelian position was abandoned in two directions: the *vita* yielded place to the cosmopolis, the *κοινὴ γὰρ τῶν ἀνθρώπων ἀρχή*, and slavery, the basis of the ancient city, gave place to equality of all men in the 'dear city of God'.¹⁸ That Roman conquest had made the Mediterranean area for the first time an actual political unity simply rendered things easier for the Stoic, by creating out of the multiplicity of city and nation-states the single world-state, or something very like it.¹⁹ But the same kind of opposition that is observed between Stoicism and the narrower social ideals of Aristotle is found also when Stoicism is transplanted to Italy. For the fundamental difference between Stoicism, or the religion of humanity, and early Roman thought is that the former maintained the existence of a bond of unity among mankind which transcended all the distinctions of the actual political and social organization.

2. **Amelioration of slavery.**—When the tramp of the legions had reached its destined limits, and the empire, in obedience to the obscure laws of its own evolution had ceased to expand, there began that slow economic process by which, through the intermediate stage of *serfdom*, the servile status of the producing class was changed into one of legal freedom.²⁰ How far the different emperors in their legislation furthering these changes, as by protecting the slave against his master, facilitating manumission, and elevating the freedman, were working with prescience under a definite conception of the economic and social tendencies of their age is a problem far too obscure to be lightly answered.²¹ Here, being concerned with the bare facts, and among them with such only as are significant for culture, we must content ourselves with tracing

²⁰ The history of the rise and development of serfdom, which falls outside the limits of this article, is given by F. de Coninghes, *Handbuch zur Geschichte des Feudalismus*, Paris, 1885, and E. Heisterberg, *Die Entstehung des Feudalismus*, Leipzig, 1876.

²¹ Cf. Ferrero, l. 385: 'The law of life was the same then as it has been in all ages. The great men of that day were just as ignorant as their fellows of the historic work of which they were at once to be the instruments and the victims.' see also what is said by J. B. Bury with reference to Justinian and his work (*Hist. of the Later Roman Empire*, London, 1880, l. 304). So, speaking of Constantine, J. E. Carver (*The Religious Life of Ancient Rome*, 1912, p. 110) says: 'He accomplished an extraordinary number of foolish things, yet we feel that these things did themselves through him rather than that he did them.'

the general tendency of imperial enactments and legal rules in favour of freedom.

Something was done to check subsidiary sources of slave supply by the prohibition of the exposure or sale of children or the giving of them in pledge for debt. A *lex Petronia* of the 1st cent. A.D. forbade masters to punish slaves by sending them to fight with beasts in the arena, except with the assent of a proper court. Hadrian made it illegal for a master to kill his slave, except after judgment before a magistrate;¹ Antoninus Pius held a master who killed his slave just as liable for homicide as if the slave had belonged to another. He further laid down the rule that a slave badly used might take sanctuary at a temple (*sanctuarium*) or the emperor's statue² and then initiate a magisterial inquiry into his case; if his complaint of excessive cruelty³ were made good, the slave was to be sold *bonis conditionibus* to another master.⁴ A series of enactments had by the time of Justinian gradually limited the master's right of punishment to reasonable emigration. Protection to the morality of slaves was strangely slow in developing. Domitian forbade the commercial castration of slaves,⁵ under penalty of forfeiture of half the offender's property; Hadrian increased the stringency of the law, and allowed the slave to lodge a complaint. Justinian confirmed all this in his *Novelle*, 142, and punished all concerned in the perpetration of the act, on whatever pretence, and declared the slave free. Protection to the chastity of female slaves was similarly long delayed, and very imperfect. Not until A.D. 428 was it made penal for *lenones* to employ their slaves in prostitution. Justinian made rape of an *ancilla aliena* a capital offence; but there is no penalty laid down for seduction of an *ancilla* by her own master.

As regards the natural relationships which arose between slaves, the marked distinction between the rules of law and the practice of everyday life has been noticed.⁶ Here also law tended to recognize the validity of practice informed with natural equity. Constantine laid it down that upon division of a property the slaves were to be so distributed as to keep together parent and child, brother and sister, husband and wife, thus recognizing not only the tie of marriage but also that of blood. Justinian went farther, and not only restricted the master's freedom of action so as to benefit the slave, but gave certain rights of succession to the issue of servile or semi-servile marriages, when one or other parent was manumitted.

Here may be mentioned the mass of legislation designed in the interests of orthodoxy from the time of Constantine onwards. Its purpose was to crush heresy and prevent proselytism to the non-Christian cults tolerated by the empire (especially as it directed against Judaism). This legislation culminates in that of Justinian consolidating earlier efforts. It provided that no Jew should acquire a Christian slave by any title whatsoever, and that, if he did acquire one and circumcised him, or indeed if he circumcised any non-Jewish slave, Christian or not, he should be capitally punished, and the slave be free. Further, no pagan, Jew, Samaritan, or unorthodox person was allowed to hold a Christian slave, but such slave was to be free, and the man was to be fined. Lastly, if any non-Christian slave or heretic joined the Christian Church, he *ipso facto* became free, without compensation to his master. This must have operated powerfully to foster the idea of the Christian faith as constituting an order within which the rights of oppression of various kinds found protection and privilege.⁷

¹ Hadrian called for five years a *Rufina* lady who treated her slave with atrocious cruelty on slight occasion (*Dig.* i. vi. 2; *C. Jus.* 202, vi. 401).

² In later times of course the Christian Church expounded these (cf. *Codes Theodosianus*, 12. 44. 13).

³ This was held by cover not merely bodily violence or starvation, but also *iniqua servitio*, which would probably cover attempts to debauch an *ancilla*.

⁴ Cf. the *Attic* rule; *Justin.* 12. 12: 'si interducentis videbitur postmodum servilis negotiorum servum esse venditor.'

⁵ *Nov.* Domitianus, 7. ⁶ *Justin.* 12. 5.

⁷ Cf. *art. 16* (Christian) and (*Jewish*).

3. Influence of Christianity.—It is evident from the above that, while the legitimacy of slavery continued to be firmly held, humanitarianism made its first conspicuous advance under Hadrian and the Antonines; and that the two hundred years following the first Christian emperor were comparatively barren in this respect. The legislation of Theodosius and Justinian marked a second advance, by its abolition of the restrictions on enfranchisement and the amelioration of the condition of freedmen, and its regulations in connexion with slave marriages (through the repeal of the *Servatus-consuetum Claudianum*) and the status of exposed children. But *per contra*, even under Constantine, the rights of property were still so strictly guarded that, even for crimes, slaves were forbidden to lay information against their own master—a rule to which Constantine allowed no exception, but enacted that in all such cases the slave proffering information was to be crucified unheard.¹ The emperor Gratian, under whom orthodox Christianity for the first time became dominant in the empire, improved upon this by a law which may rank among the most atrocious of Paganism.² It provided that, if a slave accused his master of any crime, except treason, the justice of his charge was not to be examined, but the slave was to be burnt alive;³ the same terrible punishment, under Constantine, was laid on the slave guilty of intercourse with his mistress. Even Justinian's legislation, though it is no doubt influenced by the new religion, yet has nothing to say about slavery being opposed; to either the spirit or the letter of Christianity; its guiding principle is expressed in a formula that is Stoic rather than specially Christian: 'pro libertate quam et foveat et tueri Romanis legibus et praeceptis nostro munus peculiare est.'

The change in sentiment and policy of which the above modifications of the law are significant, so far as they go—which is indeed not very far—was of much earlier date than the official recognition of Christianity, and even antecedent to its introduction into the empire at all.⁴ Perception of this fact gives the corrective of the exaggerated estimate, or rather the false historical perspective, in which the influence of Christianity upon the slave system of the empire is sometimes presented.⁵ Partly the change was the fruit of philosophy or higher thought of the time, partly it was the natural adaptation of sentiment to the existing economic facts. While we cannot deny that Christianity tended to discourage slavery, and to loosen the tie of slavery by humanizing the relations with masters, it is certain that the economical conditions which changed the slave system into the collocation and art system were the chief cause. Beliefs and sentiments generally adapt themselves to facts, and facts are in turn modified by beliefs.⁶ Such humanitarian sentiments and attitudes were not the exclusive property of Christianity. 'What is a Roman knight, or a *libertinus*, or a slave?' *Seneca* asks. 'They are more than, born of nobility or of wrong?' 'Slaves?' he says in one of his finest letters. 'Nay, rather they are men. "Slaves!" No, comrades. "Slaves!" No, they are lowly fellows, yes our fellow-slaves. . . . Remember that he whom you call your slave sprang from the same stock, is smiled upon by the same skies, and on equal terms with yourself breathes, and lives, and dies.'⁷ 'Virtue is fenced against none, but is open to all, admits all, calls to all—freedom, freedom, slaves, prisoners, exiles.'⁸ In such passages as these *Seneca* preaches, with the notion of an evangelist, all the doctrines on which the humane legislation of the Antonine age was founded, all the principles of humanity and charity of every age.⁹

Pliny the younger is like him in feeling that his slaves are of the same flesh and blood as himself,¹ and that towards them he has moral duties transcending the legal conventions of his time. His kindly letter on behalf of the repentant freedman of his friend Subrius Pater has often been brought into comparison with that of St. Paul addressed to Philemon on behalf of the runaway slave Onesimus.²

It has been pointed out that the services of Christianity in this sphere were of three kinds. (1) The ceremonies and discipline of the Church ignored class distinctions; slave birth was no bar even to priesthood. This, however, is no innovation of the Christian brotherhood, for such equality of membership is found in the mystery-religions and other social-religious unions.³ And, as in them, so in the Christian Church the participation of the distinction between bond and free is confessedly limited to those who come within the sacred pale; for those outside the Church, social and legal distinctions are left untouched, and therefore implicitly valid. Precisely the same attitude is forced upon the Church in modern times in dealing with similar conditions (often in deference to purely political considerations). That is to say, it has to be content to 'walk upon God,' in the sense that it must await the slow operation of what, humanly speaking, are secular causes. (2) In so far as Christianity imparted moral dignity to the servile class, by insistence upon the moral worth of just those qualities which were especially open for a slave to cultivate—obedience, fidelity, patience, patience, and resignation—it was but reinforcing the higher secular teaching of the time; and, like that, it found itself peculiarly heretofore most at variance with current conceptions and popular ideas of character. It would probably be correct, however, to see here the most profound and far-reaching influence of Christianity upon the social history of the empire; and not improbably much of the social hostility towards it was inspired by a perception of this fact of the inner sympathy of the new faith with the discredited and submerged sections of the population.⁴ (3) The claim that the Church gave a special impetus to the movement of enfranchisement does not seem to be borne out as fully as one would wish.⁵ It is at least a curious commentary thereon that the ecclesiastics 'were among the last to follow the customs that so liberally bestowed upon the belly' (Pater) and Christians continued to own slaves like their pagan neighbours. The historical fact is that slavery lasted in Europe for nearly 1000 years after Constantine—so slow is the working of the moral leaven, even when, as here, economic factors conspire with religious motives in effecting the ultimate freedom of labour.

The truth is that much of what is said on this topic tells for want of historical knowledge, or through actual suppression even in the interests of prejudice. We can hardly with justice claim that the Church in its infancy and youth, advancing not by leaps but by and through human volition conditioned always by immediate facts and the forces of inherited tendency and circumstance, should have seen things more clearly than proved to be the case nearly 200 years later when the 'three or four absolutely virtuous pages comprised in the history of nations' were written—written, moreover, largely in blood. Its action was not so much definitely official and mandatory as steadily influential for good, a *sermo crassus* in the heart of the individual slave-owner.⁶

4. Manumission.—Hardly anywhere better than in connexion with the manumission of slaves is the fundamental selfishness and meanness of antiquity observable. The emancipator never lost by his act, but probably in most cases stood to gain much.

Among the Romans manumission was less an act of liberality than an industrial speculation, the master often finding it more for his interest to share the profits of his trade or commerce of the freedman than to desert his title to the whole proceeds of the labour of his slave.⁷

Manumission was of two kinds—regular (*stato*), and informal (*stipulis stato*). Of the former class there were three varieties.⁸

(a) *Census*.—This was essentially connected with the republican constitution and forms, and was probably a very ancient mode. Under the empire, with the extinction of the censorship, it is practically obsolete. In form it was simply the *censor's* enrolment of the slave, under a name of Roman type, on the list of citizens,⁹ with his owner's assent. The slave became free and a Roman citizen. No conditions could be attached, though by means of a preliminary oath taken by the slave such could in practice be imposed.¹⁰

(b) *Vindicta*.—This mode was really a fictitious litigation or collusive action, in the form of an action brought by an *adversor libertatis*, who claimed the slave before the presiding magistrate as a free man; the part of *adversor libertatis*, in later times, was usually played by a *licitor*, who touched the slave with his wand (*vindicta*, or *festuca*), which gave its name to the method. As the point of the method lies in the official declaration that the slave is a free man, the freedom conferred is absolute; i.e., it cannot be suspended or made conditional either expressly or tacitly, though doubtless there were ways of circumventing this difficulty so as to safeguard the claims which the master wished to retain over the services of his freedman. It was not unusual to exact from the slave to be manumitted an oath before manumission covering such services; repudiation of the oath rendered the freedman liable to penalties as a *libertus ingratus*.¹¹

(c) *Testamento*.—This mode, by far the most important, is as old as, and therefore probably older than, the XII Tables. It differs from the preceding methods in that it is not based on fiction. It takes effect only upon the operation of a valid will, so that in general manumissions by this mode stand or fall with the will itself. Further, this manumission may be conditional or deferred (pending the event the man is a *stato liber*); the subject in the interim, until the arrival of the stated time or the occurrence of the condition, is exposed to the ordinary incidents of slavery, sale, etc., but he may not be brought into a worse condition or be deprived of his conditional right to freedom. Once effective, his liberty is irrevocable, subject to his performance of his duties as freedman.

(d) There were the only forms of manumission recognized as valid under the republic; but there were in fact certain other less formal modes. Of such there were several varieties—e.g., voluntary declaration *stato amico*, or *per opationem*. Such declarations were legally valid; but towards the end of the republic the praetor intervened to protect slaves who had been declared free in this way, so that they enjoyed freedom *de facto*, though not *de iure*.¹²

(e) To these forms of manumission must be added one in use from the time of Constantine—the *manumissio in sacrosanctis ecclesiis*. A constitution of Constantine in A.D. 315 says that it had long been allowed for masters to free slaves in *ecclesiis catholicis* before the people, in the presence of the priests. By a constitution of 321 such manumission is declared to give also the *status Romanus*. Hence it is surmised that this method was at first informal—a development of the manumission *inter amicos*. Justinian seems to have added the provision that there must also be a document signed by the master *inter testigos*. This method appears to be in part a descendant of

¹ Cf. *Juv. Sat.* xiv. 15; Pliny, *Ep.* v. 19.

² *Ep.* ix. 21.

³ Cf. Pliny's letter in Lightfoot, *Coloss.* and *Philem.*, p. 314.

⁴ Lecky, *Hist. of European Morals*, II. 661.

⁵ Cf. Schiller, I. 135.

⁶ Cf. I. 104 124.

⁷ When, in reference to St. Paul's Epistle to Philemon, Lightfoot says, 'The word "emancipation" seems to be something on his lips' (p. 321), we must hold that to be purely imaginary. The letter contains not the slightest hint that Philemon ought to set Onesimus free. The hope that he will receive him as a brother means only that the old tie should be beautified by the new relation of Christian fellowship. Certainly the phrase of v. 10: *si quis de foras, aut deo fecerit, carere non debet* is significant of manumission. There is no evidence that the thought of an ultimate general abolition of slavery being possible or desirable had ever occurred to St. Paul (cf. A. C. McGiffert, *Hist. of Christianity in the Apostolic Age*, Edinburgh, 1897, p. 378).

⁸ Lecky, *Hist. of European Morals*, II. 71.

⁹ The power of tradition in the blood is quite strong enough, often indeed is so powerful as to make progress but slow and doubtful, and to prevent the intrusion of new ideas' (F. Gardner, *Especially Spontaneous*, London, 1890, p. 100).

¹⁰ Cf. A. Delamann, *Light from the Eastern East*, London, 1810, p. 594; H. Leide, *Microcosmus*, Reg. 16, Edinburgh, 1833, II. 446; cf. also art. SLAVERY (Christian).

¹¹ *Mois. xii. 14*.

¹ Cf. *Cl. de Test.* 2: 'si quis ex testis, et iudicibus, per testamentum liber servus sit, non est liber.' The origin of Roman manumission is unknown; it is already an established institution at the time of the XII Tables (450 B.C.). *Dim. Hal.* (v. 25) credits the law about it to Servius Tullius, but little weight attaches to this.

² Cf. *Cl. de Test.* 1, 14.

³ This mode could be applied only in Rome, where alone the true Roman census was held. Strictly the entry of the name did not confer the *stato*; it was the fictitious removal of the record that the man was a citizen, under his proper name; but the legal mind of the Roman detected here a vice problem.

⁴ Cf. *Cl. de Aff. fil. II. 6*; *Test. Ann.* ciii. 25.

⁵ Hence such could not dispose of their *penitentiis*; cf. *Test. Ann.* ciii. 27.

the Greek mode of manumission by dedication in a temple to a deity.)

M. Aurelius and his brother authorized or regulated the purchase of freedom by slaves. This must have been an old practice in Rome, just as in Greece it was apparently the usual practice. The slave arranged with a third party to purchase him from his master, with money supplied by the slave, and then manumit him. The source of the purchase money was immaterial, whether it came from the slave's peculium (which in law belonged actually to the vendor, his master) or from a loan advanced by a friend or even by the purchaser by arrangement with the slave. A slave so purchased was said 'suis amicus erit'.¹ The purchase was fictitious (*imaginaris*), but was wished at by the law.

IV. *FREEDMEN*.—Upon formal manumission by a valid method a slave became a freedman (*libertinus*, if spoken of with reference to class; *libertus* [= *libertus*] in relation to his former *dominus*, who now becomes his *patronus*). In business relations with the world he was his own man,² but towards his old master and his family he continued to stand in a semi-servile relation,³ under certain ties recognized by custom and law.

1. *Social position*.—Liberated slaves were perhaps usually set up in business or industry by their old master, who indeed in most cases liberated them to that end, and they continued to act as his confidential agents in financial undertakings, and as managers of businesses in which the *patronus* was sleeping partner. A man was thus able to profit by trade while avoiding the social stigma of direct management, and, if he was a senator, he was thus enabled to evade the Clandian law of 218 A.D., forbidding senators or their sons to engage in commerce—an enactment which drove them partly to invest their money in land, i.e. in slave-worked estates, partly to defeat the law in various ways through business slaves and freedmen. The Clandian law thus indirectly encouraged manumission.

Freedmen, though citizens, were in an inferior position, as they had not *consecratio* with free persons, or the *lex honorum* (right of office or of sitting in the senate); nor could they as a rule serve in the legions⁴ or among the equites. Their political rights were really annulled by their being restricted to enrolment in the four city tribes.⁵

2. *Importance under the empire*.—One of the most remarkable features of the empire was the swift rise of freedmen to wealth and power,⁶ and the extraordinary importance to which individual freedmen attained, not only in the business world, but in that of imperial administration, in spite of the most violent prejudice and hatred felt towards them by aristocrats and plebeians alike. The inscriptions bear testimony to the extent to which wealth drifted into the hands of this class, just as in previous centuries it had tended to concentrate in the hands of a comparatively small section of *ingenui*, the great noble and the great contractor, and to be almost wholly withdrawn from the peasant and artisan. Since a freedman had no social standing to lose, the whole field of industry and trade, to which he had been trained as a slave,

was open to him; so that he became, from the economic point of view, the greatest enemy of the pure-blood Italian. Not only were the lower walks of trade and industry invaded by freedmen, but as capitalists and landowners on the largest scale, both in Italy and in the provinces, they became a power in the land, and were conspicuous for their liberalities to *collegia* and municipalities. It is to this class that we must turn if we wish to trace the rise of a free industrial and free mercantile element divorced from the social and political traditions of the ancient world.

They began to be regarded as the natural free workers of the community, who surrendered a portion of their profits to their superiors to maintain the upper and middle-class Italians in a luxurious idleness.⁷

Trimalchio, the self-made man depicted by Petronius, is in many of his traits typical of the class—of its opulence, its vulgar consciousness of success, and its utter lack of all traditions or standards, except such as were expressible in terms of money.⁸

It is under Sulla that, in the person of Chrysogonus, there first comes into view 'the artificial Greek freedman . . . a sinister figure, destined to reappear again and again in the days of the Empire as an instrument of administration, and to wield enormous power.'⁹ The regular use of slaves and ex-slaves as public officials began under Julius Caesar, who installed slaves of his household as officers of the militia.¹⁰ But the practice must go back to a still earlier date, to the time of C. Gracchus, who concentrated the most varied and most complicated functions of government in his own person.¹¹ In these multifarious activities Gracchus must have relied upon the skill and discretion of educated slaves and freedmen; just as did the great companies of publicans. 'The houses of politicians like Pompey, Crassus and Caesar were miniature government offices where numberless freedmen and slaves from the east were engaged on their master's work.'¹² It is of this class above all, both under the later republic and under the empire, that Ferrero's words hold good when he says that 'in the pages of too many modern historians the mighty host of the workers lies concealed and condemned behind the dominant personality of a few soldiers and politicians.'¹³

3. *The imperial freedmen*.—The system of employing in the imperial administration the household talent of the reigning emperor was a necessary concomitant of the empire itself; for theoretically the emperor was only the first citizen, and his administrative staff was simply that of his private house, with its hierarchy of slaves under departmental heads who were themselves also either slaves or freedmen.¹⁴ He had neither ministers of state nor a trained civil service, but was in theory his own secretary of state, chancellor, and minister of foreign affairs. It was not until the reign of Claudius, however, that the 'household of Caesar' was confounded with the commonwealth, and his freedmen placed 'on a level with himself and the laws'.¹⁵ The political importance of the emperor's personal administrative staff increased, so that his freedmen became really ministers of state, responsible solely to him, and presiding over new departments, or acting with increased power and independence abroad.¹⁶ The three great departments of controller of accounts (*a rationibus*), presided over by Pallas,¹⁷ secretary

¹ Cf. Mitteis, pp. 100, 378.

² Cf. Suet. *de lib. Gracch.* II.

³ A slave, having no legal name, had to have one made for him on manumission. He took the name (*nomen* and *praenomen*) of his old master, adding his own slave name as cognomen; cf. Cic. *ad Att.* IV, 27, 1.

⁴ A slave liberated by will was called *involuntarius libertus*, and the patron's rights fell to the children of the deceased.

⁵ This was the strict rule under the empire, so that a freedman, before he could be enrolled in the army, must have *republican* conferred upon him by the exercises of the imperial prerogative. But *libertini* were always freely employed in the fleet.

⁶ Mommsen, I, 196 f.; details in his *Statuten*, Berlin, 1874-85, III, 426 f. Cicero in reference to this approves of the action of T. Gracchus, censor in 185 A.D., saying that otherwise 'republicum quidem nunc via tenemus, iam diu nullum habemus' (*de Off.* I, 9 [38]). Cicero, of course, exhibits all the narrow prejudices of the *ingenue* class.

⁷ Cf. Petron. *Sat.* 38: 'et liberti sociati, qui omnia ad se trahunt.' In Martial's day 'freedman's wealth' has become proverbial (*Mart. Epigr.* V, xlii, 8; cf. Sen. *Ep.* xxvii, 4: 'et patrimonium habebat libertus et ingenium?'; see also *Jur. Sat.* I, 102 f., v. 328 f.).

⁸ Ferrero, I, 340.

⁹ Cf. Petron. *Sat.* 77: 'Credis mihi: aenum habemus, aenum valeas; habes, habebis'; and 12: 'Ah, auro erit et parvis fuit quadrante de stercore coactum tollere.'

¹⁰ Helldorf, *Römische Republik*, II, 428.

¹¹ Suet. *Jul. Cae.* 70: 'pecuniarie servae praepositi.'

¹² Mommsen, III, 358.

¹³ Ferrero, I, 341.

¹⁴ Cf. Suet. *Aug.* 67: 'It was a standing anomaly of the constitution that many offices which in a modern state would be important departments of the civil service were regarded as no more than posts in the chief citizen's household, unworthy of the dignity of any person above the rank of a freedman' (H. Furneaux, *Facile Augustum*, II, 52). Even under the republic 'the domestic transaction of official business was very large at Rome, for the State had given its administrators not even the skeleton of a civil service' (Greenidge, *Hist.* I, 16).

¹⁵ Tac. *Ann.* xii, 40.

¹⁶ E.g., Felix, brother of the freedman Pallas, 'quem uberioribus et alle peioribusque locis praeposuit, item regnum maritum' (Suet. *Claud.* 36; *Ac 249*), who 'exercised the power of a king in the spirit of a slave' (Tac. *Hist.* v, 6).

¹⁷ Tac. *Ann.* xi, 29.

(*as epistulis*), presided over by Narcissus,¹ and receiver of petitions (*a libellis*), presided over first by Callistus and then by Doryphorus²—all these being private freedmen of the emperor—originated or took their importance in this reign. The rule of these powerful and wealthy freedmen was one of the bitterest memories of the outraged aristocrats³—as though it had been the work of a set of mere menials rather than of men at the highest level of capacity and education. In spite of their many gross and obvious vices, the ability and immense energy of these freedmen are undeniable. The disadvantage of their use was that, for all their efficiency and fidelity to their imperial master, they were not legally state officials at all, and their actual position was a standing offence to the social prejudices of their time.

4. **The Augustales.**—The strict exclusion of *libertini* from magistracies and priestly offices, and from a seat on the municipal senates, was a public loss, as it deterred from public life and the constant distribution of wealth entailed by office precisely the richest and most enterprising class in the municipalities. To the problem of associating this class with the social and political ideals and organization of the empire Augustus early devoted attention. To this end he opened to the ambition of freedmen a field in the municipalities of Italy and the west by means of a new institution—that of the *Augustales* and the *Sacri Augustales*.⁴

V. **ECONOMIC AND SOCIAL EFFECTS.**—Investigation of the economic effects of slavery upon the Roman community is at once one of the most important and most difficult chapters in the history of the institution. To what degree did slave labour interfere with the development of free industry? An answer to this question would involve primarily an accurate estimate of the number of slaves found in Rome at a given moment, and the proportion they bore to free adults.

We have no statistics as to the number of urban slaves, public and private; much less can we discover the total slave population of Italy or the number of free-towns. Both slaves and freedmen are spoken of vaguely as a vast multitude, so great as to awaken alarm in the mind of any one who faced the facts.⁵ The statement of Aulianus⁶ that 'very many' (*equales*) Romans possessed 10,000 and over 30,000 slaves is no doubt an exaggeration. The freedman, C. Cael. Iulianus, under Augustus, lost much property in the civil wars, but left at his death 4119 slaves;⁷ Pegasus Secundus had 400 slaves in his city establishment.⁸ But there is no doubt that in Rome as in Athens the vast majority of the people possessed no slaves at all. A reasonable estimate puts the urban slaves at 600,000 or 800,000.⁹

'The history of the Roman Republic is largely the history of the wealthier classes.'¹⁰ Of the poorer classes we know little, as we hear of them only in the mass, and generally only as a political instrument in the hands of the demagogues. They must have had some means of livelihood other than the cheap corn distributed by the government (which indeed was not distributed gratis until 58 B.C.). This applies still more forcibly after the number of recipients was ruthlessly cut down from 320,000 to 160,000 by Julius Caesar,¹¹ to a little over 200,000 by Augustus.¹² The continued existence of the trade guilds (*collegia opificum*) in the last

century of the republic (though then largely misused as instruments of anarchism, *collegia sodalicia*) must, it seems, indicate that some freemen at least, in spite of the prejudice against small industry and retail trading,¹³ made their living by such labour. Some indeed have gone so far as to maintain that even under the early empire a freeman could always obtain work if he wanted it¹⁴—in spite of the competition of slaves, and of *libertini*, who, as bound to their *patronus*, must in this connexion be reckoned with the true slaves. A large number of urban slaves worked within the great houses of the rich,¹⁵ making them to a great extent self-supporting, but not directly competing with the small freeman, though undoubtedly restricting the field of his enterprise. Probably still larger in the aggregate was the class of slaves employed by contractors for public and private works, for public shows, and for all the activities of the various classes of *publicani*. Many of these slaves had been specially trained for their work.¹⁶ This is the class which directly competed with free labour, for the free citizen either was not sufficiently well educated for these posts or was too independent for manual labour, apart from the fact that the stigma attaching to labour, other than agriculture, was very pronounced.¹⁷ It was obviously as easy to hire from his master the sort of slave one wanted as to hire the services of a freeman from himself, without any certainty that he was capable of doing the work. The slave, it was certain, would do the work—his master would see to that. Hence both the skilled and the unskilled forms of labour would appear by a natural law to have been almost wholly in slave hands, except in so far as freedmen and their children, having gained special skill and habits of industry in slavery, retained a place in the industrial world. The whole tendency of the later republic and the empire was in the direction of 'permanent endowment of the unemployed.'¹⁸ As regards the country estates, the tradition had always been that the farm should be as far as possible self-supporting;¹⁹ but this had not implied that it should be run solely by slave labour.²⁰ Hired free labourers²¹ were called in when extra hands were wanted, as at hay-harvest-time, or for the gathering of olives, and the vintage; Varro²² also recommends the use of hired labourers rather than one's own slaves in unhealthy districts. Nevertheless the tendency was to make such properties more and more self-contained and self-supporting, so that even Varro's farming, which stands midway between the small farming of early times and the later plantation system, is essentially slave-farming and leaves little room for free labour. Upon the cattle-runs of S. Italy the work was apparently entirely in the hands of the half-wild herdsmen,²³ and here the economic system had sunk to a more primitive level; the same was true of Etruria also.²⁴ Here the exclusion of free labour

must have been absolute, for life on the estate-run was below the culture level of the Roman populace.

Two remarkable facts stand out in this inquiry. (1) The Roman proletariat, so far as appears, never at any time complained of the competition of slave labour as depriving them of bread, though the Roman populace wanted bread badly—even Cicero, superficial as are his social and political judgments, admits that the corn-law of Gracchus was necessary.¹ (2) The Roman slave-owners, though the shrewdest men in the world, never seem to have had any doubts about the comparative advantages of slave labour. Both classes—and the same is true of Greece—persist, the one in acquiescence in, and the other in an application of, a system which is now held condemned not only in its moral basis but also in its economic results. Yet the Roman proletariat showed itself all through its history by no means unready to proceed to the most violent measures in relief of its grievances; and, on the other hand, we have no right to assume on the part of the Roman capitalists a stupid inability to gather from experience in what direction their maximum profit lay. It is undeniable that the Roman grandees found their account in the slave system as actually worked; only when the financial conditions altered, under the later empire, did slavery give place, in obedience to the law of maximum profit, to a new economic form, which indeed is very old—that of serfdom. In this connexion it must be noted that the Gracchan movement would be entirely wrongly interpreted as a protest of free labour against a slave system which deprived the freeman of the right to live by his toil. When Tiberius Gracchus cried that the beasts had their lairs, but nothing was left to Roman citizens save the air and the sunshine, that those who were styled masters of the world had no longer a clod they could call their own,² he was protesting, not against the slave system as such, but against a vicious system of land-distribution and of land-tenure, and his aim, like that of his brother, was not to revive the free labourer, but to re-establish the free peasant proprietor; the anonymous appeals to him were not that he should abolish the slave, but that he should restore to the poor their share of the public lands.³ The failure of the Gracchan legislation, so far as it did fail—in proving unable to check the influx of the country population to the capital—was due to the fact that it 'offended against social ideals rather than against economic tendencies.'⁴ Yet it is accepted almost as an axiom that it was the slave system, and the slave system alone, that ruined the Italian middle class of small proprietors and created the urban proletariat.

It is of course on the moral and spiritual ground, not on the economic, that slavery must ultimately be judged. That wide and deep demoralisation which results for both master and slave is sufficiently obvious in the case of Rome alone. On the one hand, the slave-owners, with no feeling of responsibility, except that of mere self-interest towards those who were absolutely at their mercy, fell into that despotic temper which found its logical but unexpected final expression in the insane cruelties of the successive masters of the Roman world. On the other hand, the existence in Italy of tens of thousands of men for whom all ties of race and kindred and home had been snapped at a stroke, for whom no moral standard thenceforth held good but that of their master's

will, for whose conduct the only sanction was corporal punishment in its most debasing forms, for the vast majority of whom life offered no faintest prospect of moral or social independence and development, meant, at its lowest valuation, a permanent and terrible menace to the whole community. The evil was accentuated by the fact that this poisoned reservoir was not fenced off by the law, nor guarded by nature's colour-signal, which only those for whom the claims of their native race and culture already stood for little dared disobey; on the contrary, from this tainted source an ever-flowing stream was directed into the free population by the way of manumission. The condition of social progress, viz. the gradual elimination of class inequality, was certainly in a degree achieved thereby, and the decay of the native population to some extent made good;⁵ but it was unfortunately from the most corrupted and most pernicious class—that of the urban slaves—that the freedmen who were the active agents in transmission of the blood-taint were mainly derived.⁶ The steady stream of manumissions meant that the blood of the lower and middle classes of Latin stock was, generation after generation, losing its purity and becoming contaminated into a mongrel mixture of blood derived from nearly every race in the empire—and that only after its purveyors had been for a longer or shorter time submitted to all the deleterious influences of slavery. At a comparatively early date the effect of this process was manifest.⁷ To argue that such qualitative distinctions are historically and philosophically invalid, and to point to the fact that in the fullness of time the blood which Scipio reviled was destined to produce a new race,⁸ is not permissible, for it was after all true that, in comparison with Thracians, Gauls, Germans, and Asiatics, the Italian peoples had been and still were the vehicles of higher culture, and that, in so far as the elements assimilated through manumission were derived from Greece, it was nevertheless from a Greece decadent and debased.⁹ The criticism rightly taken, however, is directed not against the mere fact of incorporation of diverse alien material, but against the ill-regulated and fortuitous way in which the incorporation proceeded, and the absence of any selective process worthy of the name, the whole field being in fact abandoned to a capricious and haphazard operation which gave no guarantee that only those most deserving of the honour attained it—a process entirely contrary to that lengthy education through which the larger political groups within the Italian peninsula itself had been incorporated with the republic. It is surely passing strange that aliens were freely admitted to citizenship provided that they entered by the door of slavery, whereas the incorporation of individual foreigners on grounds of personal merit was the rarest thing¹⁰ and mostly the result of jobbery. Dionysius of Halicarnassus in the time of Augustus gives remarkable expression, as the result of his own experience, to the

evil effects of this indiscriminate system of manumission, with suggestions of a remedy.¹ But the collapse of the empire was not brought about by slavery,² but partly by the inclusion of undigested masses of barbarians³ (who play on a larger scale within the empire the rôle previously played by slave-masses within the body politic of Italy), and partly by the vicious non-productive economic system of the empire itself.

SLEEP.—See DREAMS AND SLEEP.

SMĀRTAS.—1. The Smārtas are an important sect of Brahmins, found mostly in the south of India, their chief seat being in the Mysore State. There are also many in the Central Provinces. They derive their name from *smṛti*, 'what was remembered,' or tradition, as distinguished from *śruti*, 'what was heard,' inspired or revealed truth, only orally and audibly transmitted. As Mann¹ explains it, *śruti* means the Veda, *smṛti* 'the institutes of the sacred law.'

The Smārtas worship the triad of Brāhmā, Śiva, and Viṣṇu under the mystic syllable *Om*, and, while admitting them to be equal, exalt Śiva as their chief deity. They hold the pantheistic Vedānta doctrine of *advaita*, or non-dualism, which means that the universe is not distinct from the supreme soul. The leading tenet of the sect is the recognition of Brāhmā Para-Brāhmā as the only existing being, the sole cause and supreme ruler of the universe, and as distinct from Śiva, Viṣṇu, Brāhmā, or any individual member of the pantheon; to know him is the supreme good. The attainment of complete wisdom results in *mukti*, or liberation, and reunion with the divine essence. But, as the mind of man cannot elevate itself to the contemplation of the inscrutable first cause and only soul, he may be contemplated through inferior deities and sought through the prescribed rites and exercises. This creed thus tolerates all the Hindu deities, and the worship of the following was, by Śaṅkarāchārya's express permission, taught by some of his disciples: Śiva, Viṣṇu, Kṛṣṇa, Śōrya, Sakṛi, Gayatrī, and Bhairava. The distinctive marks of a Smārta Brāhman are three parallel horizontal lines, of pounded sandalwood or of the ashes of cow-dung, on the forehead, with a round red spot in the centre. The Dāṇḍa of the north of India are an outcome of the Smārtas; they are mendicants.

The founder of the sect was Śaṅkara or Śaṅkarāchārya (q.v.), the celebrated Hindu reformer of the 8th cent., and apostle of the Uttara Mīmāṃsā or Vedānta. Their *guru*, or spiritual head, is the Śringeri Swāmī, designated the Jagad Gura, or priest of the world. He is a man of eminent learning and an ascetic of great sanctity, trained for his office from boyhood. His claims to

⁴ *ibid.* 10.

reverence are admitted by all votaries of Śiva, whether of the Smārta or of any other communion. The enormous sums obtained from the piety of his disciples during his tours, on which he is often away for several years, are spent with a lavish hand in hospitality and works of charity so called. Śringeri, Śringa-giri, or Rishya-Śringa-giri, the site of the monastery, is a most picturesque and fertile spot on the bank of the Tungā river, sheltered by the Western Ghāts, in the Koppa taluk of the Kadur District of Mysore. The *jāgṛ*, or landed estate, is about 8 miles long by 6 wide.

2. **Subdivisions.**—The following are some of the subdivisions of the Smārtas, in certain of which are also included some members of the Mādhyas (q.v.) sect. The Mādhyas had their origin in the northern (Bādaga) districts (245) and speak Kannada. The Deśastha are immigrants from the Mahratta country and mostly retain the use of Mahratti. The Nabbar Kannaḍa, Kannaḍa Kannaḍa, and Uḍia Kannaḍa nearly all speak Kannada, a few Telugu also. The Kannaḍa country seems to have been to the east of the Kolar District. The Mūḍi-ṇāḍ or Mūḍi-ṇāḍ are from the Kadapa District and speak Telugu. The Hayaṅgaḍa, also called Vajraṅgaḍa, derive their name from the old Hoysala or Hoysala Kingdom east of course speak Kannada. The Aravali, or the Rā. Thumman, speak both Kannada and Telugu. The Aravali Nyaḡi are a branch of them who are leishers, or devoted to secular callings. The Chitṭāvan are Mahrattas. The Hayaḍa, or Hayaḍa are immigrants from Raḡga, the ancient name of N. Kanara, and they are almost entirely confined to the west of the Sūṭṭaga District. They are now principally engaged in the cultivation of arena-out gardens. They lay claim to original descent from the north of India. The small communities of Kandarava, Kavarpa, Kopa and Kōḷivara, Kūḷathala, Suvarga (properly Suvargala), with the Svali, are all Tulu Kēḷamāra, immigrants from N. Kanara, the ancient Tāḷava, and mostly located in the western districts. They engage in agriculture and trade and speak Tulu and Kannada. The Kārḷa or Kārḷa are Mahrattas from Kārḷa. Some are employed in the Revenue Survey. The Kōṭṭavāḷa are also Mahrattas, from the Kōṭṭan. The Nandavāḷa are from the Telugu country and speak Telugu and Kannada. The Prathamādāḷa or Madyādāḷa also speak Telugu and Kannada. The Śaḷavāḷa are immigrants, like the Chitṭāvan, from the Mahratta country. The Sakkēḷa are from Madhira and speak a corrupt mixture of Tamil and Kannada. There are two branches—the Kōḷḷa and the Kōḷḷaḷa, so named from the place in which they first settled, which are in the west of the Kannaḍa and Mysore Districts. The Sakkēḷa reverence a prophetic named Nāḷāḷaḷa or Nāḷāḷaḷa, who seems to have been instrumental in causing their migration from their original seats. The Rāḷa (Śrīṇāḷ) speak Kannada and probably derive their name from Śiva in the Tōṭṭa District. The Vajraḷaḷa all speak Telugu. So do the Vēḷḷa, who resemble the Mūḍi-ṇāḷa. They are mostly in the south and east. The Vēḷḷaḷa speak Kannada.

3. **Śringeri.**—The fortunes of Śringeri, of such vital importance to the Smārtas, have had their ups and downs. It is worthy of note that the same neighbourhood was the cradle of two great states, thus proving it to be what is called 'heroic soil.' It was the birthplace of the Hoysala, who developed into a first-rate power, arrested the Chola invasion in these parts, and finally drove the Cholas out of Mysore, thus becoming rulers of the whole country. But on the collapse of the Hoysala kingdom through Muslim invaders from the north, in the 14th cent., an interregnum was created. Advantage was taken of this by the head of the Śringeri *maḷa* to aid two princesses who had been connected with the Hoysalas to found a new kingdom, which before long expanded into the great Vijayanagar empire, embracing the whole of S. India. Mādhyava, surnamed Vidyāraṅga, 'forest of learning,' the abbot of Śringeri, himself became the first minister, and after him the capital was first called Vidyānagara, eventually changed to Vijayanagar, 'city of victory.' It was now that the *maḷa* was endowed with lands and entered on a prosperous career. But Vijayanagar fell a prey in 1565 to a confederacy of Muslim powers, and evil times overtook Śringeri. It was reduced to ruins, and its lands were seized by any one who could get hold of them. Meanwhile the Keladi or Bednūr kings in the north-west of Mysore had been extending their power and absorbed all Kanara and Malabar, with regions beyond to the north. They, in common with all the neighbour-

ing states, had adopted the new Vira Saiva or Lingayat (g.v.) faith, which had spread with great rapidity throughout the Kannada and S. Maharashtra countries. To them, nevertheless, the guru appeared in person and was successful in enlisting their support. The ruined buildings were rebuilt and the lands restored. At the same time, the guru judiciously resolved to recognize the Lingayats, as being votaries of Siva, though they would have nothing to say to Brāhmana. Since that time the place has been in safety, and, after the Kaladi or Bednūr kingdom was subdued, has been liberally maintained by the Rājās of Mysore.

4. Other mathas.—Other mathas besides Srīngeri were established by Saṅkarāchārya in various parts, which are still in operation. The most notable is the Badarikāśrama at Kedarnāth in the Himalayas. This is where he died, at the early age of 32. The temple there is to this day always served by a Nambūtiri Brāhman (known as the *rāvaṇ*) from Malabar, which was Saṅkarāchārya's native country. Other mathas are at Dvāraka in Kathiawar, Jagannāth in Orissa, and Kambakonam in Tanjore. There was thus one at each cardinal point of the compass.

LEWIS RICE.

SMOKING.—1. Smoking to produce rain.—In primitive society, where the food-supply is governed directly by the rainfall, the attitude of man is intensely practical and calculated to produce states of emotional intensity. The emotions must find vent somehow; this they do in representative and emotional ceremonies to produce the desired result. When primitive man wants rain, he does not imitate it, but endeavours actually to make it.¹ He has learnt by observation that the gathering of clouds presages the fall of rain, and consequently, he argues, to make clouds is the equivalent of making rain. Now nothing would more readily suggest to his mind the phenomena of clouds than smoke, and it is therefore not surprising that this substance frequently figures in rain-making ceremonies.

Thus the Bedonkoos burn the stomach of an ox at evening because they imagine that the black smoke will produce rain-clouds,² just as the Tarahumara Indians of Mexico envelop the whole country in smoke in the spring by burning the grass, in order to gather rain-clouds. Likewise the Zulu Indians of New Mexico set fire to the grass and trees at the summer solstice in order to make a great cloud of smoke, while bull-herders are evening and prayers offered imploping the rain-makers to water the earth.³ Every four years in August, when the corn is a foot high, a sacred dance is performed by Zulu maidens carrying baskets of corn, while a man of the Frog clan smokes a cigarette of native tobacco over vessels of water and stalks of green corn. The object of the rite is to ensure a supply of rain and the growth of corn.⁴

Among the Omahas of N. America, when the first thunder is heard in the spring, the Elk and Bear clans assemble in a sacred tent belonging to the Elk clan. There one of the Bear people takes a pipe (from a sacred bag) and hands it to one of the Elk men with tobacco from an elk bladder. Before the pipe is smoked, it is held towards the sky and the thunder-god is addressed. After the pipe has been smoked, the rain always comes.⁵

2. Smoking to produce trance.—It not infrequently happens that various psychological experiences are produced by inhaling the smoke of certain plants—a fact that has led primitive man to regard smoking as a means of getting into communication with the spirit world. Thus in the Hindu Kush the *daigai*, or sibyl, inhales the smoke from the smouldering sacred cedar with a cloth over her head, till she is seized with con-

vulsions and falls to the ground.⁶ The smoke of the same wood is also inhaled by the prophet among the Takims on the border of Kashmir in order to keep off evil spirits before he utters his oracle.⁷ The sacred laurel was inhaled by Apollo's prophetees before she prophesied,⁸ and in Madura the woman who is to act as the medium of a spirit inhales the smoke of incense, sitting with her head over a smoking censer. Gradually she falls into a trance, and her utterances are regarded as oracular.⁹ By smoking tobacco the sorcerers of Brazilian tribes raise themselves to ecstasy in their convulsive orgies and see spirits. The Bororo Indians (Brazil), e.g., bless the new maize by an *arotowari* (medicine-man) working himself into a frenzy by dancing, singing, and incessant smoking, and in this condition biting into the husk and uttering shrieks from time to time.¹⁰

Among the Baganda of Central Africa a priest is set apart as the vehicle of the manifestation of the late king's spirit. The royal tomb is visited five months after the death of the king by his successor's sons, three chiefs, and a few robbers. One of the party enters and seizes the head from the late king's body, brings it out, and puts it in a heap for insects to eat of the flesh. The skull is then washed and filled with wine and later with milk, after the former has been drunk by one of the priests. The lower jaw-bone (*luwaga*) the special portion of the body to which the ghost of the deceased clings—is put into a separate house shaped like a bee-hive. This 'temple' containing the jaw-bone and umbilical cord (*luwaga*) of the king is divided into two compartments—an outer one, into which the ordinary people are admitted, and an inner one, where the spirit of the departed king is said to dwell. In front of the partition is a throne covered with lion- and leopard-skins, and in front of this is a rail of spears and knives, keeping the entrance to the throne sacred. When the *luwaga*, or priest, who is to be possessed by the king's spirit, wants to converse with the people in the king's name, he first comes to this throne and speaks to the spirit inside the inner room, telling it the business of the people. He then smokes one or two pipes, and after a few minutes he begins to rave, being possessed with the spirit, and speaks in the tones of the late king.¹¹

3. Smoking to produce guardian spirits.—Young men of the Blackfoot tribe of N. America use pipes in a ceremony for acquiring a guardian spirit. They 'go up on to a hill, and cry and pray for some animal or bird to come to them. . . . They take with them a pipe and tinder and flint, and a native weed or bark for smoking (not matches or tobacco). When the pipe is filled, they point the stem to the sun and say, "Pity me, that some animal or bird may come to me!" Then they address the trees, the grass, the water, and the stones in the same manner.' The animal or bird that appears to them in their dreams becomes their guardian spirit.¹²

4. Smoking as a means of propitiation.—Smoking is employed in ceremonies to propitiate gods, animals, and stones. (a) *Gods*.—The Omahas of N. America begin an undertaking by smoking a pipe with a prayer: 'Great Spirit, come down to smoke with me as a friend! Fire and Earth, smoke with me and help me to overthrow my foes!' The Comanches of the prairies send the first puff of tobacco-smoke to the Great Spirit, and the second to the sun. The Creeks, who regard the sun as a symbol of the Great Spirit, send him the first puff of the calumet at treaties, and the Natchez chief smokes towards the east at sunrise.¹³ Among the Thompson Indians of British Columbia, when the first tobacco of the season is gathered and smoked, an elderly man assembles all the inhabitants of each lodge, arranging the smokers

(male and female) in a circle while he stands in the middle. He then addresses the company, cuts up some of the tobacco, and, after mixing it with bear-berry leaves, fills a large pipe, lights it, and hands it to each of the individuals in turn, following the sun's course. Every one takes a whiff and, holding up his hands, blows the smoke between the fingers and over the breast, praying to the Tobacco Chief to be kept from sickness and death.¹

The Hañga and Iñkê-sabe, or Black Shoulders clans, of the Omahas are in possession of two pipes made of red pipe-stone and decorated with porcupine quills. According to Anahahebe, the aged historian of the Omahas, the old men made seven pipes and carried them round the circle formed by the tents of the tribe. They gave the first pipe to the head of the Iñkê-sabe gens, and then passed on to the Hañga, to whom they handed a firebrand with which to light the pipes for the chiefs. The Bear, Blackbird, and Turtle people received no pipe because they feared them. The Eagle people, however, not being feared, were given a pipe, and the remaining five pipes were distributed among the 'good' sections of the other clans. This tradition is based on the belief that these seven pipes are symbols of peace.² On ceremonial occasions the two pipes kept by the Iñkê-sabe are brought out of the sacred bag in which they are kept with the other tribal relics, and solemnly cleaned and filled by Iotassanah-men, who, while performing these functions, recite certain formulae. They are lit by a member of the Hañga clan, and are passed round the circle of the chiefs assembled in council on tribal affairs. Both pipes are smoked by the chiefs, who blow the smoke upwards, saying, 'Here, Wakanda, is the smoke.' This is done because they say that Wakanda gave them the pipes and he rules over them.³

(b) Animals.—Before setting out on a bear hunt, the American Indians offered expiatory sacrifices to the souls of the bears slain in previous hunts. When a bear was killed, the hunter lit his pipe, and putting the mouth of it between the bear's lips, blew into the bowl, filling the beast's mouth with smoke. Then he begged the bear not to be angry at having been killed and not to thwart him afterwards in the chase.⁴ The Assiniboine address prayers to the bear and offer to it sacrifices of tobacco, belts, and other valued objects. The head of the animal is often kept in camp for several days and ornamented, the pipe is offered to it, and prayer made that the natives may be able to kill all the bears they meet without harm to themselves.⁵ The trader Alexander Henry has described the apologies offered by the Ojibwas to a bear which he killed near the winter camp in 1764. The animal was reminded that it was an Englishman who had done the deed and was requested not to lay the fault upon the natives. The next day the head of the bear was placed on a new strand of blanket, pipes were lit, and tobacco-smoke was blown into the nostrils to appease her anger.⁶ A similar ceremony was performed in the same district when an Englishman killed a rattlesnake. It was addressed as grandfather and smoked over, and its protection was sought for the Indians and their families.⁷

(c) Stones.—The Huron Indians of Canada offered tobacco to certain rocks, such as the one called Tashnubi Arasta (the abode of Tashnubi, a kind of

bird of prey), which apparently stood at one time on the bank of the St. Lawrence. This stone is said to have once been a man, and it was thought that in the hollows of the huge boulder a demon dwelt. In consequence tobacco was deposited in one of the clefts of the rock by the natives as they paddled up and down the river, and the spirit was addressed thus: 'O demon, who dost inhabit this place, here is some tobacco which I offer to you. Help us, save us from shipwreck, defend us from our enemies, cause us to do good business and to return safe and sound to our village.' Likewise every spring the Mandan Indians approached a thick porous stone some 20 ft. in circumference, and solemnly smoked to it, alternately taking a whiff themselves and then passing the pipe to the stone.⁸ The following morning certain marks (secretly painted on the stone during the night) were examined and deciphered.⁹

LITERATURE.—The literature has been given in the footnotes.
E. O. JAMES.

SNEEZING.—See NOSE, § 4.

SOBRIETY.—The relation of sobriety¹ to temperance and moderation (qq.v.) has been variously understood. Aquinas regards sobriety as a part of temperance.² Jeremy Taylor, on the other hand, says that sobriety 'hath within it [includes] the duties of temperance, chastity, humility, modesty, and content.'³ The fact is that the word in its widest sense is equivalent to moderation.

¹ *Sobrietas* (Latin) is similar to *sobrietas* (Greek) and *sobrietas* (Hebrew).
But, inasmuch as it is 'chiefly praiseworthy' to observe moderation in the matter of drink, since drink in a greater degree than food impedes the use of reason, sobriety may be regarded as a 'special virtue' designed to guard against 'the special impediment of reason' which is involved in excessive use of strong drink.⁴

1. As a special virtue, sobriety is a duty particularly enjoined upon the young, on women, and on the Church-ruler.⁵ Speaking generally, Scripture is far from discouraging or prohibiting the use of wine. It was, indeed, forbidden to the priests at the time of their ministration and to the Nazirite during the period of his separation,⁶ but generally 'wine' is regarded as the symbol of all that is most generous and joyous in human life. Its good effects, however, depend upon strictly moderate use, and St. Paul's words in Ro 14²¹ imply that there may be cases in which total abstinence is a way of showing true brotherly love; in other cases it may be a condition of personal perfection.⁷

2. In the NT use of the word *σωφροσύνη* we see a gradual extension of the word 'sobriety' to other spheres. In 1 Th 5⁸ the word *σωφροσύνη* is opposed to *μεθυσμός*, but *σωφροσύνη* in 1 Ti 3² is evidently understood by early commentators to imply something more than abstinence from the disabling use of strong drink. Thus Chrysostom⁸ says: *σωφροσύνη δὲ τοῦ σώματος . . . διατηρεῖται, καὶ ποτὶς παραχθὲν ἀναχθῆναι τοῖς ὀφθαλμοῖς*. He adds that the multiplicity of cares and worldly business usually hinders the growth of this grace.⁹ The wider use of *σωφροσύνη* appears also in 1 P 1²¹ & 2¹. It is used in these passages metaphorically to mean calmness of temper, watchfulness, and self-control.¹⁰ Thus in

⁶ *BBW*, pt. v., *Spirits of the Corn and of the Wild*, II, 224.

1 P 1st the duty of 'sobriety' is closely connected with that of 'girding up' the loins of the mind, checking the vague wandering of thought and speculation, etc.

Sobriety in this sense 'guards' us against the 'intoxication' of false prophets, against false views of *theology*, against moral and doctrinal suppositions.¹

In the same way, St. Paul opposes to intoxication the duty of being 'filled with the Spirit.'² The word, however, that is more frequently used in this connexion is the verb *supporis*; the adv. *suppositus* is also found,³ and *suppositus* at least once, in this sense.⁴ The grace of sobriety corresponds to the actual condition of the world, and to the fact that human life necessarily involves warfare and struggle, demanding the vigilance of a soldier and the endurance of an athlete.⁵

(1) According to the teaching of the NT, sobriety thus includes watchfulness against the great enemies of our salvation,⁶ and against the danger of being overcome by the intoxicating draught of pleasure, the pressure of worldly care, the example of an evil world. This is the temper enjoined by our Lord in Mt 24-25, Lk 12³⁰⁻³² and 21³⁴⁻³⁶; the watchful heart, the girded loins, the lighted lamp are symbols of the spirit which should animate the Christian in a world full of hidden snares, deceits, and allurements.

(2) Sobriety also includes a moderate and temperate use of creatures, 'a moderate delight and satisfaction in prosperity,'⁷ the temper that does not expect too much of life and is not inordinately dismayed or depressed by adversity. Bernard speaks of sobriety as the counterpart of two forms of intoxication:

'Exterior voluptatum effusio, interior caritatum occupatio.'⁸

Sobriety accordingly involves restraint in the matter of pleasure,⁹ and the curbing of curiosity. Practically the duty of sobriety in this aspect is identical with temperance (q.v.).

'The sobriety of the soul consists in humility, and in being content with necessities.'¹⁰

(3) A very important part of sobriety is a just self-estimate. So St. Paul insists,¹¹ having regard to the general needs of the community and the necessity that each individual should realize his true function and place in it.¹² Sobriety in this sense is equivalent to 'the philosophic mind' which comes with years.

'As we grow older . . . we take more and more our right place in the social organism. . . . We recognize that we are members one of another.' That is a fact which involves a claim—the claim that we should love our neighbour as ourselves. We recognize that our neighbour cannot suffer without the other members suffering with him. . . . We come to accept our limitations, internal as well as external. . . . It is only in middle age that most of us are able to say calmly of our needs: "We must increase, but I must decrease."¹³

(4) Finally, sobriety is the temper that results from a particular view of the world and of life—a view everywhere implied in Scripture, and equally removed from shallow optimism and from pessimism. There is a frame of mind which perhaps finds its typical embodiment in men like Bishop Butler.

'We should,' he says in a characteristic passage, 'propose to ourselves peace and tranquillity of mind, rather than pleasure.'

after high enjoyments. . . . The miseries of life brought home to ourselves by compassion . . . would forget in us that moderation, humility, and sobriety of mind, which has been now recommended: and which peculiarly belongs to a season of recollection,¹⁴ the only purpose of which is to bring us to a just sense of things, to recover us out of that forgetfulness of ourselves, and our true state, which it is manifest for the greatest part of men pass their whole lives in.¹⁵

This temper is characteristic also of Wordsworth and the whole 'Romantic' school of poets. Christianity sanctions and encourages it, in so far as it frankly recognizes the presence and power of evil in the world, and the close relation that exists between physical and moral evil. The Christian habitually bears in mind the inevitable limitations of human nature in respect of knowledge, power, and character. The spirit described in 2 Co 5¹⁹⁻²¹ is this: 'sorrowful, yet always rejoicing, perplexed, but not in despair.'¹⁶ This is a temper which, as we have said, corresponds to the facts of life, and which is not unmindful of the divinely ordained regenerative forces which are at work in the world, counteracting the disturbing and disintegrating elements introduced by sin, sorrow, and death.¹⁷ It is a temper which finds its characteristic view reflected in the Bible, which 'looks on the world as God's world,' and with severe truthfulness takes account of the stern and sombre aspects of human life.

'the heavy and the weary weight
Of all this unintelligible world.'¹⁸

Henry Bishop Wilson, perhaps as 'our greatest wisdom' 'a constant seriousness of temper; an universal care and exclusion of life, an indifference for the world; self-denial, sobriety, and watchfulness.'¹⁹

The Christian character is a union of opposites. The sobriety described above is quite compatible with fervour of spirit,²⁰ joy and peace in believing,²¹ and cheerful thankfulness 'for all things.'²² In a world like ours all things

'Do take a sober colouring from an eye
That hath kept watch o'er man's morality';²³

but the reign of God is a truth which counterbalances the impression made on the heart by the stern and sombre facts of life. The site of St. Peter's martyrdom at Rome is marked by an obelisk bearing the inscription:

'Christus cinxit; Christus regnavit; Christus imperavit;
Vixit Leo ex tribus diebus.'

Sobriety is the temper which has great things in view, and which, because it believes in the victory of God, learns to 'use the world as not abusing it.'

R. L. OTTLEY.

SOCIALISM.—Socialism, with all that it implies and reveals of the desires and possibilities of human life in this world, stands in thought and history as gathering into itself tendencies, ideals, impulses, visions, and activities, theoretical and practical, which are as profoundly significant as any in our modern civilisation, and the power and worth of which for the future of mankind no one would be justified in estimating on a low scale. By enthusiastic believers socialism has been described as in itself a religion; and the fact that for thousands of earnest men and women, feeling themselves crushed in the tangle and welter of human existence, something called 'socialism'—often something crude, indefinite, tinged with the violence of discontent—has been indeed substituted for religion, and made the goal of effort and the standard of

conduct, is an indication both of the passion and the enthusiasm for humanity which lie behind all socialistic theories, even the crudest, and of the failure on the part of religion, as usually understood, to meet desperate problems and high aspirations in the life and thought of modern men and women. It would be unwise and unworthy to present socialism as an insignificant thing, whether we deal with it as a theory or complex of theories about existence, as a vision of what human society might be and perhaps ought to be, or as a comprehensive ideal to be achieved in the future. Socialism belongs to the big things of human history and endeavour.

As practically all writers on the subject have confessed, socialism is difficult to define with accuracy and brevity in such a way as to cover all that the term contains, still more all that it means for those who most sincerely and devotedly use it. Socialism has been called a religion. In modern history it stands before the observer as distinctly a 'movement,' something with its ground and origin in life rather than in thought, in the factory, the workshop, and the slum rather than in the study. But it appears equally as a theory, or more truly a complex of theories, economic and political, concerned with social existence and organization. On occasion it may advance to the rank of a philosophy. It has been described as the 'economic philosophy of the suffering classes.' Again and again, by upholders and opponents alike, it has been set in contrast with the philosophy of individualism (p. 9), however that may be defined. In the later years of the 19th cent. socialism became an organized political force in all Western States, with its programmes, national and international, its representatives in legislative assemblies, its parties, and its press. Socialism may, therefore, be considered in any or all of these aspects, and attempts at definition made accordingly. Further, it may be treated simply as an ideal and defined or described under the form of a Utopia. A definition that shall cover all the possibilities seems beyond attainment. The best way of approach is probably through a study of the history of socialism, as a theory and as a political force, with a steady and sympathetic eye upon the actual conditions of human existence out of which the theories developed and within which alone they could be turned to weapons of practical endeavour.

I. HISTORICAL SURVEY OF SOCIALISTIC IDEAS.

—In this article it is impossible to treat the history of socialism with any completeness of detail. Only a survey sufficient to bring out the chief characteristics, and this mainly in the region of socialistic ideas rather than socialistic effort, will be attempted.

1. **SOCIALISM A MODERN DEVELOPMENT.**—It is important to recognize from the outset that socialism, as a historical fact, both in its theoretical aspects and as possessing political and practical importance, is a modern development. If socialism were so indefinite as to be only the philosophy, explicit or latent, of the suffering classes of mankind, or if we include under it any and every attempt at emancipation on the part of people in economic and social enslavement, or again any vision at any time of a better social future for humanity, any ideal 'Republic' or 'Civitas Dei' or 'Kingdom of Heaven' that imagination has bodied forth, then there has always been socialism; but it is rhetorical exaggeration to push back socialism beyond the limits of the modern period. Those limits are fairly definite. They may be taken to be, on the one hand, the French Revolution and, on the other, with less accuracy as to delimiting dates, that series of changes, in the social and economic structure of civilization, from the basis of feudalism, the land, and economically individualized production, to the basis of commercialism, capital, machinery, and collective production, which is summed up under the phrase 'the Industrial Revolution.' We need look no farther back than the last quarter of the 18th cent. for the beginnings of socialism.

2. **EARLY SOCIALISTIC THOUGHT ILLUSTRATED: ITS SOURCES.**—J. T. Merz¹ points out that the historian Michelet opens his *History of the Nineteenth Century* 'by introducing three great Socialists.'

¹ *History of European Thought in the XIXth Century*, Edinburgh, 1896-1912, IV. 472 ff.

It is a significant beginning, and reveals profound insight into the deeper currents of 19th cent. life and into the importance of socialism. The socialists whom Michelet names are Babeuf (1764-97), Saint-Simon (1760-1825), and Fourier (1772-1837).

These men, he says, 'emerge about the same time from the prisons of the Terror. Their ideas, to begin with, are in no wise discordant; they have the same point of departure: humanity, pity, the outlook on extreme misery. . . . Whichever opinion one may form of the three famous Utopists, we must admit that their systems, even their eccentricities, sprang from an admirable emotion, from the rising of a most generous feeling. Babeuf asks only for the division of deserted lands, abounding everywhere, in order to make them productive: *Right* is the single basis, the universal right of men to a sufficient living. Saint-Simon desires *Progress*. . . . Fourier craves for *Harmony*.'

Far more important than the 'systems' which these men desired or the practical demands which they made are, as Michelet suggests, the motives underlying their writings, the controlling ideas with which they worked, and the assumptions on which they rested. They aimed, in the end, at nothing less than an entire reconstruction of society, a radical alteration in the whole method and manner of human living. In so doing they established from the outset a characteristic of socialism which it has always retained, and lapse from which may truly be regarded as lapse from genuine socialism. Both as theory and as movement, socialism seeks to envisage and to establish an order of social existence totally different from that which is characteristic of modern industrial civilization. The order of social and economic life which the Industrial Revolution induced was accompanied from its inception by the demand for an altogether new order. In a sense, though not quite in the sense intended by him, the contention which, as we shall indicate, Karl Marx insisted on as so important, to the effect that the capitalistic order of life contains within itself the seeds of its own destruction, is true enough. Revolt has been with modern industrialism all along, its second self, its perpetual shadow. The mind and heart of modern life, which in the French Revolution, despite awful failures and disillusionment, received as rich an emancipation, have ever been in conflict against machinery, the peculiar force in the Industrial Revolution; and socialism represents in no small degree the persistent struggle of mind and heart against machinery. Feelings of pity, a sympathetic enthusiasm for humanity, belief in equality and brotherhood and the rights of man, distrust of 'civilisation,' a strong sense of the injustice and ugliness of poverty and misery—these emotional and spiritual qualities, so potent in producing the mighty upheaval in France, lived on into the era of the factory and the machine as perpetual incentives to criticism and discontent; they are the moral springs of every consciously elaborated socialistic theory, even the most apparently materialistic, and they are the real sources of energy in every socialist movement. It is, therefore, significant that men like Saint-Simon and Fourier, who influenced socialism in the beginning, were more Utopian than scientific, more akin to the poets than to the sociologists or economists, more open to the logic of the heart than to that of the philosophy of history.

3. **Saint-Simon.**—If socialism seeks a beginning in the thought of Saint-Simon, Fourier, and their followers, we must admit that it originates from men who had a genuine passion for humanity. They sought after a complete reorganization of society which should allow human beings full opportunity to develop and display the qualities of humanity which they possessed; they believed in the natural goodness of man, in his natural ability to achieve absolute truth, and in his natural and inalienable right to full and satisfying life. The systems which they imagined as likely to give

² Michelet, *Hist. du XIXe siècle*, I. 1, quoted in Merz, *loc. cit.*

human nature the best chance to be itself would hardly pass muster now as in accord with received socialistic theory. Saint-Simon, *e.g.*, who directed his sense of revolt mainly against the ancient régime and viewed the approaching change to industrialism as good in itself, seems to contemplate an ordering of society in which spiritual power shall be vested in men of science, and temporal power in representatives of the property-possessing class, leaders of the new industrialism—a disastrous heresy, viewed from a later standpoint. The contrast between labour and capital, so prominent in subsequent theory, is not present to him. In the writings of his later life his interest, it is true, becomes more and more fixed on the question of the condition of the poorest classes in society. In his *New Christianity* (1825) he emphasizes this aspect of the matter repeatedly and develops the view that the main function of society is the betterment of the moral and physical existence of the poorest class; society ought to organize itself in the way best adapted for attaining this end. This was Saint-Simon's final interpretation of the Christian ethic, a true philosophy of the suffering classes, and an attempt, not noticeable in his earlier works, to place his social theories on a religious basis and present them indeed as a necessary fulfilment of Christian truth. Saint-Simon's writings contain many fruitful and brilliant ideas, and there are few of the great social problems of modern life on which he does not touch; but his schemes have historical interest only. His main contribution was to present plainly the truth that the crucial problem of the new modern world which he saw opening before him would be nothing less than the ultimate organization of society as a whole. Among his more immediate followers, in the midst of many extravagances which brought the whole complex of his ideas into disrepute, we find notions which were destined to play a great part in later socialistic thought. The definite attack on private ownership, soon to become one of the cardinal characteristics of socialism, finds emphasis, and there is development towards doctrines of extreme communism; whilst the conception that the principle of association (co-operation) must be fundamental in social organization becomes prominent; we get the first hints of the emancipation of women and of the doctrine of the political and economic equality of the sexes as necessary to worthy social life.

2. Fourier. — The underlying assumptions on which Fourier, a clearer and more systematic though less influential thinker, rested his views were much the same as Saint-Simon's. He believed in the ultimate, native goodness of human nature, and desired a social organization that should give freedom for full exercise of every individual's capacity and desire. Set free from restraints, human nature, he believed, would inevitably work towards harmony. The social system which he imagined as adequate to meet the need for freedom is interesting as representing a tendency in socialism opposed to the corresponding dominant tendency of the Saint-Simon school. Whereas Saint-Simon looked rather to centralization and what we might call bureaucratic government, by scientific experts, as the way of social salvation, Fourier envisages a tremendous development of the small, autonomous group—a kind of village commune with full local self-government—as the basis of social organization. He thought that such an arrangement would allow a greater measure of real freedom to the individual than any other method, freedom for the individual being the object of social organization.

These two tendencies, the one towards centralized government and the absolutizing of the State, the other towards group-organization and decentralization—the spreading of

autonomous power over as wide an area as possible—appear again and again throughout the history of socialism and might even be taken as differentiating schools of socialist thought one from another. Saint-Simon represents one tendency, Fourier the other. Intellectually and spiritually the one thinker belongs to the camp of the bureaucrats, the other to that of the anarchists. Socialism knows both.

These early French thinkers, and we may say practically all who can be described as socialistic thinkers throughout the first half of the 19th cent., developed their ideas on the basis of a profound belief in human reason and in an underlying natural law, natural right, natural harmony of created things, due to the goodness of God or of Nature, which it was the highest business of reason to discover and to accept. In their view the ultimate principle of reality, God or Nature, had intended an orderly and harmonious creation, and as part of that creation an orderly and harmonious human society, in which man could be happy. The principles of that natural social harmony and organization existed in *rebus aeternis* and only required looking for. 'Has not Nature,' exclaims Cabet, a typical socialistic thinker of the time, 'endowed us with intelligence and reason with which to organise happiness, society, and equality?' True social organization is a matter of knowledge and perception; only reveal the underlying natural principles of society to mankind, educate men's minds, and their reason will accept and act on them and all will be well.

3. Rousseau.—In all this belief in reason and natural right and order, which had and still has so much to do with the vitality of socialistic speculation, there is clearly discernible the influence of the spiritual forces that helped to bring about the French Revolution, and particularly the influence of Rousseau (*q.v.*), the father of so many of the greatest ideas in modern thought. It was very largely from Rousseau and kindred sources that the early socialistic thinkers learnt their belief in the goodness and perfectibility of human nature, their distrust of civilisation and consequent demand for a new start in history, a complete change, their conviction that mankind needs and must have, and can rationally devise, a political constitution and an economic and social structure that shall give the individual full freedom of personal life, and their optimistic faith in progress and education.¹ Convinced, thus, that man was intended for happiness and was by nature a social being, and yet seeing all around them unhappiness, misery, crimes, disorders of all kinds, they could only conclude that the laws of nature had been defied or misunderstood, and that the way out of the morass was a new application of reason to the discovery of these laws and a complete re-organization of society on the basis of them. The fact that other thinkers of the period also believed in a 'natural' order for society, and thought that they had discovered that natural order in industrialism, free competition, and equilibrium, does not seem to have troubled the pioneers of socialism very much. Views opposed to their own belonged, no doubt, to what Owen called 'the irrationality and insanity of the past and present state of the human race.' Although the systems of the first socialists differ considerably from one another in detail, the authors of them are agreed in the conviction that the rational order is different from the one in which they lived, and tend to reach agreement also in the belief that among the natural principles of social harmony and organization there may be found at least two which are to be regarded as axiomatic: (1) that *common property* is *natural* and therefore necessary to happiness,

¹ All the early socialists were great believers in propaganda and had a remarkable faith and trust in mankind's power of understanding. They thought that man had only to be shown the truth in order to act upon it.

(2) that labour is the only title to property. All socialistic economies may be said to be variations on these fundamental themes.

4. Robert Owen.—A very interesting and remarkable illustration of socialistic ideas, of the rationalist and Utopian kind, is to be found in the writings and the practical activities of Robert Owen (1771-1858).

Owen was a man of extraordinary capacity and great personality. His career was a varied and amazing one; in the course of it he rose to wealth and European reputation as a successful manufacturer with novel ideas of treating his workers, and sank to poverty and ill-repute as an advocate of extreme communism, a supporter of social change and militant trade unionism, and an experimentalist in communist settlements. As a 'model employer' in his famous factory at New Lanark he introduced reforms, amenities, privileges, opportunities of education, for his work-people, which shewed on his part a deeply humane insight into the social problems and sadness of the new industrial era, and also laid down the lines that were later followed in many respects when legislation had to step in, to remedy some of the worst evils of competition and mechanical industry. The direction and character of his later activities may be illustrated by such facts as these: in 1828 he established, at his own expense, a communist society at New Harmony, Indiana; in 1830 he attempted, on a small scale, the establishment of 'an equitable labour exchange system, in which exchange was effected by means of labour notes, the usual means of exchange and the usual middlemen being alike superseded'; in 1834 he was mainly responsible for the appearance, with amazing though short-lived success, of the 'Grand National Consolidated Trades Union,' with syndicalist ideals, in 1835 for the 'Association of all Classes of all Nations,' a preliminary sign of socialistic internationalism.

Owen's socialistic thought, which chiefly concerns us, set forth mainly in his *New View of Society* (1813) and *The Book of the New Moral World* (1836), is based on the familiar belief in reason and natural right and in ultimate principles of natural social order and social harmony which reason can discover. Those principles Owen thought he had discovered, and in his writings he undertakes to explain them for the benefit of his fellows. Give, first of all, freedom to human nature, and it will develop a form of society in harmony with natural law. Systems of restriction are due to the stupidity of man refusing to follow reason; they prevent human nature doing its proper work. The present social system is a monstrous imposition which must be got rid of; enlightenment of reason and education will achieve its destruction. Owen apparently believed that there once was historically a true social order, in accordance with nature, and the new order which he desiderated was a reproduction of that first paradise. The eternal principles of natural social order were communistic. By natural right, property is common. Therefore the institution of private property must be abolished. Owen contended (and the contention has been repeated in socialist teaching time and again) that the institution of private property is the root of all divisions and separations in society, the basis of economic poverty and of the difference between rich and poor, and the source of all jealousies, rivalries, strifes, and wars; private property, he maintained, is not necessary to meet human needs, nor is competitive industry, based on private property, the best way of satisfying legitimate human wants. Co-operative labour, aided by science and machinery, would produce so much wealth that not only would all needs be supplied, but there would be abundance beyond all wants or wishes, so that 'any desire for individual accumulation or inequality of condition' would cease. This communism of the natural order Owen carried to some lengths with regard to the institutions of marriage and the family, making marriage an easily terminable contract, whilst his extreme belief in the necessity for the free play of individual preferences and feelings and his equally extreme distrust of man-made laws led him far, though with inconsistencies, in the direction of anarchism.

¹ Cf. Kirkup, *Hist. of Socialism*, p. 67.

Owen was not content with preaching his socialistic communism; he made valiant attempts to practise it, dreamed somewhat by the heroic, though mistaken, idea, which appears over and over again in socialist history, that the best way of destroying the present evil social order and establishing the new natural and good order is to start out at once and build 'communities' within the existing fabric of society, on the basis of the laws discovered by reason. Owen tried this method and failed, though not before he had created considerable interest and set going a stream of potent influence. A recent socialist writer has said that the promulgation of Owen's ideas on the 'community' forms a landmark and may be reckoned as the beginning of modern socialism. The claim is extreme; but without doubt the ideas which Owen expounded have played a tremendous part in socialist thought, whilst the sentiments from which his ideas drew their inspiration are characteristic, both in their good points and in their defects, of every socialistic Utopia that has been imagined, portrayed, or attempted.

Another not unimportant aspect in socialistic thought which finds remarkable illustration in the ideas of Owen may be mentioned here. He seems to have perceived with great clearness that the troubles of social existence under the new régime of machines and factories were economic rather than political; he was concerned more with the worker at his work than with the citizen in the larger life of the community. He was among the first to envisage the social situation definitely from the point of view of the economically enslaved workman. As a result, he and his followers were often thought to be lukewarm towards the agitations for political reform and the securing of the franchise, which aroused much popular enthusiasm at the time. Owen did not believe that the way to the social, and still more the economic, revolution which he desired lay through the controlling of political and parliamentary power. Political democracy appeared to him 'quite secondary to Industrial Democracy, or the co-operative ownership and control of industry answering to the economic co-operation in all industrial processes which had been brought about by machinery and factory organization, and which had removed manufacture irrevocably from the separate firesides of independent individual producers. . . . Owen and his more enthusiastic disciples were persuaded that a universal voluntary association of workers for productive purposes on his principles would render the political organization of society of comparatively trivial account.'

When his isolated communities of producers failed to realize his dream, Owen hit on the idea of turning the trade unions, defensive combinations of workmen, into the voluntary communistic associations, 'National Companies,' as he called them, which should supersede both the capitalist manufacturers and the State. All that the workers had to do was to combine into such associations of producers as Owen imagined, and the capitalistic system was doomed. Just how the associations of producers were to secure the transfer of industries from the existing proprietors Owen does not seem to have made clear; he does not appear to have approved of violence, and the concept of the 'general strike' is not adopted by him, although that method was advocated by contemporaries.

In various forms this idea of voluntary co-operative associations of producers has appeared frequently in socialistic thought and effort.² But the notion of turning the trade unions into such associations was distinctly an inspiration on the part of Owen himself, and, so the quite recent history both

¹ Cf. Sidney and Beatrice Webb, *Hist. of Trade Unions*, new ed., p. 130 f.

² We may instance the social workshops—associations of workers provided with capital by the State—conceived and attempted by Louis Blanc in France about 1835 (see his *Organisation du travail*, Paris, 1839). Ferdinand Lassalle, the founder of German socialism as a political force, advocated associations of producers working with capital supplied by the State, as a practical method of reform. We may mention also the self-governing workshops favoured by the 'Christian Socialists' in England.

of trade union theory and of socialist theory has shown, a much bigger and more fruitful idea than some of Owen's critics have allowed. The point, however, to be emphasized here is that Owen's ideas in this respect sprang from the fact that, in envisaging the social and economic problem of his time, he fixed his attention on the worker as producer, the worker at his work, more than on anything else. Freedom for the individual in his industrial life, the power of self-government and self-control there, was what Owen wanted to secure. The fact is that, like most of the Utopians of his time and since, he begins his socialism with the individual. There is another school of socialist theory which begins definitely with the concept of 'the State,' the community as a whole, 'society' as such, the 'social organism,' and so forth. The difference is very great, with regard both to the way in which the socialistic Utopia is envisaged and to the methods by which it is to be achieved.

There has been a tendency in some socialistic writers to treat almost with contempt all this earlier socialist speculation. Marx and Engels described it all alike as 'Utopian,' a term not overburdened with respect, in contrast with their own 'scientific' socialism. Others have quarrelled with it because it has no real philosophy of history, no sense of historical evolution, above all no concept of 'the State,' whilst its criticism of social conditions is rejected as sentimental. The sources of its intellectual origin in the rationalism of the 18th cent. are suspect. Its inclination towards extreme communism in economic theory and voluntaristic anarchism in political theory makes it repugnant to some types of mind. But no one can really hope to understand socialism without consideration of its early Utopian period. Ideas characteristic of all socialistic thought were then and there developed, or at least set going. But, even more significantly still, these early Utopians—and this feature is characteristic of all others like them—reflected and expressed the usually voiceless feelings and aspirations of oppressed masses, and particularly of the crushed and unvalued individual, out of which socialism most truly springs, and they never failed to awaken the passion for freedom and individuality without which socialism is unrecognisable. In default of a philosophy of history and a sense of historical evolution they had faith in humanity, belief in the perfectibility of man by education, and a strong apocalyptic idealism, leading them to expect the dawn of a new era, as it were, on the morrow.

III. EARLY SOCIALISTIC THOUGHT AND RISING DEMOCRACY.—Socialism can never be properly appreciated in any of its aspects unless it is seen in intimate connexion with the life of the working-classes of society, and its best exponents have been just those who, either through actual experience or through sympathetic imagination, have entered most fully into the feeling and passion of the working life of working people. The early pioneers of socialistic thought were the voices of new forces and new classes in society, above all of that characteristic product of the Industrial Revolution known commonly as 'the working-class,' described more technically as 'the proletariat.'

1. Emancipation of the proletariat.—Werner Sombart defines socialism as 'the intellectual embodiment of the modern Social Movement,' and the 'Social Movement' he takes to be the totality of 'all the attempts at emancipation on the part of the proletariat.'¹ That definition brings out the fact, which it is important to emphasize, that socialism is and always has been, theoretically

and practically, a movement in thought and life intimately concerned and connected with certain particular social classes, roughly the wage-earning classes, economically the most insecure and menaced members in the social whole. The more modern, and so-called 'scientific,' way of regarding socialism, which would elevate it to the position of a political philosophy, or a doctrine of society, as it were, in its own metaphysical right, is really mistaken and historically incorrect. In the sources of its vitality, and in the general scope of its most characteristic ideas, socialism might not inaccurately be described as the philosophy of an oppressed social class, which was itself the product of a particular series of economic developments and a particular kind of economic organization.

The Industrial Revolution, which we have pointed to as one of the limits beyond which it is needless to look for socialism, created new social forces and social classes. Especially, it created, on the one side, the social class possessing capital and the power to employ labour and, on the other side, the social class possessing nothing but power to work, and dependent on the capitalistic class for opportunity to exercise that power, and so to live. There had been land-less men before: there were now capital-less men—men possessing power and skill to labour, but destitute of the economic facilities for utilizing their labour and making it productive. That was the root fact of the new situation created by the change to industrialism: it is the dominating social fact of the 19th cent. and of modern civilization. The coming of machinery, the application of science to industry, the collectivization of production by the factory system, and in the early years of the new era the amazing rapidity with which wealth was gained, affording temptation and opportunity to unscrupulous greed and selfishness, speedily intensified the new class divisions and deepened the misery of the non-possessing members of society. The story of that evolution is well known: the social history of England for certainly the first half of the 19th cent., if not more, illustrates the condition of things only too well.¹ Admittedly the new era produced 'suffering classes' and there was need and room for 'an economic philosophy of the suffering classes.' Socialism rose to answer that need. Socialistic ideas were the intellectual formulation of desires, aspirations, half-conscious longings and stirrings after freedom, fuller and better life, felt by these economically subordinate social classes. Often it is difficult to say whether a socialistic idea owed its origin to an independent thinker and was accepted by the proletariat, or whether the man who formulated the idea first discerned it germinating in the mind of the struggling proletariat itself. Socialism, at any rate, has been a live force only when there has been close interaction between its intellectual formulation in the realm of ideas and the instinctive thought and feeling of the proletariat, or, if we like the phrase better, the heart of the people.

2. The Chartist movement.—We may illustrate what we have just said, and also, perhaps, bring out some further characteristic ideas of socialism by a brief consideration of the remarkable Chartist movement which largely constituted the life of the English working-classes for a

¹ The pitiful story of those years has been told frequently, perhaps nowhere better, at any rate for the first thirty years of the century, than in the social studies of J. L. and Barbara Hammond, *The People's Life in England, 1790-1832*, London, 1911, and *The Town Labourer, 1790-1832*, do. 1917. The terrible indictment drawn by Karl Marx in *Das Kapital*, 3 vols., Hamburg, 1867-81, will always be classic. The novels of Kingsley and Dickens tell the same story, and there is a mass of other evidence.

² *Socialism and the Social Movement*, Eng. tr., introd. p. 1.

quarter of a century, and the actual connexion of which with socialistic thought has not been as fully recognised as it ought to have been.¹

The Chartist movement was the most complete expression of the revolutionary temper of the English working-classes, developed in them, slowly and painfully, by the bitter actual experience of what the Industrial Revolution meant in their lives. It was not the work of agitators, but the spontaneous outburst of oppressed men and women, no longer to be restrained. It was a movement of the new industrial proletariat, the first of its kind that the world had seen. Just as the Industrial Revolution itself ran its opening stages earlier and more quickly in England than elsewhere, so, quite naturally, it there earlier than elsewhere revealed within itself the power of provoking resistances and opposition inherent in its constitution; the capitalistic, competitive mode of social organization creates a class of people whose only hope of endurable existence consists in destroying the creature that begot them.

"The Industrial Revolution," it has been truly said, "obliged everybody when it affected to think about the problems it raised, and when they addressed themselves to these problems the rich and the poor started from different standpoints: the rich from the attractions of property, the poor from the facts of their own lives. As a result there developed two different systems of morality. For it makes a great deal of difference whether experience is passed through the sieve of hypothesis and theory, or whether hypothesis and theory are passed through the sieve of experience. The upper-class explanations ceased to be satisfying to men and women who wanted to know why they were starting in the midst of great wealth."²

Instinctively and subconsciously, driven by pressure of experience, the working-classes of the new society were making, on the basis of their own needs and suppressed desires, a philosophy of social life and an economic theory which were bound to be different from those of the possessing classes. The unpropertied man cannot think and feel like the propertied: his psychology is different: he sees life from a totally different angle. Chartism is, historically, the first clear pronouncement of the instinctive political philosophy and economic theory of propertyless and unprivileged human beings, awakening, on the one hand, to the sense of enslavement and, on the other, to their capacity for visions and ideals. The fundamental demand of Chartism was for a total change in social and economic organization. It was a revolutionary movement, in the strict sense of being a movement not for 'reform,' leaving the basis untouched, but for radical change involving alteration of basis. It is true that Chartism is frequently presented as a movement merely for political enfranchisement, conditioned by the dissatisfaction of the working-classes with the results of the Reform Act of 1832; and undoubtedly it was a movement of demand for political democracy. The famous 'Six Points' of the Charter were all concerned with matters political, and contained no hint of economic and social demands. But the reason why Chartism, as a political programme, spread like wildfire is not contained in the political programme itself, but in the conceptions which the proletariat had now begun to cherish of the uses to which political power might be put. Political democracy was not desired for its own sake; it was desired as means to an end, and it was the thought of the end beyond the means that created enthusiasm. For twelve years at least prior to 1837, when the Charter appeared, the movement behind it had been fermenting and

developing; and examination of contemporary Chartist literature seems to show conclusively that the aim of the deeper movement was nothing other than the revolutionizing of Britain in a complete socialistic sense, and further that this aim represented, not something given to or foisted upon the working-classes from outside, but their own instinctive, and now partly conscious, reaction to the conditions in which they were placed. The idea of social revolution—radical social and economic change—which gave to Chartism its emotional force was born from the heart of the proletariat. The demand for political power covered the determination to use such power, if acquired, to reconstruct society on a new basis. Democratic parliamentary reform was only a step to the larger goal. Chartism, it is true, was not an uninterrupted movement, nor systematically developed, nor were its intellectual foundations and sources the same as those of more modern socialistic-democratic thought. There was no unanimity in regard to the salient characteristics of the social revolution desired or in the envisagement of the ultimate goal. But in the course of the Chartist movement, and especially during the years of its greatest intellectual activity (1831-34), almost every permanently important socialistic idea found expression, and, more significantly, response from the working-classes, whilst the characteristic proletarian criticism of modern civilization was published in the newspapers and pamphlets of the movement.

We are not concerned here with the source of the Chartist movement itself, but only with the ideas lying behind it and their relation to socialistic thought. What were the most prominent of these ideas? (1) Chartism makes evident the presence and operation of the concepts of class-consciousness, class-interest, and class-war. In the literature of the movement we find the doctrine enunciated that the working-class must stand alone and work out its own salvation, that there must be no alliance with the property-owning classes, that the interests of labour and capital are essentially irreconcilable, and that the only solvent for the misery of existence is the democratic organization of society on the exclusive basis of labour as the only title to rights, possessions, and privileges of any kind. The outbreak of revolutionary trade struggles (really to be considered part and parcel of the Chartist movement) which followed the repeal of the Combination Acts in 1825, and in which Robert Owen was influential, rested on conceptions such as these. The concept of the 'general strike' as a way towards social revolution appeared, and ideas of the ownership and control of the means of production in each industry, not by the community at large, but by the workers engaged in the industry—ideas which were to have a remarkable resurrection in syndicalism—were put forward.

(2) The economic theory behind all this ferment of ideas was determined by the doctrine that labour is the real source of wealth, the only ground of possession, and that consequently the labourer has inalienable right to the whole produce of his labour. This doctrine, in various forms, had been devised by unorthodox economists like William Thompson (1784-1833) and others as an amplification of the reasoning of Ricardo, from whom the economics of unfettered capitalism and free competition also professed their origin. By thinkers drawing their inspiration from the rationalism of the 18th cent. and the theories of natural law and natural right—especially, e.g., William Godwin (1768-1826)—the doctrine of the 'right of labour' had also been associated. But it was received by the working-classes only because it corresponded to their own instinctive reactions towards private ownership, their own sense of what was naturally right, and their own painful experience of non-stop toiling at the production of great wealth and receiving next to nothing of it in return. Quite clearly, if the propertyless producer of wealth achieves an economic theory at all, it will inevitably contain some proposition to the effect that the man who produces is also the man who ought to own the product, that the only title to wealth is that a man has worked for it. Equally inevitably and naturally, when it is observed that only a very small portion of the wealth produced by labour, or as *Agathos* as produced, is enjoyed by labour, when the residue goes off elsewhere into interest, rent, and profits, this departure of the product appears to be a taking away from labour of its rightful due, and almost, in fact, robbery. That doctrine, and economic criticism of capitalist society, also found expression in the Chartist movement, but in the more polite form of the theory of 'surplus value,' later to be made by Karl Marx a cardinal theory of socialist economics, and to be elaborated by him with great subtlety and skill. Again, the doctrine is part of the instinctive economics of the

¹ The best treatment of the Chartist movement in its relationship to English socialism will be found in Max Beer, *Chartism, the Socialism of England* (for the best history of socialistic thought yet produced). Another illuminating study of Chartism is that of Mark Harell, *The Chartist Movement*, Manchester, 1918.

² J. L. and R. Hammond, *The Town Labourer, 1790-1820*, p. 198.

proletariat. About 1825, in the *Poor Man's Friend* and elsewhere, the declaration is to be found that, under the modern system, whilst the worker produces all the wealth, he receives only the barest minimum needed for subsistence, and sometimes not even that, whilst all wealth over and above that, the surplus, goes to the capitalist, who, with the aristocracy and priests and gentlemen, lives by the toil of the workers.

(3) The aspirations of the proletariat in the Chartist movement turned partly in the direction of desire to socialise the land of Great Britain and organise life on a basis of communistic colonies—a desire frequent enough in early Utopian socialism; partly in the direction of preparing the workers, by parliamentary reform, political organisation, and education, to revolutionise and control the country in a political sense, making them ready for economic power through use and exercise of political power; and partly, again, in the direction, as we have already suggested, of the ownership and control of industry and the means to industry by the associated workers themselves—a kind of syndicalism. These aspirations received little systematic expression, but their undoubted presence illustrates characteristics of the mind of the workers in revolt on which socialism has always depended, if not for its theories, at any rate for the vigour of its practical effectiveness.

(4) Another significant feature in the movement is found in the differences of method advocated as likely to secure the desired good. Chartism had a 'moral force party' and a 'physical force party'—names which sufficiently indicate the nature of the methods proposed. For our purpose the matter has importance as showing how thus early, in the first real movement of the modern proletariat towards social redemption, what we might almost call the two wings of socialism in all stages and in all countries make their appearance—on the one side, the tendency towards violence, insurrectionary revolution, and parliamentarism, distrust of politics, and ultimately a loose, communistic, group-organisation of society, with suggestions of anarchism; and, on the other side, the tendency towards political reform, change by constitutional legislation and parliamentary action, evolutionary socialism, as it was called later, and ultimately a centralised, rather bureaucratic social organisation.

3. **Revolt against machinery.**—It is not necessary to recapitulate the ideas that we have found present in Chartism. The parallelism between them and the ideas of early theoretical socialism is obvious, and it is important to notice that actual experience of misery on the part of the proletariat led, not only to the acceptance, but also to the instinctive discovery, of the same kind of ideas concerning social life and organisation as had been prompted in the minds of theorists by contemplation of and sympathy with that misery. Still more significantly, just as theoretical, Utopian socialism was animated by a genuine passion for humanity and a deep sense of human beings as persons, so this proletarian, instinctive socialism, as manifested in Chartism, was everywhere fanned into a flame by a sense of outraged personality. That was the deepest motive in it; it was inspired, we may say, by hatred of the machine. For the men and women concerned in the Chartist movement machinery was the monstrous symbol of the new social and industrial and economic order in its totality.

They felt passionately that the new power 'was inhuman, that it disregarded all their instincts and sensibilities, that it brought into their lives an insupportable force, destroying and scattering their customs, their traditions, their freedom, their ties of family and home, their dignity and character as men and women.'¹

Proletarian socialism is a characteristic form of the revolt of mind against machinery which is the innermost thing in modern history; and the right way to see socialism is not as a system in economics or as a political philosophy, but as a movement of humanism and personalism in life, especially in the life of the working-classes.²

¹ Cf. J. L. and B. Hammond, *The Town Labourer*, p. 12.

² We may add here two observations: (1) the Chartist movement collapsed about 1850, in failure so far as its main objects were concerned. But the ferment that it created and the ideas that were disseminated during it led to lasting results in the social life of Great Britain: we may instance the co-operative movement, and the movement for education of the people which led to the great Acts of 1870 and 1871, and, also, nothing here the special influence of Robert Owen, the legislation for the control of factories and the employment of women and children, which helped to remedy some of the worst abuses of the early years of industrialism. So far as British socialism is concerned, it is usually said to have died, at any rate as a movement, about 1848, and not to have revived again till 1880, except for the labours of the so-called 'Christian Socialists,'

iv. 'SCIENTIFIC' SOCIALISM. — Many writers, following Marx and Engels, have spoken of the first period of socialistic thought as 'Utopian,' and of the second as 'scientific,' though the changes are often represented as much deeper than they really were. Socialistic thought, as we shall see, has never wholly lost the characteristics of its humanistic and, if we will, Utopian origins. Still, there were changes, made inevitable by various causes operating in the world of intellectual, social, and political development generally. The long-continued influence of the rationalism of the 18th cent. disappeared, about the middle of the 19th cent., before the advance of the evolutionary, scientific, and developmental point of view; historical realism displaced *a priori* speculation in regard to the problems of human life and society; political theory and philosophy were subjected to scientific method, with consequent departure from all conceptions of a 'natural order' of society and a possible displacement of the existing order by reversal at the instigation of the human will. On the continent of Europe also, at any rate, if not in Britain, the philosophy of the State, centralized and organized, as the real social entity, became prominent, whilst in Britain itself, the special home of political individualism, by the beginning of the last quarter of the century, the older view of the State in relation to the individual was dying, if not dead, and the social sense, the social conscience, the feeling of corporate and collective responsibility, were everywhere growing apace. Further, the endeavour of the working-classes to secure emancipation from industrialism became actively and prominently involved in the development of political democracy; socialism, in some form or other, became the programme of political parties, organized and forceful; and this fact also affected socialistic thinking.

Under these and similar influences, socialistic thought, as we are now to consider it, appears much more definitely than before as systematic economic theory and political philosophy. It develops a distinctively economic, rather than a purely humanistic, criticism of modern capitalist society. Socialism is now presented not simply as a desirable social change to be striven for by those who will to strive for it, but as a necessary stage in the evolution of society, an order of social life that must supersede on the present order. On its theoretical side, in some aspects, it loses touch with the heart of the proletariat and tends to become even academic, drifting often from its original and indeed essential character as a revolutionary movement and appearing frequently as little more than an impetus towards evolutionary, gradual, and politically-engendered social reform.

1. **The Communist Manifesto.**—The characteristic language of this new level of socialistic thought is heard for the first time with concentrated power and the force of genuine eloquence in the famous *Communist Manifesto*, which has been called the charter of independence of modern socialism, and which is described by Werner Sombart as 'a unique document in the literature of the world.' We shall get to the heart of the most

chief among whom were F. D. Maurice and Charles Kingsley, with their abortive efforts at 'self-governing workshops.' (2) In other countries, where capitalism has pursued a similar course, the connexion of socialistic ideas with movements of emancipation on the part of the proletariat was not unlike that illustrated by the Chartist movement, especially in the secure wider political power. Socialistic ideas became connected with efforts to secure political democracy, whilst industrial unrest among the workers tended to find expression in socialistic visions and efforts. That is the usual story. The years round about 1848 were years of proletarian unrest and revolt throughout Europe, and those years witnessed a vast spread of socialistic thought, thereafter soon to influence definite social, political movements and parties, organized, national, and international.

effective and most wide-spread socialistic thought of modern times, and of working-class life even to-day, by considering the leading ideas in this *Communist Manifesto*.

After a challenging preamble, describing the fear which the spread of communism, i.e. socialism, is creating throughout Europe, the *Manifesto* begins by laying down the principle that all history, since the days, at any rate, of primitive tribal community of property, is the history of conflict between social classes, created by economic conditions, and distinguished from each other by the possession or non-possession of economic independence and power.

'The modern bourgeois society,' says the *Manifesto*, 'that has grown from the ruins of feudal society, has not done away with class antagonism. It has but established new classes, new conditions of oppression, new forms of struggle in place of the old ones. Our epoch, the epoch of the bourgeoisie, possesses, however, this distinctive feature: it has simplified the class antagonism. Society as a whole is more and more splitting up into two great hostile camps, with two great classes directly facing each other: Bourgeoisie and Proletariat.'

The development, characteristics, and achievements of capitalistic civilization, under the dominance of the social class distinguished by the possession of capital, are next described, with full regard for the amazing endeavours and results of modern industrialism.

'The bourgeoisie, during its rule of scarce one hundred years, has created more massive and more colossal productive forces than have all preceding generations together. Subjection of Nature's forces to man, machinery, application of chemistry to industry and agriculture, steam-navigation, railways, electric telegraphs, clearing of whole continents for cultivation, canalization of rivers, whole populations conjured out of the ground—what earlier generations had even a presentiment that such productive forces slumbered in the lap of social labour?'

Under the new industrial régime economic existence, production and consumption of wealth, has become cosmopolitan, international. Home industries, national industries, are displaced everywhere by new industries which 'no longer work up indigenous raw material, but raw material drawn from the remotest zones; industries whose products are consumed, not only at home, but in every quarter of the globe.' This means, according to the *Manifesto*, the breaking down of national barriers and exclusivenesses, and the rise of 'a universal interdependence of nations—a real internationalism of intellectual creation and a common form of civilization. But unrestricted competition rules in the realm of consumption and distribution of created wealth: there is competition on the one hand to secure markets in which the goods produced can be disposed of, and on the other hand to secure raw material to which the new vast productive forces can be applied. This means perpetual instability in economic existence. Driven by insatiable competition, the capitalistic methods of production and distribution must exploit every corner of the globe; the instruments of production are constantly being revolutionized; productive capacity overleaps itself and its opportunities, periodic crises occur, 'epidemics of over-production,' which destroy 'a great part not only of the existing products, but also of the previously created productive forces,' and threaten the whole fabric and existence of society. All this is really due to a contradiction inherent in the nature of capitalistic, competitive civilization itself—a contradiction between socialized, or collective, production, and individualistic, competitive appropriation, which tends of itself to destroy the capitalistic order of civilization; by creating conflict between the productive forces at the disposal of society and the conditions, of private ownership of capital and free competition, on which the actual existence of bourgeois, capitalistic society depends.

This inherent contradiction—and it is on this point that the *Manifesto* chiefly insists—is reflected, and indeed represented, in the struggle between

the classes, bourgeoisie and proletariat, of which the one stands for the factor of individualistic ownership and appropriation, the other for the factor of socialized labour and collective production. These social classes are created by economic conditions and are differentiated from each other by economic characteristics. The bourgeoisie, possessing class is marked by ownership of the means of production, with consequent economic independence and control of economic power, on which follows control of political power, the institutions of government, and the organization of the State. The proletariat, on the other hand, is marked by lack of economic power and independence, concentrated in the fact of wage-labour, the basis of capitalistic exploitation, the essence of which is the compulsion placed on the wage-earning class to sell their labour-capacity, in order to subsist, at a price not only dependent on the will of the possessing class and capitalist controllers of industry, but (according to the doctrine of the *Manifesto*) tending always, by 'iron law' of the economic system itself, to approximate only to the level of the cost of subsistence needed to keep the wage-earner in being as a productive agent. Between the two classes thus characterized there is and must necessarily be mortal antagonism: their interests are opposed; their function in history is different; their destiny is not the same. As capitalistic society develops, this antagonism deepens and intensifies, capital tends to become concentrated and centralized in fewer and fewer hands, with the steady advance of large-scale organization in industry, whilst, on the other hand, the proletariat tends to be numerically constantly increased by a mass of individuals, resting at the bottom on complete unemployment and poverty, who benefit not at all by the progress of industry and the increasing facility of production, but sink deeper into misery.

'The modern worker,' says the *Manifesto*, 'instead of rising with the advance of industry, sinks deeper and deeper because of the conditions which his own class imposes upon him (i.e., because of the compulsion of the wage-system and the competition for existence among the workers). The worker becomes a pauper, and pauperism develops even more quickly than population or wealth.'

Such an ever-widening gulf between classes, with the steady pauperization of one class as the condition of the enrichment of the other, constitutes an inherent criticism of social organization which must in the end be disruptive. This inherent conflict 'makes it abundantly clear that the bourgeoisie [the condition of whose existence is private ownership of the means of production] is incapable of remaining the ruling class in society, and of forcing society to accept the conditions of its own existence as a general law regulating the existence of society as a whole. The bourgeoisie is incapable of bearing rule because it is unable to ensure for its slaves a bare existence, because it is forced to place them in a position where, instead of maintaining society, society must maintain them.' The only way to escape from the impasse is to resolve the fundamental contradiction in the system—viz. the contradiction between collective, socialized production and private appropriation, ownership, and control. This means either reverting to individualized production, which in view of the progress of industry is impossible, or advancing to socialization, not only of production, but also of appropriation, ownership, and control. This means, again, socialization of the means of production, abolition of private property in these respects—in a word, appropriation, ownership, and control of the socialized means of production by the socialized producing agents, i.e. by the proletarian class.

The rôle of the proletariat in social evolution is

to represent and work out, in unity and solidarity, the negative side of the contradiction inherent in capitalistic organization—to turn that negative into the positive of the new social order by taking over the ownership and control of the means of production, thereby emancipating itself, overthrowing class society, and compassing the real social revolution, which is not only in accord with the desire and will of the workers for freedom, but also to be a necessary fulfilment of the inherent conditions of economic development itself. The very progress of capitalistically organized industrial society creates the conditions of change and the class by which change is to be brought about; it accumulates misery, which breeds revolt, and it compels the proletariat more and more towards self-protective unity and solidarity, by which revolt can be directed to its appropriate end. The class struggle represents the developing economic situation; the main duty of the proletariat is to spread and intensify that struggle, and to hasten the inherent economic development, by cultivating class-consciousness, the sense of their destined historical function, solidarity of intention and aim, and unity.

The *Manifesto* ends with the famous appeal for unity; and, because the conditions are in essence identical wherever capitalistic industrial organization prevails, the appeal for unity is made to all workers everywhere, the call to socialism becomes international: 'The workers have nothing to lose but their chains: they have a world to gain. Workers of all lands, unite!'

2. Influence of Karl Marx.—This *Communist Manifesto*, drawn up in 1847 for a relatively small society of revolt in Brussels, calling itself the 'Union of the Just,' and in principle repeated in 1884 as the basis of the 'International Working-men's Association,' the real beginning of international socialism, was the work of two men, Karl Marx (1818-83) and Friedrich Engels (1820-95), mainly the former. These two names are indelibly associated with modern socialism in all its aspects, and wherever it has found acceptance. Marxian socialism moulded and dominated the socialistic thought of the Continent almost completely, and, till a relatively few years ago, almost without question. Its influence has been less in Britain than elsewhere, though socialism in Britain was in some measure reborn from the study of Marx which occupied certain acute minds about the year 1880.¹ Marx has the greater fame, and he was a more erudite and accomplished thinker than Engels, but he owed much to Engels, and especially to the knowledge which the latter possessed of the development of industrialism in Britain. Marx, in *Das Kapital*, may be truly said to be theoretically diagnosing and formulating, in his own metaphysical and economic terms, the history of capitalistic industrial organization in Britain, and peculiarly the proletarian reaction manifested in the Chartist movement, whilst his indebtedness to English political economists, and again especially to the economists of Chartism, is well known. The leading ideas in the *Communist Manifesto* are the basis to the elaboration of which Marx devoted his splendid intellectual facilities, and to the practical organization and spreading of which he gave his energy and his life.

(1) From amongst these ideas we may single out, firstly, the so-called materialistic conception of history. Marx was a student of philosophy and

belonged to the extreme left wing of the Hegelian school, being influenced especially by Feuerbach. From Hegel he accepted the monistic and systematic interpretation of life and history and the (Hegelian) evolutionary theory of development, but he rejected Hegel's ideal principle of reality and substituted a naturalistic or purely materialistic principle, which he further identified with the economic factors of existence. For the Hegelian dialectic of the Absolute Idea Marx substitutes a dialectic of economic conditions and economic development: it is economic changes that determine all else, whilst the ideal elements in man's nature and life are reflexes only, or reflexions, of alterations, movements, in the play of material conditions and economic forces. History, says the *Manifesto*, is the record of the struggles of social classes; but the main point is that the existence and character of these social classes are determined by economic factors.

'The materialist conception of history,' writes Engels, expounding Marx, 'starts from the proposition that the production of the means to support human life and, next to production, the exchange of things produced, is the basis of all social structure; that in every society that has appeared in history, the manner in which wealth is distributed and society divided into classes or orders, is dependent on what is produced, and how the products are exchanged. From this point of view the final causes of all social changes and political revolutions are to be sought, not in men's brains, but in man's better insight into eternal truth and justice, but in changes in the modes of production and exchange.'²

Unrest of any class or group of human beings against the conditions of their existence—e.g., proletarian unrest against capitalistic society—is only a reflexion of an unstable and changing condition of things, a lack of equilibrium of forces, in the economic system itself, which is pursuing the laws of its own being towards a new stage. There is, thus, determinism in the process, a certain fatality of events, which the will of man cannot finally hinder, though it may conceivably help. In any condition of social existence there is always development going on, and at some point a climax will come when the existing economic and social order will give way to another. If, at any given moment, the character of the economic forces at work in social life can be discerned and understood, if observation can lay bare the hidden dialectic of any given economic system, reveal the stage of its movement and the contradictions which it contains, then the character of the next stage, the direction of the changes implicit in the existing system, can be predicted, and, as it were, the programme and policy of human life arranged accordingly. This was the metaphysics behind the *Communist Manifesto*; it was this view of history that led Marx to the conviction that socialism could be made scientific and displayed as scientifically necessary; it was this that prompted him to search out the secret of capitalistic industrial organization, to undertake what Engels called 'the revolution of the secret of capitalistic production.' This materialistic conception of history, and the consequent conviction of some intimate connexion between socialism and science, had for socialist thought certain ethical implications of importance which are noticed below (§ III.). For the moment we leave the theory with two observations: (a) it clearly serves to emphasize the undoubtedly great importance of economic, and in so far material, conditions in human history and existence, and sometimes the thoroughly deterministic power of the economic factor is overlooked; (b) in the applications which Marx made of his theory, especially with regard to the enhancing of the historical rôle of the proletariat, it is very difficult to decide whether he made these by virtue of scientific and impersonal loyalty to the theory or by virtue of a temperamental,

¹ E.g., H. M. Hyndman, who was mainly responsible for the founding of the Social Democratic Federation in 1881, and E. B. Saxe, who did much to popularize socialism. The group of brilliant and adventurous thinkers who established the Fabian Society in 1882 studied Marx, though often, rather than before, reaching socialistic ideas, and to many Marxian ideas they became strongly opposed.

² *Socialism, Utopian and Scientific*, Eng. tr., p. 40.

revolutionary strain in his nature which, resting on profound sympathy with human misery and hatred of oppression, made him from the onset of his career a champion of the socially subordinate and politically impotent classes.

(2) The *Manifesto* next reveals the fundamental Marxian economic criticism of capitalist society. This criticism is really a restatement of the older, Utopian, humanistic criticism in terms of socialistic economics. Three intimately associated strands may be discerned in it: (a) the well-known doctrine of 'surplus value,' (b) the concept of a contradiction between collectivistic production of wealth and individualistic control and appropriation, and (c) the focusing of interest on the human agents in production, on the worker as a person.

(a) *Doctrine of surplus value.*—In the *Communist Manifesto* the main economic criticism of the wage-system, the basis of capitalist production, is drawn, not in terms of the theory of surplus value, but in terms of the equally doctrine of the 'iron law' of wages.¹ The general form of this doctrine, familiar enough to socialistic thought, is to the effect, that from the produce of labour only so much is distributed among the workers as is required for their maintenance, with reserve to their qualitative needs out as property but only as producers, and that the amount thus distributed is determined by the varying number of workers to be maintained, or by the number required at any given moment by the conditions of capitalist production. By the operation of this law, it is said, the workers are permanently and necessarily excluded from participation in any increase of productivity in their own labour; under capitalism their position can never become better, but, as their number grows, must inevitably become worse, until a point of collapse is reached, when the capitalist system must topple over through sheer inability to maintain the wage-labour on which it rests. In passing, we may remark with reference to this doctrine that, while it has been severely criticized by modern political economists, and whilst some of the conclusions based on it—e.g., the steady impoverishment of the proletariat and the approach to collapse—do not seem so far historically justifiable, it has an ethical value often overlooked. The sting of it, and the persistent appeal, as a criticism of capitalist society, are to be found in the fact that, viewed from the side of the wage-earners, the distribution of wealth does appear to be decisively dependent, not on any principle of justice, but only on the necessity for keeping them alive—if they were not needed, they would receive nothing—and the level of wages, whatever the reasons in economic theory may be, appears to the worker practically variable only in accordance with variations in the cost of living and the demand for labour. No more economic criticism of a doctrine like this will ever shake its force amongst people who instinctively feel that they are not receiving a fair share of the wealth which they conceive themselves to be producing. The fact is that socialistic economics, in so far as they have life in them, are not drawn from theoretical political economy, but are interpretations, in economic terms, of instinctive ethical reactions of the mind of the proletariat to the conditions of its existence.

(b) *Production and appropriation of wealth.*—The doctrine of the 'iron law' of wages, taken in connexion with the further doctrine that labour is the source of all value and so of all wealth that can be distributed,² leads to the discovery of a contradiction in the economic system between the production of wealth and its appropriation, and to the further doctrine that the surplus of wealth produced by labour, over and above the

portion distributed to it for its maintenance, is held by the capitalist class unjustifiably and to the detriment of the worker. It is this doctrine of surplus value that Marx makes central in his economic criticism of capitalist production, and to the development and exposition of which he devotes a considerable part of his chief work, *Das Kapital*. Marx starts out definitely to analyse economic conditions on the basis of a theoretical political economy, beginning with an analysis of the concept of value. By subtle and frequently very difficult definition and argument he seeks to show that the essence of capitalist commercialism consists in the appropriation of value, due to the expenditure of labour-power, but in excess of what is needed to replace that labour-power itself and maintain it. Into the economic intricacies of the argument we shall here make no attempt to follow him, more especially as, in effective socialistic thought, it has always been the general significance of the doctrine much more than the precise Marxian economics that has been prominent. And that general significance is clear enough, and has already been indicated.

(c) *The worker as person.*—More important in Marxian socialism than the doctrine of surplus value are (1) the insistence on a contradiction in capitalist society itself, and (2), in the analysis of the significance and meaning of labour-power, the emphasizing of the worker as producer, and the concentration of interest on him and his class as dominant social facts—a concentration of interest made prominent by Marx's exposure of the inequalities of competitive industry.³ Marx argues again and again that the disastrous peculiarity in modern industrialism is the contradiction between socialized production and individualistic appropriation. In an earlier stage of economic development, when individualized production was the rule, the worker had, in general, been himself the owner of the means to make his work effective, and consequently had exercised control over the conditions of his industry and the disposal of its product. The great change to modern industrialism meant the divorce of the worker from the means of making work effective, and consequent loss of all control over conditions of industry and disposal of the product. The workers, no longer their own masters, were driven by the exigencies of advancing conditions, on the one hand, and the fear of starvation, on the other, to accept socialized production—i.e. factory-labour, large-scale industry, and so forth—and dispose of their labour-power to the owners of the means of production in return for wages. Wage-labour became the rule and basis of all production, and, though nominally one of the conditions of wage-labour is that the worker shall be a free person, able to dispose of his labour-power to the highest bidder, he ceases to be free in reality—for two reasons: (1) because he no longer exercises control over the conditions of his industry and has no say in the disposal of the product of that industry, and (2) because the tenacity of the competitive system itself is to exert a compulsion which makes 'free contract' impossible, whilst, inasmuch as labour-power, though treated as a commodity, is inseparable from the personal life of the worker, the loss of freedom within industry inevitably detaches from the free personality of the worker away from his work. This is the contradiction viewed from the side of the workers; socialized production, dependent on wage-labour, along with individualistic ownership and appropriation, means the inevitable failure of society to allow and provide for the full development of free personality.

All the economic criticism of the *Communist Manifesto*, all the Hegelian theorizing and subtle economic analyses of Marx, rest really on this fundamentally ethical indictment of modern industrial existence. Once more it is the sense of outraged personality, full and free development of life denied, that makes real and vital the proletarian-socialist criticism and economics. The class-consciousness of the proletariat, the unity and solidarity by which, alone, according to Marx, they can put themselves in alliance with developing historical economic conditions, and accomplish, at the destined moment, the revolution which is to replace capitalist society by a new order, must rest on the realization of the fact that they are being robbed of their freedom as persons.

Marx has been subjected to severe criticism on many points, and much that he regarded as true and vital has been discarded by socialists everywhere, but no one can overestimate the value of his work. He it was who gathered up into the form of a coherent and systematic theory, with its metaphysical background (whether true or false we do not now say), its connections with historical evolution, its scientific outlook, and its technical economics, all the hitherto mainly instinctive reactions of the proletariat mind to its new surroundings, and its hitherto mainly unsystematic and disconnected aspirations. His limited social-

¹ This doctrine originates with the physiocrats of the 18th century. Turquet, e.g., writes: "In every sort of occupation it must come to pass that the wages of the artisan are limited to that which is necessary to procure his subsistence" (quoted in Hume, *The Town Labourer*, p. 301). Wages were determined by natural law and tend to approximate only to the bare level of subsistence. Adam Smith and Malthus give countenance to the doctrine, whilst Ricardo often seems to accept it. It can be used, and was used, as a justification of poverty, and its general acceptance is certainly one of the reasons why the poorer classes in the early days of industrialism were content to see their fellows starving and in misery. But by nineteenth-century economists the doctrine was used as a severe criticism of capitalist society and as a reason for abolishing that order. Ferdinand Lassalle, following Rodbertus, made this doctrine one of the bases of his socialism.

² This doctrine appeared, as we have seen, in the economics of the Chartist movement. The orthodox economists, including Ricardo, are cited as authority by it. William Thompson, to whom Marx was indebted, drew practical socialistic conclusions from it in his *Principles of the Distribution of Wealth most conducive to Human Happiness*, London, 1834. The history of the doctrine is treated fully in Anton Menger's, *Das Recht und die soziale Arbeitstheorie in geschichtlicher Darstellung*, Stuttgart, 1896. The doctrine has the form of the general proposition that labour is the source of all wealth—i.e. other than natural resources—and the more technical form that the exchange-value of commodities, on which production for profit depends, is the result of labour expended.

³ Cf. Marx, *Capital*, Eng. tr., 2 vols., London, 1887, pt. II, ch. ix, § 1, pt. IV, ch. xv., 'Machinery and Modern Industry.'

ism, as Sombart says, 'to the movement of one particular social class, the proletariat,' and this was of the greatest importance: 'he inspired the proletariat with self-consciousness, with a trust in their own strength, and with a belief in their future'; he gave them a historical rôle and a function in the social life of to-morrow; he set before them a simple and definite goal; and he gave them, also, weapons of criticism which, though they may change their form, do not change their incisiveness and force.¹ They were to accomplish their own salvation and that of society by resolving the fundamental contradiction in modern life: socialized production must be accompanied by socialized ownership and control of the means of production: collective labour necessitates collective capital. Ownership of the means of production in industry, and control over the conditions of industry, by the workers themselves—that was the Marxian goal. That was the 'social revolution,' and the first step towards it was the development of class-consciousness and unity, and the realization of international solidarity² amongst the workers of the world. For fifty years Continental socialism held by Marx, in essentials, and the 'revisionist' attempt to get away from him was very soon met by the cry, 'Back to Marx!', and the discovery in him of yet more truth.³

V. SOCIALISTIC CONCEPT OF 'THE STATE': RECENT DEVELOPMENTS OF REVOLT.—The programmes of modern socialistic parties frequently contain, along with some statement of principles and of the goal to be reached, a series of demands for 'reforms' to be undertaken by 'the State.' The *Communist Manifesto* contained such demands, but it contained no theory of the State; socialism was there approached not from the point of view of society as a whole, but from the point of view of a class.

1. Marxian theory of the State.—Marx, despite his Hegelianism, made little use of the concept of the State in thinking out his socialism. The social revolution, for him, consists in the proletariat taking over the ownership and control of the means of production. One way of their doing this (though not for Marx the only way) is for them to acquire political power, through the development and right use of the democratic franchise and representative institutions, and to use that power for the purposes of the social revolution. What happens to the State after the revolution is not very clear. If we are to accept Engels as expressing Marx's views on the point, we must conclude that both regarded 'the State' as a product of class-society and as always in reality representing only the dominant social class, by whom its mechanism is used to subject and exploit subordinate classes. Inasmuch, then, as the proletarian social revolution abolishes all classes and class-distinctions, it of necessity 'abolishes also the State as State.' The State loses its essential function as a weapon of subjection and so ceases to exist.⁴ If, behind this, anything at all is envisaged with regard to the future form of social organization, it can only be some ordering of society under 'groups,' determined by economic factors, which are autonomous and at best only loosely federated into a larger whole for certain purposes. The internationalism of Marx, and his

doctrine that the proletariat has no country, would emphasize this. The political ideas involved in this view are evidently not those which emphasize the State as the main functioning organ of social life, insist on the priority of society to the individual, regard sovereignty as necessarily concentrated in a central authority, incline strongly towards the theory of centralized government and control by experts, and tend to view the 'rights' of groups and individuals, not as constituted by the effective will then present and the purposes contemplated by the groups or the individuals themselves, but as granted only or substantiated only by the sovereign power of the State as such.⁵ On the Continent, where Marxian influence was strongest, however, the apparently inevitable connexion of socialism with political democracy, as evidenced in the growth of all socialistic parties everywhere, and the notion of achieving a socialist régime through acquiring and developing political power, naturally caused the idea of the State to loom large in socialistic thought; and the consequent tendency to formulate an appropriate theory of the State and society was strengthened, on the one hand, by the practical development, especially in Germany, of the absolutism of the State and, on the other hand, by the general spreading of political, and especially of sociological, views which emphasized the organic character of society and asserted, in one way or another, the priority of society over the individual.

2. British collectivism.—But it is to Britain that we have to look for the most complete development and formulation of the theory of the State in explicit connexion with socialism; and indeed the idea of collectivism, or State socialism, may be regarded as the characteristic contribution of Britain to socialistic thought, the product of a national temperament not prone to revolutionary feeling, and of a country with highly-developed political sense and long training in political traditions, and in which the working-classes, for various reasons, never have shown, save for the spasmodic outburst in Chartist and the revolutionary trade unionism of brief periods, many signs of strongly developed class-consciousness.

We cannot here discuss the intellectual and spiritual influences that have moulded British socialism and given it sources of origin very different from those elsewhere.⁶ We can only

¹ The profound importance of the differences in political philosophy here briefly suggested, not only for socialistic thought but also for the whole future of mankind, cannot at the present moment be overestimated. Differences of opinion as to the respective significance of society and individual, and as to the meaning of sovereignty and the functions of the State, not only divide socialistic theory into opposed parts, but actually rend the whole world.

² Socialistic thought in Britain experienced a revival about the year 1880. Chartism failed and perished in 1848, leaving behind only in the co-operative movement and in a tendency towards revolutionary trade unionism which was spasmodically displayed in recurrent industrial lurches and strikes between 1860 and 1880. Christian socialism maintained, to a certain extent, the Chartist criticism of competitive society, but exercised no wide influence on either Church or State. Political philosophy and economic theory in Britain were dominated by individualism and *laissez-faire*. On the other side, an influential making for a socialistic revival, must be set (1) the literary and humanistic criticism of the dominant philosophies with which the names of Carlyle and Matthew Arnold are prominently associated; (2) the work of Ruskin and his disciples; (3) the social theories of Comte and positivism (*q.v.*), which incidentally link British socialism with Saint-Simon, whose disciple Comte was; (4) the movement in the realm of political economy away from individualism to collectivism, to which the great authority of John Stuart Mill contributed much; Mill had not only committed himself to the view that the distribution of wealth is an artificial matter controllable by the State, but in his late writings had more than sympathized with the idea of collective ownership and control of capital; (5) the study of Marx already referred to; (6) above all, the by now numerous failures of *laissez-faire* in political life and the continued growth of State interference, coupled with the rapid development of the sense of society as an organism and the rise of a social conscience. All these influences gave British socialism its peculiar

¹ Cf. *Socialism and the Social Movement*, Eng. tr., p. 601.

² It was Marx who gave to socialism for ever the vital concept of internationalism.

³ About the year 1906 German socialism, under the influence of E. Bernstein, showed a tendency to break with the Marxian tradition, but it was more than counterbalanced by the appearance at the same time of syndicalism in France and Italy—which professed to be, and in no small degree was, a return to pure Marxism. Cf. Georges Sorel, *L'Action socialiste des syndicats*, Paris, 1898, and *Réflexions sur la violence*, do. 1908.

⁴ Cf. Engels, pp. 75-77.

touch briefly on its characteristic ideas; and we select, more or less arbitrarily, only a few points. Orthodox British socialism, if we may use the term, has been predominantly collectivistic, evolutionary, and parliamentary or political. Its ideal has been State socialism, the ownership and control of the means of production, land, and capital, in the interests and service of the whole community, by the community as a whole, operating through the organs of its political life, i.e. through a central government and officials, responsible to a representative parliament democratically elected, and, locally, through the same essential organs on a smaller scale—the State for national, the municipality for local concerns. The ideas dominating such collectivism are familiar enough.

'The essential contribution of the century to sociology,' says a leader of collectivist thought, 'has been the suppression of the individual by the Community as the starting-point of social investigations. Socialism is the product of this development, arising with it from the contemporary industrial evolution. On the economic side, Socialism implies the collective administration of rent and interest, leaving to the individual only the wages of his labour, of land or brain. On the political side, it involves the collective control over, and ultimate administration of, all the main instruments of wealth production. On the ethical side it expresses the real recognition of fraternity, the universal obligation of personal service, and the subordination of individual ends to the common good.'¹

The point of view behind this is that of society as a whole rather than that of an oppressed social class. The controlling thought is of society as an organism, itself conferring individuality on its members; the law of individuality is service to the community as opposed to self-interest and self-assertion, and it is the very fact of society that provides opportunity for such service and so for the development of true individuality. Ethically society, the social organism, is the essential and necessary co-operator with the individual, and indeed the major partner and influence, in the building of a good and valuable personal life. And as the case stands ethically, so should it stand economically. Wealth, like morality, is in the end socially created; without society wealth, like morality, would be impossible; and so the wealth really created by the whole society ought to be 'owned and administered by the whole society.'

The ethics and economics of collectivism both depend on the organic conception of society. As the organ of practical administration and the exercise of government, which in theory is to be self-government, collectivism envisages 'the State,' but the State as purely and completely democratic. It seeks to equate State ownership and State control with the notion of ownership and control in industry by the workers themselves, by assuming, and working towards, a fully democratic State in which the State shall be the workers, and the workers the State. Socialization of the means of production and democracy must advance together if socialism is to be realized. Although collectivistic socialists have been prone at times to regard any and every transfer of property or control of industry from private hands to the national government or the municipality as a move towards socialism, it must be said in justice to the true collectivistic theory that only when the State or lesser organ of administration concerned is truly democratic and representative of an enlightened democracy, only when and in so far as the State ceases to be oligarchical collectivist tone and colouring. It springs to life again as a highly special sense a philosophy of society and the State, in opposition to individualism, with a fitting ethics and economics; and it was in proportion that less a movement originating in instinctive reactions of the working-classes. Collectivism, with all its outlook and terminology, is decidedly a product more of the study than of the history—a theory feeding much more on intellectualist bases than on the inherent aspirations and desires of a social class. And this difference is very significant.

A full, and probably final, treatment of this topic is contained in Max Beer, *Greek, the Socialism*, referred to above.

¹ Sidney Webb, *Socialism in England*, London, 1899, p. 92.

and the bulwark of a superior economic class, or an entrenched bureaucracy, one changes from private to public ownership and control be regarded as genuinely socialistic. It is, indeed, just in the slowness of the advance towards real democracy, and the failure of the organs of collective government and administration to correspond to the ideal of enlightened and educated democracy, that collectivism finds its most serious obstacles and the source of criticism most damaging to it. The upholders of collectivism have been, more often than not, primarily interested in the problems of the administration of wealth and its distribution rather than in the problems of its production, and so more concerned with the efficiency and good order of the social structure as a whole than with the individual life and personal freedom of the worker in his working existence. They have tended, therefore, almost inevitably, to lean towards uniformity in social life, to strongly centralized government, necessitating, because of the magnitude of the powers and issues involved, the continued existence of a governing class, trained in administration—in a word, a bureaucracy—and the maintenance of practically coercive authority. Like other socialistic theories, collectivism has been inspired by sympathy with oppressed social classes, but collectivism differs from other socialistic thought in the extent to which this underlying sympathy has been dominated by a highly philosophical theory of society, the social organism, and the State, which, whatever other values it may have, finds little place in the instinctive reactions of the minds of the workers to their surroundings.

The most recent developments in socialistic thought have made this fact clear. Collectivism is evidently adapted to the political mind and suitable to a purely political form of socialistic thought and activity. The approach to it as goal is evolutionary and gradual, and depends on the acquiring of political power by the workers. The reflexion of collectivism in the world of politics is parliamentary (and municipal) socialism, with its repudiation of violent and revolutionary action, its belief in constitutional methods, and its faith that the social revolution can be accomplished by stages of 'reform.' From all this, recent socialistic thought has diverged in directions which significantly mark the reappearance, of course in more highly developed shape, of earlier, original, and, as we should hold, more fundamental socialistic ideas. The divergence is best illustrated by syndicalism and guild socialism, or the theory of national guilds.

3. **Syndicalism.**—The true home of syndicalism is France. It is the product of a revolutionary national temperament, and of a country in which revolutionary hope and fervour have always lived in the working-class mind, and where socialistic thought has been prevaillingly influenced by anarchist-communist ideals.¹ Syndicalism, with its persistent distrust of parliamentary socialism, revives and emphasizes the conviction that only the workers can emancipate the workers. It holds that the social revolution must be the product of the emerging will of the industrial classes,

¹ The historical origin and general significance of French syndicalism is best treated, among English writers, by G. D. H. Cole, *The World of Labour, and Self-Government in Industry*. Syndicalism was born and developed within the French trade union movement which made rapid and remarkable progress during the two decades before and after 1900. The leading personality in the movement was Fernand Pelloutier, whose *Hist. des sources du travail*, Paris, 1900, was the chief literary influence in forming syndicalist thought. Pelloutier was a philosophical anarchist, of the school of Proudhon and Bakunin, and his whole outlook was swayed by the concepts of voluntary association of producers, group-organization with hierarchy, and the local committee. The philosopher of syndicalism is Georges Sorel, whose chief works have been mentioned already.

operating possibly only through a 'conscious minority,' clear as to goal and method, swaying the mass. But in any case social freedom must come as result of the desire for freedom and the will to freedom, and cannot be imposed by organization from above or enacted by government. The workers must create their own society and do so by act of their own will. The end is still the fundamental socialist end—the socializing of the means of production—but new methods are upheld. Not parliamentary but trade union activity, not political but industrial organization, not the franchise but the general strike—this is the newer socialism. The concept of the class war is rejuvenated and brought into prominence. Socialism once more is presented as the peculiar and exclusive doctrine and ideal of working-class life. The socialistic order of society must be made by the workers, through their own natural organizations, and especially through their trade unions. The divisions between social classes must be not only kept intact but deepened, intensified. Already a new society, with its own institutions, its own morality, its own point of view, is growing amongst the workers, and nothing must be done to impede that growth; but everything to aid it. Class-consciousness and the 'will-to-revolt' must be kept alive and fostered in every possible way. The goal is freedom, individual and social, and only intense desire for freedom, and the sense of freedom flung away, can lead towards that goal.

Syndicalism envisages the form of the future society as based upon group-organization, groups being determined by economic and industrial functions, workshops, factories, and industries without 'masters,' private or collective, democratically constituted, owning and controlling the means of production, and bound together by a system of local and national federation. The State as central organ of administration disappears, and power is distributed throughout a series of autonomous though interdependent industrial groups. The controlling impulse in the whole outlook is to get back closer to the individual worker in and at his work, and to move outwards to association, determined by the will of the workers and the purposes to be achieved. Syndicalist criticism of capitalistic social and industrial organization is characteristically drawn in terms of the personal life and personal freedom of the worker.

4. **Guild socialism.**—In Britain the parallel of syndicalism is to be found most theoretically complete in guild socialism, or the theory of national guilds, the latest of all developments in socialistic thought, and still in its early stages.

Guild socialism, says one of its leading exponents, 'sets before itself the ideal of finding that form of social organization which will afford to the individual the fullest and freest power of self-development in an organized community. It wants men to be free, not merely in order to get good administration, but because freedom is in itself a good thing and the greatest of good things.'

It believes that the State, 'in the sense of a governing authority claiming supreme power in every sphere of social organization,' is the negation of self-government. It contemplates, therefore, an organization of society on the basis of self-governing industrial groups, determined by industrial function, each democratically organized throughout, and federated into larger wholes for certain defined purposes. That form of social grouping called 'the State' will not cease to exist, but it will become one only of many groupings, divested of all intrinsic sovereignty, and with its value and significance determined simply by the purposes of man's free spirit which it can adequately and conveniently serve and by the functions of collective life which it can conveniently and adequately discharge.

¹ G. D. H. Cole, in a letter to the present writer.

charge.¹ The practical steps towards realization of this type of socialism consist mainly in the development of the existing characteristic products and organs of working-class life, viz. trade unions, the transformation of these into industrial groups (guilds), covering and including all engaged in any industry or common service, and the transference of control, with regard to all the conditions of labour, in workshop, factory, and elsewhere, from the 'employer' to such democratically organized groups of workers—a transference which, passing inevitably from socialized control of the conditions of production to socialized ownership of the means of production, would expropriate the capital-possessing class and bring about the social revolution. The only conceivable ethical justification for the existence of a capitalistic class—viz. the management and control of the conditions of production—would be gone, and the system would collapse. The main criticism of existing society by upholders of guild socialism is drawn in terms of an investigation of the moral significance of wage-labour, and a setting forth of what the inevitable condition of dependence for livelihood on the will of a possessing class means for the personality of the worker in his work, and outside—a kind of criticism which has appeared frequently throughout this article. The desire and intention behind guild socialism is to secure for the worker in his work 'the greatest chance for individual self-expression and for local initiative and experiment,' thereby increasing indefinitely his personal value, both in his working-life and outside it.

Both syndicalism and guild socialism are fundamentally motivated by interest in the personal freedom and life, the true individuality, of the worker. The evil of society for both is at bottom an ethical evil, and no economic solution can be adequate unless it carries with it an ethical solution, and is indeed determined by the categories of individual freedom and personal worth as supreme for human life. Once more, in syndicalism and guild socialism the source of socialistic aspiration and theory becomes the definite sense of oppression and lack of freedom; the atmosphere of revolutionary discontent is restored; and with the emphasis again on class-consciousness and class-enmity, in the form of the irreconcilability of the interests of labour and capital, and the conviction that the working-classes must work out their own salvation and be themselves architects of their own future, socialism resumes its character as definitely a movement of emancipation on the part of economically subordinate, and consequently ethically unfree, social classes.

II. **WHAT, THEN, IS SOCIALISM?**—We must now try to gather together the central points revealed in our endeavour to trace and illustrate historically the characteristics of socialistic thought, and this we shall do in the form of a series of propositions stated without criticism or amplification.

1. **A feature of modern civilization.**—Socialism is a characteristic fact, element, and feature in modern industrial civilization, and is recognizable throughout its history as an attack upon the economic, and, in so far, the ethical, bases of that civilization.

2. **A revolt against capitalism.**—Socialism is a movement of revolt against capitalistic, competitive, industrial and social organization, and its significant demand is for a new order of society.

¹ It should be noted that in the theory of national guilds the philosophy of the State, its meaning and function, is not yet adequately agreed upon.

² Syndicalism, which we have treated as a characteristic product of French socialistic thought, has what may be called parallels not only in guild socialism but also in 'industrial unionism,' as promulgated, e.g., by the society known as the 'Industrial Workers of the World' (the 'I.W.W.'), strong in America, Australia, and elsewhere. The common element in all these modern movements of revolt is the predominance of the ethical idea of freedom as corner-stone of doctrine, and the transference in economics of interest from consumption and distribution (the main concerns of collectivism) to production and the democratic control of conditions of production. Their envisagement of the future organization of society depends on the historical and economic rational life and development in which they appear.

resting on new economic bases and emphasizing new ethical values. It is a continual criticism of the existing order, from the point of view conditioned by vision of a new order and desire for radical change. Socialism demands the complete reorganization of social and industrial existence, and is, therefore, strictly revolutionary in intention and aim, whether violent in method or not.

3. A demand for collective ownership.—Though varying in many details, socialistic theories are united in the conviction that the root of economic evils is to be found in the private and individualistic ownership of those things without which our human ability to labour is unproductive and uncreative, or by which that ability to labour can be utilized more effectively, made more productive, and given greater freedom in creativeness. Socialism seeks the abolition of private possession and individualistic ownership in respect of what may be called fundamentally communal goods—e.g., land and capital, including under the former the material resources of nature, and under the latter all the means and instruments of production by which human labour can be more efficiently applied to those natural resources. Nothing is recognizable as socialism which does not contemplate and strive towards some radical change, not merely in the distribution of wealth, but also in the ownership of wealth and the means to wealth, and consequently some radical change also in the economic fact and the ethical concept and value of 'property' and private possession. Socialistic theories and visions of Utopia show many variations with regard (a) to the standards, methods, and manner of distributing created wealth among the working members of society, and (b) to the extent and meaning of private ownership, consumption, and enjoyment of the portion of wealth thus acquired by the individual, but all are agreed that private ownership in the definite means of production must cease, and that its place must be taken by communal or collective ownership in some shape or form.

4. An ideal of a juster order.—Socialism, in so far as it is a vital movement and is not turned into a merely academic philosophical theory, a political or economic dogma, and not too much entangled in parliamentarism and party politics, is a revolutionary criticism of modern society, an ideal and vision of a possible more just and equitable order of life, and an aspiration towards fuller freedom, all engendered by the division of the social structure into separate classes marked off from each other by economic differentiations. Socialism is the characteristic product of the mind, heart, and will of those social classes distinguished by the fact that they in the end own and possess nothing but ability to work, reacting towards the inevitable conditions of their existence under such a limitation. In other words, socialism, at its deepest and in its most vital elements, is the instinctive reaction of working-class thought and emotion towards an economic environment felt to be ethically evil, restrictive, and oppressive, combined with a steadily growing realization of personal worth and consequent desire for personal freedom and self-expression, to be achieved in an environment of greater economic liberty, more complete equality of opportunity, and wider, more satisfying fellowship.

5. An ever-changing theory.—Socialistic theories, political and economic, are formulations of these instinctive reactions. No socialistic theory in all its details is ever to be regarded as final or made into a dogma. Socialistic theory undergoes many changes and exhibits many variations, in accordance partly with general changes in the contemporary intellectual and

moral outlook, but more especially in accordance with definite advances in education, culture, opportunity, and the sense of power, among the workers themselves. Socialism itself continues and will continue, finding expression in theory, in visions of Utopia, and in efforts to secure radical change, so long as the division of the social structure into economically differentiated classes remains, and so long as that division, or any similar division, is felt by any straitened and subordinate class to be a restriction on freedom and a curtailment of personality—in other words, so long as economic differentiation is felt to have an evil ethical content and significance.

6. An ethical criticism of economic system.—Socialism, although frequently in its theories it has expressed the truth the wrong way round, always contains the conviction that economic, economic systems, and economic theories have ethical significance, ethical meaning and value, and must be judged ultimately by ethical standards. Consequently, always, its economic criticism of society rests and depends upon an ethical criticism, implicit or explicit, and the deepest motive in all socialism is an ethical motive. It may be sympathy with the oppressed, belief in the value of humanity, faith in human nature, the desire for freedom and self-realization, the sense of personality cramped and crushed, the seeking after fellowship, or some similar motive or combination of such motives; but no economic or political theory of socialism, and no action of men under the socialistic impulse, can be rightly judged or appreciated unless it is seen continuously against the background of ethical motive. This is why the economics of socialism has, again and again, received support from quarters where the fundamental, and frequently the only, criticism of modern life has been ethical.¹ The paradoxical truth is this, that the innermost power and quality of all vital and vivid socialism is and always has been something which we can only call 'personality,' the conviction of supreme ethical values resident in persons, and the certainty that the meaning of life is the realization of those ethical values through and by individual freedom, development, and self-expression. Not any theory of 'the State' or of the 'social organism,' nor any metaphysics of history, nor any economic theory, is the ultimate in socialism, the source of vitality and power, its root and ground in life, but always the conviction of personality, the sense of cramped and fettered existence, nay the very urge of life itself towards personality, freedom, and fellowship; and all this operating mainly, though not exclusively, through particular social classes, created during a particular period of history by arrangements in the social structure largely determined by economic factors. Socialism, as we said at the outset, is a form of the perpetual conflict of in-

¹ This significant truth can be best illustrated by the socialism of a man like William Morris, whose criticism of and revolt against modern society were fundamentally ethical, and whose socialism was born of his experience as craftsman, poet, and artist. In this article we have deliberately refrained from speaking of or noting the tremendous import of socialism of the William Morris type. It must always be remembered that behind and deeper than all political and economic socialism there is somewhere present, giving reality to the theory, just that criticism of life, that demand for freedom and beauty, that craving for fellowship and joy in creative work, that revolt against selfishness, slavery, and ugliness of a cramped existence, which Morris so gloriously and with such magnificent humanity expressed. Morris had the heart of socialism, and no critic has answered him yet. In another direction this bringing of support to economic socialism from a purely ethical criticism of society might be illustrated by the influence on socialistic thoughts of great individualistic ethical thinkers like Tolstoy, Carlyle, and even Nietzsche, and indeed of every philosophy and movement in modern times which has insisted on the significance of life as against mechanism, and on the value of personality.

dividual mind against the tyranny of mechanical existence—a ceaseless criticism carried on by life itself against the outward forms of its manifestation, inspired by vision of new and better forms.

III. **SOCIALISM, ETHICS, AND RELIGION.**—Much energy has been wasted by socialistic writers and even more by critics of socialism in discussion concerning the relations of socialism with, and the effects of socialism upon, morality and religion, with those latter elements ill-defined or not defined at all.

1. **Ethical value of socialism.**—So far as socialism and ethics are concerned, the underlying purpose of this article has been to reveal the fact that, historically, socialism springs from definitely ethical motives and ethical sentiments, has an ethical value, and must be regarded as a moral force. It is the fact, also, that in all socialistic writings the dominating ethical note is that of altruism, brotherhood, love for one's neighbour, service of the community, sympathy with the oppressed. On the other hand, it is true that socialist theorists have often seemed to favour immorality, and therefore in the eyes of many people 'immoral' experiments, arrangements, and possibilities, with regard to certain established institutions of human life—e.g., marriage and the family. It is, however, mere obscurantism to confound socialism with anything and everything that socialistic writers may have chosen to say. The issue is really simple. The motive behind the socialistic demand for a radical change in social organization is ethical. What the effect on 'morality' of such radical change as is desired would be depends on what the ultimate ethical result might be of the abolition of private property in the means of production. In so far as existing customary ethical valuations and ethical relationships depend, as they undoubtedly to a considerable extent do depend, upon the method of ownership and distribution of property and wealth, socialism with its radical change in that direction would inevitably induce many alterations and differences. Other causes—*as, e.g., the adoption and putting into practice of a full ethical Christianity*—might produce equally noticeable changes and differences in morality. But it is obviously impossible to predict in any detail what such alterations and differences would turn out to be. Socialism is to be judged, not by any imagined consequences that might follow from its actualising, but by the character of the need and the demand which have called socialistic theory, hope, and vision into existence. If that demand and need are really vital, if they represent and accord with the fundamental, instinctive movement of life itself, consequences must be risked. But it should always be remembered by socialists and their critics that in all probability, despite Marx and the materialistic conception of history, the ethical life of humanity, as the story of socialistic hope and theory itself actually reveals, is a deeper and more fundamental reality than the economic or political form of society, and that this ethical life is continually following its own laws of development under influence of many forces other than the strictly economic or political.

2. **Variable ethical results.**—Within socialistic theory itself intelligent anticipation of ethical effects and results will vary in accordance with the type of ultimate socialistic organization contemplated. The ethical results, *e.g., of a highly-centralized, bureaucratic, State socialism*, with primary emphasis on the concepts of society, efficient order, the good of the community, the authority of the whole body, and so forth, will not be the same as the ethical results of a socialism tending towards distribution of sovereignty,

decentralization, group-organization, and determination of forms of fellowship and co-operation from the effective will of the individual working outwards to wider association in conformity with purposes initiated and approved by the individual will. It is along the lines of these quite characteristic and indeed ultimate differences regarding the final form of socialistic organization that the question of the effects of socialism on morality should be discussed, allowing always, in all cases, for the extreme difficulty of prediction, and the independent movement of the ethical life in humanity itself.

3. **Ethical determinism.**—The tendency of much socialistic thinking and theorizing to support, often with startling inconsistencies, ethical determinism and to place exaggerated insistence on the importance of 'environment,'¹ should be noted. Much socialism, as a result of this tendency, has, by an almost perverse devotion to abstract and now largely discredited deterministic theory, both obscured the genuinely ethical character of its origin and aim and given its opponents a ground of criticism which has served only to confuse and complicate the real issues of socialistic thought and aspiration. For this singular and, as we hold, altogether unfortunate obsession by ethical determinism there is a historical reason, which explains not only this but other curiosities of socialism as well.

4. **Socialism and religion.**—This reason becomes more obvious and pertinent when we consider the relations of socialism with religion. During its history socialism has been marked by very varying relations to religion and Christianity, whether as individual profession or as organized institution. The majority of professing socialists to-day would probably assert that religion is an individual and private affair outside the purview of socialistic theory; they would oppose any State organization of religion, State maintenance, or provision for religious teaching by the community, and they would contemplate religious organizations only on a purely voluntary basis, and altogether without temporal authority; it is doubtful whether many would trouble to identify their socialism with a denial of the religious hypothesis, whilst some certainly would individually accept that hypothesis. Many of the earlier Utopian socialists tested their socialism on belief in God, and strove to identify socialistic theory with Christian ethic and the gospel of Jesus. Similar efforts have been frequently made, whilst from the side of accepted religion and Christianity attempts in the same direction have been not uncommon, though, with few exceptions, what is called 'Christian socialism' has been content with criticism of conditions and advocacy of reform, or the infusing of the Christian spirit into existing institutions, stopping short of the full socialistic demand.²

Socialism and Christian ethic, or the gospel of Jesus, are not essentially related, either historically

¹ Robert Owen expounded and adhered to an almost naive form of materialistic determinism in ethics. Consciousness, for him, is a product merely of material organization and determined wholly by external stimulation, whilst the notion that the individual is in any way responsible for his character is regarded as vicious error. It is of course difficult to reconcile this with Owen's distrust of government, on the one hand, and his belief in education, on the other. The sources of his materialism are to be found in certain well-known aspects of 18th cent. rationalism. In later socialistic thought materialism has other origins. It is often as naive and extreme, but differently based.

² The socialism of Maurice and Kingsley was of the reformative type. The advanced Roman Catholic understanding of Christian ethic tends in the direction of a social organization containing socialistic elements, though officially Catholicism is morally opposed to socialism. The only definitely Christian organization which to-day seems to advocate a full and strictly revolutionary socialism is the Church Socialist League. A desire for 'social reform' is not socialism.

or intellectually. The existence of the gospel and the Christian ethic has, no doubt, directly and indirectly, influenced and contributed to the existence of socialism, and some interpretations of Christian ethic might, and indeed would, lead to conclusions very closely similar to socialistic theory and demand; but many of the premisses and the line of argument would be different. Christianity, in its ethic, contains a social philosophy which can be and ought to be worked out independently of historical socialism. One of the mistakes of professing Christians with socialistic sympathies has been a too great readiness merely to accept a formed socialism and try by various devices to fit it into their Christian ethic or their ethic into it, whereas they should have been occupied in developing independently the social implications of their faith and gospel and in working its ethical principles out into detailed application.

5. Socialistic faith.—But modern socialism, as most widely accepted and existing as a political force and organized power, has been, especially on the Continent, almost uniformly hostile to organized Christianity, partly through theoretical antipathy to the religious hypothesis in general, but more significantly because, in practical matters, it has been thought, and not unjustifiably, by upholders of socialism that organized Christianity, in modern times at any rate, has little to its credit in the way of sympathy for the struggle of the non-possessing against the possessing classes, and much to its discredit as being a habitual supporter of the established social order and a bulwark of the existing state of things.

The theoretical antipathy of socialistic thought to the religious hypothesis in general is important. Admittedly, such antipathy has been widely prevalent in socialistic writing and thinking, especially since the time of Marx. One reason for this antipathy is obvious: socialism is primarily and indeed absolutely concerned, in all its forms, with the destiny of mankind on this earth and within the sphere of historical time. It contemplates an order of society realizable by men in earthly conditions, and to be entered upon at a date not impossibly distant by generations which will reap the fruit of present sowing. From this point of view, socialism is clearly committed to a high and indeed extreme form of ethical altruism, since any labour for socialism undertaken by an individual must be undertaken without expectation of individual reward and for the sake only of some future hour of realization in which he cannot hope to share. Thus, paradoxically and unwittingly, socialists have frequently demanded and lived by a faith (in the historical future of mankind) more difficult than most accepted religious faiths; but this exclusive interest in historical time has induced a certain blindness among socialists to some valuable aspects in the characteristic religious concepts of eternal life, the future of the soul, and man's spiritual and otherworldly destiny, whilst the feeling that interest in personal immortality and a life beyond this life may become a preoccupation leading either to disregard of this life's problems or to contentment with 'things as they are' has caused socialists again and again to turn altogether away from these necessities of religion.

6. Marxian materialism.—But there is a deeper and more subtle reason for the antipathy of much socialism to the religious hypothesis. This reason is to be found mainly in the teaching of Marx. The materialistic conception of history is obviously hostile to all theories of a spiritual origin and destiny for man and the universe, and Marx accepted the extreme materialism of the Hegelian

Left with its denial of all independent spiritual values and reduction of religion to a man-made illusion. When, as was frequently the case, this Marxian materialism became confused with scientific materialism and determinism, having in reality a quite different origin, the antipathy to religion was only strengthened. But the story of this antipathy does not end there. Far more potent than the materialistic conception of history was the conviction of Marx and Engels that they had made socialism 'scientific.' In that fact lies the final secret of all the antipathy to religion and all the ethical determinism which is to be found in socialistic thought. It was and has been repeatedly assumed that between socialism and 'science' there is intimate connexion, and this assumption has been interpreted to mean that socialism must accept without question all that 'science' may say. If 'science,' therefore, declares for a materialistic hypothesis of life and the universe, socialism must follow suit; if 'science' stands for moral determinism, socialism must accept that view too, and so on all through; only very slowly has socialism begun to emancipate itself from subservience to 'science,' and to realize that between the fundamental socialistic hypothesis and demand and the utterances of 'science,' so often science overstepping its proper limits, there is no necessary connexion. The process of emancipation has been aided by the deeper understanding of its place and function which modern science has achieved for itself, and by the realization within the region of socialistic thought that in any case socialism, in one necessary aspect, is an ideal, a vision, and a hope, and so demands for its acceptance and service a measure of 'faith,' and that determinism and materialism are not the best ground on which to nourish an ideal and faith in that ideal. The most recent movements in socialistic thought show the change clearly. They, although systematic, display little respect for the earlier devotion to so-called 'scientific' argument and talk of the 'necessary truth' of socialism, and so forth, but reveal instead a new intensity of feeling, a belief in human freedom, and a dominating appeal to the power in man of creating ideals and of living and working for them in pure faith, and with an enthusiasm which, it is now recognized, a cold scientific materialism and determinism inevitably destroy.

7. Conclusion.—Socialism is one of the significant movements of modern life, naturally affected by all the varying currents of thought and feeling which go to the making of that complex modern life; and the question of the relations of religion or Christianity, and of ethics, to socialism is really part of the wider question of the relations of these things to modern existence and thought generally, and their place therein. From all such questions the fundamental issues of socialism can be, and for purposes of true appreciation should be, separated, and taken in and for themselves. Then socialism appears, as we have already defined it, as a movement; vision, hope, theory, and ideal, generated by modern conditions, motivated in the deepest intent and meaning of it by ethical impulse and inspiration, and issuing in a characteristic demand for the economic reconstruction of society along well-defined lines, and in the anticipation of an earthly order of existence, based on new economic and industrial arrangements, inspired by new motives and purposes, and intended to provide a fuller and richer opportunity for the development of individual freedom, powers and qualities of personality, in a life of more intense, real, and satisfying fellowship than, thus far, the world has seen. The vital points are two: (1) understanding of the fundamental economic demand and effort

involved in all socialism, viz. the abolition of private possession in the means of production, and (2) understanding of the ethical ground, need, and desire out of which that demand issues. Everything else in socialism, both in the settling forth and in the criticism of it, is subsidiary, and often merely incidental and largely irrelevant, to these two considerations.

LITERATURE.—The literature of socialism in its various phases is vast and extraordinarily dispersed. Much of the best work has taken the form of tracts and pamphlets. It has been possible only to select a very few books, more as being suggestive than as really covering the field.

I. Historical.—Thomas Kierup, *A Hist. of Socialism*, London, 1909; Karl Diehl, *Über Sozialismus, Kommunismus und Anarchismus*, Jena, 1911; Max Beer, *Die Gesch. des Sozialismus in England*, Stuttgart, 1911; *A Hist. of British Socialism*, London, 1912; Werner Sombart, *Socialism and the Social Movement*, Eng. tr. from 6th German ed. by M. Epstein, do. 1909; J. T. Stoddart, *The New Socialism*, do. 1909 (with good bibliography); A. V. Woodworth, *Christian Socialism in England*, do. 1902; Morris Hillquit, *Hist. of Socialism in the United States*, New York, 1910; Sidney and Beatrice Webb, *Industrial Democracy*, new ed., London, 1907; *The Hist. of Trade Unionism*, new ed., do. 1906.

II. Theoretical.—F. Engels, *Socialism, Utopian and Scientific*, tr. E. Aveling (Social Science Series), London, 1887; Jean Jaurès, *Études socialistes*, Paris, 1902; E. Vandervelde, *Résumé socialiste*, do. 1905; E. Bernstein, *Die Voraussetzungen des Sozialismus und die Aufgaben der Sozialdemokratie*, Stuttgart, 1906; J. R. MacDonell, *Socialism and Society*, London, 1905; *The Socialist Movement*, do. 1911; A. Schäffle, *The Quinquessence of Socialism*, tr. H. Bonquet, do. 1906; L. B. Boudin, *The Theoretical System of Karl Marx*, New York, 1911; *Fusion Essays on Socialism*, ed. G. Bernard Shaw, London, 1899; K. Kantaky, *Karl Marx' ökonomische Lehren*, Stuttgart, 1903.

III. Special.—*Syndicalism et socialisme* (essays by various authors), ed. J. Lagardelle, Paris, 1903; A. D. Lewis, *Syndicalism and the General Strike*, London, 1912; A. E. Orage, *National Guide*, London, 1914; G. D. H. Cole, *The Work of Labour*, do. 1915 (good bibliography); *Self-government in Industry*, do. 1917; G. D. H. Cole and W. Mellor, *The Meaning of Industrial Freedom*, do. 1918.

IV. Critical.—A. Schäffle, *The Impossibility of Social Democracy*, Eng. tr. (Social Science Series), London, 1890 (pt. II. of *Quinquessence of Socialism* by the same writer); Robert Platt, *Socialism*, do. 1914 (good references to literature of socialism); W. H. Mallock, *A Critical Examination of Socialism*, do. 1902.

STANLEY A. MELLOR.

SOCIETAS PERFECTA.—A *societas perfecta* is a society that contains within itself all means sufficient for its support. The use of the term is derived from Aristotle, and came to mean in the Middle Ages no more than a sovereign and independent community. The term became important in the later Middle Ages, on all topics connected with the relations of Church and State. From Aristotle through St. Thomas Aquinas it filtered into Roman Catholic political theory. In the discussions that arose in consequence of the great schism at the end of the 14th cent. we find it argued that it must be possible for the Council to depose a pope, otherwise the Church would not be a perfect society, i.e., if it could not get rid of an impossible ruler, or had no organ to do so. The point is that a perfect society must have within itself all sufficient means to exercise its own functions and needs no extraneous help. Therefore it must provide implicitly or explicitly for every emergency. In the period succeeding the Reformation the term became more common in regard to the relations between Church and State. We find the argument used on behalf of whichever of the two powers is at the moment depressed. Church controversialists like Bellarmine claimed all kinds of rights for the Church on the ground that it is a perfect society. When these were extended by the papalist party in such a way as practically to deny the independent existence of the State, the secular writers used the argument on their side. John Barclay,¹ e.g., frequently uses this argument—the State is a perfect society no less than the Church. At that date no Roman

Catholic thought of denying that the Church was a perfect society; therefore the State had within itself all powers and did not require ecclesiastical sanction or approval; therefore the deposing power claimed for the pope is iniquitous, and so forth. It was the recognition of something like this position for the State that caused the development of the doctrine of the indirect temporal power of the papacy. In theory this doctrine is very different from that of the direct power. The doctrine of the direct power of the papacy is expressed, e.g., in the *Unam Sanctam* of Boniface VIII., or in the writings of Augustinus Triumphus or Boius, who asserts that the State is a part of the Church, and that kings are servants of the papacy. The doctrine of the indirect power proclaimed by Bellarmine and Suarez allows the State an independent existence as being in some sort a perfect society, but claims an indirect power for the Church in cases in which its own interests might be concerned. The former doctrine has relation to the medieval notion of the whole commonwealth as one society with its two departments, temporal and spiritual. The other looks forward to the modern doctrine of Church and State as two separate societies. In the 16th cent. the extreme claim of the civil power, especially in France after the Restoration, led to the development of modern ultramontanism (q.v.), and it was necessary to maintain the independence and inherent reality of the Church as a society. For this purpose there was the doctrine of the *societas perfecta* to hand. It was developed with great elaboration by two Jesuit writers, Targuini and Palmieri. Later we find the official recognition of the doctrine in the encyclical of Pope Leo XIII., *Immortale Dei* (1885). Therein it is stated that the Church no less than the State is a *societas generis et juris perfecta*. The admission in regard to the State shows how different is the condition from that contemplated by Boniface VIII. The following passage from a 16th cent. papalist Simancas illustrates the way in which the doctrine was employed in controversy:

¹ *Omne república spiritalis perfecta est et sibi sufficiens, ut se ipsam indomare servet, potest se omnia facere, omnia necessaria fieri ad eum finem consequendum exercendo etiam jurisdictionem in eos qui in rebus temporalibus aliqui esse subjecti non sunt, quod quidem naturali jure cuiusque Principi facere contra aliorum repúblicas licet.*²

LITERATURE.—Aristotle, *Politics*, I. ii. 8; Aquinas, *Summa*, I. ii. q. 20, art. 2, shows how the theory comes out of St. Thomas. Much use is made of doctrine of *societas perfecta* by Suarez, *Tractatus de Legibus et Deo Legislatore*, Antwerp, 1612, III.; see also C. Targuini, *Juris Ecclesiastici Publici Institutiones*, Rome, 1874; D. Palmieri, *Tractatus de Romano Pontifice*, Pisto, 1866. Discussion of the conception is found passed in A. Robertson, *Regnum Dei* (185), London, 1901; and in J. N. Figgis, *Studies of Political Thought from Grotius to Groen*, do. 1914, pp. 265 ff. and 264 (12).

SOCIETY ISLANDS.—See POLYNESIA.

SOCIETY OF JESUS.—See JESUITS.

SOCINIANISM.—Socinianism is the term applied to a critical and reconstructive theological movement of the post-Reformation decades, with consequent ideals of faith and morals. It was named after its master spirit, Fausto Paolo Socini (latinized into Socinus), a man of commanding intellect, supreme organizing ability, and unflinching will. He led and inspired a succession of able expositors who developed and articulated his tenets. Among these the names of Völkel (his amanuensis), Schmalz, Moscorovius, and Osterodt, who were his contemporaries, followed in later years by Johann Crell, a most prolific writer, Schlichting, Ludwig von Wolzogen, and Andrew Wiazowaty (grandson

¹ Barclay, *op. cit.* p. 101: *per seipsum ac principium . . . societas*, Paris, 1614.

² De Pope, printed in J. T. Noonan, *Bibliotheca canonica Pontificia*, Rome, 1896-98, vol. 277.

of Socinus), deserve a place in the record. The most important of the Socinian writings were gathered together in the *Bibliotheca Fratrum Polonorum*, edited by Wicowaty, the first two volumes of which contain the treatises of Socinus. In the *Racovian Catechism*, issued first in Polish in 1606, the year after the death of Socinus, at Rakow in Poland, where the Socinians had a strong church and a noted college, there is to be found the most compact and clearly developed systems of the doctrines. It is a marvel of clear, orderly, and definite statement in a time of intellectual confusion and doctrinal debate. Socinianism was an intellectual and rationalist system of Christian doctrine on a supernatural basis. It was a species of Unitarianism. The name Unitarian came into general currency through the admission on the title-page of the *Bibliotheca Fratrum Polonorum*—'quos Unitarios vocant.' It asserted the necessity and the fact of a divine revelation, maintained that the Scriptures are its authoritative record, and declared that the reason—the moral and religious nature—is the sole and final arbiter of truth. But in the beginning it was rather anti-Trinitarian than entirely sympathetic with the opinions of the Unitarian teachers of its day. Harnack, in his *History of Dogma*, ranks it, along with Tridentine Catholicism and Protestantism, as one of the three final stages of dogma. That may seem to be an exaggeration of its importance. But, when we look broadly at the historic developments of Christian doctrine, and remember how many schools of Christian thought are sympathetic with the conclusions of Socinianism, Harnack's classification is justified. The teaching of Socinus and his followers was a distinct variant from both the Roman and the Reformed doctrines, and churches of that variant remain to this day.

I. Historical setting.—The historical setting of Socinianism is of the first consequence. In every European country which was quickened by the religious and theological ferment of the Reformation a new sense of individuality, a clear realization of the discrepancy between the dogmas of the Church and the Christian experience of the times, combined with an intense moral passion, issued in a contempt for all stereotyped forms of doctrine. There was a wide-spread outbreak of independent and adventurous thought and speculation. Its expression and advocacy depended, in great measure, on the attitude of the civil rulers. Where the authorities were sympathetic, or where any measure of religious liberty prevailed, the truths which had laid hold on men's minds were publicly proclaimed, openly debated, and, when accepted, rigorously enforced upon the community. For this reason Switzerland, Transylvania, and the then large and powerful country of Poland became the haunts and sheltering homes of refugees from intolerant and persecuting lands. In Italy, under the rule of the papacy, with the merciless eye of the Inquisition watching every heretic, the expression of conviction was perilous to both life and fortune. But in Italy, as elsewhere, there were men for whom religious liberty was the breath of life. Foremost among these was the patrician family of the Sorini (as they spelled their name). They had been distinguished as jurists and canonists for several generations. They were as notable for nobility of character as for intellectual energy and dialectical skill.

Lelio Francesco Maria Sorini (1525-82), a jurist whose legal studies had led him on to researches in Hebrew and Biblical literature, broke openly with what he called 'the idolatry of Rome.' He sought the larger liberty to be found only beyond the borders of Italy. He visited all the Reformation lands and won the respect of all its leaders by

his wide knowledge and sincere piety, while he gained their friendship by his personal charm. He lived at Wittenberg for a time on intimate terms with Melancthon. He made the acquaintance at Geneva of Calvin, whom, however, he 'shocked' by the audacity of his speculations. His eager and subtle mind canvassed all the doctrinal problems of the day, reaching at last, through the confession and fate of Servetus, the central doctrine of the Trinity. Returning from his travels to Zürich, he spent three quiet years there, when his brief career was closed by his early death in 1582.

Lelio Sorini is of interest chiefly because of his influence upon his nephew, Fausto Paolo Sorini. Lelio was the father of the doctrine, but Fausto was the moulder of the theology and the founder of the Church. To his nephew Lelio bequeathed all his property. His most precious legacy was a number of MSS and exegetical notes. His nephew acknowledged his indebtedness in generous terms. He declared that his conversations with his uncle infused his young mind with a moral passion for the things of salvation and with a true conception of its method. He confessed that he learned from him a fair interpretation of Scripture, and he makes the copious statement that Lelio's excerpts of 'the apostle in John 13' and 'the beginning of the gospel' was the fruitful hint for a method of a new Christology.

Fausto Sorini was born in Siena in 1539. There he spent his youth and received his education. On coming of age, he left Italy, living first at Lyons and then at Geneva, where he was enrolled as a member of the Italian congregation. In 1565 he returned to Italy, conformed to the Roman Catholic Church, and, after the ennoblement of the time, entered the service of Isabella de Medici in Florence, who bestowed upon him both office and honour. He always referred to these twelve years as the wasted period of his life. Yet his mind had not been dormant, although he made no open sign. It is now known that the fear of losing his patrimony kept him silent. After Isabella's death he left Italy and settled in Basel to give himself entirely to the study of the Bible. There he became a centre of theological inquiry and discussion. The first outcome was seen in his treatise *de Jesu Christo Servatore*, a polemic against the evangelical teaching of the Reformers. It was written anonymously and privately circulated. A copy reached the hands of Blandrata, who was court physician in Poland, with an ambition to regulate the religious life of the people. Italians had always been welcome in Poland, where their genius in both literature and art had been admired. The religious tolerance of the rulers had made Poland a land of desire. When Blandrata sent for Socinus, he eagerly accepted the invitation, and his theological learning and deftness in practical affairs found their fitting sphere. Despite his slim birth and his hampering deafness, he so basted himself with his pen, and in debate in conferences, that he impressed himself and his convictions on the religious thought of the people. The Unitarian doctrines held the minds of the ruling classes. Socinus won them to his protest against the doctrine of the pre-existence of Jesus, and, on the other hand, overcame their objection to invoking Christ's help in prayer. The Unitarians became *invocantes—non adorantes*. The Anabaptists, with their urgent and enthusiastic zeal for individualism in religion and their imperative demand for rebaptism, had enlisted the sympathy of the masses. He purged the Anabaptists from their unreasonableness in doctrine and their excesses in morals. His writings were published pseudonymously. But, when he found himself settled in Poland, married into one of its families, and cut off from his patrimony in Italy, he acknowledged their authorship. This issued in a revolt of the masses against him, and in 1598 he was expelled from Cracow. He found shelter with friends, but the intense toil and strain of his life had prematurely aged him, and he died on 4th March 1604. It is

open to question whether or not the Minor Church, as it was called, with its clear-cut and subtly argued scheme of doctrine from the hand of Socinus, might not have become supreme in Poland. But the authorities at length took up a position of keen antagonism, which issued in active persecution. Its teachers and people were scattered throughout Western Europe, finding shelter in Holland and in England, and giving birth to schools of Unitarian theology. It is only among these Unitarian communities that the modified tenets of Socinus and of his earlier followers are to be found openly avowed, but the influence of his teaching is more pervasive than is commonly realized.

2. *Outline of doctrines.*—The doctrines of Socinianism, because wrought out into a well-knit scheme, can be given an orderly statement. The point of view from which they should be approached is that of a theory of salvation. In this Socinus had caught the spirit of his age. That was the subject of his first treatise written in Basel. The focus of its critical attack was the orthodox doctrine of the Atonement, and to this day all churches and schools who look back to Socinus level their lance at the evangelical interpretation of the death of Christ. The most strenuous pages of the *Bibliotheca* and the most pungent sentences of the *Racovian Catechism* deal with the meaning of the sacrifice on the Cross. To stand with Socinus at his conception of the death and resurrection of Jesus as a centre enables us to sweep round the whole circle of his system.

(a) *The basis.*—The first feature which emerges is its basis in the Scriptures. The NT, whose authenticity, sufficiency, and perspicuity are postulated rather than argued, is the text-book. Its rational and balanced exegesis will yield proofs of its authority as a divine revelation. The witness of tradition, the declaration of creeds, and the authority of the Church are summarily set aside. All that is required is the use of 'right reason' to discover, understand, and apply the things which belong to the faith and its salvation. The OT has no authority in itself. It has a certain value for its illustrative and devotional features. But it is entirely dependent for its authentication and interpretation upon the NT Scriptures. One of the by-products of the teaching of Socinus was his method of a balanced and scholarly exegesis, and the ban which he placed on dogmatic interpretations was a service of exceeding value to Christian scholarship.

(b) *The doctrine of God.*—On this basis there was raised the superstructure, and its first article, in order, is concerned with the doctrine of God. Here Socinus was influenced and even controlled by his Scotist conception of the divine nature. Philosophically Socinianism was a throwback to the Scotist demand for concrete and evidenced reality, and a protest against a metaphysic which would not yield itself to almost entirely natural categories. As a consequence, the conception of God in the mind of Socinus was somewhat external, and His attributes are those which are essential to His being, rather than inherent in His character. Socinus, therefore, defined God after His nature and His will. In His nature God is 'the supreme Lord of all.' Omnipotence is not His only attribute, but it rules every other. God is an *absolutum Dominium*. There can be no question raised against God, who, however, will do no evil. Still more, as the finite cannot be a measure for the infinite, all human conceptions of the nature of God must be considered as inadequate grounds on which to base a critical or condemning judgment. It follows that God's will is an *arbitrium imperium*, a will entirely free, bound by no law that the human mind can formulate, and able to will God's

pleasure, in obedience to His purposes, in ways hidden from the human mind.

'God's dominion comprises a right and supreme authority to determine whatsoever He may choose (and He cannot choose what is in its own nature evil and unjust) in respect to us and to all other things, and also in respect to those matters which no other authority can reach; such as are our thoughts though concealed in the inner recesses of our hearts—for which He can, at pleasure, ordain laws, and appoint rewards and punishments.'

Thus God is simply the great omnipotent free will, the supreme individual personality, over against whom man is also an individual personality as free in will but impotent in fact. It at once appears evident that such doctrines as predestination, original sin, the necessity of imposing a penalty or of adhering to any doctrine of forgiveness in relation to law, are swept away. God stands above all compulsion, over against man, who also is endowed with a free will to obey or to disobey. From this position it is an inevitable step to the unity of God. God is the absolute arbitrary One. 'There cannot be more beings than one who possess supreme dominion over all things.' To speak of three persons, by which Socinus always means three individuals, is to speak irrationally. Yet the Socinian doctrine was careful to utter a caveat and to suggest a limitation, with a view to giving room for its Christology. As against the personality of the Holy Spirit, there is no hesitation. The Holy Spirit is only an energy. But God may delegate His power or may share it, as He has done pre-eminently in one instance. Yet He remains single, alone, supreme, so that the Socinian argument is always unfalteringly anti-Trinitarian.

(c) *Doctrine of Christ.*—The Christology of Socinus is set out in regard to Christ's person or 'nature,' and His work or 'office.' Jesus was truly a mortal man while He lived on earth, but at the same time the only-begotten Son of God, being conceived of the Holy Spirit and born of a virgin. He was separated from all other men, distinguished by the perfect holiness of His life, endued with divine wisdom and power, and was sent by the Father with supreme authority on an embassy to mankind. By His resurrection He was begotten a second time and became, like God, immortal. He was therefore glorified by God, that He might be made the chief director of our religion and salvation—in which office are comprised His supreme authority and dominion. These positions are supported by a comprehensive citation, with a confident exegesis of the relevant passages and types and symbols in the Scriptures. The strenuous and subtle argument, with its occasional violence of denial, indicates the strain clearly felt in dealing with the words of Christ and the witness of the Epistles, as these are accepted by the Church Catholic. A similar pathetic note can be heard in the protests of Martineau under the stress of the same exegetical contest. The 'office' of Christ are three—the prophet, the high-priest, and the king. But the offices of the high-priest and the king are dismissed briefly, and the whole stress is laid upon His prophetic ministry. Jesus is our high-priest, not because of His sacrifice at Calvary, but because of His mediation and intercession after His resurrection to heaven. Jesus is the king because God has 'placed Him at His right hand and given Him all power in heaven and on earth, that He might at His own pleasure govern, protect, and eternally save those who believed in Him.' In His prophetic office Jesus has manifested and confirmed the knowledge of the hidden will of God, and His work was consummated in the new covenant, as it is found in He 8th and 1 Ti 2nd. In that covenant, interpreted by Jesus, are stored the perfect pre-

cepts and perfect promises of God, with the modes and grounds of our obedience to them. The precepts are both moral and ceremonial. Some of them were additions by Jesus. Others were interpretations, and a quickening of the inwardness of OT laws. The ceremonial ordinances are baptism by immersion, simply as a rite of initiation, although Socinus himself remained indifferent to the use of this sacrament, and the Lord's Supper, which is nothing more than a feast of remembrance. Through these observances the Christian believer lays hold on eternal life and receives the gift of the Holy Ghost. But Christ's prophetic office fulfilled its supreme function in His confirmation of the divine will by His perfect innocence, His miracles, and His death. With the meaning and efficacy of Christ's death Socinus wrestled in the fullness of his strength. The one thing of which he is sure is that Christ's death is not an atoning sacrifice. Christ indeed suffered for sin rather than for sinners. He was a victim of sin, a witness to its guilt, a deliverer from its power, and, therefore, He willingly 'underwent a bloody death as an expiatory sacrifice.' Because of this willing submission to the rage and fury of sin, men have a right to the remission of sins, and a new hope in God. They are drawn to Christ as their Saviour and see Him to be God's witness to His own boundless love to the human race, and are therefore led into reconciliation with Him. Every other view is rigorously analyzed. The doctrine of satisfaction, which the Reformers urged, is keenly canvassed and its difficulties are set out in an animated dialectic. The conclusion reached is that God, whose will could have chosen any mode of forgiveness which is not foreign to His nature, chose to make acceptance (*acceptatio*) of Christ's death at Calvary, but especially of its offering in heaven, the ground of forgiveness. The forgiveness of God is, therefore, not *propter Christum* and not even *per Christum*, but *gratuito*, because God was willing to accept this sacrifice. Its power consists in its revelation of the will of God and its consequent moral influence on the heart of man.

(d) *Doctrine of faith.*—This theory of salvation is matched by a corresponding doctrine of faith. Faith is an attitude of attention to the promises and an obedience to the precepts of God. It may be of two kinds. 'A bare assent alone of the mind whereby we acknowledge the doctrine of Jesus Christ to be true' is not attended by salvation. The faith required is that 'we trust in God through Christ, and give ourselves up wholly to obey His will.' In spite of the wide gulf between these limiting definitions and the breadth and depth of the Pauline conception, Socinus felt himself compelled to relate his conclusion to the Pauline doctrine of justification. But his reference is slight, and his logic renders his use of Paul's master word unreal, if not unmeaning. The whole system is completed by an ethical demand of high seriousness and eyes of austerity, although it lacks the glow and colour of an obedience which is the outflow of the adoring gratitude of the redeemed.

3. *Critical estimate.*—When we turn to a critical examination of the doctrines of Socinianism, we find that the contest ranges along the whole front. Socinianism has been condemned both by the judgment of history and by the witness of almost universal Christian experience. The Roman Church, with its adherence both to the method and to the content of the early creeds, and through its passionate loyalty to Augustinian doctrine, dismisses the teaching of Socinus with an unflinching denial. But it troubled the Reformed theologians of the 17th cent. and invaded all their communions, so that they grappled with it as the

subtlest and strongest enemy of evangelical truth. The Christian thought of to-day no longer fears its assault, for it has discarded, once for all, the Socinian method of approaching Christian doctrine, but it maintains and must maintain its protest against its chief conclusions.

The first broad remark to make is that Socinianism was a school rather than a Church. Its congregations were associations for Christian learning rather than communions for Christian worship and service. This is confessed in the opening sentence of the *Racovian Catechism*:

'The Christian religion is the way of attaining eternal life which God has pointed out by Jesus Christ and it may be learned in the Holy Scriptures, especially in the New Testament.'

But the Mediaeval Church and the Reformers held that the Church was a religious fellowship, a society of divine origin, founded by Christ through His atoning work for men. Within its communion and by its offices sinful man found the way to God. The Church was more important than, and prior to, the individual believer. To the Church God fulfilled more abundantly His promise of the Holy Spirit. Through its message men were called of God, and by its sacraments were sealed to His service and to communion with Him and their fellow-men. Had Socinus and his followers ever entered into this truth, they would have realized how insufficient was the basis, and how external was the structure, of their scheme of doctrine.

The view that Scripture is merely a source of information about doctrines and precepts is a shrunken conception of what both the OT and the NT have been to the Christian mind and conscience. Scripture is a means of grace, a channel through which the message of God passes to the soul of man, a meeting-ground where God and man stand, spirit in touch with spirit. Scripture has a divine power to enlighten, to quicken, to rebuke, to comfort, to give peace. The Reformation doctrine of the witness of the Spirit to the word, which is affirmed not only by Scripture itself but also by universal experience, was never upon the horizon of the Socinians, and that casts a blight upon much of the skilful exegesis of their scholars and commentators. In the same way in their doctrine of God they never rise to the height of the thought that He is the God and Father of the Lord Jesus Christ, and is so regarded, as known, and so confessed through the power of the Holy Spirit. He is not even a moral Ruler of a moral universe with laws unalterably righteous, to which He has set His seal. He is simply an 'All Highest,' for whom creation and providence and, finally, the redemption of men are simply acts of His mere pleasure, the exercise of His will. He is never a holy love, with a necessity to create and redeem, because of a self-sacrificing passion for men and a desire for their fellowship and service.

When we realize the insufficiency of the Socinian doctrine of God, we understand the reason for the limited and depreciatory doctrine of Christ's person and work. Jesus was not the Word made flesh. He was the man whose life in the flesh achieved victory over sin for Himself, whose resurrection, not by His own power but by the will and power of God, made that victory a means of salvation to men. We realize in a moment with what tremendous energy the Reformers did battle with this, as they deemed it, dishonouring conception of the incarnate and redeeming Christ. They pointed out not only that the ecstatic sentences of the NT were inconsistent with these formal statements of Socinian theology, but also that this conception was a throwback to the discredited Pelagianism of the past. They remarked upon the fact that no self-forgetting consecration and no impassioned

devotion were to be found in the hymns and prayers of the still life within the Socinian churches. The truth was clear that the Socinians had no sufficient doctrine of sin. It was neither a transgression of a holy and indissoluble law nor a state of enmity to God. It was the offence of an individual man against an individual God, a private injury which God might pass by on any conditions that He might choose to impose. As a consequence the Atonement is really superfluous. All that can be said is that God has chosen to accept it in the exercise of His will as an offering through which He will be reconciled. The motive of the love of God as the source and spring of the Atonement, the fact of the divine reaction against sin, the solemn truth that a holy law cannot be broken without the breach of much else, and the necessity of a reason in righteousness for Christ's death for sinners, all lie outside the narrow path of Socinian theology. The issue of all this is that both faith and obedience, both the relationship to God and its ethical issues, are bleached of their colour. It is not accurate to say that the Socinian conception of faith is only assensus. That is denied, with good reason. But it is fair to say that faith never became a full-orbed and adoring *relucta*. It never attained to a simple, unquestioning confidence in God and in His grace revealed and made potent in Christ. It never reached to that vision of His love, that venture upon His mercy, and that victory over the world which constitutes the secret of the Lord. It never evoked that love which casts out fear. The final issue is seen in the fact that the ethics of the Socinian churches in all time never rise to that abandonment of joy, that quenchless zeal for Christ and His kingdom, and that glow of devotion which make up the atmosphere of believing churches and believing men. The Socinian ethics lacks the dynamic of a faith in the love of a divine Redeemer who gave Himself for men. It is unlikely that Christian theology will ever hark back to the way of the Socinian. It will never build either with his intellectual method or upon his narrow and scholastic bases. But there is a possibility that, through the application of similar methods to the self-consciousness of Christ, there may be a reaction to anti-Trinitarianism, and from that men may stand again with the Socinian to utter their denial of the deity of Jesus and all that that implies.

LITERATURE.—The reasoned apologetic of Socinianism is to be found in the *Biographia Pietatis Polonoarum*, Amsterdam, 1696. Vols. I. and II. contain the letters of Socinus as well as his chief controversial works. Of these his treatise *de doctrina Scripturae*, Bales, 1810, which is said to be his earliest writing, and his *de Jure Christi Servatoris*, Basel, 1691, state and defend the basis of his system, and the stress-point of his thinking. In the latter it is the work, and not the person, of Christ that is expounded and argued. The simplest and clearest statement is to be found in the *Strogonium Catechismus* issued in Polish in 1695, published in Latin in 1699, and translated into English by John Hells in 1697. It was afterwards revised and enlarged and reached its final form in 1699. From this ed. Thomas Ross published his Eng. tr., with a sympathetic historical introd., in 1811. A. Harnack, *Hist. of Dogma*, Eng. tr., London, 1904-09 (vol. 2, 288), gives a full account of the historic development and theological trend of the system. Albrecht Ritschl, *Critical Hist. of the Christian Doctrine of Justification and Reconciliation*, Eng. tr., Edinburgh, 1872, deals critically with its chief features; T. M. Lindsay, *Hist. of the Reformation*, Edinburgh, 1896-97, II., shows its historic setting and relationship to the Reformation. The standard German work is that of O. Feick, *Der Socinianismus*, Kiel, 1847. The biographies of Socinus are of especial value. The earliest (1693) by S. Præpikowski is prefixed to his works. In 1868 it was rendered into English by John Hells (1618-22), who has been called, significantly, 'the father of English Unitarianism'; whose sufferings in an intolerant age indicate the anti-policies assumed by Socinianism. A sympathetic Eng. tr. by Joshua Toulmin, with a historical introd., was published in 1777 under the title *Memoriae of the Life, Character and Writings of F. Socinus*. An illuminating study, embodying the result of recent research, is A. Gordon, 'The Socini and their School,' *Theological Review*, July 1913. The various heresies of Unitarianism in England and in the United States trace the con-

nection with Socinianism, and point out the criticism and reduction of its conclusions and the difference between their points of view.

W. M. CLOW.

SOCIOLOGY.—1. The field.—Sociology is the study of human society, which means in its most general sense the tissue of relations into which human beings enter with one another. The name suggests friendliness and co-operation, and it is true that a certain ultimate community of aim and of character underlies those relations between men which are continuously active and permanent. But these are in fact blended with dealings and feelings of a hostile or indifferent character, and, for purposes of investigation, all or any dealings of man with man, anything that conditions or proceeds from such dealings, is a social fact. 'Envy, hatred, malice, and all uncharitableness'—the un-social or anti-social elements in our sense of the term—are unfortunately relevant to the study of social facts in the widest sense. The social relation, again, may be direct, personal and conscious, or it may be indirect and unknown or ill understood by those whom it affects. In the complexities of the world marked a good harvest in the Argentine may affect the fortunes of a Norfolk farmer and possibly the employment of a labourer who would be puzzled to point out the Argentine on the map. The effect is just one element in the operation of a tissue of social relationships of which perhaps no one but the student of this particular market possesses any adequate knowledge, and it is a part of any sociological inquiry to bring to light relations of social cause and effect which without systematic investigation remain quite obscure even to those whom they most intimately affect. Thus the social relationship is potentially as wide as humanity and as various as life. In the simpler societies, it is true, physical barriers separate off different tribes and peoples so that their lives may have little or no contact with one another, but, as material civilization advances, such barriers are scaled and the range of direct and still more of indirect social interaction is progressively widened. In the study of society we may deal with anything which interests us within the whole range of this interaction, and it will be seen that by 'society' we mean something different from a society. Society is something universal and pervasive, a tissue, as we have called it, of relations of which it is difficult to find the beginning or the end. A society, on the other hand, is a definite collection of people united by certain special relations with one another and in some way marked off by these relations from others who do not enter into them, possessing in fact a certain unity and in general a structure and what for want of a better metaphor we are accustomed to call a certain life of its own. The formation of societies—their growth, structure, and decay, their inner history and their mutual relations—constitutes the principal part of the study of society, but not the whole. Behind societies there is always society, and the door is opened to serious fallacies if we forget the distinction. Broadly we may express the relationship by saying that it is one of the general characteristics of society that it engenders societies. Out of the tissue of social relationships emerge collections of people constituted each with a definite structure of its own distinguishing it, but by no means severing its relations with others. If society is the tissue of relationships between men, a society may be defined as a structure of which the elements are human beings living in certain enduring and defined relations to one another. Any given human being is as a rule a member of many

societies—e.g., family, house of business, trade union, Church, and State—and these societies may either be concentric (the smaller group being members of the larger) or intersect (e.g., a world Church or an international labour organization cuts across State divisions). Running through and beyond all these societies are the social relationships that have not thrown up any organized structure. Thus the influence of science, philosophy, art, and literature is international and extremely pervasive, but, though we speak of the republic of letters or of science, this is no more than a metaphor. The mutual influence of thought and discovery among the peoples is of old standing and is very great, while such organization as it has attained in the shape, e.g., of world congresses is recent and very partial. Nevertheless the tendency of social relationships to take shape in some definite organization is interesting and important here as elsewhere.

Ideally the complete subject of sociology is the entire field of these social relationships organized or unorganized. Any study is sociological which concerns itself with any branch of them, and, as human faculty is limited and the field of society vast, it is in practice necessary to divide the subject into a number of specialisms. Necessary, but a necessary evil. For one of the few generalizations that can be laid down with confidence about society is that all its different parts, however clearly distinguishable for thought, are in their actual development interwoven. The religious, the ethical, the legal, the scientific, the economic relations of life are rightly distinguished, and, if any results are to be attained, each must be studied with the minuteness and accuracy that are possible only to specialism. Yet change in any one of these relations may affect all the others, and the specialist who becomes so concentrated on his particular branch that he ignores the rest is liable to serious errors, such as, e.g., disturbed for a time the development of economics. There is no fundamental difference in this respect between sociology and other sciences, particularly sciences which deal with living beings. A pathologist may specialize with success on the eye or the ear or the liver, though all these organs are part of one organism and are affected in their functions by changes in other organs. What the social specialist has to do is to cultivate his own garden without forgetting the larger field of which it forms a part and from which weeds, let us say, may spread to his own patch. Or, to drop the metaphor, he may make generalizations within his own department, but must bear in mind that these results are conditional on freedom from disturbance by influences emanating from other departments. These things are so obvious that they would hardly be worth stating if it were not for a certain pride of specialism which tends to erect the particular branch, whatever it may be, that the student has chosen into the main stem of society. Thus the economist is apt to see in the industrial and commercial relationships the true and solid foundation of society, the groundwork of its development, the root of its diseases and decay. The political philosopher is convinced that the State is society—not merely the governmental organization which serves as a shell, but the essence and spirit of society itself. The religious man will find all that is of real account in the character of the beliefs current among a people. The biologist sees racial characters everywhere, and the historian of thought is inclined to the view that intellectual development is the sole cause of profound changes in civilization. Against all these tendencies to bias sociology has to make its protest. Its fundamental thesis is that all parts of society interact, and that

no pre-eminence over the remainder can be claimed *a priori* for any one element of social life. What is the extent of the influence of each is a very difficult problem to be solved inductively, and probably is destined to receive a different answer in relation to different societies and different periods.

Perhaps a single illustration may be given of the interacting of cause and effect and the impossibility of ascribing the parts of influence to a single factor. Some economists, the Marxists in particular, represent history as an unbroken process proceeding by an inherent dialectic determining and not determined by the rest of the social structure. But it must be apparent that the industrial structure of our own time is more and more determined by scientific discoveries; not in the 19th cent. would the electric telegraph—one of the key processes—have arisen but for the experiments of Galvani and Weber stimulated by a theoretical interest, and derived in their turn from the purely intellectual work of Volta and many others. In our own time wireless telegraphy, a commercial innovation of the highest importance, owes its origin to the work of Hertz, which is affiliated to the purely theoretical researches of Clerk-Maxwell. So far the economic factor is dependent on the intellectual, but, if any one thinks that the intellectual factor alone determines the application of science to industry, let him ask himself why the principle of the steam engine, known to Hero of Alexandria, had to wait for the second half of the 18th cent. for its fruition. It is clear that in the 1st cent. A.D. there were men capable of devising practically steam engines if the conditions had created a demand for them.

It would be easy but superfluous to follow the illustration farther. Let us put the point in this way. The development, say, of science is primarily self-dependent, one discovery leading on to another, but it is conditioned by many elements in the social order—e.g., by religious freedom, the facility of intercommunication, and the social appreciation of intellectual work. Social prejudices, moreover, affect the fashions of scientific thought; e.g., political passions have encouraged theories of race and of the struggle for existence, and national prejudices play their part. So again religion has its own evolution, but is vitally affected by science. Ethical evolution is not the same as religious, but is closely interwoven with it. Law is distinct from either, but cannot violate the ethical or the religious standard with impunity. National evolution has its own roots, but plays upon and is played upon by religious, ethical, and economic influences and even by scientific or pseudo-scientific theories of race. The existing sum of sociological knowledge includes all the scientific studies of all these departments of society. The ideal sociology which has yet to be created would be the synthesis correlating and correcting their results.

Ultimately, then, sociology is a synthesis of the social studies. In the meantime the immediate task of the sociologist is humbler and yet difficult enough. Having in mind the interconnection of social relations, it is his business to discuss and expose the central conceptions from which a synthesis may proceed, to analyze the general character of society, examine the action of social development, and distinguish the permanent factors on which society rests and from which social changes proceed. In a wider sense sociology may be taken to cover the whole body of sociological specialisms. In a narrower sense it is itself a specialism, having as its object the discovery of the connecting links between other specialisms. In this sense the problem of sociology is the investigation of the general character of social relations and the nature and determining conditions of social development.

2. Social science and philosophy.—So much controversy has arisen as to the method of such investigation as to have in large measure blocked the path of investigation itself. The greater part of sociological treatises is apt to be taken up with questions of the logic of the science. In point of fact every science has found out its own method by experiment, and it is only by investi-

gating social phenomena that we shall learn to distinguish between the fruitful and unfruitful methods of approaching them. Nevertheless to define the relation of sociology to other inquiries that cover or even touch the same field is to make some advance in our main problem of clearing up fundamental conceptions, and we must deal here briefly with the main issues that have been raised.

(a) *Questions of fact and questions of value.*—Historically the systematic investigation of social life began as a branch of general philosophy. Plato's *Republic* is a treatise on metaphysics, ethics, aesthetics, psychology, education, and political theory in one. For Aristotle ethics and politics in the narrower sense are two branches of a more widely conceived political inquiry, and are together subordinate to his conception of nature and man's place therein. To the Stoics the city of Cecrops was a microcosm within the wider cosmos which was the city of Zeus. In modern times the study of social affairs began with the criticism of political authority and was dominated by the conception bequeathed to the world by the Stoics of a law of nature, and down to our own day among the followers of Hegel the metaphysical theory of the State (*q.v.*) retains its influence. The simpler and truer view of the relations between social science and philosophy is due to the Utilitarians. For them moral philosophy was devoted to the study of the ultimate ends of human action, which they declared to be the promotion of the greatest happiness of the greatest number of those whom action can affect. Political and in general social theory were concerned with the actual relations of man in society, and this investigation would be the servant of ethics, as it would reveal what institutions made for and what were prejudicial to the general happiness. We thus get a clear distinction between three inquiries which are apt to be confused: (1) the inquiry into the nature of the good, a discussion of values; (2) the inquiry into the actual relations of human beings, a discussion of facts; (3) the inquiry into the means of utilizing our knowledge of the facts in the service of the good, the application of ideals of value to the discovered truth as to facts, the art of social improvement.

Certain fundamental questions may be raised here as to the distinction of value and fact. It may be that value (*q.v.*) is also a fact, an element in reality. We shall not pursue the discussion here, as we should be far from denying the ultimate co-ordination of all thought—a co-ordination in which the conception of what is desirable must play a part along with the knowledge of what is actual. But, in whatever sense the actual and ideal are related, they are also distinct, and of any specific inquiry we must know whether it is dealing with the one or the other. We may appropriately use the term 'philosophy' for the discussion of value, whether it be the value of methods of attaining truth or the value of modes of life and conduct, and the term 'science' for the investigation of facts and the interconnections of fact which we seek to exhibit as laws. As social life is the medium in which all that we most value has its being, it is clear that it falls within the purview of philosophy as here described, and, if we call the study of value ethics, it follows that any social philosophy is a branch or application of ethics, as the Utilitarians justly conceived. But it is also clear that the application cannot be usefully attempted without knowledge of the facts of society, the systematic exhibition of which is the object of a social science. So far we have a justification for both the philosophic and the scientific treatment of our subject. A complete sociology would therefore embrace a social philosophy and a

social science. But it would be a synthesis, not a fusion, of the two inquiries.

It is necessary to make this clear because the distinction has in fact been too often ignored. If we turn to any treatise on social philosophy, we shall find an examination of many of the elementary social institutions—government, law, property, the family, international relations, etc. These are all existing facts, institutions varying endlessly in detail and often in most essential elements from case to case. If we examine these institutions in order to discover what is in fact common to them or how they in fact differ, we are in the region of science. If we examine them to discover how far, or in which of these specific forms, they conduce to the good of man, we are in the region of philosophy. The fundamental defect of the metaphysical treatment of society, however, has been precisely that it has not distinguished these questions and that in analyzing the actual constitution of society it has seemed at the same time to determine what is and to lay down what ought to be. As against this method it must be maintained that the analysis of institutions is either an analysis of values in subordination to some explicit system of ends or an analysis of their actual form of operation in a given society. Both inquiries follow a characteristic method of general philosophy in that they examine those elementary conceptions which ordinary thought takes for granted. Both cover a good deal of the same ground. But their final goal and consequently their continuous interest is different. One thinks constantly of the good which an institution subverts, the other of the precise form which it assumes at a given time, the evolution through which it assumed that form, its interaction with other institutions, and similar questions of fact. Grave confusions arise when issues of fact are coloured by judgment of value; but, when the facts are completely and accurately stated, it is reasonable to essay their valuation, and this is the proper task of social philosophy.

Thus the whole field of society can and should be treated scientifically, and, when scientifically understood, can and should be reviewed philosophically. There is no objection to either method in itself, but only to a confusion of the two. A complete sociology, indeed, aims at a synthesis in which the two parts, though always distinct, are brought into definite relation.

The confusion of method may be illustrated by the uncritical use of terms like 'progress,' which, if it means anything, means a change to something better, a change which therefore we approve, which accords with our standard of ethical valuation. If this meaning had been kept in mind, it would have been impossible for the conception of progress as involving an unqualified brute struggle for existence to hold its own for a day. In the scientific part of our work we had better avoid terms of instinctively ethical colouring, and with that object, in place of social 'progress' and 'retrogression,' we shall speak of 'development,' 'arrest,' and 'decay.' It may be objected that these terms still carry ethical associations, particularly if we speak, and we shall have to speak, of 'higher' and 'lower' developments. As shown farther on, there is, however, a precise and unambiguous meaning to be attached to these terms which is independent of any ethical valuation; they import differences in the internal vitality, efficiency, and extension of social organization. Whether such organization is on the whole a good or a bad thing is another question. On the method here proposed the question of the nature and conditions of social development becomes a question of social science proper, the question of the social ideal one of ethics, and the question whether actual development has been or is or may be so guided as to conform to the ideal one of the application of ethical principles to scientific results. The present article deals in some detail with the definition of social development, and only briefly indicates the ethical ideal by which the facts should be valued.

(b) *Law and freedom.*—Another philosophical conception which has given trouble in the scientific study of society is the conception of law. It is maintained that the object of sociology as a science is to achieve generalizations which presuppose the

existence of law in the life of society, and it is questioned whether law involving necessary connexion prevails in the field of human action determined by the human will. The metaphysical question of freedom which emerges here has been generally held to be of critical importance to the status of sociology as a science. But this is an error. It is forgotten that in all sciences the 'laws' which investigation reveals are conditional. They tell us what will happen under given conditions, and enable us to predict what will actually happen at a given time and place only on the tacit supposition that our knowledge of the conditions then and there existing is adequate. Even the astronomer who predicts an eclipse for a given hour and minute speaks with the tacit reservation that the solar system remains unchanged by the irruption of a comet or other disturbing body. Whenever we apply science to practical affairs, the possibility that our enumeration of the relevant conditions is incomplete becomes a serious consideration, and the judgment of the practical man is required to round off and apply the conditional predictions of the specialist. The pathologist lays down the normal course of a disease. The family doctor, using the pathologist's results and knowing the history of the patient, forms by the union of the two a prognosis which is valuable in proportion to his discernment but is not matter of demonstrative certainty. Similarly, what sociology tells us or hopes to tell us is what will happen under given conditions. The economist, e.g., shows that, if supply is reduced while demand is constant, prices will rise. This is a result reached by legitimate reasoning from certain postulates, generally verified in the workings of a modern market. But, if a food controller intervenes, or even if there is a strong appeal to patriotism or a wide dislike of 'profiteering,' a new condition is introduced and the conclusion will not hold. The motives that may stimulate the will are so various, and the complications of social life so intricate, that on any theory of the will all our sociological generalizations must be conditional in character. If people act in certain normal ways conformably to our analysis of human nature, confirmed perhaps by statistical records of actual behaviour, then on given conditions certain results will follow. Even if we assume the strictest philosophical determinism, we could not get farther than this until we knew all the possible motives to action which all possible situations might throw up. If, on the contrary, we assume an indeterminism in the old and strict sense, we are for the present no worse off. We shall still be able to say that, if the mass of men act as they ordinarily do, the results will follow. The difference would emerge only at a much later stage than sociology has reached. For, if there is a strictly indeterminate element in the will, then there is a factor which not only is not known but never can be known. In that case, while other sciences might, ideally, complete the study of their subject-matters and succeed some day in transforming their hypothetical predictions into categorical generalizations in which all relevant conditions should be known, sociology and psychology would have to leave a gap where the undetermined will operates. None the less on both sides of the gap the territory could be explored, and the generalizations obtained would be valid conditionally on a stable operation of the will.

But even this distinction admits a little too much. It overlooks the power of statistical method. If there is an element in the operation of the will which is *bona fide* indeterminate, we are in the region of 'pure chance.' Among a thousand persons confronted with a certain conflict

of motives it is even odds whether any individual chooses this or that, accepts, let us say, or refuses. To deny this evenness is to take away the indifference of the will, and inclines us one way or the other. Now in such an event it is quite impossible to determine how any one of the thousand may act, but of the thousand as a whole statistical theory will tell us what the probabilities are. It will tell us that probably the number of acceptances and refusals will be approximately equal, and it will give us a precise measure of the improbability of their diverging by more than a specified amount from equality. If there are many sets of a thousand in question, a divergence in the same direction in all of them becomes increasingly improbable. The approach to certainty is asymptotic, but it is the business of inductive science to yield not only certainties but also measured probabilities, and this is possible to sociology by the use of statistics even on the assumption (which one may take as almost excluded by philosophy) of a strictly indeterminate element in volition. In fact, if the indeterminateness of the will is clearly grasped and the conception rigidly applied, it results that, while the conduct of any individual in a given case is absolutely unpredictable, the average of conduct in a large number of cases will be exactly what it would be if the indeterminate element of choice were non-existent. On the average men will act in accordance with the predominant motive. If, on the other hand, the unknown element does not act indifferently now one way and now another, it ceases to be indeterminate, and, if its effect is studied over a large number of cases, it must become measurable.

(c) *The element of individuality.*—It may be objected that the individual decision may be just the critical event—the turning-point on which great things depend. There are moments in which a single man holds issues as great as those of peace or war in his hands, and the whole future of a community will be different as he decides this way or that. The scientific view of society has sometimes been too hasty in dismissing this objection. Carried to an extreme, indeed, the objection develops with the 'great man' theory of history, the sufficient answer to which is the careful study of the careers of great men. Such study shows that in the realm of action such men have been very narrowly circumscribed by their surroundings and have attained their conspicuous position far more by clever adaptation to the movements of their time than by the power of sheer creation. On the other hand, it is false science to limit the importance of individuals on the strength of any *a priori* preference for the general and the uniform. All social cause and effect runs through the medium of individual character, and it is simply matter of empirical fact that individuals differ and that character is more strongly marked in some than in others. It is also matter of fact that the structure of all societies gives the immediate decision on various issues, sometimes issues of great magnitude, to particular persons in particular positions. In such cases the character of the individual will count. It will not count for as much as appears on the surface, for the large social causes will operate and will be sure to narrow down the choice to a fine point, but none the less at that point the attitude of the individual will be a makeweight, and it may be just the makeweight which turns the balance. There is nothing in this to conflict with the 'reign of law.' A tumbler rolls along a table, coming slowly to rest at the edge. A breath, a tremor, decides whether it stops or falls over and is smashed to atoms. Whichever happens, all is in accordance with uniform and

indeed, in this example, perfectly mechanical laws, but to the tumbler the difference is catastrophic. The most rigidly mechanical view of society cannot ignore these perilous edges, and in general say one who has seen public affairs from the inside, particularly if his position is that of a critic rather than an actor, must have learnt that, while public men are much less free in the range of their choice than appears on a superficial view, yet at every stage of a movement personalities count. The vanity of one highly-placed person, the private enmities of another, the fortunes of a Cabinet intrigue, the fears of this man for his seat in Parliament, the regard of that man for his consistency, the coldness of Mr. A. to a cause which his rival Mr. B. has made his own—all these the on-looker has noted with despair as palpable influences in matters on which great public interests depend.

The European War was long attributed popularly in Britain to the Kaiser. Wilhelm II. could no more have made the war by his single decision than he could have waged it single-handed, but the gradual gravitation of his mind towards war so easily described by H. C. G. Campbell reflected the new distribution of multitudinous psychological forces in Germany during 1913, and a decision was taken in July 1914 in which the scales swinging between very nearly equal weights moved finally to one side and at that moment the weight of the Kaiser's personality and position was amply sufficient to decide the turn.

Individuality, then, counts for something, and its effects are not altogether smoothed out by compensations into simple laws of averages because there are moments and points of turning when individuality—possibly through its weakness as much as through its strength—switches a society on the line to the left instead of on the line to the right, and great consequences ensue. This fact introduces an element of uncertainty into any science based on and resting in social generalization. But to some thinkers it is accordingly fatal to the pretensions of sociology as a science. Indeed many see in it only an illustration of a much wider truth applying not only to sociology but to all sciences that pretend to deal with life. Sciences, they say, deal with the universal and the measurable. It is or is destined to be mathematical in its final shape. It must have exact likenesses or graded and scaled differentiations, so that it can generalize, formulate, and predict. But life is neither uniform nor differentiated only by degrees measurable in scale. It is individual, and in each of its cases there is something unique and unseizable by the intellect—creative of essentially novel, and therefore unpredictable, developments. Even if the idiosyncrasies of individuals could be in some measure reduced to law by the fiction of averages, the life of a society to which millions of individuals contribute each in individual ways is so unique that no generalizations apply to it, and there are not those large numbers of societies which make possible the use of statistics for the calculation of average results. What we can know about a community is its history as a living organism, just as what we can know about a man is his biography. The history and the biography may be written with greater or less fullness and truth, but the nearer they come to the real springs of life, in either case the more they will reveal those as unique, incapable of being inferred from any parallel case because there is no parallel case, incapable of revealing their own future activity because they are essentially creative in such a sense that the future need in no way resemble the past.

So far as this argument touches the claim of sociology to be a science, it may be sufficient to reply that the sphere of science is too narrowly conceived when it is identified with generalization and prediction. The function of science is to examine and describe facts impartially, accurately,

and systematically. If it finds any of its facts unique, it is its business to say so. But it is only from systematic comparison that true uniqueness will emerge. If we test the action of a living organism by mechanical principles, we do or do not find a correspondence. Either the circulation of the blood corresponds to that of a liquid forced through elastic tubes; in which case the physical analogy holds and we are right in regarding the process as mechanical, or there is a measurable divergence, in which case we know what is due to the organic elements involved. It is a residual phenomenon which we identify, even if we do not explain it, only when we have contrasted the organic with the known behaviour of the inorganic. If the vitalist is right, there will always, when the physical and chemical explanation has been carried through, be such a residuum, but what this residuum amounts to can be known only by carrying the physical explanation as far as it will go and no farther. Similarly it is only when we have applied all the generalizations which we can legitimately make to the life of a given society that we can ascertain and measure the value of that factor, if any, which is its own peculiar individual self. Individuality, if real, will display itself as the result of scientific inquiry. We suspect its force just because we do not find uniformity. To know it, we must find out accurately what uniformity means, to what expectations it would lead us, and how far the reality differs from these anticipations. The individual is not withdrawn from our knowledge. On the contrary, knowledge begins with individuals. Generalizations are drawn from them and concern them, and the limits of generalization in turn display and delimit the field of individual differences. We come back to the caution which we advanced at the outset. Generalizations in all science are conditional, with this addendum that it is in the failure of generalizations that we discover residual phenomena.

(d) *Law and will.*—Scientifically, generalizations have become popularly known as laws. It is not the best of all possible metaphors, and in sociology it raises peculiar difficulties. Sociological laws are sometimes crudely confused with the law of the land. In fact, they correspond only in so far as the law of the land formulates the ways in which ordinary people do ordinarily act. Scientific laws have not the force of commands and do not impose penalties, but to seize this contrast is at once to come perilously near to a mistake of the opposite kind. If it is thought that, because sociological law is not an ordinance imposed upon the will, it is therefore something necessarily independent of the will and, if valid at all, must express something which will and must happen in the life of society, no matter what the human beings who constitute that society may think or desire, social development comes to be conceived as something proceeding fatally and even mechanically, which human beings can neither arrest, accelerate, nor modify. In opposition to that view, it must be maintained that social laws rest on and express the ways in which human beings act in their relations to one another together with the consequences of such actions. But, as human beings are capable of that reflective and deliberate action which we call the action of will, sociological laws, far from being independent of the will, must consist largely of statements of the ways in which human wills act. It follows that the mere knowledge of such laws and of the tendencies to which they lead introduces new data for consideration and possible new motives.

Malthus's law of population, e.g., by showing how, under given conditions, population must increase faster than the

moment of substance, had a profound and far-reaching effect upon opinion, and finally upon action, which seriously contributed to the arrest of the increase of population. Such an effect is fairly described as a defeat of Malthus's law. It is a defeat of the tendencies which Malthus found in operation through the apprehension of the results which Malthus predicted. The law, properly stated, is a conditional generalization. If, and so long as, people act in a certain way guided by certain conditions, population will increase faster than the means of subsistence. When they take this into account, new motives come into play and the condition under which the law holds is removed.

Sociological laws therefore do not necessarily formulate processes that must occur independently of our will, but rather indicate the ways in which men act under assignable conditions and the consequences of such action. The knowledge so obtained is the necessary condition of a fuller control of the life of society by the deliberate will of human beings.

To sum up. Sociology as a science does not involve the negation of the freedom of the will, nor does it negate the individuality of societies or the uniqueness of national history. Its business in general is to give an articulate, impartial, and systematic description of the facts of social life. In these it finds features that recur and features that are unique, events attributable to widely prevalent social conditions and events attributable to the action of this or that individual; and the elements of uniformity it sums up into generalizations which hold conditionally on the character of that complex of circumstances which constitutes the individual life of a society at a given time. These generalizations express the ways in which human beings act in accordance with the promptings of human nature and the consequences of such actions; but they do not hold good if other motives come into play than those which they have taken into account. They display social life as made by man for man, not as imposed on man by a super-inmanent necessity.

3. The social structure.—(a) *Types of society.*—We have described a society as a structure of which the units or elements are human beings living in certain more or less durable and dependable relations to one another. The definition is intended to fit a family or a State, a literary society, or the 'society' of a town or a neighbourhood. In the last case the conditions of durability and definiteness may be sometimes said to recede towards the vanishing point, and the limits which mark out one such society from another become correspondingly vague. Yet even within a society of this kind people exercise mutual hospitality in certain recognized ways and within observed limits, and the relations between them endure sometimes through a lifetime. But, when the term 'society' is used in so large a sense, very little can be said of it in general. If we want to be more precise, we must distinguish different kinds of societies, and in particular those which rest on the deeper needs of man and play the larger part in his life. Of these we may perhaps distinguish three types: (1) the effective 'kindred' growing out of the ties of parenthood and sex, forming a structure of a definite and durable kind deeply rooted in human impulses; (2) the community, which is the entire society occupying a certain territory² as long as it is united by certain connective relations³ that do not extend beyond its borders; (3) what we shall call the 'association,' by which is meant not one

society only or even one species of society, but rather a genus including all societies which are based on specific purposes and needs of man. Some such societies are temporary and superficial as the purposes they serve. But some are based on profound needs and must rank with those of the greatest importance to the sociologist. Of these the Churches are the most conspicuous instance. Professional and trade organizations, political parties and leagues, and finally 'institutions,' universities, colleges and schools, even great businesses and government departments, are all societies existing primarily to meet certain needs and often possessing a life and character of their own which profoundly affect the individuals who join them, and react on the other societies with which they are in contact and on the community or communities to which they belong.

(b) *The community.*—The centre of these three types is the community. For the family is normally, if not universally, a part of a community and intimately attached to its structure and its fortunes, while the association is by definition hardly capable of an independent life, but requires either a community or communities as its background and support. Sociology therefore is right in making the community the centre of its inquiry, though it goes wrong if it forgets that society is wider than any community and that very essential relations may transcend the communal limits.

What we have called the connective relations constituting the community consist mainly in (1) the observance of a common system of rules regulating the ordinary intercourse of life, and (2) mutual protection against both external enemies and internal breaches of the peace. Among many of the simpler peoples these two functions fall apart, the second particularly in internal relations falling rather to the kindred or quasi-kindred (e.g. the totemic group). The community here consists of people who live in individual intercourse regulated by customs which are generally observed but not necessarily enforced by organized collective action. Moreover, if there are some rules so enforced, they are often not such as ensure the protection of individuals, which is a matter for the kindred or some other constituent group. Even for purposes of external defence or aggression the community as a whole may be very slightly organized. In larger and more organized communities the enforcement of rules and the protection of its members as well as the maintenance of its own being and perhaps the extension of its borders become essential features of the community and are the first function of a distinct organ, the State (q.v.).

A civilized community is, in fact, always organized as a State, but the State and the community are not to be identified. By the community we understand the people in the entire fabric of their life, including their family relationships, their industry, commerce, religion, art, and relaxation. The State is the organized fabric supporting law and government. It is more than mere government—with which it is sometimes identified—while it is less than the community. It includes the executive and judicial system (with the public forces, police and military) on the one side, and the constituent authority on which government is based on the other. In a very democratic country the State may be regarded as the community as organized for those collective purposes which involve compulsion as an ultimate resort. In undemocratic countries the State is not the whole community and may be alien and unfriendly to a greater or less part of it. In many simple communities there is no government and no State. Community and State therefore are different forms of society, and on the whole the State belongs to the type of society which we have called association. It exists to meet specific needs, and it becomes confused with the community because in large and developed societies it is the organ and outer expression of its unity. Questions of the basis, origin, and development of society in general, of the community, and of the

¹ By the term 'effective kindred' the present writer means the kindred to the limit within which its life is an actually operative force—a limit that varies remarkably among different peoples, and even in different families.

² Or (in the case of nomads) habitually moving in association.

³ If a community is loosely organized, individuals or other communities like groups may occupy or move about in the same territory without entering into connective relations with it. Fully organized communities, of course, bring all such relationships under control.

State should therefore be distinguished. The community is a form of society, and the State is an organ of the community. Man builds society as naturally as the bee builds the honeycomb because isolated man is an incomplete being; and societies vary in every possible way because man's nature is so various, and on all or almost all sides needs the social relation to complete its expression. As social beings the men whose lot is cast together build communities, but in the formation, maintenance, and development of these permanent structures the differences of human qualities make themselves felt. The distinction which we draw between social relations in the wider and narrower sense comes into play, and it is only so far as the tendencies making for co-operation overcome those of antagonism that the community extends, and only so far as the former gain at the expense of the latter that it can develop. Thus the conditions—psychological, historical, or environmental—that make for co-operation determine the life and character of the community; and the abstract fact that man is a social animal is only the first step in explanation. The State reflects the life of the community, in part its conscious or half-conscious need for organization, in part the actual superiority which organization confers in the struggle for existence. It is natural neither in the sense of issuing immediately from man's primitive impulses nor in that of spontaneously expressing his matured perfection. On the contrary, at all known stages it requires effort and criticism to adjust its control, whether to the lower or to the higher nature of man.

As a durable society a community is, in accordance with our definition, a structure of which the unitary elements are human beings living in defined and permanent relations with one another. It may include many subordinate societies, even the simplest communities, e.g., generally including several families (at least in the narrower sense of the term). What is generally necessary to the maintenance of the community is that the several relations between individuals, families, and associations within it should be compatible with one another. However complex, they must, taken together, be self-maintaining; economically, e.g., the relationship between motive and effort must so work out that the community produces enough to maintain itself. On the side of law and order its members must on the whole know what they may expect of others and what others expect of them. Even a game cannot be played without this much of mutual understanding; still less the complex business of running social life. Thus, from the simplest people upwards, every community known has its web of traditional custom, which as a whole makes up a fabric that with less or more of friction will somehow work. Thus a community is not only a structure but a self-maintaining structure—one of which the parts are always in movement and action, but on such lines that by movement and action the structure is on the whole maintained. This description is suggestive of the life of an organism, and not the less so if we consider that the structure may not only be maintained but also develop, and not only develop but also perhaps decay and even perish, so that what might seem to be an objection to our general postulate of self-maintenance falls into place as an exception which proves the rule. How far is this comparison a metaphor, and how far does it express the real essence of communal life?

The objection commonly made is that an organism is a unity possessing a life and consciousness as a whole and not in its several parts, whereas, whatever unity the community may have, the life and consciousness are manifested in its individual

members. Our consciousness in its normal functioning is unitary, and we know nothing of any consciousness in our component cells. In the community, on the other hand, each component individual is a conscious being; and we know nothing of any central consciousness unless it be either (a) that of a ruler, who is after all one member of the community, or (b) the common councils and decisions of many or all members of the community acting in co-operation. Here, we may agree, is a material difference which disposes of any attempt to treat the community as a species of living organism, if that means a species of animal.

(c) *The organic principle.*—But there is another and more effectual way of using the term. We may define the organic in general terms and treat living beings, societies, and perhaps other things (e.g., works of art) as species falling within it. An organic whole, then, is a system with a distinct character and mode of action of its own constituted by the conjoint action of parts, each in turn with a distinct character and mode of action of its own, but conditioned in the maintenance of their character and the pursuit of their activity by their mutual requirements as members of the union. The relation of whole and part requires no external agency to create or maintain it. This differentiates it from a mechanical whole in which something essential to the formation is always external. It must be said further that organic unities differ in two principal respects. (1) Some are more and some less thorough-going and intimate. In some the parts cannot exist without the whole; in others they survive its destruction, but modified or crippled in greater or less degree. Among the higher animals a cell removed from the body rapidly dies; among the lower it may survive permanently with some change of form. Viewed under this aspect, some social relations are seen to be very intimate. Indeed the sum-total of all the social relationships in which a man stands must be regarded as so deeply affecting his whole nature that, if we suppose them all cancelled, it may be doubted whether he could still be called human. Any given society, however, may embody only a fraction of these relationships, and its dissolution might not greatly affect the individual. We cannot say *a priori* how it will be in any given case but merely note that on this side the intimacy of the organic union varies in every possible degree. (2) There is, further, a variation of kind, according as the union is harmonious or constrained. Each part is so far distinct as to have its own tendencies and potentialities. It may find in the other parts the co-operative conditions necessary to fulfil these, or it may find forces which in greater or less degree distort and cramp it. Such mutual constraint—the price, so to say, of mutual development—is of common occurrence in organic unions, but necessarily involves a loss of energy and, if carried far enough, entails the risk of a break-up. The organic principle is pure or harmonious in proportion as the constraint involved diminishes.

To apply these principles to a community, it may have many constituent groups, each with a certain internal life, and these in turn are composed of individuals, each with his capacities which may or may not be fulfilled. It will suffice to consider the community in relation to the individual. What do we mean by fulfilment of capacity? Human life rests on impulses which in their higher and more definite form become purposes. Any attainment of a purpose is *pro tanto* a fulfilment of some element in our nature. But purposes may be distracted and conflicting, so that the fulfilment of one may be the frustration of

others, and there is no fulfilment of the self as a whole. Hence, conversely, if there is any fulfilment of the self as a whole, it must lie in the realization of a comprehensive purpose or in a coherent system of purposes. Now, one purpose might be pursued through life to the disregard of all others. There would then be consistency of action, but no fulfilment of the mass of impulses or purposes. But, conversely, the purpose or system of purposes might be such as would give to all manner of impulses and purposes the greatest scope compatible with mutual consistency. It might indeed be a summing up of such purposes as seem in relation to one another. This would yield the most complete possible fulfilment of the self as a whole. The process of such fulfilment is the development of personality, which is thus seen to rest on the free scope of each part conditioned only by the harmony of the whole.

What is true within the single personality applies *mutatis mutandis* to the plurality of persons in a society. If we conceive a common purpose, or system, embracing all purposes of all individuals so far as they are mutually consistent, the realization of such a system would be the completest fulfilment of the life of a community. Ideally such a system would be one which should lay all elements of our nature under contribution, informing them with a spirit of unity rather than limiting them by constraint. It is clear that such a harmony could be expressed only in a religious ideal setting before humanity as a whole the meaning and value of its life. Of such an ideal all that can be said here is that the two conditions on which it rests are those which we have called harmony and freedom—fullness of scope for our many-sided nature conditioned at the lowest by the requirement of mutual consistency, or at a higher grade inspired by conscious relation to a harmonious whole.

A community will be harmonious or organic in the purest sense in proportion as it realizes these conditions—i.e., as it rests upon and calls forth the personality of its members in all respects in which they are in fact capable of harmonization. Thus it will repose upon the social qualities in the narrower of the two senses given to that term. It will not admit any quality or activity incompatible with the consistent working of the whole, nor allow the restraint or stoppage of any development except on the score of such incompatibility.

Unfortunately, as we saw at the outset, the term 'social qualities' has a much wider sense; the human beings of whom society is composed do not with their whole being enter into harmonious co-operation: they are centres of independent life with interests of their own, in the pursuit of which they impinge on one another, crossing each other's paths. The various groups which they form act with a similar collective selfishness, so that we are faced by centrifugal tendencies and begin to wonder how it is that the community is kept together at all. Thinkers who start from these tendencies have, in fact, formed two main theories of the origin of social union.

(d) *The principle of force.*—One school rests the State upon force. Now it is true that organized society has never yet been able to dispense with force, but force itself as applied in social life is a conception requiring analysis. Where more than two or three are gathered together, force cannot be effectively exerted by a single man. It may no doubt be wielded, directed in detail, by the will of a single chief. But essentially it rests on discipline and organization, and organization involves a delicate psychological balance. Even in a disciplined army there must at bottom be a widely diffused will to obey, and, if there comes a point

at which for any reason that will is shaken, the whole fabric may, as the world has seen, suddenly crumble. In a slave society there must be union among masters and overseers or privileged slaves. In an aristocratic society compromises and shifts are adopted to prevent trouble with the mass, and 'charity' plays a large part in substitution for justice, while the power of the governing class rests on an energetic development of a common will. In short, if organization involves force, it is still more true that force rests on organization, and organization on response of mind to mind, will to will. There may indeed be a large class of slaves, serfs, or subjects who have 'nothing to do with the laws except obey them,' but even here, as we get closer to the facts, we generally find that it is easier to proclaim laws than to enforce them if they are definitely out of keeping with the ingrained tendency of the mass. Repression may unfortunately play a very large part in social organization, and many of the vital social impulses may be inhibited, but there must be some seed of social co-operation, even if it is limited to a small section of the community which conceives its common good as conditioned by the subordination of the remainder. Force is not the basis of the State as such, but is the element in State organization which is the exact antithesis of the organic principle, expanding or contracting as that principle contracts or expands, but incapable of extinguishing the last germs of its life without resolving the structure into a chaos of centrifugal elements.

(e) *The principle of self-interest.*—Other thinkers have founded the community on self-interest, and this theory has taken two main forms. In one the organized community, the State, is based on a contract. Individual self-seeking, unable to get its way, comes to terms with others, 'so as neither to do nor suffer injustice,' and the result is an agreed system of general rules and an accepted government to enforce them. This theory, viewed in broad principle and without regard to the inaccuracies of its historical exponents, covers a part of the facts. It is true that on the balance the interests of each man are in general better served by some sort of order than by anarchy, and a vague sense of this truth may even operate as a true psychological factor in securing consent to government. But as a principle the theory of contract errs by omitting the entire common interests of mankind and with it the manifold and complex relations into which human beings enter spontaneously through the development of their own impulses. Compact, express as well as implied, plays its part in public as in private life. Public transactions are affected by reciprocity, and men labour or disavow a project of laws which does not directly touch them from a sense that the same principle might be applied in a way that would directly touch them. Indeed in this manner there is an element of self-interest in the assent nominally given to law itself. But the part played by calculating egoism is very secondary to that of the various impulses that constitute the Ego. It is true that men are more moved by something that might easily have happened to themselves than by things more remote, but this is largely because such things necessarily lie within the range of their experience and are the more readily realized in imagination. Pity is not a fear lest the like misfortune befall oneself. It is quite another kind of emotion. But it is more easily stirred by a situation in which one can readily imagine oneself or others near to one to be placed. Both for good and for evil our relations to others rest primarily not on egoistic calculation, but on direct and spontaneous impulses and

emotions, and the organized life of the community represents rather the adjustment of such impulses and their reduction to order and system than a precarious balance of purely self-centred interests.

The second form of this theory played an important part at one stage in the development of economics. It was conceived that in a community in which every man was free to pursue his own interests, and enlightened enough to understand its true conditions, the play of economic forces would suffice to secure the common good. Since each knows where his own shoe pinches, it is the free purchaser in the free market who is most likely to get the shoes to fit his own feet. The workman who can sell his labour freely works to the best advantage. The employer who can secure labour freely finds the best man for the most paying job, and the most paying job is that for which at the moment there is the widest demand. Thus demand and supply, operating in a world of free, equal, and intelligent beings, adapt the efforts of each to the maximum needs felt in that world, and there is a natural harmony of interests on which the statesman should rely for the promotion of order and progress. On this theory only two comments are required here. The first is that it postulates freedom, enlightenment, and equality of opportunity, which, if obtainable, are no only by a complete system of restraint on the oppressive use of personal or class ascendancy—i.e., it postulates after all organized action for the common good. The second is that this theory stimulates a harmonic view of society, but is really different in principle. For in the harmonic view the interest of one is in the welfare of others. In this view the interest of each one is merely served by the others as instruments, and the correspondence assumes a kind of 'pre-established harmony' which is little short of miraculous. We must distinguish sharply between a harmony growing out of social impulses and expressed in a common purpose and a harmony resting on a mechanical coincidence of self-centred desires from which the social interest is eliminated. But, though these two forms of harmony are distinct in idea, they have something more than the name in common. It is a very important truth that even as self-centred individuals men have a certain community of interest—e.g., that in the long run the trader gains by the prosperity of his customer, that high wages may mean cheap production, and so forth. These relations testify to underlying conditions of harmony in human life, whether men are aware of them or not, and the old economic theory had at least a glimpse of the truth. On the other hand, to bring these conditions to light and make them the basis of social organization a very different psychology is required.

(f) *The blending of distinct principles.*—Thus we find different and even opposed principles operating in the life of the community. But we must not imagine these principles either as lying side by side or as in continual conflict with one another. Men adapt themselves to their conditions, and under a system of constraint some tendencies atrophy and others develop and take a firmer hold, and one may become in time a loyal and willing slave, while another takes it as a natural right that he should be master. The actual system of society may be far from harmonious, but may be very deeply rooted in the minds of the members as they have come to be under the pressure of generations of historic development and may be strongly resistant to changes which would in fact liberate many of its suppressed potentialities and yield a fuller and more harmonious life. Such a community is highly organic in the sense that its members are deeply penetrated by its spirit,

though it may be of low grade from the point of view of the harmony which it secures.

It would seem then that to define a community as an organism would be to simplify our problem too much. A community has more or less of organic character as the case may be, or sometimes more of one organic character and less of another, and is accordingly less or more subject to internal (or external) constraints. If, then, the community is not as such an organism, may we call it an organization? The term has been proposed to avoid the analogy of the animal organism, but it carries with it converse suggestions which are hardly less objectionable. All communities are no doubt more or less organized, in that they are structures in which people stand in fairly definite and durable relations in virtue of which they so act as on the whole to keep the structure in being. But the term 'organization' is apt to suggest that this structure is intelligently planned for a purpose and imposed for that purpose on an otherwise unordered people. Such organization of course plays its part within most communities at one point or another, but in the main the community grows out of the needs, and indeed the purposes, of individuals, but not out of a common purpose, while, if it achieves a common purpose, that is rather the flower of its high development than the originating cause of its being. We may speak of 'the organization of a community' in a neutral sense, leaving its base and character, whether organic or mechanical, purposive or impurposive, to be further determined. But we had better avoid defining the community as an organization. Generically a community—we fall back on our first account—is a self-maintaining structure, composed of individuals with lives and purposes of their own, but in perpetual interaction with one another. This interaction modifies the individual so far that the normal community settles down to an accepted order. How far in such order the development of individuals is subject to restraint, distorted, and suppressed, how far it is full, harmonious, and free, are questions to which the answer must differ from case to case, and in each case it tells us how far that community is in the full sense a completely developed organism.

Whatever the relative importance of the co-operative or the repressive principle in its life, the communal structure is a whole, constituted by those elements of character which its constituent individuals contribute, while it modifies those individuals to the extent to which it draws forth from them or represses the characteristics which in a different social milieu would have had a different history. So understood, the common life is precisely the sum-total of the individual lives as actually lived in the community.

4 *The development of the community.*—Structures which maintain themselves in continual process, through the interaction of their parts and by dealings with their physical or social environment, may be said to differ from one another in one or more of three principal points, and it is by such differences that we measure their development. These points are (a) the efficiency of their operation, (b) their scale or scope, (c) the basis or principle of their organization.

(a) *Efficiency.*—The term suggests an end or purpose. How far purpose can be attributed to communities as such is, as has been hinted, a doubtful question, and it cannot be discussed here. But, whether of clear purpose or otherwise, the community somehow maintains itself, and that not like a stock or stone by dull inertia, but like an organism (it does not matter for the moment whether the likeness is superficial or fundamental) by unceasing metabolism. It protects itself against

enemies and against internal disorder. Its members supply themselves, largely if not principally by mutual service, with the necessities, comforts, and luxuries of life. All this, though it may not be planned by any common will or by any single will on behalf of the community, may obviously be in fact performed with greater or with less efficiency. It is the requirement of efficiency that gives rise to the division and combination of effort, the articulation of social functions, all that we are accustomed to call organization in the narrower sense of the term. The farther differentiation proceeds, the greater is the need of some supreme regulation based on recognized principles. But without assuming a common purpose to be universal, we may say that every community in maintaining its being exhibits a degree of efficiency, high or low.

(b) *Scale or scope.*—Communities differ in scope. This has two principal meanings. In the first place, they differ in mere size. A living organism may consist of a single cell or of millions of cells, a community of three or four families or of a hundred million men; and it may be remarked that unity and size are not, generally speaking, easy to reconcile. Great organizations generally contain small organizations within them, and sometimes the smaller organization is the more effective unity of the two. Thus the cell is more efficiently organized than the life of some of the metazoa which are aggregations of cells acting normally as one being but capable of independent life. Many of the larger human communities have been loosely compacted, and the smaller units composing them have in history shown more vitality, more power of keeping together and maintaining themselves, than the whole to which they belonged. In the simpler societies the tribe is often a feeble and ill-organized community, as compared with the clan which is its immediate component.

But there is a less obvious sense in which communities differ in scope. They cover a larger or smaller sphere of life and activity. The total output of human energy may be relatively great or small, poor and narrow or rich and many-sided in its development. As the scientific, the religious, the imaginative interests develop, as callings are differentiated and wealth and industry grow, the scope of life extends. The metabolism that sustains the social structure is more intense, the outlook is wider, the pace faster. There always arises the question whether the old bottles will hold the new wine, or, to drop metaphor, whether the soma of the activities, at once extended and intensified, will still maintain itself as a unity or suffer disruption. The success of the community in absorbing manifold and divergent developments into the unity of its life is the measure of its scope.

(c) *The base or principle of organization.*—Communities differ in spontaneity. As we have seen, organization may be imposed upon elements which are indifferent to its purposes from without. The elements are then subdued, for their energies are directed by the superincumbent force into channels into which they would not naturally flow. With time their original impulse may be crushed, or it may be simply held in check to re-assert itself when the pressure is removed, while, so long as the organization remains mechanical and in proportion as it is mechanical, it is alien to the elements which are made to serve it, and herein there must be necessarily a not loss of efficiency, because by hypothesis some portion greater or less of the inherent energy of the parts is indifferent or even hostile to the purpose for which it is being used. On the other hand, the structure may spring from and express the inherent energies of the parts themselves, which spontaneously respond to one another, each eliciting from the other the output

of its inherent energy for the fulfilment of its capacity. Such a structure differs from every other in that it has the root of self-maintenance and development in itself, diffused through all its parts. It is in accordance with our definition organic. As applied to society, it is easy to recognize in this description the ideal life of a community, and it is as easy to see that it is an ideal which is very imperfectly realized in any existing community, and one that is not readily reconcilable with the imperfections of human nature. It results, however, that communities are organic in proportion as their life is based upon spontaneous co-operation, and that a free co-operative commonwealth, however difficult to realize, has within it the foundations of a more complete and stable unity and of a higher efficiency than the most complete mechanical organization. It is also clear that it has within it the power of attaining a very much wider scope than the mechanical organization which is by hypothesis repressive, and which, while it may be exceedingly efficient for one purpose, must cramp human nature on other sides. Could there be co-operation in freedom, on the other hand, it would be a co-operation on all sides of life which are capable of social or harmonious expression.

But, though co-operation may be based on freedom, it would be a mistake to suppose that the most completely organic society could dispense with positive institutions, or that there could be harmony of manifold impulses without limitations and restraints. The best impulses require direction and co-operation, and even a community of saints would need a definite order in which the special functions of each person on each occasion should be indicated. The problem of freedom is not that of dispensing with all guidance and all restraint, but that of finding the lines upon which the manifold social qualities of man can develop in harmony, with the result that the restraints involved are voluntarily accepted and self-imposed. Nor is the problem of organic construction that of engendering the social impulses, which are born and not made, but that of so adjusting the framework of institutions that such impulses have free play and scope for development. This is the truth expressed by T. H. Green when he says that the direct object of legislation is to create not the common good—conceived as the free operation of a spiritual principle—but rather the conditions under which the common good may develop. Legislation cannot make men honest on principle, but commercial law may be such that honesty is the road to ruin, while it may be so reformed that the honest man becomes capable of holding his own. Industrial law may enable the harsh employer to beat down prices by sweating, and so render it impossible for any one who refuses to employ others except on a living wage to remain in the trade. When such a law is amended, it does not force anybody to be truly and spontaneously considerate in his dealings—in this sense no one can be made good by Act of Parliament—but it does enable the considerate man to play his part as an employer in industry. Thus it is no more possible to create an organic spirit than it is to make a living thing, but it is possible to open the channels along which the vitalizing fluid may run and thereby gather energy and volume. What we call free institutions are institutions which on the whole rest for their stability on this vital principle, and provide the lines upon which it can move without obstruction.

Communities, then, differ in the three essential respects of efficiency, scope, and spontaneity, nor do they tend to vary concomitantly in the three relations; e.g., a community may be organically one—its common life a 'spontaneous' expression

of character—but very small and very limited in the scope of its activity. Thus a little clan may stand together as one man to protect every one of its members, its unity based on spontaneous and deep-seated feeling. On the other hand, it contains only a few score of individuals, and its notions of life may be exceedingly narrow. Again, a large community may be efficiently organized upon the basis of military despotism. It is then an exceedingly formidable force in the world, and may defeat and destroy rivals who have cared more for the development of individuality and less for discipline and order. This is the victory of mechanism over the spirit which is the recurrent tragedy of human history.

Again, the life of a community may be many-sided and so rich in scope, but the greater amplitude conditioned by freedom may be purchased at the expense of organic unity. There may be an order like that of the Roman empire superimposed on heterogeneous peoples allowing great latitude for internal movements such as are illustrated in the rich religious growth of the imperial period. Such states do a service for civilization, though not quite the highest service, and their weaknesses are easy to see.

Lastly, the organic principle may be strong and penetrating, but not pure or harmonious, resting, e.g., on the strong mutual development of certain qualities and a certain attitude of mind which represses other qualities of personality. Such organic character will often be found in small communities of very simple mode of life, and sometimes even, through the strange adaptability of mankind, in larger communities supporting essentially repressive systems of authority.

Thus these three features of social organization vary independently, and development may be measured by the advance in any one of them. But, considered in its fullness, it is measured by the advance in all three taken together. That is to say, the most developed community would be that which effectively achieves the most complete synthesis of the widest range of human activity, including within its membership the largest number of human beings, but in such wise as to rest most completely upon their free co-operation, thus expressing the whole of their vital energies as far as these are capable of working together in harmony. Judging by this standard, we may speak of one society as more highly developed than another, and we have in this conception a general criterion of advance in organization.

5. Complete development and the ethical ideal.

—Now, the final term of development in these three respects accords with the ideal of a rationalistic system of social ethics. For, whatever the view taken in detail by the ethical rationalist, his general principle is that right conduct must form a rational system. A rational system is one applicable to all humanity in all the varied relations of its life, and its demand is for a practical consistency in character and conduct. By practical consistency, again, is meant a system of purposes which in their operation do not conflict with but support and require one another, forming a whole within which they are distinct but interdependent parts.¹ Thus such a system constitutes an organic whole, as it has been here defined, and one that embraces the whole of human life and activity. Thus for a rational ethics the good life,

¹ It may be objected that the requirements of a rational system would be satisfied by the subordination of all purposes to one supreme end, so that in place of a system of ends distinct but interdependent rational conduct would be of the nature of a mechanism in which every detail is a mere means to a single end. This conception can be shown to rest on an imperfect view of rationality, but in relation to ethics it is sufficient to remark that it involves a denial of all intrinsic value to personality—i.e. of conscience, of love, and of justice.

if actually realized in society, would form a perfectly organic unity of the widest possible scope. It follows that at bottom the ethical and the organic principle are the same thing. Thus, when we speak of 'higher' and 'lower' development in the senses here set out, the ethical implication of these terms is fully justified from the point of view of a rational ethics. But it is important to remark that the terms 'higher' and 'lower' may be used of organization without an ethical reference, implying merely the greater or less completeness, efficiency, or extent of the organization itself. From this point of view, the three characteristics here taken are the essentials. For organization, to be complete, must rest on an internal principle, and will be more or less complete in proportion as it is saturated with that principle. The principle must be efficient in governing the parts and in controlling their activities, and, completeness being thus assured, extent is measured by size and what we have called scope. Thus we arrive at the result that in fundamental principle development in social organization, considered in its fullness, coincides with ethical development as conceived by a rationalistic system. This is the fundamental proposition in the relation between sociology conceived as a science of facts and sociology as a philosophy of values. Partial developments may diverge from ethical requirements in any degree.

From this point the further treatment of the subject, which cannot be pursued here, divides into two branches. The first is philosophical and consists (a) in the justification of the ethical theory here laid down, and (b) in its expansion and application to social institutions. This is the task of social philosophy proper. The second is scientific and consists in ascertaining the condition of development, the correlation of its different branches, the causes making for its furtherance, arrest, or decay, and the principal phases of its partial achievement in the course of historic civilization.

LITERATURE.—The term 'sociology' is due to Comte (see art. POSITIVISM), and the modern treatment of the subject has been greatly influenced by his work and that of Herbert Spencer. To Comte his *General View of Positivism*, Eng. tr. by J. H. Bridges, new ed., with introd. by F. Harrison, London, 1906, is the best introduction. Spencer's *Principles of Sociology*, London, 1900, is now mainly of historical interest, but his *Study of Sociology*, do. 1885, is a brilliant introduction which retains a value.

Sociological literature since Spencer's time has been exceedingly voluminous, but the subject has been pursued more essentially in its special aspects than as a whole. For this reason any adequate bibliography would be of unmanageable dimensions. Perhaps the best recent treatises, professing sociological in aim, is R. C. McIver, *Community: a Sociological Study*, London, 1917, to which the present writer must express his obligations. Numerous text-books and introductory volumes have appeared in America, among which F. H. Giddings, *Principles of Sociology*, New York, 1893; L. F. Ward, *Outlines of Sociology*, do. 1908; J. Q. Dealey and L. F. Ward, *Text-book of Sociology*, do. 1906; F. W. Blackmar and J. L. Ollis, *Outlines of Sociology*, do. 1912; Albion W. Small, *General Sociology*, Chicago, 1905; E. A. Ross, *Foundations of Sociology*, New York, 1905; and C. A. Ellwood, *Sociology in its Psychological Aspects*, do. 1913, illustrate various methods of treatment. L. T. Hobhouse, *Social Evolution and Political Theory*, was also published in America (New York, 1911). The *American Journal of Sociology*, *Sociological Papers*, and the *Sociological Review*, published by the (London) Sociological Society are the principal serial publications in English. The first volume of the *Sociological Papers* contains a valuable art. on 'The Origin and Use of the Word Sociology' by V. V. Branford. In French E. Durkheim's works, especially *Les Règles de la méthode sociologique*, Paris, 1912, and the volumes of *L'Année sociologique* are important, and the volumes of *La Science sociale* incorporate the principal work of the school of Le Play. In German G. Simmel, *Sociologie*, Leipzig, 1908, is a voluminous treatise, and P. Barth, *Die Philosophie der Geschichte als Soziologie*, do. 1887, a very valuable résumé. Müller-Lyer, *Phasen der Kultur*, is of interest to the student of comparative sociology. The *Versteherwissenschaft für wissenschaftliche Philosophie und Soziologie* may be consulted. In England the general subject has been approached mainly from the philosophical point of view, E. J. Urrick, *A Philosophy of Social Progress*, London, 1912, and J. A. Hobson, *The Social Problem*, do. 1903, are of value to the general student. J. H. Muirhead and H. J. W. Hetherington, *Social Purpose*,

London, 1912, and J. S. Mackenzie, *Outlines of Social Philosophy*, do. 1913, are representative volumes (Mackenzie's *Treatise on Social Philosophy*, Glasgow, 1880, retains its value). Westermarck, *N.Y.*, 2 vols., London, 1913, and A. Sutherland, *Origin and Growth of the Moral Instinct*, 2 vols., do. 1908, are in the main works on comparative sociology on the side of custom and ethics. Graham Wallas, *The Great Society*, London, 1914, is indispensable to the student of social psychology, to which the works of Ross (New York, 1926) and W. McDougall (London, 1918) under that title are suggestive contributions.

L. T. HOBBHOUSE.

SOCRATES.—1. *Chronology.*—Socrates was put to death in the archonship of Laches (Ol. xiv. 1=400-399 B.C.). The date was given by Demetrius Phalereus in his *Register of Archons* (*ἀρχοντικὸν ἀστυπρόβητον*), which was based on official records, and is the only fact about Socrates that may be regarded as beyond the reach of controversy. The year of his birth was obtained by calculation. Plato made Socrates say that he was seventy¹ or over seventy² at the time of his trial, and the ancient chronologists counted back seventy archons from Laches inclusive, which brought them to the year of Apsephion (469-468 B.C.). As, however, Socrates was condemned at the beginning of the Delian festival, which appears to have fallen in March, it is safer to go back at least to 470 B.C. In any case, that year cannot be far wrong.³ The dates show that Socrates was essentially a man of the Periclean age, and that he grew up in that wonderful time when Athens, conscious of having saved Greek liberty, became the centre of a free artistic and intellectual development that has never been surpassed. He must have seen the first performances of the *Antigone* and the *Hippolytus* and watched the building of the new Parthenon from start to finish. On the other hand, Plato and Xenophon, the writers who have most to say about him, were not born till after the high hopes of the Periclean age had been bitterly disappointed, and their youth was spent in years of disaster which ended, by the time Plato was twenty-three, in the fall of Athens and the loss of her leading place among the states of Greece. It is obvious that, if we are to understand Socrates, we must try to replace him among the surroundings of his own generation, and to do that we must carefully weigh all contemporary references to his youth and early manhood. It is only when we have done this that we shall be in possession of a test which we can apply to the evidence of men who know him only in his old age.

Plato was born in 428-427 B.C., when Socrates was already over forty. It must be supposed that Xenophon was older, and this is the real explanation of the general disposition to regard his evidence as particularly valuable. The early date given in older books for the birth of Xenophon is solely due, however, to an uncritical acceptance of the calculations of ancient chronologists. They fixed his death, or *ἀστυπρόβητον*, as usual, with the fortieth year of his life. From the *Anabasis* itself, however, we learn that Xenophon must have been well under thirty in 355 B.C.⁴ He meets a great deal on his youth as compared with the other generals,⁵ and Proxenus was only thirty. We may confidently infer that Xenophon was younger than Plato. It is also to be remembered that he left Athens before the death of Socrates, so that he was only a lad when he knew him. His Socratic writings belong to a later date, when those of Plato, Antisthenes, and Eucleides were already well known. None of the most recent writers on Socrates regard Xenophon as a first-hand authority, though they differ considerably as to his sources.

2. *Early references to Socrates.*—The earliest reference to Socrates now extant probably comes from a time before the birth of Plato, and certainly from a time before he was ten years old. In a book of memoirs entitled *Παιδεία* (*Paideia*) the

¹ *Crito*, 52 E.

² *Apol.* 17 D (according to the reading of T): *ἑξήντι ἔτεσιν ἢ ὀλίγον ἄνωγος*.

³ For the chronological questions involved see F. Janoby, *Apollodorus Chronik* (*Philol. Unters.* xvi.), Berlin, 1904, p. 284 B.

⁴ Cf. O. Gabel, *Neue Lektionen*, Leyden, 1828, p. 254 ff.

⁵ Ill. 1. 14, 25. For the age of Proxenus see Ill. 6. 30.

tragic poet Ion of Chios said¹ that Socrates in his youth visited Samos in the company of Archelaus. If we had the context, we might be able to fix the date of this; but, even as it is, we may be fairly sure. We know² that Ion met the poet Sophocles (who was one of the generals) at a dinner-party at Chios during the Samian War (441 B.C.), and it is natural to suppose that his meeting with Archelaus and Socrates was about the same time. At any rate, Plato makes Socrates say in the *Crito*³ that he had never left Athens but on military service, with the single exception of a visit to the Isthmus, and there does not seem to be any other occasion than this on which he could have been at Samos on military service during the life-time of Ion, who is referred to as already dead in the *Peace*⁴ of Aristophanes, which was produced in 421 B.C.

Now this reference of Ion's is very important for what it implies. Archelaus was, in the first place, an elegiac poet, who belonged to the circle of Cimon, son of Miltiades, and the *Consolation* on the death of Cimon's wife, which arrived to a later date, was attributed to him.⁵ Ion of Chios belonged to the same circle, to which he was introduced when quite a lad, and certainly before the ostracism of Themistocles.⁶ It may be taken for granted, then, that Archelaus was an old acquaintance of his; and so, when he mentions Socrates as being in his company, he must mean that there was a close relation of some kind between them. There is independent testimony to this, though from a later and less trustworthy source. Aristoxenus of Tarentum wrote a scandalous account of Socrates, based on the recollections of his father Spintharos, and he said that Socrates attached himself to Archelaus at the age of seventeen and followed him for many years.⁷ The title-tattle which accompanied this may be disregarded, but it could hardly have arisen unless the relations of Socrates with Archelaus had been notorious. Now Archelaus was not only an elegiac poet, but the disciple and successor of Anaxagoras, who had introduced Ionian science into Athens immediately after the Persian Wars, but had been forced to take refuge at Lampacus about the middle of the century.

For the date of the trial and flight of Anaxagoras see A. E. Taylor's article in the *Classical Quarterly*, vi. (1917) 81. The idea that it took place just before the Peloponnesian War is due solely to Ephorus, whose chronology is well known to be arbitrary. All the data we have point to the residence of Anaxagoras at Athens having lasted from about 480 to about 450 B.C. It is quite distinctly implied in Plato's *Phaedo*⁸ that Anaxagoras had left Athens before Socrates was old enough to take an interest in science, and that Socrates never had any personal relations with him. It is also clear that the earlier date is alone consistent with the statement of Plato and Aristotle that Anaxagoras was the teacher of Pericles,⁹ and the fact that he was succeeded by Archelaus, who had written a poem for Cimon. Plutarch's statement about this comes from Diodorus.¹⁰

If, then, Socrates became a disciple of Archelaus about 450 B.C., or a little earlier, it means that he was then interested in Ionian science. It would have been strange if he had not been so; for, according to all accounts, he was a man of boundless curiosity, and Ionian science flourished exceedingly at Athens in those days. We need not, however, suppose that Anaxagoras had already

¹ *Frags.* 5 (*FGH* ii. 49). This is quoted in the *Life of Socrates* by Diogenes Laertius. The suggestion of Wilamowitz that it refers to another Socrates has now been withdrawn (*Platon*, Berlin, 1912, p. 66).

that the allusion to men who teach that the heavens are an oven (*πυρρίδι*) was taken from the *Panoptie*, where it was expressly referred to Hippo, so it appears that Aristophanes thought it plausible to attribute Italian as well as Ionian scientific ideas to Socrates. We must always remember that these two divergent views of the world met on common ground at Athens, where they set up an intellectual ferment which was of far more importance than the excitement produced by the occasional visits of the distinguished teachers to whom the name of 'sophists' is commonly applied. They were here to-day and gone to-morrow, but the scientific schools and the religious associations were firmly established.

Of course the whole plot of the *Clouds* turns on the belief of Strepsiades that the Socratics keep on the premises two *λόγοι*, a weaker and a stronger, and that they can make the weaker prevail over the stronger, though its case is a dishonest one. That is a perversion of Protagoras, but it does not follow that Aristophanes attributed it to Socrates. On the contrary, much of the fun of the play depends on the fact that, when Strepsiades has been initiated, he finds himself let in for something quite different from what he had expected. The idea is that the ordinary Athenian knew there was some talk of *λόγοι* in the school of Socrates and took for granted that it was just what Protagoras had made familiar some years earlier. Aristophanes knew at least that it was something different, though he may not have troubled to find out exactly what it was.

It appears also from the comic poets that Socrates had somehow become impoverished about this time. They allude to his want of a new cloak and the shifts he was put to to get one. Antiphanes said he 'was born to spite the shoemakers,'¹ but that only refers to his practice of going barefoot, which Aristophanes attributes to the whole school.² Antiphanes, in the same fragment, calls him 'a stout-hearted fellow that, for all his hunger, never stooped to be a parasite.' Two years later Eupolis spoke of him³ as 'a garrulous beggar, who has "thoughts" about everything (*γίλλαι περὶ πάντων*) except where to get a meal'—another reference to the *σπανιότης*.

4. **Antisthenes and Aeschines.**—So far we have made no use of any evidence later than Plato's childhood; we must now look at certain writers of Socratic dialogues who were his contemporaries. There is not much to be learnt from the remains of Antisthenes, who seems to have been considerably older than Plato and to have been attracted to Socrates mainly by the strength of his character. The most important contribution he makes to our knowledge of him is that he spoke of foreigners being attracted to Athens by the renown of Socrates (*κατὰ δόξαν Σωκράτους*). It is important to observe that this cannot have happened at any time after the outbreak of the war. Socrates must therefore have had a Hellenic reputation before Plato was born. Antisthenes told the story about Socrates saving the life of Alcibiades, which we know from Plato's *Symposium*, and he also mentioned the fact that Socrates yielded the *ἀσπίς* to Alcibiades, but he referred the incident to the battle at Delium instead of to that at Potidaea.⁴

If we could be quite sure that Aeschines of Sphettus was independent of Plato, his testimony would be of the greatest importance. Plato makes Socrates mention him as one of his followers in the *Apology*,⁵ and in the *Phaedo*⁶ we are told that he was among the company present at his death. Whether he was older or younger than Plato we

have no means of knowing. In any case it seems in the highest degree improbable that Aeschines and Plato should have conspired to misrepresent what must have been notorious facts in their day, and Aeschines had no philosophy of his own to commend by representing it as that of Socrates. We may therefore regard his evidence as trustworthy, so far as it goes. For our purpose the most important of his dialogues are the *Aspasia*, the *Alcibiades*, and the *Telauges*, and we fortunately know a good deal about them. In the first of these dialogues Socrates was represented as taking lessons in the art of love from Aspasia, and as recommending Callias to send his son Hippogenicus to learn politics from her. Moreover, he was made to maintain that the goodness (*ἀρετή*) of a woman is the same as that of a man—a point which he illustrated, not only by the case of Aspasia herself, but also by that of the Persian warrior maiden Rhodogune. Plato has little or nothing to say about Aspasia, though she is represented in the *Menexenus*⁷ as the instructress of Socrates in the art of rhetoric. It will, however, be observed that Aeschines confirms the account given by Plato in the *Republic* of the views held by Socrates with regard to women. The *Alcibiades* is even more instructive, and, thanks to a recent discovery of Grenfell and Hunt, we now possess a considerable continuous fragment of it. In this dialogue Socrates made Alcibiades feel that he was insufficiently prepared for the ambitious projects that he entertained, and made him weep in despair 'with his head on his knees' by proving to him that he was foolish (*ἄμαθής*) and therefore wretched (*ἄλυστος*), and, still worse, ugly (*αἰσχρὸς*). What he had neglected was 'care for himself' (*ἐπιμέλεια ἑαυτοῦ*). Socrates himself has no *ἔρωτες* and cannot therefore impart any to others, and certain characteristic expressions, such as *ὁλομολογῶ*, *ἐδωκεν*, *ἔπος* occurred. The main purpose of the dialogue appears to have been to show that Alcibiades was not, properly speaking, a disciple (*μαθητής*) of Socrates, as had been alleged—a point made also by Plato,⁸ Isocrates,⁹ and Xenophon.¹⁰ There is, of course, a striking resemblance between the dialogue and what Plato makes Alcibiades himself confess in the *Symposium*.¹¹ In the *Telauges* Socrates was represented in conversation with a Pythagorean of that name who seems to belong to the circle of Philolaus. He is an associate (*τράποι*) of Hermogenes, and Cratylus also appears to have been introduced. So far as can be made out, Socrates expostulated with Telauges for his exaggerated asceticism. Here, then, we have further confirmation of the existence of Pythagorism at Athens at this date and of the relations of Socrates with it. Aeschines also confirms Plato in representing the attitude of Socrates to the extreme asceticism of the doctrine as one of comparative detachment, while Aristophanes, for his own purposes, chose to ignore the distinction between him and such persons as Telauges. Perhaps Chærepho was more thoroughgoing than his master in this respect.

5. **Plato.**—Up to this point we have endeavoured to picture Socrates without making use of Plato except for a few hints. We have seen that in his youth he was a follower of 'the philosophy of Anaximenes,' then represented at Athens by Archelaus, and that he was also influenced by contemporary Pythagorism. We have seen that he was believed to have belonged to the circle of Aspasia and that he did his best to influence Alcibiades. We have also seen that he had become a comparatively poor man some time shortly before 423 B.C. At that date he was known chiefly as one who taught some new doctrine about the soul and

¹ Frag. II. ² *Clouds*, 105. ³ Frag. 322.
⁴ This is far less probable; for Socrates would be more likely to have shared the *ἀσπίς* when he was under forty than some years later, when he was nearly fifty.
⁵ 22 E. ⁶ 22 B.

¹⁰ *Mem.* I. 2, 12 ff. ¹¹ 114 A ff.

about the birth of thoughts (*poëides*) from it. Plato was still only a child, but we can hardly doubt his statement that his uncle Charmides had already made the acquaintance of Socrates. Apart altogether from what he may have learnt by personal intercourse with Socrates himself, Plato had every opportunity of hearing about him from the older members of his own family.

We learn, then, from Plato that Sophroniscus, the father of Socrates, had been a close friend of Lysimachus, the son of the great Aristides, who belonged to the same deme of Alopece, about a mile and a half from Athens.¹ Socrates himself had a lifelong friend in his contemporary, the wealthy Crito, who belonged to the same deme.² The name of his mother, Phænarete, has an aristocratic sound, and so has Patrocles, the name of her son by another husband, Chærophanes.³ This is not in the least inconsistent with the fact that she exercised the profession of a *maie*.⁴ Such offices were performed by women of good family, and the translation 'midwife' is quite misleading. There is no good evidence that either Socrates or his father was a stator or a sculptor. Xenophon, at least, had never heard of such a thing, or he could hardly have avoided mentioning it when he related the advice given by Socrates to the sculptor Clito.⁵ The impression left by all our best authorities is that Socrates came of a well-to-do family, that he had no definite trade or occupation, and that he associated on terms of perfect equality with all the 'best people' at Athens, and especially with the Periclean circle. His poverty belonged only to his later years; for he served as a hoplite at Potidaea (431), Delium (424), and Amphipolis (422), and must therefore have had some property of his own.

The close relations of Socrates with the family of Aristides are presupposed in the curious story of 'the highway of Socrates.' He is said to have been married to Myrto, the daughter or grand-daughter of Aristides, as well as to Xanthippe. This story is given on the authority of Aristotle in his *High Experiences*. We know that Socrates married Xanthippe late in life; for his three sons were all young when he died, and one of them was a baby; and A. R. Taylor has shown it to be quite possible that he was then a widower, having married and lost Myrto in his youth. We must remember, however, that the age of little-battle had begun by Aristotle's time, and the story in the form quoted from him by Diogenes Laërtius is plainly impossible. Surely too, if Plato had known the story, and if Lysimachus had been the brother-in-law or the uncle by marriage of Socrates, he would not have made him call him simply *carpenter* (*tekton*). The first appearance of the statement that Socrates was a stator or stone-cutter (*tekton* or *tekton*) is in Timon of Phlius,⁶ who belongs to the 3rd cent. B.C. and is a very unsafe authority for anything. It appears to have arisen from an almost certainly false interpretation of his references to Iodalmus as the ancestor of his family.⁷ The Attic hero Iodalmus had nothing to do with stone-cutting or marble sculpture, but was primarily a worker in metals, and secondarily the reputed artist of wooden figures. He was sprung from the line of Erechthonius, and the Iodalmidae were not, as sometimes asserted, a trade guild, but an Athenian *gênos*, which had given its name to a deme not far from Alopece. The whole chapter of Xenophon referred to⁸ contrasts Socrates with a *tekton* (*tekton*), and the point of it is clearly that he himself was not a professional man. In the *Apology* Plato makes Socrates address himself to the *hēgoumenoi* as to a hitherto unexplored class. Plato's repeated allusions to the intimacy of Socrates with Damon confirm the tradition that he was intimate with the uncle of Pericles.

Plato has very little to tell us of the early interest of Socrates in Ionian science, which is natural enough, seeing that it had ceased to be of much interest in his time, and that he knew Socrates only after he had given it up as hopeless. It is all the more remarkable that, in the autobiographical sketch which he puts into the mouth of Socrates on the last day of his life, his youthful enthusiasm for science is made quite prominent.⁹ It seems unthinkable that Plato should have invented a purely fictitious account of his revered

master's intellectual development, and inserted it in an account of his last hours on earth. We are told that Plato himself was not present on this occasion;¹⁰ and we have no means of knowing whether Socrates did, as a matter of fact, say these things, but we are surely bound to believe that Plato thought they were substantially true. Such arguments do not, however, appeal to every one, and there are fortunately others of a more objective character. The whole passage has obviously been written with the greatest care.¹¹ After saying how eager he had been in his youth for the kind of knowledge called natural science (*ἡ φυσικὴ ἐπιστήμη*), Socrates enumerates the problems that had interested him. They were such as whether the earth is flat or round, and whether 'what we think with' is air or blood, and the like. There were also problems about the nature of the unit and what is really meant by addition and subtraction. Now it can be proved in detail that all the questions raised in this passage were eagerly discussed in the middle of the 5th cent. B.C. at Athens; and that they could hardly have excited so much interest at any other time or place. There is not an anachronism in the whole passage, and a very slight knowledge of the state of science in those days is enough to show that what is represented as puzzling Socrates is just the opposition between the Ionian theories, 'the philosophy of Anaximenes,' and the Italic doctrines, that is to say, the Pythagorean and Eleatic systems. It was just in the Athens of Pericles and nowhere else that these came into contact. Plato does not mention Archelaus by name, though a doctrine which we know to have been his is clearly described. Socrates felt (or professed to feel) quite helpless in face of this diversity of opinion, and he came to the conclusion that he had no gifts that way. That, of course, is his 'accustomed irony.' At least he heard 'some one [Archelaus?] reading a book, as he said of Anaxagoras, in which mind was said to be the cause of all things, but the expectations this raised in him were disappointed when he got the book for himself and found that it really assigned no causality to mind at all, but only to 'airs' and 'ethers' and the like. He determined accordingly to strike out a line of his own. All this is confirmed by the burlesque of it in the *Clouds*.¹²

In another dialogue, the *Parmenides*, Plato supplements this account of the intellectual struggles of the youthful Socrates. It is a report of a discussion between him and Parmenides of Elea, who was visiting Athens along with Zeno, and the discussion turns on the difficulties which attend the conception of sensible things as 'participating' in the forms (489). There is no chronological difficulty whatever,¹³ and the actual occurrence of the discussion is referred to as a fact in two other passages of Plato.¹⁴ We know that Zeno was at Athens for a considerable time, and that Pericles 'heard' him there. We also know that Pythodorus, son of Isotichus, studied under him and that other Athenians paid him large sums of money. If we remember the growing interest of Athens in the West at this date, it will not appear surprising that Parmenides, who was not only a philosopher but also a statesman and legislator in the Ionic colony of Elea, should have visited Athens along with his favourite disciple. Now it is, of course, obvious that Plato was not in a position to give an accurate report of a conversation which took

¹ *Phaedo*, 102 E.

² For the details see the notes on *Phaedo*, 90 A E., in the present writer's edition of the dialogues (Oxford, 1911). The view that Plato is describing his own intellectual development in this passage is ludicrous. These questions were no longer of any interest even in his youth.

place more than twenty years before he was born, but it should also be obvious that he was not likely to represent a theory of his own as the subject of a rather damaging criticism in that conversation. It is, therefore, important to notice that the criticism of Parmenides is not specially directed against the so-called 'theory of ideas,' but rather against the view that these 'intelligible forms' can somehow be 'present' in the things of sense, or that the things of sense can 'partake of' them—a view which Plato expressly ascribes to Socrates in the autobiographical sketch of the *Phaedo*,¹ though he indicates at the same time that Socrates was not clear that 'presence' or 'participation' was the right name for the relation between the sensible and the intelligible which he postulated. It is, fortunately, unnecessary to pursue this subject farther here. We are not bound to discuss whether Plato himself proceeded to 'separate' (*χωρῆσαι*) universals from particulars or not, or whether Aristotle thought he did so or not. What is quite certain is that he never represents Socrates as 'separating' the forms from the things of sense, and that the difficulties he gets into in the *Parmenides* are due solely to his insistence on the participation of sensible things in the forms, and his refusal to take the easiest way out of those difficulties by adopting the theory of 'separation' (*χωρῆσαι*).²

Now in the *Phaedo* it is just this coming into being and passing away (*γενεή και φθορά*) of particular things that interests Socrates. It never occurs to him or any of his associates from first to last to question the reality of the world of being (*οὐσία*); that is the postulate (*πρόθεσις*) which they all accept. The only question is the cause of becoming, and the new method by which Socrates proposed to attack it was what he called 'examination in arguments' (*εἰσφοράς ἐς λόγους*). That was, in fact, the method which had proved so successful in geometry already, and which Zeno had turned into such a deadly weapon against the Pythagorean geometry itself. What was new was its application to the consideration of other than arithmetical and geometrical problems, and in particular to the good and the beautiful. The importance of *λόγος* in the work of the 'thought-factory' was well known to Aristophanes, as we have seen, though he carelessly or deliberately mixed it up with the teaching of Protagoras about making the weaker argument the stronger—a point which he still further developed when he introduced the righteous and the wicked argument in the second edition of the play. The Athenian public would certainly not distinguish the two things, and, as a matter of fact, there was something in common between them. Protagoras said that on every subject there were two *λόγοι* opposed to each other, and that was exactly what Zeno had shown in another sphere. The method of Socrates was to follow out the consequences (*τὰ ἐκπαισσεύειν*) of these *λόγοι*, to 'follow wherever the argument led him,' and he transferred this method to matters of right and wrong, fair and foul. There still exists a curious document written in the Doric dialect, in which this application of the method is plainly exhibited, and which must have been composed under Socratic influence.³

¹ 100 D.

² It is worth noting that Proclus, who was familiar with both the Academic and the Peripatetic tradition, has no hesitation in saying that Aristotle ascribed the 'theory of ideas' to Socrates. He says (in *Platonis Republicum*, I, 258, ed. G. Kroll, Leipzig, 1899-1901): *εἰς τὴν τῶν σοφῶν καὶ φιλοσόφων τὴν θεωρίαν ἵδμεν αὐτὸν εἰς τὴν ἀπορρίψαν τὴν οὐσίαν καὶ τὴν εἶναι οὐκ ἐκείνην θεωροῦσαν αὐτὸν ὡς τὴν οὐσίαν ἀπορρίψαν*.

³ For the so-called *harmotus* see Diels, 87, and A. E. Taylor's chapter on the *harmotus* in *Varia Socratica*, 1st ser., Oxford, 1911, p. 94 ff. The Peloponnesian War is referred to as the most recent, which dates the dialogue within fairly narrow limits. The Doric dialect at once suggests Megara, where Euclides was developing the Eleatic doctrine under Socratic influence.

6. Early reputation of Socrates.—In the *Clouds*, as we have seen, Socrates is represented as the head of a regular school. The picture of the *σοφιστής* would be quite pointless on any other supposition, and the most natural thing is to assume that he succeeded Archelaud. His work must have been much interrupted, however, by the war. Plato makes a great point of his bravery in the field. We know that Socrates served at Potidea, Delium, Amphipolis, and probably elsewhere, and we may take it for granted that these experiences made a deep impression on him. It is clear that he was already a celebrated man. We saw that Antisthenes spoke of foreigners being attracted to Athens 'by the renown of Socrates,' and we know who some at least of these were. There were the Eleatics Euclides and Terpsion from Megara, the Pythagorean Echecrates from Phlius, Aristippus from Cyrene, and doubtless many others (Cebes and Simmias, the disciples of Philolaus, from Thebes, and Phaedo of Elis belong to a later time; for they are quite young in 399 B.C.). No one has ever disputed these facts, and they imply a great deal which is not yet generally recognized. In particular, we must remember that the attachment of the scattered Pythagoreans to Socrates must have begun in those early days before Plato was born. He had also devoted disciples among his fellow-citizens, of whom the best known to the Athenian public was the enthusiastic and eccentric Chærepho. It was he who, somewhere about this time, actually asked the oracle at Delphi whether there was any one wiser than Socrates. The oracle of course replied that there was not, and, according to Plato, Socrates at his trial attributed his mission to the Athenians to his desire to refute or confirm the truth of this oracle. He was conscious of knowing nothing except that he knew nothing, and he found at last that he was wiser than others only in this, that he knew he knew nothing, while they knew nothing either but thought they did know something. That, of course, is Socratic 'irony'; his mission was a much more serious thing, as we shall see. What is important for our present purpose is to observe that his reputation for 'wisdom' was well established before he entered on his mission at all.

To this period we must also assign the rivalry of Antiphon the sophist with Socrates, of which Xenophon has preserved some notices from an unknown literary source. He tells us¹ that Antiphon endeavoured to rob Socrates of his associates (*ρῆναι συνοικιστὰς ἀπὸ τοῦ Σωκράτους*). He pointed out to him that he lived a life no slave would put up with, that he wore a cloak which was not only shabby, but the same in summer and winter; that he went barefoot and shirtless, and he argued that he was really a teacher of unhappiness. That was why he charged no fee. Here Socrates is clearly depicted as the head of a voluntary association of aestetics, much as he is in the *Clouds*. Socrates answered him as was to be expected, and he goes on to describe the way he spent his time with his associates.²

¹ 'I unroll in common with my friends the treasures of the wise men of old, which they have left behind written in papyrus volumes, and if we see anything good in them, we extract it, and think it great gain if we become friends to one another.'

This is not like anything else in Xenophon, or even in Plato, and must refer to the date of the institution which Aristophanes burlesqued as the *σοφιστήριον*.

It is impossible that Xenophon can be speaking here from his own personal recollections. We have no means of dating Antiphon the sophist, but the style and matter of the fragments which we possess³ make it clear that he belongs to a time before Xenophon was born.

7. The mission of Socrates.—It is evident that

¹ Mem. I, 6, 1 ff.

² Ib. 14.

³ Diels, 80 ff.

ordinary circumstances to keep a man on the right road; but it cannot be trusted to do so in every case and in all circumstances, because it is not secured by a 'reasoned account of the cause' (*alēta Aytoria*), as all scientific knowledge must be.¹ The man who really knows knows that everything worth doing is only so 'for the sake of the good,' which is the only thing it is really possible to wish for.² Now the only man who knows the good is the philosopher, and he is the man whose soul is in complete union with it, so that it is impossible for him to do wrong. It seems impossible to doubt that Socrates spoke in the language of passion of the love of the soul for the good and of its mystical union with it, and that the speech he is made to attribute to Diotima in the *Symposium* represents his real teaching on the subject. Such things were, of course, beyond the range of Xenophon, who had read Plato's *Symposium* without discovering what it was about. If we may judge from his own composition of the same name. We would give much for a glimpse of Plato's relations with Socrates, but he has kept himself out of the Socratic dialogues completely.

The present writer believes that we are bound to regard all the dialogues in which Socrates is the leading speaker as primarily intended to expound his teaching. This by no means excludes the possibility that Plato may have idealized his hero more or less, or that he may have given a turn of his own to a good many things. That would only be human nature, but it would not seriously affect the general impression. The principal ground for holding this view is that, at a certain period of his life, Plato began to feel that it was inappropriate to make Socrates the chief speaker in his dialogues. He is present in all of them except the *Lysis*, which makes the secondary position assigned to him in the later dialogues all the more remarkable. If Plato had made Socrates the more mouthpiece of his own speculations in the *Symposium*, it is difficult to see why he should not also have credited him with the logic of the *Sophist* and *Statesman* and the cosmology of the *Timæus*. The *Philebus*, one of Plato's latest works, is just the exception that proves the rule. Its theme is the application of Pythagorean principles to questions of morals; and, if we believe Plato, that was just the chief occupation of Socrates.

10. Trial and death of Socrates.—Though he performed all his duties as a citizen, and especially as a soldier, Socrates took no part in public life till the year 406 B.C., when the very existence of Athens was at stake. In that year he allowed himself to be nominated for the Council of Five Hundred; the lot fell upon him, and he took office. It was in the prytany of his tribe, the Antiochia, that the illegal proposal was made to condemn the generals who were accused of failing to recover the dead after Arginusæ collectively, instead of deciding each case by itself. Socrates stood alone in opposing the proposal and would not even take any responsibility for putting the question to the vote. There is no reason for supposing that he was in any way disloyal to the democracy, but he had seen it become more and more anarchical and tyrannous, and, if we may trust Plato's *Gorgias*, he now saw that Pericles himself had started it on this course. To him it was quite as repugnant that the people should act contrary to the laws as that a despot should do so, and he was bound by his deepest convictions to resist anything arbitrary. It is not therefore surprising that, when the democracy fell, Socrates did not feel obliged in any way to identify himself with its cause by leaving Athens. It may have seemed quite possible at first that the Thirty, several of whom had been among his associates, would restore the legal State. We know now that there was no chance of that, but it was not so clear then. Xenophon, who may have been in Athens at the time, has a story³ of how Critias and Charicles called Socrates before them and told him that he must obey the law which had been ordained forbidding any one to teach 'the art of arguments' (*τῆς τοῦ λόγου τέχνης*). Socrates replied by arguing

in his customary manner with them. That was not very serious, but the affair of Leon of Salamis, twice repeated by Plato,⁴ was more so. The Thirty were anxious to implicate as many people as possible in their crimes, and they sent for Socrates with four others and ordered them to bring Leon over from Salamis to be put to death. The others obeyed, but Socrates simply went home, for which he would have been put to death, if the Thirty had not been overthrown in time. That may have made him popular with the restored democracy for a little and so delayed the inevitable end, but of course Socrates remained faithful to his principles, and, when the democracy began to fall away from its original moderation, we may be sure that he did not spare his criticisms. To the men now at the head of the State he must have seemed dangerous, as a cause of disaffection among the younger men. The amnesty made it impossible for them to accuse him for his acquiescence in the rule of the Thirty, so something else had to be found to try him for. The actual accusation contained two counts: (1) irreligion (*asebeia*), which was explained to consist in his failure to recognize the gods recognized by the State and introducing new ones; and (2) corruption of the young. The first charge was based on the old story of his unorthodoxy contained in the *Clouds* of Aristophanes. That may seem to be going a long way back, but it must be remembered that the men who had flocked to him from all parts of Greece in the days of the *Isagorides* were now free to visit him once more; and Plato indicates that at least Euclides of Megara, Theodorus of Cyrene, and Cebes and Simmias from Thebes actually did so. Most of these men had just recently been 'enemy aliens,' and their views were doubtless shocking to the orthodox. It was not, therefore, strange that the old scandal should be revived at this time. As to 'corrupting the youth,' that really meant encouraging them to criticize the new régime. It is not to be supposed that Anytus really wished Socrates to be put to death; he only wished him to leave Athens. Socrates, however, refused any compromise of this kind. He was not found guilty by a large majority, and it is clear that, if he had cared to propose banishment as an alternative penalty to death, as it was open to him to do, that would have been accepted. As it was, he proposed free entertainment in the Prytaneum for life, with the natural result that the majority for the sentence of death was greater than that for the verdict of guilty. Owing to the Delian festival, a month passed before he could drink the hemlock, and he spent it in conversation with his friends. Some of them were eager to get him out of prison and away from Athens, but he would not stultify himself by breaking the law. He had been legally condemned, however unjustly, and he must abide by the sentence, and so, he added, must his accusers. It is particularly noteworthy that most of the Athenians who were present at the last were men whom we know to have been associates of Socrates in earlier days. The rich young men, whom he was supposed to have corrupted, were not there. On the other hand, there was a remarkable company of foreigners—Eleatics from Megara and Pythagoreans from Thebes. It was very natural in these circumstances that Socrates should revert to the topics which had occupied him in earlier days. His mission was over, and there was no need to talk of that any more. He spoke, therefore, of the soul and its destiny, and Plato makes us feel how far he had gone beyond his former associates in his view of it. The older men say nothing at all, and Cebes and Simmias, the young Pythagoreans, though ready to be convinced, are frankly critical and inclined to

¹ *Nemo*, 97 A 2.

² *Mem.* I. 2. 38 ff.

³ *Charm.* 166 D 2.

⁴ *Apud* 32 ff., *E. Resp.* vii. 394 ff.

scepticism. When the talk was over, Xanthippe, who had been resting after sitting up with her husband the night before, was sent for to say farewell to him, and to receive his last instructions in the presence of Crito. The last scene of all is one of the great things of European literature, and must be read to be felt. Plato had ample opportunities of hearing the death of Socrates described in detail by men who were present, and it is impossible to doubt that he tried to record it as accurately as he could. The world has never quite forgotten the message that was left to it on that spring day of 399 B.C.

LITERATURE.—The Socratic problem was correctly formulated by P. D. E. Schleiermacher, *Ueber den Werth des Sokrates als Philosophen* (Werke, Berlin, 1834-84, sect. III, vol. II, p. 267 ff.). His canon was: 'What may Socrates have been, besides what Xenophon tells us of him, without, however, contradicting the traits of character and principles of life which Xenophon definitely sets up as Socratic; and what must he have been to give Plato the occasion and the right to represent him as he does in his dialogues?' Unfortunately, this canon was overshadowed by the dictum of G. W. F. Hegel (*Vorlesungen über die Geschichte der Philosophie*, Berlin, 1822, II, 94) that 'we must hold chiefly to Xenophon in regard to the content of his knowledge, and the degree in which his thought was developed.' This became untenable as soon as the date of Xenophon was settled, and the slight character of his acquaintance with Socrates was realized. K. Jell, *Der echte und der Xenophontische Sokrates*, 2 vols., Berlin, 1901, tried to find a test by which to judge between Plato and Xenophon in the statements of Aristotle, but this has not been generally accepted, since Aristotle did not come to Athens till a whole generation had passed away since the death of Socrates, and he could have had no firsthand knowledge about him. The literary problem was well discussed by Ivo Bruns, *Das literarische Porträt der Griechen*, Berlin, 1896. A. E. Taylor has discussed a number of points in *Varia Socratica*, 1st ser. (St. Andrews University Publications, no. 12.), Oxford, 1911, and a similar standpoint is adopted in the Introduction to J. Burnet, *Plato's Phaedo*, Oxford, 1911. The most recent discussions are those of H. Maier, *Sokrates, sein Werk und seine geschichtliche Stellung*, Tübingen, 1914, and A. Rösler, *Sokrates*, Berlin, 1914, which agree in rejecting the testimony of Xenophon and Aristotle in favour of Plato's. Their other results are contained in the present writer's article on 'Ancient Philosophy' in *The Year's Work in Classical Studies*, 1915, ed. Cyril Bailey, London, 1916.

JOHN BURNET.

SODOMY.—Sodomy is sometimes defined as 'unnatural sexual relations, as between persons of the same sex, or with beasts.' The word 'sodomy' meant originally the kind of wickedness practised by the inhabitants of the city of Sodom. That this was sexual intercourse between persons of the same sex is an inference based on the words of the men of Sodom to Lot (Gn 19): 'Bring them [the men] out unto us that we may know them.' If 'know' (yad) be given here a sexual meaning, as in Gn 4, the reference would be to unnatural intercourse. There is no actual necessity, however, for so interpreting the word 'know.' It may mean no more than 'get acquainted with,' and the wickedness which Lot is said to have anticipated that the men of Sodom contemplated may have been no more than to give the strangers a beating.

The translators of AV understood the word to cover any immoral sexual intercourse, for they rendered Dt 23¹⁷: 'There shall be no whore of the daughters of Israel, nor a sodomite of the sons of Israel.' The 'whore' of this passage was a *hierodoule* (ἱεροδούλη), or sacred prostitute, and the sodomite was her male counterpart (εὐν). The Bishop's Bible translated: 'There shall be no whore of the daughters of Israel, neither shall there be a whore keeper of the sons of Israel.' It is clear, therefore, that in Elizabethan English sodomy was not restricted to sexual intercourse with the same sex and with beasts, but was applied to intercourse between unmarried human beings also. In this article we shall assume that the term has the breadth of meaning that it had when AV was made.

1. Hebrews.—Among the Hebrews sodomy of

¹ Century Dictionary, s.v.

² See art. *Hierodoule* (Hebrew and Egyptian), § 5.

both types existed. A law in Ex 22¹⁶ reads: 'Whoever lieth with a beast shall surely be put to death.' Just as a prohibition law implies that traffic in liquor has been known, and has even been customary, so the prohibition recorded in this law testifies to the existence of the thing prohibited. Similarly Lv 18²², 'Thou shalt not lie with mankind, as with womankind: it is abomination,' is evidence that the second form of sodomy included in the *Century Dictionary's* definition at one time existed among the Hebrews. To what extent such unnatural indulgence was practised we do not know. Fortunately the veil of oblivion has fallen over the details. Sodomy of the second kind (immorality practised by men consecrated to a deity, and practised in the precincts of a temple in the service of religion) also existed in Israel down to the reform of Josiah. The term *εὐν*, by which a sodomite is designated, means 'holy' or 'consecrated,' and indicates that he was especially devoted to a deity for that purpose. In 1 K 14²⁴ it is said that these sodomites 'did according to all the abominations of the nations which Jahweh drove out before the children of Israel.' This implies that men consecrated to similar service were connected with the sacred places of other western Semites. This is what we should expect, and is doubtless true. Ass, king of Judah, endeavoured to expel sodomites from the temple in Jerusalem (1 K 15²⁴)—a work which Josiah accomplished (2 K 23). According to the most probable reading, in Job 36¹⁵ it is said of the wicked: 'They die in their youth and perish like sodomites.' This parallelism implies that the life of sodomites was proverbially short, possibly from the fact that they contracted venereal disease. It may, however, simply refer to the destruction of sodomites by Josiah, though the first interpretation seems more probable.

The purpose of these officials is somewhat obscure. It seems probable, however, that they represented the life-giving power of the deity interpreted in a physical sense. If this were the case, barren women and perhaps also brides would resort to them.

2. Babylonia.—That behind the Babylonian civilization there lay a condition in which the type of sodomy defined by the *Century Dictionary* existed is proved by the *Gilgamesh Epic*, one of the heroes of which, Enkidu, is said to have eaten grass with the gazelles, with the cattle to have quaffed drink, and with the creatures of the water to have delighted his heart.¹ As the Epic goes on to tell how by intercourse with a *hierodoule* he was enticed away from his animal companions, the narrative means, apparently, that before the coming of the woman he had satisfied his sexual appetite with the animals.

Of the existence of the equivalent of the Hebrew consecrated sodomite (*εὐν*) there is no certain trace known to the present writer, though there is mentioned in the Code of Hammurabi an official who was probably a sodomite. This official is designated by a Sumerian term usually read *NIR-SE-GA*, which a syllabary defines by the Semitic *masmaš pami*. The *NIR-SE-GA* is first mentioned in § 187 of the Code, where it is said:

¹ One may not bring claim for the son of a *NIR-SE-GA*, a temple guard (masmaš chullin), or a sacred harlot (*SAC-sikru*). Again, in § 192 it is said:

² If the son of a *NIR-SE-GA* or the son of a sacred harlot says to the father that brought him up or to the mother that brought him up, "Thou art not my father" or "Thou art not my mother," they shall cut out his tongue.

The point of importance to our subject in these laws is that the children of the *NIR-SE-GA* are treated exactly like the children of the sacred

³ Cf. F. Harp, *Die babylon. Nomines*, Leipzig, 1884, p. 9, line 367.

harlot, or *hierodoulos*.¹ If the *NHR-SS-GA* claimed his child, no one—not even the legal husband of the child's mother—could lay claim to the child. If the *hierodoulos* chose to bring up her child, no one—not even its real father—could deprive her of it. If, on the other hand, one adopted the son of a *NHR-SS-GA* or the son of a *hierodoulos*, and the child repudiated the adopted father or mother, his tongue was to be cut out. The parallelism makes it probable that the *NHR-SS-GA* was the male counterpart of the *hierodoulos* (*SAL-tikru*).

In the first of the two laws quoted the son of a *manzan skallim* is placed on a par with the sons of the other two. *Manzan skallim* has been sometimes translated 'palace guard,' but *skallim* means 'temple' as well as 'palace,' so that the term may refer to another class of sodomites.

What is the meaning of *NHR-SS-GA* and its equivalent *manzan panti*? Mura-Arnott defines *manzan panti* as 'foremost place, dignitary, vanguard'.² Delitzsch as 'Frontplatz, d. h. als Titel: Raubhändler, der die erste Stellung bekleidet, höchster Würdenträger'.³ This interpretation seems to be confirmed for the later time by the phrase *manzan panti sarri*, 'place before the king'.⁴ It is, however, doubtful whether this was the original meaning either of the Sumerian expression or of its Semitic equivalent. Scholars have transliterated the Sumerian, *NHR-SS-GA*; in the writer's judgment it should be read *GIR-SS-GA*. *GIR* is simply a phonetic complement. *GIR* is the sign for 'foot'; *SS*, the word for 'pour out'.⁵ When we remember the way in which 'feet' is employed in Hebrew as a euphemism for *penis*, as in Ex 24 and Is 17, the possibility presents itself that this phrase may originally have had a meaning quite consonant with the office of a sodomite. In that case *manzan panti* would not be a literal translation of it, but a paraphrase. It is by no means certain, however, that *manzan panti* always means 'foremost place'. The use of *panti* in Akkadian and Assyrian are closely parallel with the uses of *penis* in Hebrew, and in Ex 24 *penis* is employed in the sense of 'presence, or, as we should say, 'person'. The meaning is that Jahweh said to Moses: 'I will go with thee in person.' If we might apply this analogy to our phrase, *manzan panti* would mean 'in place of the person', and would appropriately designate a priest who superintended a god, or who represented to the worshipper the functions supposed to be performed by a deity. If sodomites represented the life-giving functions or the fertility of a deity, as we have supposed, this would be a fitting designation of them. Herodotus tells how in the temple of Baalbek in Babylon there was a couch on which the wife of the god slept as certain times, and that the oracle came only when she occupied the couch.⁶ This appears to be confirmed by a text in the British Museum,⁷ which speaks of the presentation of a couch for the *regiment*.⁸ From what we know of ancient omens, it is hardly conceivable that at such times the god was not represented by a priest or *manzan panti*, one who took the place of his person.

This view of the religious character of the *manzan panti* of a god or a temple seems to be warranted by the fact that the *manzan panti* of a king seems to have been the representative of the monarch in overseeing public work, and the *manzan panti* of a temple was the representative of the god in looking after the affairs of the temple. Thus a pay-roll of the time of the Ur dynasty was certified to by the *GIR-SS-GA* of the priest, or ruler;⁹ quantities of wool presented to the temple of Enne at Erech were certified to by the *GIR-SS-GA* of the temple.¹⁰ In the year that Ish-Sin, the last king of the dynasty of Ur, because king quantities of grain were paid as wages in behalf of the priest of Girsu by a certain *GIR-SS-GA* who acted as overseer.¹¹ There is no reason, however, why, just because a man was a representative of the king, there should be any irregularity in the birth of his children; so that the Code would need to provide that no claim should be brought against them. It seems probable, therefore, that it is necessary to distinguish between two classes of *GIR-SS-GA*, one of which impersonated the god in functions parallel to those of the sacred harlot, while the other impersonated or acted as the representatives of earthly rulers. It is probable that the *GIR* which occurs so often on the business documents of the dynasty of Ur as the official who stated or authenticated the documents represents an abbreviation of *GIR-SS-GA*.¹²

These etymologies represent possibilities only. While it seems probable that the *NHR-SS-GA* (*GIR-SS-GA*) was a sodomite, full proof is lacking.

3. India.—In India there seems to have been among the native races a wide-spread belief that the greatest manifestation of divine power was in the generation of life. The organs of generation consequently became to them the most revered symbols of deity. In course of time this view made its way into some forms of the religion of the Aryans. In present-day Hinduism it is most generally found among the Saivite sects, though some of the Vaishnavite sects also have adopted it. In Saivite temples the deity is usually represented by the *lingam*, or phallus; the *yoni*, or vulva, is also a common religious symbol. Wherever such ideas prevail, sodomy is, or was at some time, a feature of religious services.

It is reported that in India there is a class of *fajirs* who go entirely nude, and live apart from the people, but are held in the highest reverence. When they approach a village, the people flock about them, and the women lay aside all modesty in their intercourse with them. Especially those who desire to rid themselves of the reproach of barrenness kneel before the *fajir*, take his private member in their hands, and kiss it.¹

Another manifestation of sodomy is found among the Saivite secret societies called *Saktas*. To one another the members of these societies call themselves 'the perfect' and speak of outsiders as 'beasts.' Such is the ill-repute of these societies at present that no respectable person will admit connexion with them. Their rites are set forth in texts called *Tantras*, in which the initiated are instructed. In one of these texts Siva says to his wife Durgā: 'All men have my form and all women thy form; any one who recognises any distinction in caste in the mystic circle has a foolish soul.' At their secret meetings a naked woman, the wife of the chief priest, sits in the middle of the 'holy circle'—a circle composed of men and women sitting promiscuously without regard to caste or kinship. After partaking of meats, fish, parched grain, and various kinds of wines and liquors, each man is for the time Siva and each woman Durgā. They freely copulate without regard to caste or the risk of incest. To give in detail the ceremonies of different societies would be but to repeat such indecencies.² The theory which underlies these societies is that man is a creature of passion, that passion is poison, but a poison that can be cured only by poison. On the principle 'Similia similibus curantur' they indulge in these orgies in order to cross the region of darkness to union with Siva.

4. Australia.—In Australia, among a number of tribes, the conceptions out of which sodomy grew still prevail, though the customs in which they are embodied are different; e.g., when a girl reaches the marriageable age (fourteen or fifteen), an initiation ceremony is performed upon her, which consists in cutting open the vagina.

Among the northern Arunta and Lippira the man to whom a girl has been assigned takes her, along with his father's sister's sons, and, accompanied by other men of the tribe who might have been her lawful husbands, and by a mother's mother's brother, they go out into the bush. The mother's mother's brother (who, of course, is an old man) then 'performs the operation with a stone knife, after having touched the lips of the girls with Charisma, so as to prevent excessive bleeding.' Afterwards the old man who performed the operation, the father's sister's sons, and the other men have intercourse with the girl in the order named. The girl is then decorated and

stuffed *GIR* written alone; cf. *Indo-European Hypothesis of the University of Pennsylvania, Series A: Cuneiform Texts*, ed. H. V. Hilgert, II, Philadelphia, 1910, p. 12.

¹ Quoted in *Journal*, p. 46, from Bartholomew d'Hertford's *Reliquiae orientales*, Paris, 1607.

² Mores, *Hist. of Religions*, I. 343; Hopkins, *Religions of India*, p. 491.

taken to the camp of her allotted husband. At least once afterwards he is very likely to send her back to the same man.¹ Similar customs are found with varying details among other tribes.

In the Illiamna, after the operation is performed by the brother of the mother, first he, then the elder brothers of the husband, then his younger brothers have access to the girl in the order named. In the Kallish tribe the operation is performed by an older sister of the girl, after which mother's brother's brothers, elder and younger brothers (not in blood), mother's brothers, and those who might have been lawful husbands have access to her.²

In the Warramunga tribe the husband lies down with a brother on each side of him; the girl is laid across them by an elder sister; the operation is performed by a father's sister's son in the presence of all the men and women of the camp. She then goes to the camp of the man to whom she is allotted, but he has no intercourse with her for two or three days. After this she is lent for two nights to mother's mother's brother, father's sister's son, paternal grandfather, elder and younger brothers (not in blood), and to those who might lawfully have been her husbands. After this she becomes the property of the man to whom she was assigned.³

The customs of the Wirgala, Ilingogina, Walimalla, Tiligili, Nibolia, and Walpari tribes are in substantial agreement with the Warramunga customs, except that, as a general rule, the husband's father performs the operation.⁴

If the husband dies and the woman is handed over to one of his younger brothers, he lends her for a day or two to other men.⁵

In addition to the practices connected with puberty and marriage, there are in Australia other occasions on which intercourse with women other than those allotted to them is permitted to men. While certain of their ceremonies are being performed, large numbers of natives are gathered together and marital rules appear to be set aside for the time being.⁶ The native name for such gatherings is *corroborees*. In some tribes a woman is told off each day or each night to attend at the *corroboree* ground, and all the men, except fathers, elder and younger brothers, and sons, have access to her.

Among the Arunta, when an ordinary *corroboree* is in progress, an elder man will send his son-in-law into the bush with the elder man's wife to collect material for decoration. Ordinarily it would be unlawful for the younger man to speak to the woman or to come near her. Now he is expected to have intercourse with her, in order to cause the ceremonies to go more smoothly and to prevent the decorations from falling off. Towards night, when all is ready, the women who have spent the day at the men's camp are palleted with red ochre and go to summon the other women and children for the festival night.⁷

In some tribes such sexual intercourse is much more common than in others. Among the Warramunga, e.g., it is carried on night after night during the performance of sacred ceremonies. The lending of women follows certain rules which vary according to tribal conditions. Under certain circumstances women are lent only to men belonging to another division of a tribe; on other occasions only to men belonging to a man's own division of it.

An instance is recorded where, because the men of one moiety of a tribe had built a mound for another moiety, the head men of the moiety for whom the mound had been built brought his wife up near to the other group, secreted her in the bush, and carried the head men of the other group out to have intercourse with her.⁸

On other occasions women in the Warramunga tribe are lent to men who ordinarily would not be permitted to approach them—e.g., men who are sent out to bring in the bones of a dead person before the ceremony connected with the rite of burial. On this occasion the father of the dead person, or in his absence some tribal father, lends the woman. Often messengers are sent out with dead men's bones to summon other groups to the performance of some ceremony; on such occasions not only are women lent to the messengers, but a general interchange takes place. In some tribes the messengers will take women with them. When they have delivered their message, they leave them

a little way out in the bush, where they are visited by men of the other group, who, irrespective of class, have intercourse with them. It is, however, a prerequisite to such intercourse that they should have accepted the invitation of the messengers or should have agreed to the request that they bring. When men of one group go to exact vengeance of another group by killing a man, it is customary to offer to the messengers the use of women. If the offer is accepted, it is a sign of reconciliation; if it is rejected, it is a sign that full vengeance will be exacted.⁹

Except in the Urabunna tribe, where group-marriage prevails, the men have individual wives. Under ordinary circumstances for a man to have intercourse with a woman who does not belong to his group of lawful wives would be a very grave offence, liable to be punished by death. It is only in connexion with ceremonies and the sending out of messengers that irregular intercourse is allowed. In a few special cases the lending of women may be explained as a return for some service rendered, but in most cases it is clearly due to mother motive. It is supposed to have some supernatural potency.¹⁰

GEORGE A. BAXTON.

SOLEMN LEAGUE AND COVENANT.

The Solemn League and Covenant was the formal undertaking entered into in the late autumn of 1643 by the Scottish General Assembly and Estates on the one part, and the English House of Commons and House of Lords on the other, with a view to making common cause against Charles I. in his civil and ecclesiastical policy. The agreement took the form of a religious covenant by the strong desire and insistence of the Scots,¹ who had become familiar with this more serious form of agreement in their recent ecclesiastical history. Bands had not been unknown in Scottish civil matters, the most noted being the Douglas Band and the band for the murder of Darnley in 1567. But from the era of the Reformation onwards covenants had been common and stringent. The first Covenant² was signed on 3rd Dec. 1557 by Argyll, Glencairn, Morton, Lorne, and Erskine of Dun. Between this date and 1643 almost twenty bands were signed or planned,³ the most famous, perhaps, being the band of 27th April 1569 and the National Covenant of 1638. They were kindred in several respects. They were all purely Scottish in bearing and references, and they were definite and emphatic in repudiation of Roman Catholic doctrine and practice. But the Solemn League and Covenant, while it had great similarity to these earlier bands in its strong anti-Romanism, differed in a marked way from them in its international character and in its international purpose. It was 'a Solemn League and Covenant for Reformation and defence of Religion, the Honour and Happiness of the King, and the Peace and Safety of the three Kingdoms of Scotland, England, and Ireland.'⁴

The special form of it was not of English devis-

ing; the substantial agreement was of English seeking. It took form comparatively late in 1643, but various steps towards it had been taken as early as the beginning of 1642. The earliest movements towards common action between the English and Scottish Puritan leaders are not known. But in the beginning of 1642, after the outbreak of rebellion in Ireland, 'the English Parliament agreed to pay both English and Scottish troops' to serve there.¹ The promise to the Scots was not kept, owing to the outbreak of the Civil War. The Scottish sympathizers with the Parliament had to find means in Scotland to defray the cost of food, clothing, and pay of the Scottish army. In Feb. 1643 voluntary contributions were asked for, and the response was general, Argyll giving £1000 sterling, and Alexander Henderson, the Covenanting leader, 1000 marks. That there were negotiations for closer relations between the English Puritans and the Scottish Covenanting party appears from emphatic protests made by Charles I. himself to the Scottish Privy Council. In these protests is to be found a strange mixture of self-deception and clear reading of the aims of the English Independents in their little sympathy with fundamental Scottish religious ideas. Thus, on 21st April 1643, the king reminds his Scottish subjects:

'Was requires our good subjects there to consider that the persons who have contrived, fomented, and doe still maintain these bloody distractions and this unnatural civil warre, what pretences sever they make of the true reformed Protestant religion, are in truth Brownists, Anabaptists, and other Independent sectaries, and, tho they seeme to desire a uniformitie of church government with our Kingdom at Scotland, doe no more intend, and as shee have from allowing the church government by law established there, or indeede any church government whatsoever, as they are from consenting to the synecall.'²

Various proposals were made to the Scottish States and General Assembly from time to time. At length, in Aug. 1643, a decisive step was taken when the English Parliament formally dispatched commissioners to Edinburgh to ask for an alliance with the Scots. The commissioners landed at Leith on 7th August. Even then the situation was singularly indefinite. 'One night all were bent to go as Reddors (mediators) and friends to both, without syding altogether with Parliament.'³ Baillie was of the number who favoured this proposal. 'But Waristoun, his alone, did show the vanitie of that motion, and the impossibilitie of it.'⁴ Alexander Henderson is usually credited with the authorship of the Solemn League and Covenant, but this assertion requires to be qualified, if not altogether put aside. The English commissioners yielded to the Scottish pressure for a religious covenant—a concession the more easily made because of the English Parliament's necessity, and because of the serious sentiments of the early Reformers both in England and in Scotland when leading statesmen saw the need not only of an alliance between the Protestants of the two countries but also of their giving this alliance a religious basis.⁵ But difficulties arose after this preliminary agreement.

'When they were brought to us in this, said Mr. Henderson had given them a draught of the covenant, we were not like to agree on the frame; they were more so we could assent to, for keeping a door open to England to Independents. At last some two or three in private according to that draught, which all our three Committees from our States, our Assembly and the Parliament of England did unanimously assent to.'⁶

Henderson, indeed, was spokesman for the League and Covenant in the Assembly. It 'was well prefaced with his most grave oration.'⁷ But a leading spirit in the composition, if not the

author of the whole document, was Archibald Johnston of Waristoun, whose *Diary* has this entry under Sunday, 22nd June 1661:

'My scale threeth then for making use of me in the draughts of the National Covenant, Solemn League and Solemn Acknowledgement, wherof the first scroll was from him to me.'⁸

Hay Fleming goes so far as to suggest that the Solemn League and Covenant 'may have been entirely from Waristoun's pen.'⁹ Waristoun was supremely loyal to it; and 'he looked on the Covenant as the setting Christ on his throne.'¹⁰

While the English commissioners were in Edinburgh, no serious changes were made in the agreement, although it was seen, as Baillie has noted, what the main drift of Vane and his associates was. On their return to England with the Scottish proposals Parliament on 25th Aug. 1643 remitted the League and Covenant to the Westminster Assembly of Divines 'to take into consideration the lawfulness of it.' Certain alterations were made.

Thus for 'according to the Word of God' was substituted the more guarded expression 'as far as in my conscience, I shall conceive it to be according to the Word of God.' There was discussion upon the undertaking 'to extirpate Popery.' 'It being a very nice business to know what Popery is, and what is meant by extirpation, but no change was made in the clause.¹¹ Prelacy had an explanation added (that is church-government by Archbishops, Bishops, their Clergymen, and Commissioners, Deans, Deane and Chapter, Archdeacons, and all other ecclesiastical Officers depending on that hierarchy).'¹²

On the main contention in the Solemn League and Covenant the contracting parties were agreed:

They condemn 'the treacherous and bloody plots, conspiracies, attempts and practices of the enemies of God . . . ever since the reformation of religion.' They denunciate the condition of the three countries. They see a remedy for the several degrees of mischief in the different countries. 'They are to endeavour to bring the Churches of God in the three Kingdoms to the nearest conjunction in religion; confession of faith, form of Church government, directory for worship and catechizing.'¹³

After conjoining in milder condemnation prelacy, as above defined, with popery, the Covenanting representatives in both countries pass to a different and civil subject of treaty.

They are not only 'to endeavour mutually to preserve the rights and privileges of the Parliaments, and the Liberties of the Kingdoms,' but, strangely enough, considering the proximate end of the Solemn League, 'to preserve and defend the Kings Majesties person and authority, in the preservation and defence of the true religion and Liberties of the Kingdoms; that the world may bear witness with our consciences of our loyalty, and that we have no thoughts or intentions to diminish his Majesties just power and greatness.'¹⁴

The matter of the Covenant was so far adjusted that by 22nd Sept. it was sworn by both Houses of Parliament, and by 25th Sept. 1643 it was solemnly sworn to, in St. Margaret's, Westminster, by the Assembly of Divines and 112 members of the House of Commons. Plainly, in spite of the grave seriousness of the language and solemnity of all the procedure, there was room for conflict over the bond of union itself. The Scottish signatories did not see the irreconcilable character of particular provisions, nor the loop-holes in the portion which appeared to provide for one great international Presbyterian Church. The English representatives forgot that they were consenting to the realization of this Presbyterian ideal in spite of what they regarded as verbal safeguards. There was a certain lack of sincerity on both sides. Baillie tells us that he counselled eschewing 'a public rupture with the Independents till we were more able for them'—an advice 'which even Henderson

applauded.¹ There was on the part of many of the English dislike of the Scots and antagonism to their persistence in clinging to the letter of the Covenant. 'The Independents laughed at the Solemn League and Covenant as an old almanack.'² Cromwell spoke 'continuously against the Scots intention of coming to England to establish their Church government on which Cromwell said he would draw the sword against them.'³ The English were so clear-sighted and the Scots so idealistic, in spite of recent experience of unfulfilled promises, that the signing of the League and Covenant was followed by an undertaking to send an army into England for which the English Parliament was to pay. This led to difficulties altogether different from the theological or ecclesiastical. Early in 1644 the Scottish army crossed the Border and materially assisted the cause of the Parliament in the north of England, especially in the battle of Marston Moor on 2nd July 1644. In less than a year came the further defeat of the Royalists at Naseby, and the English Parliamentary leaders ceased to regard the Scots as necessary for the purpose of beating Charles I. and his following. Their doctrinal impatience was intensified by their growing sense of practical freedom, and their comparative political liberty led to a neglect of their pledged word in the treaty which followed upon the League and Covenant. The Puritan leaders had accepted the Covenant and the ideal of an enlarged Presbyterianism as the condition of receiving military aid, but, as the need for the latter grew less, the price to be paid seemed different, not imperative. How genuine this grievance was, and how cruel, appears from complaints made to the House of Lords and from the *Records of the Commission of the General Assembly*, where the neglect of the Scottish forces was emphasised by the serious fact that the same indifference was not shown to their English fellow-soldiers. A. F. Mitchell, who, with J. Christie, edited *The Records of the Commissions of the General Assemblies (1646-1649)*,⁴ dwells upon the discouraging effects of this calculated biggardi-ness, and quotes from S. R. Gardiner⁵ to the same purpose:

'Though the hard work thus devolved upon the Scots, nothing had been done to pay or to supply them. An assessment, indeed, had been made upon certain English counties for the support of their army, but not a penny had been raised, whilst Fairfax's troops received their pay fortnightly with the utmost regularity.'

The deliberate withholding of pay and supplies from the Scottish army was doubtless connected also with the Scottish attitude to Charles I. For not only was this exasperating in its marked divergence from the English Puritan antagonism; it could not be reconciled with the treatment which the Scottish leaders meted out to Charles himself. To satisfy them he was to become a covenanted king. Yet the feeling that he was a specially Scottish sovereign, who had a right to homage and reverent national sentiment, did not fail, although Scottish 'dourness' would make no concession which might imply failure to honour the Solemn League and Covenant. A striking illustration of this somewhat illogical but very real feeling about the king, which prevailed from the negotiations about this agreement until the death of Charles and afterwards, is found at the close of a declaration of the Scottish Parliament on 21st April 1648:

¹ Baillie, II. 117.

² John Adam, *The Life and Times of Alexander Henderson*, Edinburgh, 1856, p. 323.

³ Baillie, II. 248.

⁴ 2 vols., Edinburgh, 1890-1900 (Scott. Hist. Soc., XL, XLV, 1915).

⁵ *Hist. of the Great Civil War, 1642-49*, new ed., London, 1904-05, II. 228.

'And in particular this Kingdom of Scotland will now make it evident as they often declared, That their quietness, stability and happiness doth depend upon the safety of the Kings Majesty Person and maintenance of his greatness and Royal Authority, who is Gods Vice-Gerent set over us for maintenance of Religion and ministration of justice; Having so many hands and ties of duty and subjection to his Majesty and his government, who is our native King, from a longer series and descent of his Royal Progenitors than can be paralleled in Europe. That we resolve constantly and closely to adhere thereto, as also to all the ends of the Covenant.'

The beginning of the end of Scottish Covenanting idealism in its first stage may be said to have appeared with special significance when the English Parliament, on 19th May 1646, voted that the Scottish army was no longer needed. This led the way to that most mischievous cleavage which separated Scottish and English Puritanism. But this was augmented by the other severances which accompanied it. The Roman Catholics could not possibly have any feeling but hostility to the champions of a Covenant which bound its defenders to extirpate the whole system of popery, which looked only to the least worthy of its representatives in the 16th cent., having no regard (to speak of Scotland alone) to men like Wardlaw, Kennedy, Elphinstone, Turnbull, and Robert Reid, bishop of Orkney, and which lived in constant suspicion of something that would rival the massacre of the Eve of St. Bartholomew. Adherents of the Church of England and of Episcopacy in Scotland were considered to be little better than papists because they tended to the same doctrines and practices, and offended Covenanters by their worldliness and political subservience. The worst blow but one came when the meditated unity and approximate uniformity disappeared before Cromwell's Independent triumph, when the chosen home of Presbyterianism and the Covenant was tyrannically governed by the arch-Independent himself. Absolutely the worst calamity emerged, although it was not seen to be such, save by clear-sighted saints like James Frame of Brex, when Charles II. was compelled to sign the Solemn League and Covenant—which his father never would do—and when the leaders of the Covenanters accepted the signature, well knowing that it was false in fact and in spirit.

The Restoration gave victory to the men and the forces most hostile to the principles which were embodied in the Solemn League and Covenant, and, as these open and determined opponents were joined by weak and sometimes worthless and worldly-minded men who had themselves been Covenanters, the ruin of the scheme of the Solemn League and Covenant was for the time assured. Baillie pathetically records the closing disaster in May 1661:

'But when the House of Commons did not only vote the Bishops into the House of Lords, but the Solemn League and Covenant to be burnt with the hand of the hangman, all our hopes were turned in despair.'

This was the burning of the body of the Covenant. The spirit was not destructible. For a quarter of a century and more there were brave Scottish men and women who laid down their lives for the ideal which it embodied, and those who had marked only the errors and exaggerations of its defenders saw in the Revolution of 1688 a modified triumph of what had been contended for.

The Revolution Settlement was a modified triumph, but it was a triumph. Yet the glory of the Covenant, in the cloud of witnesses from 'the Killing Time,' long haunted the Scottish mind, and the influence of the age of the National Covenant and of the Solemn League and Covenant, consciously associated with that slightly later time of martyrdom, did much for the preparation of the

Disruption of 1843, which, with some admixture of frailty and fallibility, did more for Scottish religion than any other event since the Reformation.

ALEXANDER LAWSON.

SOLIDARITY.—Solidarity is a bond which welds together living, especially human, beings, when they belong to the same whole or are mutually dependent upon each other. It is first of all a fact. (a) It is a *physiological fact*. As we advance in the scale of beings, we observe an ever more perfect co-ordination of all the parts of living organisms: primitive organisms are aggregates of relatively independent parts, while more perfect organisms are made up of parts which mutually condition each other. (b) It is a *social fact*. There is a bond between the child and its parents (at least between the child and its mother, since among some peoples paternity does not count), between the members of a family, a tribe, or a nation. As civilization advances, individuals, as Herbert Spencer shows, specialize and become dissimilar, but society becomes more coherent, because those specialized individuals require each other. Attempts have even been made to prove that society is an organism, similar to physical organisms, with a brain, digestive system, etc. But that is ingenious comparison rather than scientifically demonstrable truth. Not only do men of the same generation depend upon each other, but each generation depends upon those which preceded it, inherits their possessions, and profits from their labours, discoveries, struggles, and sufferings; it also suffers for their vices, mistakes, and ignorance. We owe to our ancestors the language which we speak, our customs, our religious ideas, and our artistic and scientific heritage. Besides general social solidarity, which is based on the family, nation, state, and sometimes even on larger groups, there are special solidarities—e.g., that based on community of religion or profession. As a general rule, the smaller the group of men, the stronger is the bond of solidarity; but the opposite is also sometimes the case; e.g., the religious bond uniting men of several nations may be stronger than the bond of national solidarity.

As is clear from what has just been said, the fact of solidarity arises both from causes which are independent of human will (this is the case especially in the natural groups) and from the voluntary action of man (e.g., we create or extend a bond of solidarity by creating or extending a political or a religious organization, although the idea of establishing a new solidarity is not necessarily the predominating *motif* of these creations or extensions). In proportion as exchanges of all kinds and means of communication multiply, a bond of solidarity tends to unite the whole of humanity.

The fact of solidarity has become the starting-point of various metaphysical, theological, and moral theories.

1. **Metaphysics.**—One of the chief tasks of philosophy has always been to show the bond which exists between all beings, even beyond the confines of humanity. Pantheistic systems all end in a universal solidarity, since all beings are merely the manifestation of a single being, the deity. The Brahmanic philosophy of the *Upanishads*, in particular, is summed up in the famous *Tat tvam asi*, 'That art thou,' which forms the foundation, adopted by Schopenhauer, of an altruistic ethic, i.e. in the fundamental identity of all beings.

2. **Theology.**—(a) The idea of original sin, and more particularly that of original guilt, rests on that of the solidarity of humanity with its first father. As the result of his fall, humanity has become sinful and guilty. The sin is transmitted

from generation to generation as a fatal heritage. These doctrines and their history are discussed in special articles.¹ Here we shall merely observe (1) that the conception of original sin is sometimes metaphysico-physiological, as in St. Augustine, and sometimes rather juridical and moral; (2) that the way is prepared for these doctrines in the OT, where the idea of punishment inflicted on children for the faults of parents, on a people for those of its chiefs, is so prevalent that on certain occasions the prophets, especially Ezekiel, expressly attack it; this idea is also met with among a great many races; (3) that the idea of hereditary guilt is self-contradictory, but that, on the other hand, it is certain that sin is not only an individual fact, but also a collective fact, and that the sins of some are often the cause of the sins of others. The degree of guilt is to be reckoned from that of the sin, but it very often happens that habitual or present sin is imputable not so much to the one who is affected by it or who committed it as to others who, consciously or unconsciously, have determined his moral condition.

(b) The work of Jesus Christ has also been considered from the point of view of solidarity, not so much when it is regarded as a vicarious satisfaction (i.e. when emphasis is laid on the punishment of the Man-God accepted by God as the equivalent of that of all sinners) as when the idea of expiation is emphasized (i.e. the fact that Jesus is a member and the chief of humanity, and that, as such, He, the innocent one who had no penalty to fear, freely accepts that which sinful humanity deserved). The idea of expiation rests completely on that of the solidarity between the guilty and the innocent which makes possible the substitution of the latter for the former; and, when we say that a man is expiating his own sins, we are, in our imagination, somehow making two persons of him—a guilty man and a man who, after having admitted and regretted his sin, frees himself from it by consenting to his punishment, who freely takes upon himself the condemnation deserved by the former and blots out his mistake by sanctioning the moral law which he has violated. It is in this sense that Kant, e.g., tried to rationalize the doctrine of the expiation accomplished by Jesus Christ. According to this theory, Christ became, as it were, the personification of the idea of the repentant sinner who accepts his penalty. The idea of an expiation accomplished by an innocent person for guilty ones, with whom he is connected by some kind of bond, is not specifically Christian, but Christianity has in a manner transferred it from the objective to the subjective mode, by showing that it is not the exterior fact of the suffering of an innocent one that saves the guilty, but the moral revolution that this fact produces in the heart of the latter.

3. **Ethics.**—The fact of solidarity has been very frequently, especially in recent times, taken as the *point d'appui* for ethical theories. Léon Bourgeois especially, in a book entitled *Solidarité*, has shown the interdependence of men in society, and the difference that exists between the distribution of the advantages which it ensures to its members and the real services rendered by one class or another to the common good. These services form between those who render them and those who receive them what in juridical language is called a quasi-contract, i.e. a state similar to that which results from certain contracts. The moral duty of society and its members therefore would consist, above all, in observing this quasi-contract and in paying to each the debt contracted with it. Morality, thus understood, would realize true justice and would also have the advantage of possessing a scientific character and of thus resting

¹ See art. *ORIGINAL SIN*, *SIN* (Christian).

on a solid foundation. It may be objected to this theory that the fact alone does not create the law, and that the idea of a quasi-contract is not sufficient to produce the latter from the former. The relations between men are far too complex and unstable, their value far too much subject to discussion, to apply the idea of quasi-contract to them and to disentangle the consequences which they involve. It is impossible to triumph over all the iniquities which are included in numerous explicit contracts. Moreover, this idea of a social debt resting on a quasi-contract is much too external to become the principle of an ethic. It argues from a fact, simply as a fact, but, considered thus, it is incapable of transforming the conscience or stirring the heart. Of itself it will not prevent any one from trying to reduce his debt as much as possible, and, then, once he believes that he has paid it, allowing himself to be ruled by egoism; it at least limits as much as extends altruistic activity. Similar remarks apply to the theory of reparative justice developed by A. Foulle in his *Science sociale contemporaine*. This philosopher insists mainly on the solidarity between the different generations of men and on the fact that this holds of the poor classes especially, because in the past they did not receive the property to which they were entitled or get the remuneration for their services which was their due. He asks, therefore, that these injustices should be redressed, but he himself recognizes the great difficulty that there is in determining the subjects of the rights which he proclaims and in determining what is due to such or such a person on account of past injustices. Thus in practice he reduces reparative justice almost to conferring the benefit of education on all, in order to put within their hands the means of rising in the social scale.

In presence of these theories we may affirm that solidarity can supply a principle of morality only if it is accompanied by a sentiment, as in the case of family or national solidarity, and to a certain extent of other solidarities also (e.g., that of the members of a religious society), or if it is considered in the light of a principle of justice, it being previously understood that this principle is purely rational (e.g., that of the equality of all men, from which it follows that there must be equality in their exchanges of services), or that it is a religious principle (e.g., that of the love of one's neighbour for the love of God).

According to the principle which we adopt, we shall take more or less account of the fact of solidarity, and we shall consider ourselves more or less obliged to extend existing solidarities, to tighten their bonds, to obtain from them only results that are beneficial to other men, and to avoid the unfavourable consequences that might also be deduced from them in certain cases. It is only under these conditions that solidarity can pass from the state of a simple fact to that of a moral principle.

In Christian social circles the idea of solidarity is greatly insisted on as helping to persuade men to perform their duty towards the disinherited of this world. The name 'solidarities' has even been given to certain solisms which are concerned with grouping either members of a parish or all kinds of persons, rich and poor, for the purpose of mutual aid, both spiritual and material. But in these circles solidarity is regarded not as a simple social fact, but as a divine law which is specially shown forth in Jesus Christ, and that is why we are able to obtain the practical results that we do from it.

In the economic world the idea of solidarity is shown in the creation of all kinds of associations, co-operating in production, distribution, credit,

etc. Some of these associations, it is true, are concerned only with the interest of the participants, and as a result they endeavour merely to create a new fact of solidarity, profitable to their members alone, not to transfer solidarity in the name of justice and love from the condition of a fact to that of a moral principle; but others endeavour to accomplish the education of their members in the sense of developing the spirit of solidarity even outside the bounds of any given association. If the principle of justice and love summons us to extend and increase the benefits of solidarity, it also summons us to suppress all its unpleasant results—e.g., to wage war upon hereditary vices and diseases and get rid of all unjustified responsibilities in our laws and customs, especially in the penal law which formerly (and, in our own time, among savage races) often punished the innocent along with or for the guilty.

Solidarity is frequently contrasted with fraternity (a word which denotes merely a vague sentiment) and with charity (which implies the humiliating idea of dependence of the weak and the poor on the powerful and the rich). It is certain that the feeling of sympathy which accompanies certain facts of solidarity, and the feeling of obligation which arises from the connexion of the fact of solidarity with the principle of equal justice for all, is stronger than the general sentiment of human fraternity. As regards charity, it always retains its place alongside of solidarity, for it alone takes an interest in the unfortunates who have not the right, in certain cases at least, to invoke any solidarity, and especially the guilty ones who have disregarded it.

Perhaps, in order to avoid confusion, it would be better to keep the word 'solidarity' for the simple fact of the various bonds which unite men, and to designate the feeling which accompanies it or the principle which applies to it by the terms 'sympathy' and 'obligation,' founded on solidarity, or other equivalents.

E. BERNARD.

SOLIPSISM.—1. History of the term.—It is not known who invented the term 'solipsism' and introduced it into philosophical terminology. In 1652 an apostate Jesuit, Giulio Clemente Scotti, published under the title of *La Monarchie des Solipses* what purports to be a translation of a tract called *Monarchia Solipsorum* by one Melchior Inhofer. Crétineau-Joly attributes the authorship to Scotti himself. The tract is a satire on the self-seeking policy pursued by the Jesuit order. The 'Kingdom of Self-Alonism,' i.e. self-seekers or egoists, is, on the model of Sir Thomas More's Utopia, described as a distant island, and an account is given of the constitution, manners, and customs of its inhabitants. The name 'solipses' is alleged to mean 'dans le langage des Magogues' the people living under the providence of many gods, the allusion being to the skill with which the Jesuits secure everywhere the favour of the powers that be. It is also punningly connected with *solus*. Subsequently the term *solipsisme* seems to have been a current label in France for the Jesuits, with

¹ *Hist. religieuse, politique et littéraire de la Compagnie de Jésus*, 6 vols., Paris, 1844-45.

reference to their selfishness. Solipsism is found for the first time in Kant's *Critique of Practical Reason* as the Latin terminus technicus for the German *Selbstsucht*. The passage runs:

"All the inclinations together (which can be reduced to a tolerable system, in which each their satisfaction is called happiness) constitute *self-regard* (*solipsismus*). This is either the *self-love* that consists in an excessive fondness for oneself (*philautia*), or satisfaction with oneself (*arrogantia*). The former is called particularly selfishness; the latter self-conceit."¹

W. T. Krug² follows Kant's usage in identifying solipsism with moral egoism ('making one's own self the end of all one's actions'), but gives no reference. This identification is still repeated as late as 1890 by F. Kirchner.³ Meanwhile, some time during the 19th cent. solipsism was transferred from moral or practical egoism to theoretical (either epistemological or metaphysical) egoism, i.e. to the theory that I can know nothing but my own ideas and that I and my ideas are all that exists. This view was called simply 'egoism' by Wolf (who treats it, rightly, as an extreme species of idealism), Mendelssohn, Tietz, and other 18th cent. writers. The distinction between practical and theoretical egoism is clearly made by Schopenhauer.⁴ Reid, Hamilton, and other English writers use the terms 'egoism', 'pan-egoism', 'egotistical idealism' like Wolf, as did Überweg in Germany, most of them representing metaphysical egoism as the logical consequence of Berkeley's views. Who was the first to substitute 'solipsism' for 'egoism' in this metaphysical sense cannot be determined. Campbell Fraser is said to have used the term in his lectures as early as 1874-75. It certainly became current in philosophical lecture-rooms and books in the seventies and eighties in England, Germany, and France. Its first appearance in English print is in A. Barratt's *Physical Metempiric*⁵ (1883), where it is used as a familiar term. In 1892 the metaphysical sense is given exclusively in Alexis Bertrand's *Leçons de philosophie*.⁶ In 1893 F. H. Bradley devotes a chapter to its refutation in *Appearance and Reality*.⁷ In Italian *solipsismo* and *psichismo* appear as synonyms. Nowadays it is in the theoretical sense alone that the term is used among philosophers.⁸

2. Metaphysical solipsism.—To follow in detail the development of the metaphysical theory which is now called solipsism is unnecessary. Its origins have been traced to Descartes's 'Cogito ergo sum,' to Malebranche's remark, 'Les sensations pourroient subsister sans qu'il y eût aucun objet hors de nous,'⁹ to Berkeley's 'Ego est percipere.' One of the earliest and most complete formulations of it may be found in Fénelon:¹⁰

"Non seulement tous ces corps qu'il me semble apercevoir, mais encore tous les esprits, qui me paraissent en société avec moi . . . tous ces êtres, dis-je, peuvent avoir rien de réel et n'être qu'une pure illusion qui se passe toute entière au dedans de moi seul: peut-être même tout dans toute la nature."

Modern discussions of solipsism have been needlessly embarrassed by the paradoxical habit which many philosophers have of expressing the theory in the first person plural. 'Have we any reason to

¹ Kant's *Critique of Practical Reason* and other Works in the *Theory of Ethics*, tr. T. M. Abbott, London, 1906, p. 198.

² *Algemeines Handwörterbuch der philosophischen Wissenschaften*, 5 vols., Leipzig, 1832-33.

⁴ *Die Welt als Wille und Vorstellung*, Leipzig, 1896, I, § 10.

⁵ P. 25.

⁶ An unusual sense appears to be given to the term 'solipsism' by certain French philosophers referred to in the *Encyclopédie de Philosophie*, Paris, 1906, who are said to oppose solipsism to nominalism 'pour désigner tout système qui admet un grand nombre d'êtres individuels, substantiellement distincts.' Leibniz's nominalism would be solipsism in this sense.

⁷ Ch. xxi.

⁸ For solipsism in the ethical sense see art. *Egoism*, *Encyclopédie*, 1897.

believe in the existence of anything beyond our private selves?', asks Bradley, and he goes on to use such phrases as 'our private self' (*etc.*). That each of us believes in the existence of other selves, and generally of a world beyond his private self, is of course a fact. But, when the right to that belief is challenged, as it is by the solipsist, the scales are unfairly loaded against the challenger, if the examination of his thesis is conducted in terms which assume the truth of the belief. Solipsism appeals to the individual, and the individual must argue the pros and cons out with himself, addressing no audience until he has gained the right to believe that there is an audience to address. The thesis, then, to be examined is this: I alone exist, and all I experience and know is my own self. What, on this view, becomes of the distinction between mine and thine? Will it be possible for me to distinguish, e.g., between my own body and the bodies of others? Must I claim that all things are mine? that the manifold sounds I hear are all my own voice? that I am the owner of all there is? In so far as solipsism denies the reality of others, consequences such as these might be held to follow, and a quick, if somewhat painful, refutation of it might be secured by putting the theory into practice. But the point of the question is not to secure a cheap *reductio ad absurdum*, but to bring out, for clearness' sake, the fact that the solipsistic argument is not conducted with reference to the legal and social relations between individuals. It does not move at all in the context of 'inter-subjective intercourse.' Hence the meaning which solipsism gives to the terms 'I' and 'myself' must be quite different from the sense which these terms bear in social experience. This point is most important. There are, we may say, at least two senses of the terms 'I' and 'myself.' There is, first, the sense appropriate to the experience of living as a self among other selves, of being a member of a world of selves mutually recognizing each other. This sense, and the experience on which it rests, the solipsist in effect denies by his thesis. Hence it is not in this sense that he can use the terms in stating his thesis. What, then, is this second, solipsistic, sense of 'I'?

The answer is that 'I,' 'myself,' and all similar terms, in the solipsist's mouth, can denote only what 'this,' 'here,' 'now,' and such terms denote, viz. immediate experience in its present 'that' and 'what.' They are more demonstratives, pointing to or expressing the feelings, perceptions, thoughts, etc., which are present in me. 'In me' here does not have the force of distinguishing my feelings from yours or another's. It is only another way of saying, 'These feelings here and now.' In short, the whole and sole point of solipsism is to declare the exclusive reality of immediate experience and to deny the possibility of transcending that experience. It is nothing but an argument for immediacy and against transcendence. To affirm that 'I alone exist' thus means that 'my,' 'I,' 'them,' present feelings, sensations, thoughts, as bare psychological facts, are all there is. To affirm that 'I can experience or know only myself' means that these present feelings do not imply, point to, mean anything other than themselves, are not a fragment of a vaster world transcending them in existence and character. It cuts down the universe to the 'this—here—now' of immediate experience. Of modern writers no one has seen this more clearly than Bradley:

"The 'this' and the 'mine' are names which stand for the immediacy of feeling. . . . There is no 'mine' which is not 'this,' nor any 'this' which fails, in a sense, to be 'mine.'"

¹ Ch. xix, p. 222 of 3rd ed. (1903): his chapters on 'The This and the Mine' (ch. xix.) is essential to his argument against solipsism (ch. xxi.).

To deny transcendence is to deny any reality beyond the momentary thrill of experience. It is to deny past and future except as present felt acts of remembering or anticipating. It is to deny the existence of material things, of the physical world or nature, except for this moment's colours, sounds, touches, and other sense-data. These fleeting presences are all there is of 'nature'; they are not signs or glimpses of a stable, enduring, orderly world of which they are parts. It is to deny the existence of other minds or selves, i.e. of centres or complexes of immediate experience other than this present one which calls itself 'I'. In short, the denial of transcendence is a denial of all inference and interpretation, nay of all judgment. For every judgment, as involving a universal, transcends the 'this' in its bare givenness or immediacy.

These sweeping denials might of themselves be regarded as sufficient to discredit solipsism. Yet many writers have been content to say that solipsism, though it carries no conviction, is theoretically irrefutable, and to justify the fact that neither in theory nor in conduct does any one proceed as if solipsism were true, by appeal to an ultimate act of faith or to a venture of the will—whether rational or irrational remaining a moot point. The pragmatist certainly has an opening here to say that the venture 'works' and is 'made true' by its success.¹ Others, like Bradley, have marshalled elaborate dialectics for refutation. Bradley certainly scores a point when he argues that the solipsist has no right to say, 'Only I and my ideas exist,' or, 'The world as I know it consists only of states of my own mind,' for immediate experience contains no such division into subject and object, into an 'I' and its ideas, into a mind and its states. These formulae already transcend the given—the one thing which the solipsist is committed not to do, if he can avoid it. The rest of Bradley's refutation boils down to variations on the theme, 'He cannot avoid it.' He cannot, because immediate experience does not stay immediate. It transcends itself. 'I' have no choice in the matter. The right to transcendence, which the solipsist challenges, is thus ultimately justified by appeal to the fact of transcendence. But, if it comes to that, had we not better at once say with Hegel: 'The "I" is thought and the universal. When I say "I," I let fall all particularity . . . ?'² In other words, immediate experience, the solipsist's 'I' and 'self,' is always both 'that' and 'what,' both 'this' and 'such,' both particular and universal, and it is the universal in it that ever carries it beyond itself—the life in it of the whole of which it is a part.

3. Methodological solipsism.—A few present-day philosophers advocate solipsism, not as a metaphysical thesis, but as a principle of method. Bertrand Russell, arguing that physics, if it is to be a genuinely empirical science, must begin and end with sense-data, puts forward the ideal of constructing physics on a solipsistic basis. The main point, in practice, would be the exclusion of the testimony of 'others.' The only evidence admitted would be, for each physicist, his own sense-data. A similar methodological solipsism, the point of which, however, is directed, not towards the distinction between my own experience and that of others, but towards the distinction between actual phenomena and hypothetical entities assumed as causes or grounds for phenomena ('metaphysics'), has been developed by Hans Driesch. Defining logic as 'the theory of order,' he claims that it may be 'founded solipsistically,' being concerned with the ordering of what I am immediately conscious of:

'Solipsism is the only basis of philosophy that is not dogmatic; for, let it be well understood, solipsism does not say that I "exist" as a "substance" or something else, but it only analyses the fundamental pre-phenomenon: I have something consciously. And this is the only fact—though not a "fact" in the usual sense—that is beyond any doubt.'

Solipsism, then, is not dogmatic, not even in a negative manner. It does not say: What I consciously have is nothing but my phenomenon. It merely says: What I consciously have is certainly my phenomenon—whether it "be" anything else or not.

But now, for reasons that cannot be explained here in full, the ordering Ego tries to go beyond the limits of a pure theory of order and to establish the concept of a something that "be" not merely in so far as it is consciously possessed or possibly possessed in some way. Thus, for reasons of order, the theory of order gives itself up and asks for metaphysics.³

The methodological solipsism of Russell and Driesch concerns, thus, only the starting-point of knowledge. Both admit the necessity for transcendence, Russell in the form of 'logical constructions,' Driesch in the form of metaphysical hypotheses.

R. F. A. HOBBS.

SOLOMON ISLANDS.—This large archipelago lies in the western Pacific and consists of a long chain of islands extending from 150° 40' in a south-easterly direction to 162° 30' E. The larger islands are mountainous, the highest point of Guadalcanar reaching to 10,000 feet. All have a volcanic basis; the island of Bougainville in the north-west has an active volcano, and the small island of Savo was also actively volcanic when the islands were visited by the Spaniards in the 16th century. This discovery was made after crossing the Pacific in the search for the source of gold and other precious objects in early times, and the islands were named after King Solomon in the idea that they may have contributed to his wealth. Many of the individual islands, such as San Cristoval, Florida, and Ysabel, still bear the names given to them by the Spanish voyagers in the 16th century. After the discovery the islands passed out of sight until last century. In 1914 the archipelago formed a British protectorate with the exception of the islands of Bougainville and Buka, which fell within the German sphere of influence. The interior of several of the larger islands is still unexplored, but the smaller islands and most of the coastal districts are now under European influence and are the seat of large plantations, chiefly for the production of copra.

1. **Somatology.**—In physical character the inhabitants fall into two groups sharply divided by a line passing through Manning Strait and the Russell Islands. To the north-west of this line the people are very dark, and on the whole negroid characters are more pronounced here than to the south-east, though many natives of this region combine with excessive blackness wavy hair and noses almost of European dimensions. The difference in colour and general appearance is so pronounced that natives of the two regions can be distinguished at a glance even by the most casual observer. These physical differences on the two sides of the dividing line are accompanied by definite differences in dress, especially of the women. To the east of the line the women, if they are not completely nude, wear grass petticoats, while in Ruviana, Edystone Island, and

¹ See art. *PRAGMATISM*.

² *Philosophy of Right*, introd., § 4, Add. (see tr. by S. W. Dyke, London, 1896).

³ *Problem of Individuality*, London, 1914, p. 75 f.

Vella Lavella to the west they wear a remarkable garment resembling a knapsack both in appearance and in function, but covering the buttocks instead of the shoulders. These differences in physique and dress mark out the Solomons into two distinct regions which will be spoken of in this article as the Eastern and Western Solomons respectively.

Surrounding the main islands there are a number of small outliers, such as Bellona, Rennell Island, Sikaiana, and Lord Howe's Island (or Ongtong Java), in which the people are Polynesians in physical characters, but in some cases with evident indications of Melanesian mixture.

2. *Language*.—In most of the islands the languages are characteristic examples of the Melanesian family with few such aberrant forms as are frequent in the Santa Cruz Islands and the New Hebrides. In a few islands, such as Savo, Vella Lavella, and some parts of Bougainville, the languages belong to a wholly different family. They differ widely not only from those of the Melanesian stock, but also from one another. In certain respects, such as the position of the glottis, they resemble the non-Melanesian languages of New Guinea and have in consequence been assigned to the Papuan family. The people who speak these Papuan languages do not differ appreciably in physical character or general culture from their neighbours who speak languages of the Melanesian family. These exceptional languages are generally regarded as survivals of such an early linguistic diversity as is still present in New Guinea. It is supposed that these early languages have in all but a few islands been replaced by languages belonging to the general Australo-Melanesian stock and that the languages so introduced have taken on the form characteristic of the Melanesian family.

In the small outliers in which the people resemble the Polynesians in physique the language is also Polynesian in character.

3. *Social organization*.—The special form of social system in which the community is divided into two exogamous moieties with matrilineal descent occurs at each end of the group, in San Cristoval and at the northern end of Bougainville. In San Cristoval the dual organization occurs in the central part of the island. It is believed that the people of the moieties differ in physical and mental characters, and there is a definite tradition of hostility between the two. One of the moieties is held to be superior to the other; its members may not be enslaved or beaten, or subjected to other indignities, and its name is *Atawa*, which means 'seafarer' or 'foreigner.' These differences provide definite confirmation of the view that the dual system has arisen out of the fusion between two peoples. There is evidence that the dual system was once universal over the whole of the Eastern Solomons, but there is no sign of its presence in the Western Solomons until one comes to the northern end of Bougainville, where it occurs again in its characteristic form and closely related to the similar organizations of New Britain and New Ireland.¹

The totemic form of social organization is more widely distributed. In San Cristoval it occurs in Santa Anna and Santa Catalina at the eastern end of the island and again at the western end, but with the striking difference that the totems of the eastern islands are mainly aquatic, while the western totems are almost exclusively birds. In each case descent within the clan is matrilineal. There are similar matrilineal clans in Ulawa, though with one or two exceptions they have no names and no totems. In Florida, Ysabel, and the western end of Guadalcanar the totemism is less definite. There are matrilineal clans each of which is connected with certain animals, often birds, but these animals are grouped with other sacred objects under the term *tindilo*, *tindadhe*, or *tindak'o*, which is also the term for the ghost of a dead ancestor. In Ruviana, Eddystone Island, and Vella Lavella there is no trace of totemic organization, but this is found again in the Shortland Islands and Bougainville, where the totems

are universally birds, and here again descent is matrilineal.

A third form of social organization occurs in Ruviana, Eddystone Island, and Vella Lavella, and probably in parts at least of Choiseul. Here there is no form of clan organization, but the social organization is founded on kinship or genealogical relationship.² In Eddystone Island a man calls all those with whom he can trace relationship his *temi*, and it is this relationship by which marriage is regulated, a man not being allowed to marry any woman to whom he is related through either father or mother. The *temi* of different persons form groups which overlap, and there is nothing which corresponds accurately to the descent of the dual and clan organizations.

In San Cristoval there is a remarkable form of adoption in which a boy is adopted, not as a son, but as a father, a mother's brother, or a grandfather, while a girl may be adopted as a mother or a grandmother. A child so adopted assumes the name and status of the person whose place he takes, the motive assigned for the practice being to 'keep green' the memory of a deceased person. By this process of adoption a child comes to be called father or grandfather, and it is possible that this practice accounts for certain peculiarities of the nomenclature of relationship, such as the use of a common term for the elder brother and the son's son, which elsewhere have been explained by peculiar forms of marriage.³ These anomalous marriages, such as that with the wife of the father's father, however, occur in San Cristoval, and probably form, as in other parts of Melanesia, the starting-point of the peculiarities of relationship.

Definite hereditary chieftainship is general in the Solomons, with patrilineal succession, even where descent is matrilineal.⁴ The concept of 'chief' has been much modified by European influence owing to officials expecting chiefs to take an important part in government. In their original state this seems to have been largely foreign to the ideas of the people, the main functions of chiefs being to see that ceremonies were properly carried out and that duly abundant feasts were provided on these occasions. In recent times certain chiefs, especially in Ruviana, have acquired great authority and have extended this beyond the confines of their own island or district, and it may be that these were examples of a native tendency to extend the functions of a chief to other spheres than the religious, but in most cases these functions have almost certainly been due, directly or indirectly, to external influence. In Eddystone Island chiefs and men who had taken ten heads in warfare were allowed to have a second wife.

An organization called *Matambala*, similar to the *Sukoe* and *Mangge* of the New Hebrides,⁵ is known to have been present in Florida in the Eastern Solomons fifty years ago, but it appears to have been in process of degeneration and soon disappeared under European influence. There is no trace of the presence of such organizations in New Georgia, the Shortland Islands or southern Bougainville, but they reappear as the *Sukruk*, allied to the *Dukduk* of New Britain,⁶ in the northern part of Bougainville, and occur here in conjunction with the dual form of social organization. In Santa Anna the members of different totemic clans may not eat food cooked at one fire—a rule which in other parts of Melanesia holds good of the grades of the *Sukoe* and *Mangge*.

4. *Religion*.—This has an elaborate character in

¹ *ERN* vii. 700.

which rites take place in connexion with sacred beings of many different kinds. These beings fall into two main classes: (1) the ghosts of the dead and (2) spirits which are not known to have had human form. These two classes are definitely distinguished in nomenclature, though the native classification so formed does not always correspond with the distinction between ghosts and spirits.

(1) Of the two cults that of ghosts lies more on the surface and takes the more important place in the lives of the people. In general the ghosts who form the object of the religious rites are those of near relatives of the person by whom or on whose behalf the rites are performed; but occasionally certain ghosts have become the object of a general cult. Thus in San Cristoval a ghost named Harumae is propitiated by the slaughter of a pig when the people are going to war. In Eddystone Island many of the *tomato*, or ghosts, are those of men long dead whose names are uttered in the prayers and other formulas, and these are probably the men who originally introduced the rite and those who succeeded them in the knowledge of the ritual. In this island offerings to ghosts take place in connexion with most of the events of life—the firstfruits of both gardens and nutting, the first catch of bonito, the building of canoes and houses, the healing of disease—at various stages of war, and in connexion with many other ordinary events. The more important rites are known only to a few men, and this knowledge forms a kind of property which is communicated to another only on the payment of money. In the Shortland Islands offerings with formulas expressing appeal are made to the ghosts of the dead on several occasions, including a feast of firstfruits at the beginning of the nut season, the making of a new meeting-house, and the occurrence of sickness. When the offerings are made to dead kinsfolk, any person may officiate, but on important occasions the chief should carry out the ceremony.

The religious rites usually take place at special shrines. In the Western Solomons offerings of firstfruits, etc., are made at shrines containing the skulls of dead relatives. In Eddystone Island these are usually in the form of half a miniature house, divided longitudinally along the roof-ridge, and are made sometimes of stone, sometimes of the usual materials of the house. In Ruviana they often have human or animal form, and receptacles of skulls made in the form of animals occur in other parts of the Solomons. The offerings at these shrines usually consist of puddings made of yam, taro, nuts, etc. In some cases these puddings are hung up at the shrine, while in others they are burnt. In Eddystone Island there are also shrines of a different kind consisting of heaps of stones including one which stands upright like a miniature monolith. It is especially at these shrines that prayers are uttered which contain the names of men long dead, and it is possible that these shrines are the burial places of some of the men whose names are thus preserved in the ritual.

(2) Concerning the cult of the spirits which are distinguished from ghosts we have information only from two localities, San Cristoval and Eddystone Island. In the former the non-human spirits are called *figona*, *figona*, or *figona*. Pools, rocks, waterfalls, large trees, or any places which excite awe are thought to be the abode of *figona*, but these are not seen and are not the object of any special cult, though it is believed that the *figona* can take captive human souls and thus produce illness. The *figona* which take an important place in the religion have the form of snakes. C. E. Fox has recently discovered that the being who forms the object of a special seoteric cult in

Ulawa, Hatoihwai, is a winged serpent. These *figona* can become stones, and sacred stones are especially associated with them. Prayers are offered to the *figona* to restore health to a sick man, to give rain in a drought, and to increase the crops. One of the serpent *figona*, Agunua, is more important than the rest. Agunua is believed to have created all things. An annual ceremony occurs when nuts are first gathered and yams dug in which offerings of firstfruits are made to Agunua at a sacred grove, various symbolic rites being performed in order that such arts as house-building, mat-making, and wood-felling may be blessed by the *figona*. The most frequent offerings are puddings made of yam or nuts, which are partly burnt, partly eaten by the participants in the rites. Pigs are also offered and occasionally a human sacrifice.

The people of Eddystone Island believe in the existence of several kinds of sacred beings which are distinguished from the *tomato*, or ghosts. The most important of these are the *tamasa*, of whom there are two main kinds—the *tamasa vuvua*, who have to do especially with crops, and the *tamasa vuvua*, who are concerned with the weather. These beings made man and the land, brought in new rites and inventions, and are still believed to make the crops grow and to control the weather. They are generally associated with special localities, and at each of these there is an ancient tree-stump, called *rengge*, with worn-away branches on which arm-rings and other offerings hang. The most important of these *tamasa* is Vanavana, or the *tamasa* of Momara. He created man without any organs and with legs which would not bend, and called in a being styled *tufuru* to make hands, feet, eyes, mouth, nose, and genital organs with a stone implement. At present this *tamasa* is believed to live underground and cause earthquakes. The next *tamasa* in order of importance, a female, has her seat at Nyatukoki. The crocodile, shark, and centipede are sacred to her. She is a *tamasa vuvua* and produces the north-west wind. Several of the *tamasa* are connected with animals, and a number of animals such as the shark, crocodile, sting-ray, sea-snake, and various species of ant are sometimes spoken of as 'little *tamasa*' or 'children of *tamasa*'.

The *tamasa* of Eddystone are especially connected with the district of Naroro, the home of the bush-people of the island, and most, if not all, of them are reputed to have come originally from Ruviana. They exert less influence on the lives of the people than the *tomato*, but they are much revered and their rites are elaborate.

The chief of these is the *note tamasa*, which is performed at irregular intervals, especially when the crops fail. The people go to Mouara with offerings of arm-rings and food, among which a special kind of banana is essential; they sing and wall, and, as they approach the spot, call out the names of all the plants which are used as food. Rings are hung on the *rengge* and the people feast. The *note* is asked by means of the ring method of divination what has made him angry and led him to interfere with the food-supply. The ritual has several special features. Whenever food or other objects pass from one person to another they must be thrown; nuts must be wrung off the bunch and not pulled, and the coco-nuts used must be carefully lowered from the tree and not allowed to fall. The *note*, called *note*, are men specially consecrated by being rubbed with certain leaves and oils.

The association of the *tamasa* with definite localities suggests that, though they are not in general known by the people to have been human, they are the representatives of men who introduced certain arts, such as agriculture and the knowledge of rites to control the weather. One *tamasa*, Magoana, was certainly a man, his thigh-bones being still preserved, and the human nature of the *tamasa* is supported by evidence from Vella Lavella, where beings evidently equivalent to the

¹ See below, p. 7.

tamara are called *mhangara*, the Eddystone word for 'chief.'

Most of the *tamara venabile* are sharks; it is their function to make calm weather and also to protect men from being drowned or eaten by sharks. The rites are of various kinds; in one the officiant ties the stem of a plant round a leaf taken from the shrine of the *tamara*, walks into the sea with arms extended, and hales water as if in a canoe, uttering a prayer that the sea shall be still.

In many of the formulas the names of beings are mentioned who are known as *tomate-tamara*. They are said to stop at the skull-shrines and were certainly once living men. There is little doubt that they are the ghosts either of the men who introduced the *tamara*-cult or of men of a later time who were especially skilled in the knowledge of its rites.

It may be noted that there are several points of resemblance between the *tamara* of Eddystone and the *Agone* of San Cristoval. Both care for agriculture and the weather, but, while the *Agone* are chiefly snakes, the *tamara* is only one of many animals associated with the *tamara*. There is some evidence of the association of the *tamara*, and especially of the weather-*tamara*, with morality. The *tamara* of Motara twists the limbs of an adulterer. All the weather-*tamara* are angered by adultery and, by raising a storm, break the unions of the offenders, whom they eat.

In Vella Lavella, where the beings corresponding with the *tamara* are called *mhangara*, those connected with the weather seem to be the more important, and offerings are regularly made to them when the people go on the sea. The *tamara verus* of Eddystone are also represented and seem to be especially connected with the cultivation of taro. Sharks are *mhangara*, or are connected with *mhangara*, but there is no evidence that other animals are so regarded.

Another sacred being of Eddystone Island whose cult is also found in Vella Lavella is *Mateana*. This being is associated with the meteor, shooting-star, and rainbow, and is believed to carry a spear by means of which disease or death is inflicted on any who come in its way. *Mateana* has come to be associated, probably by a secondary process, with the institution of tabu.¹ In some cases the injury it inflicts follows the infraction of this tabu, but disease or death is also ascribed to chance encounters with the spirit. In Vella Lavella *Mateana* is propitiated by offerings on the top of the house.

A somewhat similar being of Eddystone is called *Sea*, which is much feared and seems to be a personification of some form of wandering light which is regarded as dangerous. *Sea* is believed to carry a club, the old weapon of the island, in place of the spear of *Mateana*, and probably represents an indigenous belief, while the cult of *Mateana* is of more recent introduction.

Another disease-producing agency, distinguished from both the *tamara* and *tomate*, is *Ave*, to whose activity epidemic colds, and possibly influenza, are ascribed. *Ave* is associated to some extent with shooting-stars and the rainbow, but is quite distinct from *Mateana*. When an epidemic ascribed to *Ave* visits the island, the natives attempt to ban it by sending out to sea an imitation canoe which is believed to carry away the evil influence. There was some doubt whether *Mateana* and *Ave* are individual spirits or names for classes of spirits. The *kita*-spirits, which are believed to produce a wasting disease accompanied by sores, are certainly a class. Certain men are believed to have the power of inciting the *kita* to action. After ascertaining by means of the arm-ring method of divination whether the *kita* are willing to act, they perform rites with prayer that the victim shall exhibit the wasting, sores, or other symptoms of the disease.

Two other classes of spirits are associated with the bush: (1) the *tufuru*, or mad spirits, supposed to inhabit the bush, where they live upon fruits and nuts, are believed to drive insane any person who falls into their power; they seem to be to a large extent the ghosts of men or women who, having become insane, have fled into the bush and died there; the original nature of the *tufuru* belief is doubtful, but that these beings are believed to have formerly taken an important place in the spiritual world of the island is suggested by the part assigned to a *tufuru* in the legend of the creation of man;² (2) the *tomate munggoniyo*, or ghosts of the bush, of which one called *Tambukoma* is especially malignant, include the ghosts of people who have suffered violent death in certain ways, as by falling from trees, and of women who have died in child-birth; it is possible that they also include the ghosts of the indigenous bush-people of the island, though it is more probable that these are represented by the *tufuru*.

Similar beings of the bush are found in San Cristoval, where they are classed with the ghosts as *atara Asimou*. The people of this island believe in similar malevolent ghosts called *adaro* or *matara*, beings of the sea, half-human and half-fish, who shoot men with flying fish. It is possible that these are the ghosts of men who have been drowned at sea or whose bodies have been cast into the sea after death.

Throughout the Solomons there is a belief in another class of malevolent being which assumes the guise of a person of the sex opposite to that of the human being it encounters. If the latter succumbs to temptation, his or her fall is followed in a few days by death. These beings are called *atara Ave* in San Cristoval, *unggonate* in Eddystone Island, and *unggonate* in Vella Lavella.

5. Tabu and medicine.—In Eddystone Island, and probably in other parts of the Solomons, the relation between religion and medicine is very close. In Eddystone nearly all forms of disease are ascribed to the intervention of ghosts or other spiritual beings such as *Mateana*, *Ave*, or *Tambukoma*. In some cases it is believed that disease comes because the victim has accidentally intruded into the haunts of the disease-bearing spirit, but the cause to which illness is most often ascribed is the breaking of a tabu placed upon the fruit of certain trees, and especially upon the coco-nut, the screw-nut, and the betel-vine. A large number of diseases are recognized, each of which is connected with a special kind of tabu, and there is a more or less definite relation between the rites by which the tabu is imposed or removed and those by which the leech cures the illness which results from its infraction. The ritual connected with each tabu is known only to a small group of men, or it may be to only a single man; and, if this knowledge is imparted to another, the rites will be efficacious only if money is given at the time, the novice acquiring his new powers only through the payment of money. As a rule knowledge of the rites by which the tabu is imposed or removed is acquired at the same time as that of the rites designed to cure the disease associated with the tabu. When trees are tabued, a sign distinctive of the tabu in question is placed on or by the trees. This usually consists of certain leaves and creepers, but it may also include stones, shells, fungi, a branch of a tree made in the form of a bow, etc., the leaves or other objects being usually in sets of four. When the sign is set up, a prayer, often of considerable length, is uttered which in many cases includes the names of men, sharks, or other beings through whose agency the tabu is thus made effective. The tabu is removed by a

¹ See below, p. 73.

² See above, p. 682.

rite of a simpler kind in which the tabu-sign is usually stroked with certain leaves, these movements with the accompanying formula being designed to remove from the sign the spiritual influence to which the efficacy of the tabu is due. Another kind of rite is carried out when it is desired to use the fruit of a tree protected by a tabu.

When a person falls ill, it is necessary first to discover the nature of the disease, and, if the symptoms do not make this obvious, the cause may be ascertained by the ring method of divination. Usually a number of diagnoses are made, each followed by the appropriate remedies. If it is diagnosed that a tabu of a certain kind has been broken, a man who knows the tabu carries out the appropriate treatment. This is of various kinds, the most frequent measures being to stroke or rub the body or limbs with certain leaves, usually four in number, and to eat chewed roots or tubers over the patient. The leaves used in the treatment are afterwards worn by the patient, usually suspended from a creeper round the neck. Creepers are often placed over one or other shoulder of the patient and of other people present, and similar creepers may be worn as armlets or anklets. In all these prayers are uttered desiring that the sick man may be made well, the words used often indicating a belief in the presence of some influence within the sufferer which it is the object of the rites to expel. Usually the rites extend over four days, on the third of which nothing is done by the leech, this day being left in order to give the *famasa* or other spiritual beings an opportunity for action. Some forms of treatment should be carried out only during the waning of the moon, and in these cases the treatment is usually carried out in four successive months. When a cure has been effected, an offering is made of puddings, usually four in number. These may be burnt or put in the thick of the house, and pieces of another pudding may be eaten by both patient and leech.

In some cases the tabu and associated treatment are connected with a shrine, but it does not appear that any ceremony connected with the tabu is performed at the shrine, though rites of other kinds may take place there.

When disease is ascribed to the agency of other spiritual beings the curative rites are much like those which follow the breaking of a tabu, the motive in most cases being the expulsion from the body of some spiritual agent by which the sufferer is possessed.

The breaking of a tabu corresponds with what we should ordinarily call theft, and there is little doubt that the institution of tabu came into being in Eddystone as a means of protecting property. There is thus in this case a definite relation between religion and morality.

6. Head-hunting.—The practice of head-hunting, which exists in Ruviana, Eddystone Island, Vella Lavella, Choiseul, and the Shortland Islands, is closely connected with the skull-eat and with the cult of ghosts. A head-hunting expedition is accompanied throughout by rites of a religious kind which begin a year or more before a proposed expedition in connexion with the new canoes which are made for the occasion. Various talismans and amulets are placed in the canoes during the expedition, and formulae are uttered and other rites performed which have definite reference to the cult of ghosts. Similar rites accompany the return of an expedition. This is followed at intervals by ceremonial dances which seem to have a definite religious character. The heads which are taken in the expedition are placed in a house constructed in a special manner, but, after they are so disposed, they are not the object of any special rites. Captives are also taken in the head-hunting expeditions. When brought to the island, these captives are adopted into families, of which they are treated as members. They may marry native women and have children. In Vella Lavella they may even become chiefs, but they are always liable to be killed to supply heads when these are needed. These *pinakas*, as they are called, are also chosen to take the leading part in certain ceremonies which are believed to be accompanied by danger, as when it is necessary in the construction of a new skull-house that the skulls shall

be touched by human hands in being transferred to their new resting-place. The heads are needed at the building of a new house or a new canoe, and their use is almost certainly the survival of a former practice of human sacrifice.

7. Divination.—Divination for various purposes is practised by two chief methods. (1) In one the diviner holds an arm-ring in his hand and puts questions to the ghosts, who give an affirmative answer by movements of the arm which carry the ring round and round in a circle. This method of divination is especially frequent in religious rites, and it is by this means that those with special knowledge of disease discover what tabu has been broken or the nature of any other act by which a ghost or spirit has been offended. Before performing a rite designed either to produce or to cure an illness, the officiant will ascertain by means of the arm-ring whether the being by whose power the disease has been produced is willing to cause or cure the sickness. (2) The other method is by swaying movements of a canoe. Thus, if anything goes wrong on a head-hunting expedition, the canoe stops and its crew put questions to it, taking the swaying of the vessel to indicate an affirmative answer. It is believed that these movements are produced by a shark, crocodile, or octopus, and in Eddystone Island by a special octopus called *Nggunggal*. In this island these animals are *famasa*, and there is some reason to connect this form of divination with the *famasa wambale*, the beings by which the weather is controlled. These two kinds of divination almost certainly depend on the occurrence of movements produced without any witting intention on the part of the holder of the ring or the occupants of the canoe. They are of the same order as the automatic movements of the table-turner or the dowser.

8. Disposal of the dead.—There are many different methods of treating the bodies of the dead, over twenty varieties having been noted by C. E. Fox in San Cristoval alone. At the western end of this island, in the district of bird-totemism, the leading practice is cremation, the other chief method being to preserve the body in the house, the bones being collected when the flesh has disappeared. In other cases the body is exposed on a platform or on a rock. In San Cristoval and other islands at this end of the Solomons the body of a chief is placed in a canoe or food-bowl and buried in a square or oblong mound, called *Aro*, 50 ft. or more in length. The dead body is placed in a cavity on the top of the mound, and sometimes this cavity is closed except for a shaft leading from the exterior of the mound. Sometimes there is a dolmen on the top of the mound, under which at a later stage the bones are placed. On the mound there is often a small statue of coral or stone, into which the 'soul' of the dead man is believed to go. Behind the head of these images there is an object like a pig-tail going down to the seat on which the image is represented as sitting.

Cremation and preservation of the body occur also at the eastern end of Malaita, where the body of an important man may be kept in the house enclosed either in a canoe or in a model of the sword-fish. In Florida inhumation with later disinterment of the skull is general, while in Savo this method is used only for chiefs, the bodies of the common people being thrown into the sea. In Eddystone, Ruviana, and Vella Lavella the usual method is to expose the body on a rock or small island till the skull can be removed and placed in one of the shrines already described. If a man so desires, his body can be thrown into the sea. In the Shortland Islands the bodies

of ordinary people are either interred or thrown into the sea, while those of chiefs are cremated, and this is the habitual practice in the district of Buin in Bougainville. In both places the bones are collected from the ashes. In the Shortland Islands they are thrown into water, each totemic clan having its own site for the purpose, and it is believed that they are swallowed by fishes or other animals. In other cases the bones are interred, and this is the habitual practice in Buin. In Choiseul the body is either burnt or treated as in Eddystone, the practice of this island being said to have come from Cholamul.

The beliefs concerning the nature of the soul and of the existence after death vary much in different islands. The people of San Cristobal believe in two kinds of soul which is one part of the island are called *amaga* and *afaga*, the former being compared with the shadow from the sun and the latter with the reflexion from water. When a man dies the *amaga* leaves the body either at the fontanelle or by the mouth and goes to a distant place called *Mademana*, of which the people have but a vague idea. The *afaga*, on the other hand, remains for some time with the body and then goes either into the jaw-bone or into a sacred stone, or, in the case of the chiefly class, into the stone vessel which is put upon the funeral mound (see). In Florida the soul, called *laranga* in life, leaves the body at death and becomes a *ladadu*, or ghost. In Eddystone Island the soul is called *ghalaphala*. It leaves the body at death, soon after which a ceremony is performed in which it is caught and put under the ridge-pole of the house. Soon after this another ceremony is performed in connexion with which the ghost is believed to go to a cave near the highest point of the island. On the eighteenth day after death the *ghalaphala* is transferred by means of another ceremony to the shrine in which the skull is kept, and still later the *ghalaphala*, now called a *tonela*, or ghost, goes to the house of the dead called *Sorte*, which is located in the island of Bougainville. In Vella Lavella it is believed that the ghost, here called *afelo*, goes to the cave in Eddystone Island which furnishes a temporary resort for the *ghalaphala* of that island. In the Shortland Islands the soul, called *wasu*, is identified with both the shadow and the reflexion. When a man dies, the *wasu* becomes a *wasu*, or ghost, and goes to a place in Bougainville which is the site of a volcano. There it recovers from the effect of cremation, and with restored body returns to its own island, where it dwells in a special district. In some cases this is a place where the bones are buried after cremation. The soul in Buin is called *ura*, a word which also denotes the shadow, the reflexion, and a dream. The *ura* leaves a man when he is ill and dies in the form of a bird in the water world, where there is a tree the leaves of which represent human lives. If the soul-bird plucks the leaf representing the man whose body it has left, this man dies and the soul-bird stays in the water world. This home of the dead of Buin is the same volcano which is the temporary home of the dead of the Shortland Islands.

In all cases the life in the world of the dead differs little from that of the living. The ghosts eat, drink, dance, marry, and have children, and in some cases it is believed that they die. The nature of the life after death seems to be in no way influenced by the kind of life the man has lived, though it may be influenced by ceremonial omissions. Thus, if a man of the Shortlands had nothing burnt with him at his cremation, he would have no present to give to a being who meets him on the way to the home of the dead in Bougainville, and either he would fail to reach the place or his arrival would be delayed.

In several parts of the Solomons it is believed that pigs and inanimate objects have souls. When an object is burnt or broken at the funeral rites it is believed that the soul of the object goes with the deceased to the home of the dead.

9. Magic.—Malignant magic is less prominent than in the more southerly parts of Melanesia. In Eddystone Island, where it is called *mba*, the power of bringing disease or death by this means is ascribed to a few men and women who are also known as *mba*. They act by obtaining a portion of the food of their victim, which is then enveloped in a covering and called *penupenu*. This is kept in the clothing of the sorcerer or placed in the hot air of one of the fumeroles of the island, the motive in each case being to keep the *penupenu* warm and thus assist the occurrence of fever. When a person falls ill and it

is suspected that he is suffering from the action of *mba*, the worker of the magic is discovered by divination with an arm-ring, and formerly the person indicated was slung by one arm in a tree till he confessed and revealed where the *penupenu* was to be found. Now the magic parcel is discovered by certain men who are believed to act through friendly spirits known as *tomate kuri*. These spirits know how to find the object by which the disease is being maintained in activity. It is believed that the malignant influence of the object once connected with the victim is due to the action of a spirit, which is almost certainly the ghost of a former *mba*. This variety of magic, which in many other parts of the world is supposed to depend on some virtue inherent in the magical ritual, is here ascribed to a spiritual agency, and this kind of agency is even more definitely involved in the process by which the illness so produced is cured. In the same island the injurious power of the evil eye is also ascribed to certain men and women called *ajiana*, who have the power of flying from place to place and produce by means of their look a disease accompanied by bleeding from the throat which is nearly always fatal. Here again the power of the *ajiana* is ascribed to the agency of a *tomate ajiana*, or ghost of a dead possessor of the evil eye.

LITERATURE.—H. B. Guppy, *The Solomon Islands and their Native*, London, 1887; A. Penny, *Ten Years in Melanesia*, do. 1887; C. M. Woodford, *A Naturalist among the Haid Hunters*, do. 1890; R. H. SOMA.—*Soma*, an intoxicating plant of N.W. India which was pressed (Skr. *su*, 'press', *soma*, 'the pressing') and allowed to ferment, is supposed to be the *Asclepias acida* or *Sarcostemma viminalis*, the expressed juice of which produces a peculiarly astringent, narcotic, and intoxicating effect. As such it was regarded as a divine power, and, as in Mexico and Peru the *cechi* and similar intoxicating plants were deified, so in India and in Persia the *soma*, identical with the Zoroastrian *haoma*, was regarded as a god. Whether in later times the plant called *soma* was really the same as the Vedic *soma*, and whether this in turn was actually one with the *haoma* of the Avesta and the *haoma* mentioned by Plutarch,¹ is questionable. It may be that the names (undoubtedly identical) were retained when substitutes for the plant were used. We know that in the later period a 'substitute plant' was used in the Hindu *soma*-ritual, and the plant called *haoma* by the Zoroastrians was not the *soma* of the later cult. But originally both names and plants were the same. As early as the *Sāmaveda* it was recognized that there was a white as well as a yellow *soma*, and the latter is said in the *Āgveda*² to grow upon Mt. Majaavat, where it is fostered by the storm-god. The eagle, on the other hand, is said to have brought it 'from the sky.'³ It was mixed with water, milk, butter (*ghî*), and barley, and offered to the gods. It was at first drunk not only by the gods and the priests but also by other Aryans, and perhaps by all. Later, as the cult became more regulated, only the three upper castes were permitted to drink

¹ De Ia. et Gerf. 65.

² *Rigveda*, ix. 86, 54.

³ *De Ia. I.*

soma, withal only as a religious ceremony, while *sura*, a rice-brandy, became the popular intoxicant. So important was the *soma*-cult that one whole book (bk. ix.) of the *Rigveda* is devoted to hymns in its honour. It is called the soul of the sacrifice and the delight of gods and men. It strengthens the weak, inspires the poet, prolongs life and gives divine power to the gods. Especially is Indra (the god of strength and battle) the enjoyer of *soma*, which (or who) is regarded as his inspirer and friend. As god, *Soma*, like Indra, frees from danger and conquers foes, and brings wealth to the Aryan from sky and earth and air.

¹ *Soma* is addressed in the highest strains of adulation and veneration; all powers belong to him; all blessings are brought of him.

Even the juice, as it filters through the sieve for purification, is addressed in terms of divine worship. Besides the ninth book of the *Rigveda* and hymns found also in other books, the *Sāmaveda* is devoted to its praise. From the descriptions it is evident that it was the yellow *soma*-plant that was used by the Vedic priests; this also is the colour of the Persian *hemma*. In the (much later) medical treatises no fewer than 24 varieties of this plant (then called) *soma* are mentioned.

Before the end of the *Rigveda* period this yellow plant (which was plucked by moonlight and bathed in water and milk, and which also had the property of 'swelling' as it was thus 'purified') became esoterically identified with the yellow, swelling, and water-cleaved moon, and in *soma* of the latest hymns of the *Rigveda* there is no question that *soma* means the moon. From this time onward *soma* was thus used in two senses, either of the divine plant or of the moon-god, until, as in the epics, unless expressly the plant, the word *soma* means the moon. It is the moon-god as *Soma* who is portrayed in the *Mahābhārata* as a great warrior-god, ancestor of a race of heroes, etc. There is, however, even in this later period, the consciousness that *soma* is both plant and moon; it is no longer an esoteric doctrine, but one generally recognized; and in some mysterious way the 'moon-plant' is both moon and plant. The divine power of the Vedic *Soma*, who also is a war-god, made this identification easy. It has even been urged that, in the earliest period, *Soma* was already the moon. This is the contention of Alfred Hillebrandt, who, in the first volume of his *Vedische Mythologie*, has presented this thesis with great ingenuity. In this volume will be found the most complete analysis of the position and character of the Vedic *soma*, both as a plant (the different ways of fermentation are here described) and as the moon-god. Yet it does not seem to be proved by this treatise that *Soma* was at first the moon. The Iranian conception is distinctly that of a plant alone, and in most of the Vedic passages the conception is also that of a plant, albeit a divine power. The wild hyperbole of Vedic utterances permits many expressions which appear to be impossible when used of a plant, but some even of these are not applicable to the moon. Thus it is said that *Soma* gives the man his light,² and it is not necessary to infer from this or other extravagant phrases that *Soma* is the moon. *Soma* is also said to create all things, which applies to neither plant nor moon; but is only one of innumerable hands given to sundry gods, any one of whom at any time may be called creator, preserver, light-giver, etc., as the henotheistic poet is inspired to wilder flights of praise. Hillebrandt's main thesis, that 'everywhere in the Rig-Veda *Soma* means the moon,'³ is itself an exaggeration, which he has not hesitated to carry to its logical conclusion and

so predicates a lunar *Haoma* in the Avesta. In the *Rigveda* the prevailing thought is that the plant *soma* as an intoxicant stimulates Indra, the war-god, to slay enemies, human and divine, and, as stimulator, *Soma* himself may be said to be the 'foe-killer.' In one hymn Indra explains that he has drunk *soma* and is thereby nerved to do great deeds in a semi-intoxicated condition. This *soma* is the 'sharp-horned bull' (which Hillebrandt interprets as 'horned' moon), as it is said: 'Like a bull with sharp horns is thy brewed drink, O Indra,' and the reason for the simile is given as 'because it bellows,' alluding to the roaring flood of juice pouring noisily into the vat. A further argument against Hillebrandt's interpretation is that the ancient name for moon (*mā*, identical with *mas*, *meis*) is never applied to *Soma*. The allusion in *Rigveda*, x. 85. 3, to 'the *Soma* known to the priests, whereof no one eats' implies that the esoteric interpretation, to which allusion has been made, has finally in this late hymn identified plant and moon. The late *Attharvaveda* also speaks of 'the god *Soma* who, they say, is the moon.'⁴ This is in line with the gradual mystical tendency which appears fully developed in the *Bṛahmaṇya*. It is also analogous to the mystic character of the vine-worship or Dionysiac cult of Greece. Euripides says of Dionysos: 'Born a god he is poured out in libations to gods; through him men receive good.'⁵ So *Soma* is poured out to god, being himself a god, and he gives goods and cures woes, as Dionysos in the same passage is said to be the 'cure (*pharmakon*) for all woes.' 'We have drunk *Soma*, we have become immortal,' says the Vedic worshipper, who 'knows the gods'—much like a Greek mystic.

The later moon-*Soma* is fabled to have married 32 (later 27) daughters of the creator-god Prajāpati (later Dakṣa) and to have roused the jealousy of the others by excessive devotion to one of them called Rohini. The others went back to their father, who permitted *Soma* to take them again only on condition that he associated equally with them all. He agreed, but broke his promise, and hence was punished with a waning sickness or consumption, which causes the moon to diminish every month. This fable of the *Taittiriya Saṃhitā*⁶ is popular in all later literature. The 'wives' are the signs of the lunar zodiac. As moon, *Soma* in the epics and *Purāṇas* is 'lord of stars and planets, of priests and plants, of sacrifices and of devotions.'⁷ In this later mythology *Soma* is son of Atri or of Dharmā, or is produced from the ocean-churning. His great exploit was the rape of Tārā, wife of Brahmāpati, which caused the war of the gods described at length in the epics and *Purāṇas* and constantly alluded to in classical literature. According to these later legends; it was the son born of this intrigue who as Budha, i.e. the planet Mercury, became the ancestor of the lunar race and so, eventually, of Kṛṣṇa. The later moon-mythology gives *Soma* several new names or titles, the best known of which are 'crest of Śiva' (Śiva carries on his brow the crescent moon), 'hare-marked' (the Hindus see a hare in the moon), and 'lord of the lotuses.'⁸ The moon-*Soma* is represented as drawn in a three-wheeled chariot by ten white horses.

SOMNĀTH, PATAN SOMNĀTH.—Somnāth (Skr. *Somnātha*, 'lord of soma' [i.e., the famous sacred plant]), an ancient town in the State of Junagarh, Kathiawar, Bombay (lat. 20° 53' N., long. 70° 28' E.), is noted as the site of the famous temple of Somnāth, the scene of the destruction of the Yādava trile in an intercaste struggle, and of the death of Kṛṣṇa, who seems to have been in this place the object of a cult independent of that of the hero of Mathurā.¹ Little is known of the famous temple before its destruction by Mahmūd of Ghazni (A.D. 1024-25).

According to Khemadāni in the *Habib-nagar*,² Somnāth was placed in an idol-temple upon the shore of the sea. The ignorant Hindus, when summoned with fear, assemble in his temple, and on those nights more than 100,000 men come into it. From the extremities of kingdoms, they bring offerings to that temple, and 10,000 privileged villages are set apart for the expenses of the keepers thereof. So many exquisite jewels were found there, that a tenth part thereof could not be contained suitably in the treasury of any king. Two thousand Brahmins were always occupied in prayer round about his temple. A gold chain weighing 200 māsas, on which bells were fixed, hung from a corner of that temple, and they rang them at appointed hours, so that by the noise thereof the Brahmins might know the time for prayer. Three hundred musicians and 500 dancing shavayās were the servants of that temple, and all the necessities of life were provided for them from the offerings and largess for pious usages.³

Sultan Mahmūd, having entered into the idol-temple, beheld an excessively long and broad room; numerous thin fifty-six pillars had been made to support the roof. Somnāth was an idol cut out of stone, whose height was five yards, of which three yards were visible and two yards were concealed in the ground. Yamin-oddāna, having led him to the idol with his own hand, ordered that they should pick up pieces of the stone, take them to Ghazni, and throw them in the threshold of the Jami Masjid (parliament mosque).⁴

The common tale that the 'idol,' when broken, was found to be hollow and stuffed with diamonds and other precious stones is obviously a fable; it was really a *linga*, or symbol of Śiva, and such stones are never hollowed in this way.⁵ The present ruined temple was built by Kōmārāpala in A.D. 1165, and was the second reconstruction of the temple destroyed by Mahmūd.⁶

Another legend told that Mahmūd carried off to Ghazni the carved gates of the temple. At the close of the Afghan war of 1842 Lord Ellenborough, the governor-general, directed that these gates should be brought to India, and he addressed a pompous proclamation to the chiefs announcing that 'the insult of eight hundred years had been avenged.' The gates are now deposited in a room in the Zanāna court-yard of the Agrā Fort. They clearly have no connexion with Somnāth, being made of Ghazni *deodār* pinewood, bearing no resemblance to Hindi work, and being decorated with an Arabic inscription relating to the family of Subuktigīn, ruler of Ghazni (A.D. 977-997).⁷

SOPHISTS.—The sophists with whom this article deals are the paid teachers who undertook to prepare young men, by lectures or private tuition, for a public career in the city-states of Greece. Such were Protagoras and Isocrates (*q.v.*).

1. Lives and writings.—It should always be borne in mind that the writings, save a few fragments, are lost and the sophists themselves for the most part known by the testimony of their opponents. Prodicus of Ceos, a countryman of the poets Simonides and Bacchylides,¹ frequently visited Athens. We read of one occasion when his speech before the Athenian senate (presumably as the envoy of Iulis, the township in Ceos to which he belonged) won great admiration, while his public lectures attracted the young and brought him large sums in fees.² There are allusions to the scale of payment, which ranged from half a drachma to fifty drachmas.³ In order probably that his pupil might acquire a good prose style, Prodicus laid great stress on the accurate use of terms⁴ and the careful discrimination of synonyms.⁵ That his distinctions were not always logical is clear from the criticisms of Aristotle⁶ and of Alexander of Aphrodisias.⁷ But, besides grammar and rhetoric, he also gave instruction in ethics. One of his works, the *Horia*, as we know from the scholiast on Aristophanes' *Clouds*, 261, contained a famous apologue, which is referred to by Plato⁸ and happily preserved to us in substance by Xenophon.⁹ Pleasure and virtue personified appear to the young Hercules, urging their conflicting claims on his allegiance until he decides to forgo the allurements of ease and follow the toilsome path of duty. From this it appears that Prodicus upheld the orthodox Greek morality of his day, as enforced by the poets.¹⁰ Remarks of Prodicus on the right use of wealth are quoted in the dialogue *Eryxias*.¹¹ But the author of the *Aniarchus* is probably mistaken when he puts into the mouth of Prodicus the well-known Epicurean maxim that 'death is nothing to us, since it does not concern the living and the dead no longer exist.'¹² From Aristophanes' *Birds*, 992, and the scholiast *ad loc.*, it may be inferred that Prodicus had somewhere sketched a cosmogony, though of its contents we are ignorant. In *Clouds*, 349, he is called a *peripatēmatistēs*, a term which there seems the counterpart of *περιπατήτης* as used by Aristotle of the Ionians and other early physicists. Like them, he certainly wrote a work *peri phisikos*,¹³ of which Galen has preserved a single fragment dealing with human physiology.¹⁴ Of his views on religion we know a little more. Philodemus the Epicurean,¹⁵ in agreement with Cicero,¹⁶ Sextus,¹⁷

and Themistius,¹ names Prodicus as the first to base an explanation of religious rites and belief in the gods on a definite rationalistic theory. It would seem, Prodicus thought, that those natural objects which benefit us and sustain life were conceived as deities—sun and moon, rivers and springs, fields and fruits of the earth, fire and water, corn and wine. Most religious rites would then be closely connected with agriculture. This theory was more than once restated, notably by the Stoic Persæus.

Gorgias of Leontini in Sicily, a pupil of the Sicilian Empedocles, holds a very important place in the development of Greek prose style and forensic rhetoric.² He wrote a treatise on *Nature or the Non-Existent*, which in the manner of the Eleatic Zeno proved up to the hilt (1) that nothing exists; (2) that, if anything existed, it could not be known or conceived by man; (3) that, if anything existed and were known, it could not be divulged to another. Of this *tour de force* we have a detailed account in the treatise *De Xenophano, de Zenone, de Gorgia* (as it is wrongly entitled) in the Aristotelian *Corpus*³ besides an abstract in Sextus Empiricus.⁴ Despite this scepticism, Gorgias seems to have adopted and extended his master's hypothesis of perception by means of 'pores' or channels.⁵ In ethics he upheld a plurality of virtues, which are differently developed under different conditions of age and sex.⁶ However, unlike other sophists, Gorgias did not undertake to teach virtue,⁷ but rhetoric, which he declared to be the first and most indispensable of all arts.⁸ Yet his admission⁹ that the art of persuasion deals with right and wrong, the just and the unjust, shows that some recognition of moral judgments, some outline, at least, of ethical theory, is required from the orator.¹⁰ In the famous discussion with Socrates on the question whether it is better to suffer than to do wrong Gorgias stands aside; it is his pupil, the light-minded Polus of Agrigentum—'cult by name and cult by nature'—who is the opponent of Socrates. To Polus the prosperous career of the usurper Archelaus seems enviable, for have not his crimes brought him power, with its attendant wealth and fame?¹¹

Thrasymachus of Chalcedon is another sophist who devoted himself to teaching rhetoric. His writings were confined, so far as we know, to speeches and an important treatise on the Art (*ἡ ἀρετὴ ῥητορική*). In this direction his services were conspicuous. Critics were disposed to attribute to him rather than to Isocrates the introduction of the intermediate or mixed style, which eventually superseded both the high-flown and the bald.¹² We are told that he was rash and combative in argument, as his name suggests,¹³ and this may be the reason why Plato chose him in the first book of the *Republic* to play an arrogant and offensive part in support of the definition of justice as the interest of the stronger.¹⁴ A literary artist like Plato was not likely to miss the opening afforded by such a definition, with which we may well credit the historical Thrasymachus. But, as the dialogue proceeds, Thrasymachus becomes tamed, and at last we hear with no great surprise that Socrates

and Thrasymachus have never been enemies and are now very good friends.¹⁵ In this connexion it should not be forgotten that we have a very different sentiment cited from a speech of Thrasymachus:

'The gods take no notice of human affairs; otherwise they would not have overlooked justice, which we see every day violated.'¹⁶

The spirit of this utterance is that of the book of Job. A specimen of his style is preserved by Dionysius of Halicarnassus.¹⁷

Hippias of Elis, like Prodicus and Gorgias, travelled about Greece, acquiring wealth and celebrity by giving lectures and taking pupils.¹⁸ As Prodicus represented Julius at Athens, so Hippias seems to have been the political agent of Elis at Sparta.¹⁹ His accomplishments were varied; besides arithmetic, geometry, and astronomy, he was versed in poetry, music, mythology, philology, and history. To historians of mathematics he is known as the discoverer of a curve, called after him 'the quadratrix of Hippias'.²⁰ Further, he acquired no mean skill in manual arts, if, as we are told, he appeared at Olympia with every article that he wore made by his own hands,²¹ even to the signet-ring, which he had himself engraved, and the curry-comb and oil-flask of his own manufacture. He is also said to have invented a mnemonic system. That he was a learned antiquary is attested by his writings, of which the register of Olympic victors (*Ὀλυμπιακῶν ἀγώνων*) was perhaps the most important. His mode of instructing his pupils is criticised as too nearly akin to the curriculum of schoolboys.²² As he claimed to be at home in all the learning of the age, he sought to popularize different branches of it, but the instruction so given must often have been superficial. By Xenophon²³ and by Plato (or whoever wrote the two dialogues *Hippias Major* and *Hippias Minor*) he is represented as discussing with Socrates such subjects as justice, beauty, and the peculiar Socratic thesis that injustice when voluntary is better than when involuntary. Hippias is made to appear conceited and ridiculous, but the opinions he defends—sometimes against quibbling or downright fallacy—in no way diverge from those approved by popular Greek morality.

There is little ground for supposing Critias the sophist to be any other than the Athenian politician who took part in the revolution of the Four Hundred and was chief of the Thirty Tyrants—that extreme oligarchical faction which, after the fall of Athens in 404 B.C., attempted to extirpate democracy by a reign of terror. It is not easy to imagine this ruthless doctrinaire giving lessons, but he certainly was a prolific writer both of verse and of prose. In the play entitled *Strepshus*, probably by him, though some authors refer it to Euripides,²⁴ one of the characters sets forth speculations on the origin of the belief in the gods. The lines quoted by Sextus Empiricus²⁵ describe how in the beginning men lived a mere animal life without law and order; how, to prevent violence and oppression, severe penalties were enforced; but, as these could only check open crime, secret wrong-doing went unpunished until some man, sturdier than his fellows, thought to discourage

it by proclaiming the existence of mighty and immortal beings; who see all that is hidden and hear all that is said in secret. In order to heighten the dread of them, he placed their abode in the sky, whence came the terrible thunderbolt and the beneficent rain.

These are the more eminent among the older sophists, whom we know from our chief authority, Plato. There were, however, some whom he does not mention by name, as Xenias of Corinth, who, according to Sextus,¹ taught thorough-going scepticism. On the other hand, Antiphon the sophist, who was not the same person as Antiphon the orator,² was constructive, even dogmatic, and his claim to rank as a philosopher is not disputed by Philodemus the Epicurean, *ἐν τῷ περὶ σοφιστῶν καὶ φιλοσόφων ὁρισμῶν βιβλίῳ*.³ He was obviously interested in and familiar with the physical inquiries of his predecessors. He wrote a work *On Truth* in two books, the one dealing with first principles, the other with physics and anthropology. This work, if we may judge by citations of single words in Harpocration and Pollux, must have been widely read and studied. From the first book a few fragmentary utterances are cited:

¹ For the Word or Logos all is one. Once understand this, and you will know that for the Word nothing exists singly either of the things seen by the farthest reach of the eye or of thoughts conceived by the farthest stretch of the mind.

² Hence it needs nothing and accepts not anything of any, but is infinite and self-sufficient.

³ The mind leads the body in the direction of health and disease, or whatever else it may be.

Time he held to be a conception or measure, not a real substance.⁴ His proposal for the quadrature of the circle is criticised by Aristotle,⁵ by Simplicius, *ad loc.*,⁶ and by Thomistius.⁷ In the second book he dealt with the sun, moon, eclipses, the saltiness of the sea, and other physical phenomena.

The sun he described as 'fire traversing the moist air which encircles the earth, setting when it leaves the air unkindled, rising to renew the attack when the air has again grown damp.'⁸

In spite of Anaxagoras, he adhered to the old view that the moon shone by her own light, being put out by the approach of the sun, because a stronger fire tends to put out a weaker one, and in like manner the other stars are obscured by the sun.⁹ Samples of his style are furnished by Stobaeus.¹⁰ Of his ethics we can only judge by fragments of a treatise *On Concord*, which emphasizes the importance of education and marriage, or point a moral against injustice and cowardice.

The anonymous sophist whom we know from Iamblichus¹¹ resembles Antiphon (with whom some would identify him) in his treatment of ethical and social questions. He, too, insists on the need of training to supplement natural endowment. Only by practice, begun early and long continued, can men become virtuous or successful, or acquire fair fame. The same advantages become good or evil according as they are used well or ill. Every man should practise especially two forms of self-control: (1) his honesty should be proof against bribes; (2) his courage should not shrink even from the sacrifice of life for his country. A truly good man seeks reputation, not by external distinctions, but by his own goodness. We must not think obedience to the laws upwardly or the use of might for aggression something valiant and noble. Men cannot live in isolation; they must come together in society if they are to get even a bare living; nor

will this suffice if there be lawlessness, which entails worse evils than life in isolation. Hence it follows of necessity that law and right are the bonds of civil society. Imagine a superman, invulnerable in body, exempt from disease and suffering, of iron will, who might be supposed competent to use his strength for aggression and defy the laws with impunity; still, even he, if there were such an one, which is impossible, would be safe only so long as he upheld the laws; for the rest of mankind, given discipline in their superior numbers, could by force or fraud overcome him. The writer sets forth at length the contrast between the blessings of an orderly government—the confidence and security which it affords when men have leisure to attend to their private concerns and are free from alarm of civil strife or foreign war—and the opposite evils which come in the train of lawlessness. It is in such a state of anarchy and disorder that the tyrant or usurper springs up.

The fragmentary treatise entitled *Twofold Arguments* (*διὰ δύο λόγους*) has been called a specimen of early aristotelic, but is rather a storehouse of special topics, Aristotle's *ἐκδη*,¹² suitable for controversy, whichever side the orator or disputant may take. It cannot have been the show-piece (*ἐπίδειξις*) of a wandering sophist, but, as Diels says, a formal school-lecture to his pupils by one settled in a town where the dialect spoken was Doric; and it follows from I. 8 that its date is about 400 B.C.¹³

The method is to take certain *prima*, good and bad, fair and foul, right and wrong, true and false, and argue in the case of each pair: first, that there is not any absolute distinction between the two members; and then, again, that there is, the conclusion in the latter case being generally reached by *reductio ad absurdum*. Thus the famous antithesis of nature and convention is presented in several distinct forms. The first theme so treated is that there is no difference in the conduct of the sane and the insane, the wise and the foolish; the next, that wisdom and virtue cannot be taught, because (a) one cannot impart a thing to another and keep it himself; (b) if they were teachable, there would be a recognized class of teachers of wisdom and virtue, as of music; (c) again, the sages of old would have made their sons wise, which is not the case; (d) many pupils of professed sophists have got on good by their instruction; (e) many have become eminent who never studied under sophists. Against (a) we may appeal to experience; schoolmasters and teachers of the lyre do both impart their special knowledge and retain it; (b) we answer that there is a special class of teachers, the so-called sophists; as to (c), there is the case of Polydamas, who taught his own son to be a statesman; as to (d) and (e), the instances are admitted, but the inference is irrelevant. There is such a thing as natural endowment, *φύσις*, and, if one has enough of this, he can dispense with education. I do not say, adds the author, that virtue and wisdom can be taught, but the proofs alleged to the contrary do not satisfy me. Other arguments follow against the institution of the sokraticum in its present (or wanting) and to support of the position that the best theories are also the best practitioners of any art. These negative arguments are wanting.

Of sophists eminent as dialecticians Euthydemus and Dionysodorus are familiar figures through Plato's dialogue named after the former. There were also Bryson of the Pontic Heracles, a circle-squarer like Antiphon, whose pupil Polyxenus was asserted by Phaedrus to have been the author of the 'third man' argument against the theory of ideas,¹⁴ and Lycophron, who held that law, so far from directly promoting civic virtue, was merely a guarantee to citizens of their mutual rights, *ἐγγυητὴς ἀλλήλων τῶν δικαίων*,¹⁵ and denied the reality of the distinction between the noble and the low-born.¹⁶ Of rhetoricians besides Theodorus of Byzantium, Evemus of Paros, and Licymnius of Sicily, all three mentioned in Plato's *Phaedrus*,¹⁷ there was the Athenian Polycrates, whose pamphlet *The Indictment of Socrates* was written at least six years after the death of the latter, since it referred

to events of 393 B.C.¹ Alcidas of Elaea in Æolis in his Messenian oration advanced the thesis that God and nature have left all men free, whence it would follow that slavery is unnatural and indefensible.²

2. *Doctrine; general estimate.*—In the history of popular education the sophists themselves mark an epoch. Before their time the schools taught music and gymnastics, reading and writing; but, except for the severe military training at Sparta or the peculiar discipline of Pythagorean brotherhoods in S. Italy, there was nothing beyond—no means of acquiring general culture. The recognition of the need for liberal studies and the effort, however unsystematic, to supply that need were the first-fruits of the age of aspiration and enlightenment which followed the Persian wars, when, under the leadership of Athens, literature and art blossomed anew. Among the diverse methods adopted by individual initiative the chief was the oral lecture (for which a fee was charged) on some topic of importance or interest; the theme being sometimes chosen by the audience. Under such conditions the lecturer was not only bound to be a good speaker, in order to attract hearers; he also needed much skill and practice in replying to questions and taking part in any discussion at the close. The lectures were often on language or diction or the interpretation of the poets or other matters closely connected with literature. The pupils of a Protagoras or a Prodicus were thus taught by precept and example to admire literary excellence and form a prose style of their own. In other words, they received an elementary, but indispensable, grounding in the humanities. When we reflect that the period from Gorgias to Isocrates saw the gradual fashioning and perfecting of prose, whether written or spoken, and that the names of Tisias, Thrasymachus, and Theodorus³ mark definite stages in this process of evolution, we may fairly estimate the services of the sophists to literature as second only to their services to education. For the rest, there was a continuous change of programme, owing to the necessity of arousing interest by novelties. At different times four varieties of instruction may be distinguished. The literary and political essays of Protagoras made way for forensic rhetoric, which Gorgias brought from Sicily in 427 B.C. on his first visit to Athens, where its theory and practice became firmly established. Eristic, again; or the art of controversy, though it dates back to the Eleatic Zeno, came into prominence later than rhetoric, largely under the influence of Socrates and his disciples. Lastly in 392 B.C. arose the school of Isocrates, who, while he specially taught political rhetoric and the principles of politics, imparted to a wider circle a more comprehensive culture, not limited to any single professional routine, avoiding barren subtleties and technicalities. Some such reaction was advisable after the over-specialization which had gone on in forensic rhetoric and eristic, if the sophists were to free themselves from the charge that their whole stock-in-trade consisted of oratorical tricks and logical fallacies, with which their pupils might impose upon a jury or outtrap an unwary disputant. It is not strange that great influence was exerted at the outset by teachers who awakened intellectual interests and worked upon the native Greek passion for excelling (*tois agathon kai thelopon thelois*—*ἀγαθὸν καὶ θελόντων*). In the 'art of words' they could offer their pupils an incomparable weapon for use in public debate or private discussion. But grammar and rhetoric were the sole studies which owed much of permanent value to the sophists. Else-

where, as will be seen, preoccupation with the popular and the practical unfitted them for the work of original thinkers.

(a) *Ethics and politics.*—Quite apart from the absurdity of postulating for the sophists in common a distinctive ethical doctrine, as if the members of a whole profession ever agreed on controversial questions, or as if the rest shared the views of Lycophron on nobility or those of Alcidas on slavery, there is little evidence that the sophists, as such, specially interested themselves in scientific ethics. For one thing, their ignorance of psychology was profound and is adduced as the cause of their errors in the theory and practice of rhetoric.⁴ The opinions on morality cited as issuing from them cannot always be credited to individual sophists as thinkers; they may be put forward by them as litigants or disputants. Then, again, other views have been ascribed to the sophists upon inference only; e.g., their conception of the end of human action (it might be maintained) was success (*ὁ δὲ τις ἐπὶ τὸ νικᾶν*), but this is vague, unless we know what use is to be made of success. The undertaking to teach virtue implies, it may be said, a definite view of education, as the process by which information is imparted, just as liquid is poured into an empty jar, and not, in Plato's words, as 'the turning round of the soul's eye to the light.' It also implies the conception of virtue as something teachable, which may be thought to resolve it into a sort of knowledge. Here, again, no general conclusions are warranted, for Gorgias did not teach virtue, and Isocrates decided that it could not be taught. The apologue of Prodicus recommends the virtues or, rather, courage and temperance as means to an end, and on utilitarian grounds. Neither Prodicus nor Protagoras could define virtue itself, or any of the virtues, in a way to satisfy dialecticians like Socrates and Plato, who for that reason pronounced both to be ignorant of virtue; this was the cardinal defect of their ethical opinions. What havoc it worked can best be seen if we consider justice. How could the common good be reconciled with individual interest? The myth of Protagoras⁵ rightly makes this virtue (*δικαιοσύνη*) to be inseparably imparted in a civilized state by the interaction of individuals living in society, growing up to obey the laws and gradually recognizing in them the voice of the State. Such views are quite in harmony with Greek tradition, which derived morality from law and law from nature or God or the divine legislator. This harmony is rudely broken by the maxim 'Man the measure,' by the divergence between the code of one state and that of its neighbours, and by the conflict of human and divine law which Sophocles had emphasized.⁶ Protagoras, however, still adheres to his position⁷ that the State is the ultimate authority from which the citizen derives his views of morality, holding that to be just which the law at a given time and place ordains to be just; but there is this reservation introduced, that it is no longer absolute justice, but merely relative justice, which different states from time to time lay down in shifting ordinances. Although this is a lame defence, such inquiries, whether of a Protagoras or of a Machiavelli, deal with real problems, which must be faced. If the source of law, and therefore of morality, is not divine, it follows that it is merely human; then ought men to follow the example of Hippias and refuse obedience to all but the unwritten laws of nature?⁸ Polus, Thrasymachus, and Callicles—the last not a sophist, but a politician and a pupil of sophists—like the author of the *Republic* (*νόμος*), made great play with the antithesis of

⁸ Xen. *Mem.* IV. 17. 19.

the natural and the conventional (or the legal, *νόμος*). It shocked the Greek mind to be told that institutions hallowed by old associations had merely a conventional value, and that the immutable alone was natural. If the rules of existing society are merely conventional, it may fairly be argued that obedience to them is a slave's part; the able and intelligent, the masterful and vigorous, will rise in revolt and disregard them. Therefore Polus admires the tyrant Archelaus; Critias and others plotted the overthrow of the demos at Athens; for, the constitution being part of the laws, if might makes right, a claim to rightful rule rests upon force. Or the same result can be reached in another way, by considering the effects of a revolution which has put an oligarchy or a tyrant in power. The laws will no longer be fetters imposed by the multitude on the powerful individual, nature's born ruler; they will be laid down by such a ruler for a community where he has gained the upper hand, and thus again we arrive at the definition, 'Justice is the interest of the stronger.'¹ Between these two lies the opinion formulated by Gleanon² of a social compact based on the recognition that all men desire to do injustice, which is good, but fear to suffer injustice, which is evil: hence the compromise of positive laws which forbid both the doing and the suffering of wrong. Lycophron, as mentioned above, also restricted the province of law to the same narrow function of guaranteeing mutual rights. When a similar problem is presented by Anonymus Iamblichii,³ he, unlike Polus or Thrasymachus, decides that the unprincipled adventurer will be thwarted in the long run, provided the State be well-ordered and the citizens loyal. Before we condemn the sophists for corrupting youth, it will be well to remember that the doctrine that might makes right was publicly advocated by Athenian politicians and orators in the Peloponnesian War, whether the tyrant city⁴ was punishing revolt at Mytilene,⁵ threatening neutral Melos,⁶ or justifying an aggressive policy in Sicily.⁷ In short, Plato is right when in a famous passage⁸ he declares that it is not individual sophists, but that arch-sophist, the pable at large, that corrupts youth. For the sentiments engendered as men sit side by side in the assembly, the law-courts, or the theatre—forces against which reason is powerless—may not be, as Protagoras supposed, relatively true and right, but absolutely erroneous and dangerous. Now the discourse of Protagoras, as reported by Plato, and the fragments of Antiphon and of Anonymus Iamblichii rather suggest that these sophists in handling commonplaces presented popular morals, wherever possible, as modified by the progressive spirit of the age; e.g., the deterrent purpose of legal penalties is recognized by Diodorus,⁹ as well as by Protagoras,¹⁰ and the panegyric on orderly government (*κράτος*) of Anonymus Iamblichii partly covers the same ground as the Funeral Oration of Pericles.¹¹ In such moral harangues it was the lecturer's or writer's interest to keep an eye on his disquieted, the parents and guardians, relatives and friends, of his scholars, and not wantonly to offend their susceptibilities.

(b) *Philosophy and religion.*—If sophists were not scientific moralists, far less were they logicians or metaphysicians. Preceding philosophers—Ionians, Pythagoreans, Eleatics, or pluralists—had their crude theories of physics and ontology, with which the older sophists appear to have been acquainted. At any rate, the treatises of Prodicus

and Gorgias on nature (*πρὸς φύσιν*), and the explanations of celestial and physical phenomena—motions of sun and moon, eclipses, hail, the saltiness of the sea (which are cited from Antiphon's treatise *πρὸς ἀσέβειαν*)—as well as the more famous incursion of Protagoras into the domain of epistemology, prove that these authors were not disinclined to pursue such studies, or, at least, as receptive rather than original thinkers, to advertise the discoveries of others. Possibly, if such a demand had been made by their pupils, they would have taught physics. This impression is strengthened by the prominent place which burlesque of physical investigations takes in the *Clouds* of Aristophanes, where the typical sophist, Socrates, swings in a basket for the better observation of things celestial (*ἀσπερὰ καὶ ἀσπερὰ τὸν οὐλόν*) and directs experiments to measure exactly the length of a flea's jump. From the time when this play appeared (423 B.C.), or even earlier, the study of physics declined. The Socrates of the *Phaedo* says that in his youth he was acquainted with speculations, some of which we recognize as those of Anaxagoras, Anaxagoras, Empedocles, Diogenes of Apollonia, but that he had long since ceased to be interested in them. Presumably contemporary sophists would have made much the same admission. If anything can be predicated of the sophists as a whole, it is that their bent was not theoretical but practical. The name they bore, when we examine its history, confirms this. Before it became specialized to designate the class of paid teachers, it had been used (by Pindar, the tragedians, and Herodotus) in a wider sense, but exclusively applied to practical men, whose wisdom had been tested by experience. To the wise lords Homer and Hesiod, to artists or experts in any department, from cooks and diviners to musicians and generals, not only to Pythagoras, Thales, and Solon, but to those shrewd men of affairs, statesmen or rulers, who were known in Greece as the Seven Sages, such as Pittacus or Periander, the name *σοφιστής* was thus given. There is one point, however, where the practical teacher and the original thinker were thoroughly at one, viz. their attitude to religion. From the time of Heraclitus and Xenophanes all philosophical systems had broken with the popular creeds and the legends which offended the moral standard of the time. In the ancient quarrel between philosophy and poetry, as Plato calls it, the sophists were on the side of the philosophers. Protagoras was an agnostic, unable to decide whether there are gods or no, and, if there are, what is their nature. Yet Hippies, according to Xenophon's report, believed the gods to be the authors of the unwritten laws, one of which enjoined worship of the gods.¹² The rationalistic speculations of Prodicus and Critias, noticed above, clearly assume that the popular creed has been set aside, for they deal with the further problem, how it originally arose. Nor must it be forgotten that in his burlesque Aristophanes presses the charge of atheism again and again, as when he makes Socrates, his type of the sophist, say, 'Vortex is king; Zeus has been dethroned.'¹³ Similarly the aged Plato traces crimes of violence and insolence to the impetuosity of certain wise men (*σοφοί*) who maintain that religion and morality are mere convention, and that the highest right is might.¹⁴ Other indications of the gradual change in public opinion are afforded by a comparison of Herodotus with Thucydides. Where the former is credulous, as regards divination and oracles, the latter is sceptical, for he had witnessed fruitless appeals to

divine justice by victims of oppression, the undeserved success of perjury and treachery, the influence of fortune in thwarting the wisest calculations.¹

3. Charges against the sophists.—In a matter of much controversy notice must be taken of divergent views, particularly the attacks and aspersions from which Grote endeavoured to vindicate the sophists. Whatever the cause, the fortune of the sophists declined; the second generation was not equal to the first, the pupils were less brilliant and eminent than their teachers, or, like Alcibiades, Theramenes, and Critias, attained to a bad eminence; in the 4th cent. B.C. a liberal education was sought elsewhere, in the Lyceum or the Academy; soon the very name became a term of abuse. Isocrates so applied it to the Eristics and to Plato; Lysias to Aeschines (the Socratic) and to Plato; Androtion and Aeschines (the orator) to Socrates, who took notice. For one thing, the practice of charging fees touched a strong Greek prejudice, as if it meant prostitution of the mental powers.² This prejudice we moderns, who regard the intellectual as well as the manual labourer as worthy of his hire, can barely understand, much less share. Again, not only Aristophanes, but many worthy citizens like Anytus, a leader of the restored democracy in Athens, mistrusted what seemed to them the revolutionary tendencies of such teaching.³ Public opinion, too, shifted, and the sophist, once hailed as a prodigy of wisdom and knowledge, an invaluable aid to the political aspirant, came to be despised as a needy adventurer, often a foreigner; if a citizen, doing little, if any, service to the State.⁴ Isocrates, enamoured in his own flourishing school near the Lyceum, while claiming that what he himself taught was philosophy and culture, could afford to sneer alike at the Eristics as vendors of fallacies, who denied the possibility of falsehood or contradiction, and at those Socratics who said that courage, wisdom, and justice were identical, that none of these virtues was innate, but that there was a single science of them all.⁵ With these facts before us it is impossible to agree with Grote that the name 'sophist' was brought into bad repute mainly by the persistent and acrimonious attacks of Plato and Aristotle on a deserving profession. Plato was born in 427 B.C., and in the *Clouds* (423 B.C.) the term 'sophist' originally neutral, was well on its way to be stereotyped in *malum partem*. Very rarely has prejudice been so completely successful in changing the connotation of a word: the paid teacher became the needy adventurer, the incompetent pretender, the charlatan, or trickster, the last implication being firmly embedded in our modern words 'sophism,' 'sophistical,' 'sophistry.' In the main, however, Grote is justified in his contention⁶ that the sophists were not a sect or school of conscious impostors, flattering rich youths for personal gain and corrupting general morality. Nor, on the other hand, were they, as others have imagined, systematic philosophers who based upon reasoned scepticism an anti-social ethics, sanctioning lawless aggression in politics and freeing the individual from all conventional restraints. The latter hypothesis takes something for granted at every stage, its chief error being the assumption of a school with common doctrines, an assumption no more valid for Greek sophists than for modern journalists. Nor, again, is the charge of indiffer-

ence to truth justified, except in so far as it corresponds to the old count of making the weaker side the stronger (*τὸν ἥττον λόγον σφισσὶν ἰσχυρὸν*). This, it should be remembered, is the aim of every advocate; he appears in court, not to judge his client, but to defend him. If in so doing he does violence to his conscience, if his act is immoral, it is the fault of a system, which neither he nor the sophists devised. The supposed pernicious effect of dialectic and eristic in accustoming the disputant to take either side indifferently admits of a similar answer; and, if the objection be to the use of fallacies, surely they ought not to pass unexposed and unreformed.⁷ Plato's opposition is grounded on his metaphysics. He calls sophistry at one time the sham counterpart of legislation, which is one branch of politics,⁸ while in the dialogue devoted to the dissection of the sophist the latter is ultimately defined as the counterfeit of the philosopher, the pretender who, juggling with words in private, dissembles his own ignorance and entangles his hearer in self-contradiction.⁹ This amounts to saying that the sophist was, like Isocrates, content with appearance and opinion (*δόξα*) and had not gone farther in quest of reality and science (*ἐπιστήμη*). There were these two educational theories, and the champion of the one was bound to condemn the other. Yet we note that six at least of Plato's provisional definitions¹⁰ imply no discredit. If the sophist purged away false opinions, if he imparted information wholesale, retail, or pedlar-fashion, if he was a brilliant athlete in controversy, and ever on the hunt for fresh scholars to teach, he was doing the State some service; for these are traits not unworthy of the world's great educators, from Socrates to Pestalozzi.

SOPHOCLES.—In studying the religious content of dramatic poetry, it is well to distinguish between (1) what is traditional or contemporary; (2) what is adapted to the dramatic situation; and (3) the poet's own contribution in thought and feeling.

1. In Sophoclean drama the gods of the national worship are still living powers, to whom contemporary piety accords an implicit belief. But special stress is laid on the universal supremacy of Zeus and the oracular truth of Apollo. Athena also holds a conspicuous place. Ares and Aphrodite are regarded chiefly as authors of destruction and misery. The Eleusinian mysteries are by this time fully recognized as belonging to the religion of the State; and Dionysos, the immediate patron of the drama, is an object of affectionate reverence. The religion of the family, coming down from patriarchal times, is prized as of the first import-

ance. Not only blood-guiltiness between kinsmen, but all breaches of domestic harmony are looked on with abhorrence, and to vindicate the honour of one's kindred is an imperative duty. It is this which gives inviolable sanctity to the laws of burial, and it is in connexion with family religion that reference is made to those unwritten laws which are of immemorial antiquity. In upholding these, Greek tragedy seems to enforce the religion of Eleusis; for, in language very similar to that of Sophocles' *Antigone* (lines 463-467), Pericles is reported to have spoken of 'those unwritten laws on which the Eumolpidae based their instructions, laws which never may be abrogated, and of which no man can tell the origin' (*Lysias* 6, § 10; cf. *Thuc.* ii. 37, § 4; also *Æsch. Suppl.* 707 f.). The scene is still haunted with fears of divine jealousy or envy (*Nécess.* 406-407; see art. GOD (Greek)), and God is still imagined as causing infatuation, and thus occasioning the crimes which He punishes. The sovereignty of Zeus spurs some whose folly, inspired by hope and desire, misleads them (*Ant.* 604 ff.). Hence life sometimes appears a tissue of miseries from which death is the release (*Ed. Col.* 1225 ff.; cf. *Herod.* vii. 46). That rule is inexorable, but piety never loses its reward (*Phœ.* 1444, 1445). Fate, more distinctly than in *Æschylus*, is identified with an inscrutable Divine Providence of which the oracles are the exponents, above all the oracle at Delphi (*Ed. Tyr.* 1329, 1330).

2. Such are the main features of traditional and contemporary religion as represented in Sophoclean drama, and to the poet's unquestioning acceptance of them he owes that high repute for piety which was awarded to him by the unanimous voice of antiquity. But the exact phase of polytheism that is reflected in such drama depends largely on the situation; and if the later epics on which the plays are founded had been preserved to us, it would be possible to account more fully for certain variations. Thus, while in the two *Edips* and in the *Electra* the Delphian Apollo is all-important, in the *Trachiniae* the prime mover is the Dodonean Zeus, whereas, in the *Ajax*, Athena is the chief agent, and in the *Philoctetes* the knot is solved by Hercules. And in the last-named play it is observable that the sacred place of Chrysa, the allusion to Hephaestus of the volcano, and to the Lemnian Zeus, the invocation of the earth-goddess as the great mother, and the prayer to the nymphs of stream and meadow help to complete the local colouring, while the thought of Hercules on Oeta, of the river-god Spercheios, and the Molian nymphs add reality and verisimilitude to the person of the hero. Athena, too, while retaining her Athenian attributes (*Nies* *recluse*, i. 134), is in a special sense the guardian of Odysseus, as she is in the *Ajax*, where the Salaminian mariners by their invocation of Pan recall the inlet which he made his peculiar haunt (*Æsch. Persæ*, 418). Ajax himself, on the other hand, combines with the longing for his father's hearth a deep sense of the sacredness of the rivers and other divine presences of the Troad.

In the *Edipus Tyrannus* there is a remarkable blending of Athenian and epic with local Theban worship. Athena, more Homeric, is the daughter of Zeus; but it is not forgotten that she has two ancient shrines in the Cadmean city. Artemis at once presides over the Theban Agona and with her brother Phoebus roves the Lycian hills. Apollo is the Pythian prophet of Zeus, and he is also the epic far-darter. His local worship as Lyceus, the protector of the home, and as the prophet by the laurels, are separately mentioned. Dionysus is *par excellence* the Theban god; but Ares, to whom the Theban women in *Æschylus* appeal as

the founder of their race, is here identified with the vengeful enemy who has visited the city in the form of the plague. In the *Edipus Coloneus*, Polynices speaks of his father's Erinyes, apparently without identifying her with the dread goddesses of Colonus.

3. Behind all such associations, and shining through them, is the religious thought of the poet, less original and far-reaching than that of *Æschylus*, but in some ways more sober and mature. The 'unwritten ordinances' of the Eumolpidae are developed in the central ode of the first *Edipus* into the vision of an eternal law of integrity in thought and action whose violation, conscious or unconscious, leads the way to ruin. 'God sees and visits soon or late when one leaves hold of divine principles and turns to madness' (*Ed. Col.* 536 f.). Yet—it is added in a later strain of reflection—when the error has been involuntary, though it inevitably results in suffering, the very power that punishes holds forth a better hope. The life that is crushed in this world finds acceptance in the end, is itself blessed, and becomes a source of blessing. Even destiny has a human aspect, for it is the outcome of a divine purpose, which, however incalculable, is not, as a previous generation had thought, wholly malignant. Athens, to protect her favourites and to rebuke the pride of Ajax, brings down on him a fatal blight. But her anger, had he but known it, was only for a day, and she prepares the mind of Odysseus, his rival and supposed enemy, to vindicate his honour after death. The clear and steady vision of the poet, holding firmly by the facts of experience (he lived through the Peloponnesian War), forbade him to extenuate the sadness of life, yet he saw a light beyond. The loyal heart of Antigone, the love of Delamira, the brotherhood of Teucer, the essential purity and public spirit of *Edipus*, the faithful endurance of Electra, the incorruptible truth of Neoptolemus—these belong to the eternal things, however, on this 'narrow isthmus' of mortality, they may be frustrated or obscured. Even the dark end of the *Trachiniae* and the agonised realisation of Hyllus could not hide from the Athenian audience the certainty of the glory that should follow.

The poet's sympathies are enlisted for 'the noble living and the noble dead.' Great souls by their own or others' fault may be overloaded or broken, but in the end they shall be purified and justified. Ajax is provoked into a fatal outburst, but his valour shall be held in everlasting remembrance. The innocent but rash spirit of *Edipus* is unwittingly involved in a tangle of guilt from which there is no recovery in this world. But, though rejected by his kindred and nation, his end is peace, and he bestows a blessing on the after time. The same motive, the divine acceptance of inherent greatness that is rejected by men, appears once more in the *Philoctetes*.

Yet this exalted view of the divine purpose in humanity is subject to a certain limitation. The greatness admired is not that of outward position; it is essential greatness and nobility of nature. But noble qualities are still more or less associated with the accident of birth. Sophocles has not the *Æschylean* breadth and universality of sympathy. The inherent nobleness of Ajax, notwithstanding his offense, is vindicated by his captive bride, his illegitimate brother, and his opponent and rival, whom he suspects of being base-born. But Tecmessa was originally a princess, Teucer's mother likewise was the daughter of a king, and Odysseus was the true son of Lærtæa by his lawful queen. Antigone scorns Creon for his violation of eternal law, but she also despises him because he is not of the Cadmean race.

¹ *Soph. frag.* 140; *Sim. Sæpeus* *recluse*.

Closely akin to this limitation is the frank, untempered presentation of vindictiveness. Love and hatred in ancient life were equal powers. When Achilles drags Hector round the body of Patroclus, and kills twelve Trojan prisoners at his friend's funeral, the comment of the Greek mind would be, 'Behold, how he loved him!' So Electra's love for her father and her brother is measured by the exhortation to 'give a second stroke,' and to expose the dead Ægisthus to the dogs and birds. Ajax does not feel, as the heroic maiden in Æschylus' *Choephori* felt, that the curse he utters 'mars his perfect prayer.' Odysseus has been taught only that hatred is not to be carried beyond the grave. The peaceful end of Ædipus is not prevented, but only delayed for a moment, by the renewal of his curse against his sons.

In what remains to us of the work of Sophocles there is hardly any trace of Orphism, and the lyric poetry of the 6th cent. had comparatively little influence on his work. His materials are drawn chiefly from the epic cycle. On the subject of immortality his position is intermediate between Homer and Plato. That the Eleusinian mystic alone lives happily in Hades is strongly asserted in one fragment (763). But the feeling of Antigone is rather that of the pathetic funeral monuments in the Cermiens. Affection looks beyond the tomb. Souls meet again in that still realm, and 'longer is the time which we shall spend with them than with the persons who surround us here' (*Ant.* 74, 75). Although the language is not consistent, the continuance, not of a mere shadow, but of the conscious self in the unseen world is on the whole anticipated. Not the body, as in Homer, but the soul is *ædræ*. And while the place of departed spirits is generally spoken of as 'Hades,' in one passage, according to a later mode of thought, the dead are imagined as entering the 'vast æther' (*Ajax*, 1102; cf. the inscription over the Athenians who fell at Potidea, B.C. 432, *αἰὲρ αἰὲρ ποταὶ ἐρεβέσσῃ*). The case of Ædipus is peculiar. He lives, like Amphiaræus, a semi-divine life, in the darkness beneath the ground. Amphiaræus, too, retains in that under world the fullness of his mind, *καὶ νῦν ὁ δῖος ἀνδρῶν*.

It remains to speak of the dramatist's conception of irreligion. Creon's impiety, like that of the generals in the *Ajax*, consists in his defiance of the burial rite. But Jonasta's case is more typical. She and Laius had disobeyed the oracle, and then sought to evade it by an unnatural deed. For a moment she tries to smother her own and her husband's anxiety by a conventional act of worship. But when her hopes are revived by false intelligence, she defies not only the prophecy but the gods who gave it, until, on the sudden revelation of the dreadful truth, she dies in despair.

Some recrudescence of pessimism, such as we find in Euripides, is reflected in some passages of the latest plays. Philoctetes, when at the lowest of his fortunes, complains that in praising divine attributes one finds evil in the gods (*Phil.* 451, 452); and the elders of Colonus descend upon the vanity of life and the infirmities of age (*Ed. Col.* 1225 f.). But these depressing sentiments are contradicted by the main tenor of both dramas.

In the last *Ædipus* there is a depth and range of religious feeling which is not equally present in the other tragedies. The magnanimity of Theseus disarms the superstitious fears and scruples of the elders of the deme. Not the ritual itself, but the prayer accompanying it, is the important thing. Not the details of the ceremonial, but the pure intention of the ministrant, secures divine acceptance. Innocence of heart commends itself, in spite of involuntary pollution. And the great spirit, in passing from the upper air and light of

day, is surrounded with an atmosphere of religious peace.

SOTERIOLOGY.—In the article SALVATION (Christian) an attempt was made to trace the experience of salvation to its origins in the religion of Israel, and to depict it in the life of the disciples of Jesus and of the members of the Christian community during the apostolic age. In this article an attempt will be made to trace the idea of salvation as it manifests itself in successive periods in the history of Christian thought.

I. THE FACT OF THE CHRISTIAN SALVATION.—Salvation as presented in the NT consists fundamentally in a work wrought by God through Jesus Christ. In Him God gave the perfect revelation of Himself, and through Him fulfilled His saving purpose towards mankind. The saving work of God, however, is not complete as a bare fact of history. It operates as an abiding power in the experience of men, under the condition of trustful surrender to Jesus Christ, the personal Saviour and ever-living Lord. Certain features of this experience as presented in the NT are noteworthy, and determine essential elements in the Christian conception of salvation.

1. The continuity of this experience.—It stands in direct succession to the religion of Israel, not distinguishable from it in any other sense than consummation is from the earlier stages of one vital process. It begins a new development of God's saving work, whose centre and spring is always the same, viz. the exalted and living Lord; nor can its bounds be delimited, because they are contemporaneous with nothing less than the holy love of God. Christianity is to be identified, not by the intellectual or institutional forms with which it has been in different ages accompanied, but by the experience of salvation, which has been evoked, maintained, and furthered by trust in Christ as Redeemer and Lord. The life of the Church in salvation is continuous and forms a unity recognisable in variety. Its power of development is renewed, maintained, and defended by 'a constant spiritual return to Christ.'

2. Its differentia as a religious experience.—It is sharply distinguished from two forms of the higher life of man: (1) naturalism, in which salvation is achieved by man through diligent obedience to the moral imperative; (2) mysticism, in which salvation, conceived as immediate union with God, is achieved by man through special exercises of soul which vary from the magical to the contemplative. In deep contrast with these divergent types, the Christian salvation is grounded in, and warranted by, the divine initiative and the divine sufficiency. Its origin is in the love of God, conceived as a ruling purpose aiming at a kingdom or realm in which the holy will of God shall be done. This love appears in human experience as grace, i.e. the action of God, in the history of the race and the individual, directed towards the salvation of man. This salvation is not the work of man, but the work of God in man, and always it evokes in man, not self-congratulation, but the sense of constraint, as of those who find themselves in a bondage which is, nevertheless, perfect freedom (2 Co 5th). At the same time, this attitude towards

the divine salvation is the very reverse of quietism. Its distinguishing note is the sense of power. The OT and NT alike present a picture of life thrilling with activity and crowned with victory. Out of this experience there arises a twofold interest or passion: a passion for righteousness and a passionate longing for fellowship with God. Moralism and mysticism alike come to their rights in Christianity. They take their place within the Christian salvation. They are its expression and its outcome. They are not an achievement of man; but they manifest what human life may become through the saving action of God in man.

3. Its goal: the Kingdom of God.—Salvation is never, in the Biblical literature, statically conceived. It is always described in terms of power and action. It is true that salvation consists in a transition from one state or condition to another; and descriptions abound of the misery of the one and the blessedness of the other. But both states are conceived as determined by a power governing and animating human life. The one is the condition of man in 'the world,' or the present 'age.' Here man is subject to a power of evil, which masters him, drives him, and holds him in bondage. The other is the condition of man in the Realm of God (Col 1st). Here man is subject to the sovereignty of holy love and penetrated by the power of the Holy Spirit. This realm of power and love is conceived as a divine reality, a supernatural order, which is not, however, abnormal. It is nature, human nature, which is in an abnormal condition, and in this abnormality physical nature shares (Ro 8th). The divine order is the truth of man and the universe, and overhangs this spatial universe, impinges upon it, and is ever ready to intervene in it, if we may use figures, which, however, wholly fail to combine ideas that are really disparate, viz. a world above time and sense, and a world conditioned by time and sense. The Realm of God, being thus conceived as a fact of a divine super-sensuous order, has three aspects: it is present, progressive, and future.

(a) It is present to the need and the faith of man. It is to be received as an immediate gift of grace, and entered in deep humility (Mt 18th), through such a reversal of sin as amounts to a new birth (Jn 3rd) or a new creation (2 Co 5th).

(b) It is progressive as an enterprise to which God has devoted Himself and all His resources, and in which His honour is involved. To a share in this enterprise He summons all who will be saved. They are to enter it to the last limit of devotion, counting all things but loss for the glory of this achievement. Apart from a service which springs out of death to the old world and the old nature and may involve actual suffering and death at the hands of the enemies of God, there can be no salvation. Those who in one aspect are 'saved' in another are 'being saved.'

(c) It is future inasmuch as its victory depends on an act of divine intervention. It is impossible to omit this from any picture of salvation as an object of Christian faith and hope in the 1st cent., or in any subsequent age of the Church's history. Men cannot build the Kingdom. The Kingdom comes. Questions of time and manner are secondary and not essential to the Christian faith. The first generation of believers thought of the Kingdom as immediately to appear, and framed pictures of a literal millennium, mistaking symbolism for prediction. The point of value is that the Realm of God enters as 'the highest order of life and power in the universe.'¹ In endeavouring to represent the relation of this spiritual order to the world of time and space, it must always be conceived as imminent and described as 'at hand.' The Christian enterprise, which is, fundamentally, the vindication of the divine sovereignty in the whole domain of human life, derives from this imminence its source of urgency and its note of confidence. In preaching the gospel, in perfecting holiness in the fear of God, in waging war on behalf of righteousness, Christian men are not striving to win a salvation which is in doubt. They are building, not on the sands of human theory, 'but on the bed-rock of that Order which, however deeply it is hidden from common observation by the course of outward events, yet stands to religious faith as the most secure and final truth' (Mt 16th). Salvation, therefore, lies always above and beyond and before the Christian. The paradox of a Kingdom 'come' and 'coming,' a salvation at once possessed and expected, may

defy logical analysis, but has never seriously perplexed those who, moving through the world of time and space, have seen and entered a region of values and powers where earthly measurements do not apply.

II. THE IDEA OF SALVATION IN THE MYSTERY-RELIGIONS.—In the Hellenic-Roman world, at the time when Christianity began its missionary career, there was proceeding what cannot be termed less than a revival of religion. The religious worship of the Olympian deities had lost whatever moral and spiritual power it ever possessed. That devotion to the city which was 'the real religion of the 5th century'² necessarily passed away when the independence of the city-states perished under the might of a world-empire. But religion itself never perishes. Where ancient forms of religious life have failed, the demand of the human spirit for a satisfying salvation is only the more intense and urgent.

In the 1st cent. of our era men were going behind the more formal and collared religions to the practices and ideas of primitive times. It seems a terrible relapse into barbarism that the inheritors of the splendid Hellenic culture should seek salvation in the blood of a divine bull. Yet, in a sense, this return to a cruder and less sophisticated age was really an advance. There was a wide-spread 'failure of nerve,' as Gilbert Murray has phrased it.³ But, when men reached the depths of his helplessness, he is near the sources of religious strength and hope. He turns passionately to any religion, however crude its ceremonial or outrageous its mythology, which will offer confidently enough the great boon without which life is unendurable—salvation. The mystery-religions and the Gnostic sects are all of one religious type. They are avowedly religions of salvation. They are dissociated from race or nationality. They pass through the organized forms of civic or political life and reach down to the single soul. They are at once individualistic and universal. They are not so much separate religions as, at bottom, the ultimate religious need and susceptibility of man, turning away from traditional and stereotyped forms and plunging into depths of psychic experience where the human and the divine seem to be blent, or perhaps confused, in a unity too mysterious for thought or speech. While they are thus rooted in mystery, they share certain views of the nature of God and man and the world, of sin and evil, and of deliverance and blessedness which amount in fact to a fairly coherent doctrine of salvation.

(1.) God, as the divine nature, is conceived or felt to be a being or substance, far beyond apprehension or determination by human thought. He is not personal and cannot be named. Only this is certain, that, if the human spirit could attain to oneness with this ultimate divine nature, it would be emancipated from all ill and would enjoy an ineffable experience of peace and freedom and rest. (2.) Beneath or over against God is the world, to which He stands in no living relation: It is occupied by powers which reign in the whole region inhabited by man and hold him in subjection, so that the soul is haunted by fear, and life becomes one great cry for deliverance. (3.) Man carries within him a seed of the divine. He is at once greater and less than these sub-divine principalities and powers—greater because he is himself divine and holds, as it were, a fragment of the divine nature in himself; less, because he, i.e. the divine in him, is enclosed in a material fabric, which holds him at an immeasurable distance from God and is subject to all the influences which govern and tyrannize over the material world. Salvation, on the negative side, means deliverance from matter, from sense, from all that is not God. (4.) The powerlessness of man requires a helper, redeemer, saviour. Such an one appears in all these religions, with a various ancestry, with cloudy mythologies, decorated with titles of honour, but always claiming victory over the powers that hold man in bondage. (5.) The method by which this victory is won is variously depicted in the myths. Deep through them all, however, is the thought of life won through death. The old religion of nature, glorifying the accession of winter's death and spring's resurrection, returns with fresh power to hearts weary of the artificialities of civic ceremonial. Such primitive conceptions,

¹ G. F. Hartour, *A Philosophical Study of Christian Ethics*, Edinburgh and London, 1911, p. 200.

³ Gilbert Murray, *Four Stages of Greek Religion*, p. 28.
⁴ 18, ch. 11.

coe, relate themselves to profounder and more ethical ideas, of lives surrendered to shame and death and yet found again in the increased values of the welfare of the community. (vi.) Our sympathy with the mystery-religions up to this point is deep and an expectation great. It is disappointing to find that, when we ask under what conditions the individual was supposed to reach union with the divine, the reply dwells on fasts, not merely on symbolisms, but on magic, not merely on self-discipline, but on semi-physical ecstasy. The commonplaces of Greek religion through this whole period is the process whereby the spark of divinity in man is reunited to its source: (a) ceremonial, making keen appeal to the emotional and sensitive nature; (b) ascetic practices aiding the religious susceptibility and expressing (it was hoped) the urgency of lower instincts; (c) ecstasy, produced by fulfilling certain physical and psychic conditions and superinducing a state of sub- or supra-consciousness in which the soul knows itself to be united to God, sunk in God, and filled with God. These are the outstanding features of the way of salvation opened to seeking souls in the mystery-religions, which were the 'forerunners and rivals of Christianity.' (vii.) When we examine the salvation itself, the result is disappointingly meagre. In phrase it is magnificent, 'deification.' In reality it disappears in vagueness. Negatively it is deliverance from mortality; positively it is union with the divine, conceived mainly as a blending of a portion of being with its mystical source. Experimentally salvation is the mystic state, bearing the marks which William James has noted—ineffability, noetic quality, transiency, passivity. This is the real heart of the mystery-religions.

Applying the ethical standard, the only valid test, we must assign to these mystery-religions a very moderate value. Their emphasis is not on morality at all, but on escape from elemental powers, a flight of the soul to the divine, which is conceived mainly through negations. In this deliverance morality is only a step, valuable not in itself, but as an introduction to a condition in which moral good does not arrive, being succeeded by some psychic state which is held to be the highest blessedness of which man is capable. Morality, too, even in this secondary position, is left without dynamic. There is no inner constraint, no self-forgetful inspiration. A man is to be pure, and just, and chaste, in order that he may reach a state beyond the sphere of moral values altogether. We should not deny that the mystery-religions served religious ends in the experience of multitudes of adherents. The salvation they offered was a fragment, an element, or an instalment, of the true good. They expressed a demand and increased a desire, preparing the way for a religion which more perfectly uttered the one and responded to the other.

When we compare the ideas of salvation set forth in the mystery-religions and in Christianity respectively, we are impressed with the features common to both.

(i.) Both conceive man's highest blessedness as union with God. (ii.) Both trace man's descent to separation from God. (iii.) Both take a lofty view of one side of man's nature, as intuition affirms with the divine. (iv.) Both present the radiant figure of a Deliverer to the fasting aspirer. (v.) Both trace life to its roots in death. (vi.) Both connect the deepest religious experiences with certain ritual acts. (vii.) Both place salvation in the return to God.

To infer, however, from these undoubted resemblances that Christianity was itself no other than a mystery-religion is a mistake. The hypothesis of borrowing, or even of unconscious infiltration, is not required by the facts, which, at the same time, make impossible the conception of Christianity as a bare revelation, standing naked and alone in the history of the human spirit. All religions spring from sources deep in the nature of man. Historically, however, the great religions have followed separate paths. The mystery-religions represent the highest point reached on one line of development. Christianity is the culmination of another and wholly distinct line. It is the religion of Israel, growing by continuous evolution out of the experiences of the prophets and of those, their associates and successors, who received and responded to the actings and communications of the divine love in its redeeming,

¹ See, further, art. MYSTICISM.

saving work. The primary fact in the NT Church is the experience of salvation entered into by its members; and that experience is unique and distinctive. Its implications are essentially different from those of the mystery-religions. It is sui generis and cannot be explained as a composite. Christian missionaries borrowed in the 1st cent., as they do in the 20th, phrases of speech and forms of thought. How else were they to be intelligible? But they did not borrow their message; and they did not copy from foreign sources the religious experiences which they sought to evoke and deepen in the lives of their converts. Between Christianity, with its distinctive view of man's case, its own special message, and its typical experiences, and the mystery-religions at their highest and best there is a deep line of demarcation. On the one side, the deepest concern is ethical and personal, and the highest result is a character conformed to that of God, conceived as the incarnation of love and holiness. On the other side, the problem is primarily ontological or cosmological, and the solution is found in an experience in which the ethical and the personal are subordinated to the psychic and the ineffable. The Christian missionaries accepted the challenge presented by the mystery-religions, or rather they availed themselves of the opportunity offered in these noble and pathetic approaches towards God. Their claim was that what they had to offer took up into itself all that was best in these religions; and they invited every seeker to sturn in a goal which satisfied a need deeper than the mystery-religions ever knew. Each point of contact noted above reveals also the breadth of separation.

(i.) *The Idea of God:* to the mystery-religions a vague, remote, impersonal, unknowable, divine nature; to Christianity a living being, with a character and purpose, personal in His actions and manifestations, known in history as loving and righteous, achieving by His own doing and suffering the redemption of man.

(ii.) *The descent of man:* to the mystery-religions instability and subjection to hostile influences in or above the world—a separation conceived almost wholly and physically; to Christianity a moral separation from the holy God, produced by man's own act involving guilt and judgment and ruin.

(iii.) *The dignity of man:* to the mystery-religions the possession in mortal frame of a veritable spark of divinity, which never seeks reunion with its source; to Christianity a moral likeness to God, which has been defiled by sin, and yet is capable of being renewed, so that man can be restored to divine man and fellowship.

(iv.) *The person of the Deliverer:* to the mystery-religions a mythical figure, supra-human, whose history moves in a non-human region of sublimity and achievement; to Christianity a real human being, with a genuine human experience, the reality of whose life and death constitutes the gospel, inasmuch as they are the means through which God in His redeemed the world.

(v.) *The method of redemption:* to the mystery-religions a death which belongs to another region than that in which man suffers and dies; to Christianity a death real and tragic, an actual dying, in which the utmost need of man is felt and met by One in whom divine love fulfils its redeeming function.

(vi.) *The conditions of salvation:*—In the mystery-religions there is no living relation between what the Deliverer achieves for man and what man achieves for himself. The process of salvation in reality does not need a Mediator at all. It consists in experiences which are evoked by sacraments or dramatic symbols. Such experiences are effective in proportion as they pass beyond conscious apprehension or articulate expression; and they culminate in an ecstatic state, in which the desired union with God is attained. The difference between this and the way of salvation provided in Christianity is horizon-wide. The Christian message concerns a saving action of God, which is carried out by His Son Jesus Christ. It concentrates the salvation of men in the person of Christ. The one essential condition of salvation on the part of men is that they come, with trustful surrender, the love of God as it reaches them in Christ. This is what the Scriptures of Christianity, whether OT or NT, mean by faith. It is not a mystic state. It is radically different from ecstasy. It is not ineffable; for it is genuine only as it makes confession of its inward experience. It has 'noetic quality' only in the sense that it 'knows' by experiential acquaintance the living object of its trust. It is not 'transcendent,' but is the constant energy of life. It is not 'passive,' but is the impulsion of service. Everything in salvation is controlled by this exercise of faith. The ultimate object is always God. If Christ is designated as the object of saving faith, it is because God is not known at all in His saving

power apart from Him, and because He is inseparable from God in the believing apprehension of those who see the subjects of the divine salvation. The experience in which man, in his need, commits himself to the God who comes to him in Christ is the deepest, richest, and most fruitful of which the human spirit is capable. It embraces the whole complex of human power. It cannot, therefore, be unemotional. Precisely at this point Christianity and the mystery-religions approach most nearly and at the same time stand most widely apart. The Christian, like the devotee in the mysteries, has moments in which great tides of feeling sweep through his being, sometimes elevating him to a region of truth and reality too sacred to be disclosed to any human being. The difference lies in the source and quality of such emotional experiences. To the Christian they are privileges granted as help to faith; but they are not, in themselves, identified with faith. They are states; faith is an action. They are products, by-products, of faith, and are not to be confused with it or placed as though they were more precious than it. The expression 'faith-mysticism' is, strictly, a self-contradiction. The act of faith is incompatible with the impersonality which is the characteristic note of the mystic state. The degree to which emotion will be the accompaniment of faith's activity will vary endlessly in individuals. The conscious too will vary. Ordinarily, however, feeling will be stirred when in symbolic action: the objective saving deeds are presented to the view of believers. The so-called 'sacraments' of the Christian Church and the rites performed in the mysteries belong to different universes of religious thought and practice. Symbolism in Christianity has reference to a historic redemption and is meant to rally the members of the divine salvation; it becomes effective in experience only on condition of faith directed to God. It has no saving power in itself. No doubt, already in NT times, there were adherents of mystery-religions who, in entering the Church, carried with them ideas of the *epagoge* operative in ritual actions. But it is certain that such were not the ideas entertained by the leaders of the Church. W. Morgan, who is not slow to assign large influence to the mystery-religions in the developing theology of the Church, denies that the apostle Paul held any such idea of the ordinances he prized so highly. 'A memorial of Christ's sacrificial death, a means of proclaiming it—that and that alone is what the Supper signifies for Paul.' The aim of the ordinances is to express and confirm faith, not to produce an ecstatic state in which self shall be absorbed by God. Paul, who was an expert in practical psychology, valued highly the raptures of religious feeling, but he was well aware of the dangers attendant upon them; and he hesitated to the Church such a careful evaluation of the emotional element in religion as saved Christianity from being merged in the mystery-religions and from sharing their moral impotence and subsequent doom.

(vii) *The scope and contents of salvation.*—The mystery-religions break down at this point. Escape from some, deliverance from demons, final absorption in God are not themes which permit of enlargement. Salvation as thus conceived cannot be articulated—for the simple reason that there is nothing to it. In wide contrast, Christianity advances in a world of historical fact and ethical values. On one side, salvation is the wealth of the divine love, unfolded and conveyed in the Christ of history. On the other side, salvation is the progressive appropriation of what divine love means in life. This is all, and this is everything. There is no divine beyond that which operates in Christ. He is the *Plasma*. He is not a step towards a union with God which, in metaphysical abstraction, is supposed to be superior to the concrete spiritual realities of forgiveness, reconciliation, and moral renewal. No doubt, the people who passed into the Church were obsessed with fear of demons and of death, and it was certainly part of the Christian salvation that they should be delivered from such torments; but this, like every other benefit, was only an issue of the new relation in which men stood to God through faith in Christ. There is no getting to an end of what may be possessed in faith; and there is no getting beyond Christ. The convert was taught that all things belonged to him, because he belonged to Christ, and Christ belonged to God. Paraphrasing Christianity, which offered a full salvation for immediate acceptance, did not preclude itself to be the final stage of God's redemptive action. The salvation of the mystery-religions was at once individualistic and final. Christianity, true to its Hebrew origin, was social and dynamic. Its idea is still the Kingdom of God. Till that Kingdom shall have come, salvation is not complete. Christianity, therefore, is bound to the conception of a coming of the Redeemer to which there is no real parallel in the mystery-religions. The belief in the Parousia is an element in the essentially historical character of the Christian religion. It is a religion of the acts of God, and these acts are not closed. The greatest of them is yet to come. It will be the climax of a great redemptive movement, and in it humanity will be reconciliated and the Realm of God established in an environment suited to its divine nature.

These, then, are the elements in the Christian conception of salvation which distinguish it from that entertained in the mystery-religions—the personal, the historical, the ethical, the eschatological. To them Christianity owed its superior power and attractiveness and its final victory over its forerunners and rivals. Whether, in general,

¹ *The Religion and Theology of Paul*, p. 221.

tions following the period of the first missionary enterprise of the Church, the mystery-religions did not win an unmarked but very real triumph, by entering into Christianity and giving it a distinct mystic quality, is another question. But that the religion whose literary record is found in the NT has its own essential qualities, placing it in a class apart from the contemporary mystery-religions and giving it religious and moral superiority over them, seems to be an ascertained historical judgment.

III. *THE IDEAS OF SALVATION IN GREEK PHILOSOPHY.*—1. *Pre-Socratic.*—Reviewing the course of Greek philosophy in its three main periods, we note that pre-Socratic thinkers have scarcely faced the problem of their relation to religion. Their attitude towards the popular religion is scornful, as illustrated by the contempt poured by Xenophanes upon the polytheism of his day. This, however, means no more than that the Olympians were losing whatever divinity they had ever possessed and were passing to their doom of unreality. Philosophy itself is making direct contribution to the religious and theological inheritance upon which both Greek and Christian entered in succeeding ages. The idea of God, in Xenophanes and Parmenides, has already assumed the form which has clung to it to this day. The unity of God has become a fixed point for all subsequent reflection—a unity conceived as the negation of all differences, an absolute principle, into which the whole intelligible world, and even the intelligence itself, is resolved and lost. Greek thought, in its first stage, has not realized the place of the self-conscious subject and has not found a spiritual unity to explain the fullness of experience and give man a position of independence and lordship in the world which hems him in.

2. *Idealist constructions.*—The second period of Greek philosophy is introduced by the great name of Socrates (q.v.). Socrates has been described as a 'philosopher by accident'; and yet he gave to philosophy and to theology at once the problem and the principle by which their course was to be determined for all time coming. He is the discoverer of reason; he gave to human subjectivity its rights. At the same time he is the fountain-head of an intellectualism which made the Greek solution of the problem of life one-sided and inadequate. Difficulties arise when we press for vindication of the positive proposition that virtue is the fruit of knowledge. It is a commonplace that knowledge in things ethical is not power; else why do we constantly approve the better and do the worse? A deeper source of difficulty is the implied relation of reason to what may be termed the raw material of the moral life—the instincts and impulses of the individual and the common practices of men acting together in society. Is there such a deep gulf between them that morality and religion will spend themselves upon a task which can never be finished, viz. the reconciliation of elements of experience which are fundamentally disparate? It can be foreseen that on such a dualist thought will ultimately break itself to pieces. Precisely this is the endeavour and the tragedy of Greek philosophy—to overcome dualism by the sheer force of dialectic and, when the task is seen to be hopeless, to appeal to supra-rational sanctions and to plunge into irrational experiences. The ethic of Socrates, illustrated by the splendour of his death, has all the nobility of a protest against unreason, all the significance of a fresh starting-point in the history of the human spirit. The individual is now the problem. His salvation becomes the vital concern, not only of himself, but of philosophy.

Plato and Aristotle (q.v.) take the torch from Socrates' falling hand and bear it into regions

which he never presumed to enter. The conception of an end determinable by reason, bringing order into the moral life is by them extended to experience as a whole. Intelligence is treated as the ultimate source of all knowledge and all being. The ethic of Socrates is transmuted into cosmology, metaphysics, and theology. The problem of the individual, accordingly, is not explicitly central; and yet it is by reference to the individual that the grand sweep of Platonic and Aristotelian thought will ultimately be tested. Philosophy, as represented by Plato and Aristotle, reflects a form of life in which the individual personality has not yet received full recognition. Therefore the question of an adequate life for the individual remains unanswered, because it has not been asked with sufficient thoroughness. In this respect, therefore, Plato and Aristotle are not true Socrates. Their encyclopaedic systems are, in a sense, a brilliant episode of thought. The true succession passed from Socrates to the era of individualism which succeeded that phase of life of which the idealism of Plato and Aristotle is the splendid record. At the same time that idealism was a necessary stage in the evolution of Greek thought; it stood as a final demonstration of the sufficiency or the insufficiency of intelligence to unify human experience and to be the dynamic of the moral and religious life of man.

In the Platonic view of knowledge and of life there are two movements—one towards concrete idealism, the other towards dualism and mysticism, the latter being proof that the former has failed to reach its goal. (a) Plato seeks to reach a principle of unity which will really underlie and explain the variety manifest in the universe. With respect to human life, the Platonic ideal is an organic unity, in which each individual will find his place and function and reach the perfection possible to him, through conscious identification with the dominant idea of the whole. On this side of his great effort Plato did not need to face the problem of individualism. The individual is simply found in the great whole and finds himself when he realizes where he is. There is no problem of salvation. (b) The other movement of Plato's thought, however, suggests quite a different view of man's place and destiny. It would appear now that the unity aimed at is not found in the differences. The ultimate reason is not wholly intelligible. The goodness of God is not adequate to its tasks, being confronted by unconquerable necessity; and this recalcitrant material makes evil an abiding quality of the scheme of things. Thus dualism and pessimism haunt an idealism which has over-emphasized the intelligence and turned it against the practical details of knowing and doing. As soon as dualism makes itself felt, the question of the individual and his salvation emerges; and its solution in one way—the way of negation and mysticism—becomes inevitable. Dualism and mysticism follow a beaten path—whether in the East or in the West, whether Indian or Greek or Christian. The rubric may vary; the essential mystery is the same, and, it cannot be too plainly stated, it is essentially different from the core of that religion whose literary expression is the Scriptures of the Old and New Testaments. The true nature of man is oneness with God. His present position is that of imprisonment within an irrational and material envelope. Immediately salvation becomes his primary concern and forms the supreme business of his life, and this salvation must always take shape as a purification (*katharsis*) of the soul, its deliverance (*lysis*) from the chains which bind it to earth and sense, culminating in that vision of the divine (*thea non seen*) which is, in the very act,

its reunion with the source of its true being. Phrases like these repeat themselves unendingly in the literature of mysticism. They revolve round one central idea, a universal that is abstract, without contents, union with which is denial of all the positive experiences of life. Over against this whole conception stands the Biblical idea of salvation as fellowship with the living God, realized in faith and love, manifesting itself in character and ministry, and culminating in a social order of which God is at once the head and the indwelling life.

The effort to overcome dualism fails even more conspicuously in Aristotle than in Plato. The moral life, as Aristotle portrays it, is simply a rescript of the best Greek life he knew, not ignoble by any means, but essentially narrow, and confined to a class which bases its wealth and power and leisure on the labour of those who can never share its culture and privileges. A really dominant unity ought to constitute humanity as an organism; but such an idea is repellant to the Greek spirit and is exhibited in Aristotle's social ideal. Reason uses the irrational and cannot transmute it. And, even when this ideal, such as it is, is reached, the irrational still clings to it. Virtue is not knowledge. The virtuous man has to deal with conditions which are not the creation of reason, and accordingly he can only do his best and reach, on the whole, a balance between reason and unreason. He can attain an art of living; but to reach the perfection of reason he must cease to live the normal life. It is a far cry from Athens to the Thebaid, and a farther still to Luther, doubting if he can save his soul in the world. But the abstract opposition of form and matter, of reason and sense, of the theoretical and the practical, is the philosophy which lies behind monachism and asceticism; and it is the bequest of Greek dualism, even in the hands of so concrete a thinker as Aristotle, to the Occidental world. A negative salvation achieved by flight is his message, which subsequent generations accepted only too submissively.

Plato and Aristotle reflect the life of the Greek city-state, which, already when they wrote, was showing that it could not be permanent. Its passing left the problem of the individual and his salvation in explicit and definite form. The mystery-religions met the need of the age with their own message and methods. Philosophy pursued its own path to a goal now distinctly discerned. If the great synthetic systems are gone, with the form of life they interpreted, if there is no outward organism in which the individual can find himself, there is nothing for him to do but to pass inward into his own inner life and endeavour to satisfy himself with that which he shall find therein. Here the Greek dualism suffers shipwreck. The elements which Plato and Aristotle had masterfully held together fall apart and are made the prize of opposing dogmatism. Suppose the inner life yields us its secret and rational principle, which is also discernible as the very life of nature, then the result will be an individualism which is also a cosmopolitanism, and even a pantheism, and will be essentially religious. Suppose, however, the secret of the inner life be no more than sense and its satisfaction, the result may be delicate and beautiful, the joy of a cultured élite; or it may be gross and vile, the shame of the reckless and prodigal; but it will conform to no standard of values which can approve itself objective and universal; and, whatever form it takes, it will be essentially non-religious. Between these two views of what the inner life could yield the thought of the age was divided. The latter was really a denial of the deepest demand of the human

spirit. The former became the real religion of all who sought the higher life of the soul, and did afford a standing-ground and a safeguard in the midst of an alien world.

3. **Stoicism.**—The Stoic conception of the universe and human life is essentially religious; and the great Stoics are men with a message to the world of their day which is the outcome of a genuine and very noble religious experience. Philosophically they are monists. They surmount the dualism which even an Aristotle could not exorcise by the denial of one of its alleged constituents. The difference between form and matter is, in point of fact, unreal. It is true that the universe may be read in terms of matter; but matter is spirit and life, and the material universe is spiritual to the core. It forms a unity, in the sense that there is but one element of being—not two elements confronting one another in irreconcilable opposition. The Stoic solution of the problem of life, accordingly, is greatly simplified. The universe manifests the presence and operation of the *Nóyos creaturatus*, a generative principle, which is immanent in individual existences, or rather is so one with them that they are really parts of it. The Stoic has advanced beyond Heraclitus, from whom the Logos (g.v.) conception is derived, in that he defines it after the type of that reason which in man is reflective and self-conscious. The universe reveals the control of a Divine Providence, the constant energy of a universal life. In God all things live and move and have their being. Man has this privilege, beyond all other beings, that he can recognize the Logos as identical with his own true self. He can make himself the willing organ of a universal principle. He can rise above the separation of his mere individuality and, ceasing from all selfish endeavour, see himself to be member of a community which includes all human beings. In this vision of himself, which he reaches by leaving behind the mere externalities and accidents of his environment and entering into the secret of his individuality, he really attains spiritual universality and lives by the impulse of the broadest philanthropy. By accepting his place in the universe he transforms fate into freedom and enjoys an independence and integrity of which no outward circumstances can deprive him. This, then, is the Stoic 'salvation.' It turns from a world which no longer provided a rational life for man, and centres the whole interest on the individual. In him it finds the presence of the same reason which is the soul of the universe. It bids him awake to the consciousness of what he is, adopt that as the will of his life, and live in entire consistency with it, i.e. at once with universal reason and with his own nature, for these two are one. He thus stands secure against the assaults of unreason, whether they take the form of the fury of blinded men or the stirrings of blind passion. Even those losses and afflictions which belong to an existence in time and space do not greatly move him. He is pure reason; and all things, other or less than rational, remain outside the citadel of his soul. The task of his life is simple. Positively, it is to will the universal; negatively, it is to confront the irrational with absolute refusal. The Stoic saint is an ethical absolutist; and his moral judgments admit of no qualifications. It is altogether intelligible that the Christian salvation should show affinity with Stoicism, while with Aristotle and Plato the relation is almost wholly one of contrast. The metaphysical dualism of the Greek philosophies has no true parallel in the Biblical literature; neither the problem nor the solution enters into the Christian idea of salvation. But an ethical dualism and an active victory over it,

which are the central interests of Stoicism, form the very stuff of Christian experience. The individualism, the strenuousness, even the ethical intolerance, of a Stoic have their parallels both in Jesus and in Paul. Stoic virtue, at its sternest and most assured, might have recognized its counterpart in those 'who endured the cross and despised the shame.' A high-minded man, in the years when Stoicism and Christianity competed for the winning of souls, could have no other alternative. He must commit himself to the one or the other. Yet the defect of its Greek origin clung to Stoicism and turned its strength to weakness. After all, though it is a monism, it is born of dualism. Its unity is the unity of one element, which does not really transmute its opposite, and can do nothing with it but reject it. At its best Stoicism has the strength and weakness of asceticism. It can repress, but it cannot construct. It can command, but it cannot create. It has no inward spring of action, capable of continuous transformation of character and endless service of the ideal. It is law, not gospel. Like all honest legalists, the Stoic was bound to end in pessimism.

4. **Philo and Plotinus.**—The conclusion is that, since in Stoicism the guiding clue of Greek philosophy has failed us, we must seek some other. Plainly some deeper principle is wanted than reason, which can never subdue its opposite. The human spirit must seek for the ultimate unity, i.e. for God, not in the outer world of the universe or the inner world of the soul, but in a region that transcends both. It must cease to rely on pure thought as the instrument of its endeavour or the method of its approach. God must be held to be essentially transcendent. He cannot be transcendent in it. His connexion with it cannot be immediate, but must be maintained through intermediaries. The Logos must be dethroned from its position of Lord of all and become at best the greatest of those intermediaries. Man cannot find God even by the highest form of spiritual energy hitherto practised. Philosophy itself can bring us no farther than the threshold, which can be crossed, if ever, only in ecstasy. Such an experience leaves even the purest contemplation hopelessly behind, and impels the death of the very self which irresistibly craves this final blessedness. This is the religion—it would be improperly called a philosophy—in which the Greek spirit finally sought satisfaction. It closes an epoch. In the same period Christianity is inaugurating a new experience and giving a new statement and solution of the age-long problem. These two forms of spiritual endeavour are contemporaries. Their interrelations dominate the subsequent history of thought. Greek philosophy does not stand alone at the point which it has reached. Indeed, it may be regarded as the expression of a movement which filled the Hellenic-Roman world. God was not to be found in the stereotyped religions and the systematic philosophies. He was in a beyond which must be reached, as it were, in a kind of desperation. This is the significance alike of the mystical religions and of the closing period of Greek philosophy. The same stage, moreover, had been reached by a race whose mental qualities were widely different from those of the Greek. The religion of Israel stands apart from the theological conceptions of the Hellenic spirit. Its problem is primarily and essentially moral. It concerns the relation of man with a God who is not far off, as a unity above all differences, but near in His righteous and merciful actions. He is not an Idea, with the impotence of impersonality, but a living Being, known in His doings. No Hebrew ever dreamed of discussing either the existence or knowableness of God—He has made Himself known; He is acting

in the history of His people. What is left for man to do is to read the lesson of history and enter into the redeeming purpose of God as it grows through the centuries. There came a time, however, when it was not so easy to hold the idea of God as living, active, and close at hand. The historical revelation ceased with the destruction of Israel as a separate nationality. The voice of prophecy is still, its place is taken by a sacred book. In it is written down the absolute truth of God. Man's business is to learn the contents of the book and hold, and do, what is therein prescribed. But God Himself is not there. He is in a heaven above. From thence He will come in a great day and vindicate Himself and establish His sovereignty. The idea of God in His bare transcendence takes growing hold of the Jewish mind. The Jew has reached the point where the Greek mind stood after the failure of Stoicism was becoming manifest. Dualism, which had been alien to his religious consciousness, has laid its malign spell on him. He, like the Greek, has somehow to bridge the chasm between the absolute and the relative, the infinite and the finite, a principle of unity and the manifold of experience. He, too, has to provide a way of salvation whereby the exiled spirit of man may regain its home in God. When he reaches this point, the Jew becomes the pupil of the Greek and takes over the Greek solution of the problem, which is common to both. The Hellenizing of an Israel is unthinkable. The Hellenizing of Philo Judaeus was inevitable. In point of fact, dualism arrives in the natural movement of the human mind. When it is stated in its metaphysical form, there is only one solution, after philosophical reflection has sunk exhausted under a task too heavy for it. The solution consists fundamentally in two conceptions—mediation between the transcendent God and the finite world, and ecstatic communion between man and the God who cannot be reached by exercise of rational faculty. The scheme of religious thought, accordingly, throughout three centuries has the same outline, whether we study it in a Jewish or in a Greek representative. The details, of course, vary widely, but they come under three heads: (a) the idea of God as transcendent; (b) the relation of God to the world through intermediaries; (c) the salvation of man through an ascent, which culminates in ecstasy.

Philo, born about 20 B.C., represents the Jewish movement, while the Greek development has its finest exponent in Plotinus (A.D. 203-269). A brief summary will illustrate the resemblance between them.

Philo.—(1.) *The idea of God.*—The transcendence of God finds in Philo's work strong emphasis as at once inspiring his connection with the world and his relation to man. Anthropomorphism must be unambiguously set aside. In pure and reverent thought we rise to the conception of God as One who is wholly removed from all relations, and therefore cannot be defined. We know that He is. What He is can never be apprehended in thought. He has no attributes, and can predicate as we apply to Him as to any other the gift which separates Him from the sphere of things relative and finite and His removal from the grasp of our thought—*ἀσώματος, ἀσχετόν, ἀσυνείρητον, ἀσυνετόν, ἀσέπαιον*. He is the simply existent (*ὁ ὢν, ὁ ὢς*); He is self-sufficient (*αὐτάρκης*) and cannot directly sustain relations with any finite being.

(2.) *The idea of mediation.*—Between a God thus conceived and the finite world man must be found. God is not identical with the world, nor can His power be brought into immediate contact with the world. Philo finds the bridge built for him, both in Greek thought and in Jewish theology. God operates on the world in terms of powers which are His and yet in some sense are separable from Him. For the Jew these powers are personified attributes of God. For the Greek they are the Ideas which Plato held to be the truth of things, and which later thought tended more and more to hypostasize. These intermediaries Philo concentrated in the Logos, the one mediator between the transcendent God and the finite world. The Logos is all in all for Philo. Without the Logos there

could be no knowledge of God, nor any relation of God to man. The Logos is the first-born Son of God, or even the second God; and, from the other side of the contrast between God and the world, the Logos is the Heavenly Man, the Discoverser, the High Priest on behalf of man. To the Logos belong the great OT types of the divine presence and power, the manna, the living stream, the cloud, the rock in the wilderness.

The same great name, the same honorific titles, and the same typology are to be found in the NT; but the difference between Philo and the NT writers is profound. In Philo the problem is metaphysical and cosmological. The Logos links ontological opposites together. The Platonic Logos presupposes a distant Deity. In the NT the problem is moral and personal. The Logos crosses a far deeper than an ontological chasm, viz. that which yawns between two moral beings who were meant to live in harmony, one of whom has rebelled against the love which ought to have been his inward constraint and impulse. The NT Logos presupposes a God so near to man that He entered into the situation sin has made, and, as such, achieved the reconciliation. The problem is set to the divine love and to the human conscience, and it is solved not in fact, but in historic fact. The Logos of the NT is not a shadowy near to God, but the brightness of His glory, the express image of His person, not a vague speculative figure of which it is impossible to say whether it is God or other than God, personal or impersonal, but an historic personality, Jesus of Nazareth. It is with a kind of triumph not quite unshared with those that the NT writers fling back on Alexandrian Judaism its suggest yet empty formula. The Logos? Certainly, we have heard and seen that word—not an empty name, but the living voice of a present redeeming God. 'The Logos became flesh, and tarried among us.' It is of what entered from the very beginning, of what we heard, of what we saw, of what we witnessed and touched with our own hands. It is of the Logos of life—it is of what we heard and saw that we bring you word, so that you may share our fellowship, and our fellowship is with the Father and with His Son Jesus Christ. This is not philosophy at all. It is life, rising out of historic fact, fulfilling itself in experience.

(3.) *The idea of salvation.*—On principles of dualism there is only one source of man's distress—his body, which is the tomb or prison of his soul. From the body, therefore, man must be delivered, and also from the whole network of the soul as that is occupied with things finite; and, as action is necessarily occupied with things finite, deliverance can be accomplished only where the soul has sunk into passivity and yielded itself to the rapture of the beatific vision. The stages of this salvation are, practically, stereotyped for all these centuries. Philo named them *Ascesis, Katoche, Pora, moral discipline, 'contemplation,' 'ecstasy.'* This is the way of salvation as conceived throughout the whole Hellenic world. There is in it no conception of an historic redemption wrought for man. Indeed, even the Logos comes to be necessary and may be left out of account in the final step that brings emancipation. There is no call for faith as an act of trustful commitment or as a life of personal loyalty. The contents of the Platonic migration do not include the power of forgiveness, the joy of reconciliation, the gladness of filial confidence.

Plotinus.—(1.) *The idea of God.*—The transcendence of God finds final expression in Plotinus. What is present in Philo almost, as it were, against his will, what is the last result of Aristotle's great endeavour to present a truly organic view of the universe, what the Stoics were driven back upon, as they sought a rear-guard action against the irrationality of their antecedent, what Philo rebelled in the platitudes of the OT, is for Plotinus the crown of religion and philosophy, the heart of his message to a world determined to reach God at any cost. As an idealist he climbs 'the steep ascent to heaven,' rising above every stage of existence and thought that is still mingled with the finite and the relative, seeking continually the unity which shall escape from difference. Then, when he has reached the top of the ladder, he finds it too short to reach the higher spheres, where the Absolute dwells inaccessible and unknowable. The Absolute is beyond existence, beyond good, beyond knowledge, beyond will. In the Greek ideal sense the Absolute is ineffable. Even to ascribe unity to what is not an object for thought is an improper procedure, for its predicate is to limit. The Hebrew redeemer God says, 'I am that I am.' The Absolute of Plotinus, if He could declare anything, would say, 'I am not anything that can be expressed in any word that is intelligible to the sense of man.' The only truth that can be affirmed of such a God is that we can affirm nothing. This ultimate negation is not the humility of a worshipper, nor is it the despair of the agnostic; it is the voice of philosophy itself, declaring that unity cannot be found in difference, a philosophy which proclaims itself the ultimate, the only possible religion. It is the voice of an epoch, finding utterance through its final representative. This is the secret thought of the mystery-religion. All the philosophical and religious endeavours of the day have attained their utmost in thus raising an altar 'Apeiron, ἄπειρον; and on the name of man has laid as an offering the aspiration and its hope.

(2.) *The idea of mediation.*—Plotinus is not a pantheist; the finite does not live in God, though, apart from God, it would not be. It is, yet, if we are to reach God, we must leave it behind. 'Ous of God, in some sense, is common. Yet God cannot have any direct connexion with it, either to make it or to sustain it. The relation of a transcendent God to the world cannot be conceived except through spatial metaphors. If God is

¹ See art. ALEXANDRIAN THEOLOGY.

² See art. NEO-PLATONISM.

the beyond, plainly a bridge is wanted to connect him with what is on the higher side. It is at this point that Plotinus shows himself to be no true Platonist, and to be the exponent of a new Platonism, which is fundamentally a misapprehension of Plato. It is true that Plato did not succeed in showing that the two elements with which he worked implied each other, and that to separate them was to make the solution of the problem of knowledge impossible; but he did not mean to place truth in one region, spatially separate from phenomena. For him, as for modern idealism, all reality and being fall within experience. It not indeed within knowledge, and the distinction which he accepts is plainly shown by his terminology to be a distinction of aspects within the intellectual or real world.¹ Plotinus does what Plato and Aristotle were too concrete in their thought to do: he separates truth from the world of experience and then has to build a bridge between them. For a conception of the divine immensity he substitutes a scheme of subordination, as follows: (1) the Unknowable Absolute; (2) the Intelligence; (3) the world-soul; (4) the phenomenal world; (5) unknowable matter. It sounds mythological. It is mythology. It is the expedient to which a thoroughgoing dualism is necessarily reduced. When the extremes are held apart, an intermediary must be found which is not a real principle of union, but a third being externally related to each. This subordinationism pervaded the thought of the day. The attempt to make it the form of Christian thought regarding God, man, and salvation will at once wrecked Christianity itself.

(II.) *The idea of salvation.*—It is difficult on principles of expediency to understand the descent of man. But, waving this, we can see what salvation of soul must be. It must be an ascent of man passing upward towards the fountain of truth and reality, which arises 'beyond existence.' Plotinus has nothing to add to the way of salvation which is common to all who seek to cross the chasm wrought by a dualistic view of God and the world. The steps are stereotyped: (1) morality, conceived essentially as purification of the soul; (2) contemplation, which thinks away all difference and apprehends the unity of the soul and God; (3) ecstasy, the state, not necessarily accompanied by physical disturbances, in which the mind concentrates itself on God and reaches a condition which is ineffable, just as God Himself is ineffable. This is the beatific vision of which no report can be given, except that it is the 'life of the gods, and of godlike and blessed men, a release from all else here below, a life that takes no pleasure in earthly things, a flight of the soul to the divine.' This, then, is the highest that men can do. It is, at the same time, the exhaustion of the human spirit and the confusion of its desires. The religious situation of the Western world in the first three centuries of our era presents a threefold choice: (a) unmitigated paganism, materialism, barbarism, in which the soul is 'lost' with an unshakeable and inevitable destruction; (b) the movement, of which the mystery-religions are the popular examples, and Neo-Platonism the final philosophical expression, offering a salvation for the soul, which is essentially an ecstatic experience of union with a blank and indeterminate divinity; (c) Christianity, the gospel of a divine love historically manifested in a human life and death, the experience of that love in the lives of men, reconciling them to God, forgiving their sins, leading them together in an organism indissoluble by force of persecution, by tyranny of space, or by the incident of death. It is true that Christianity conquered: that it still endures; and that, when the same alternatives are presented, it always wins. But it is also true that, in those very centuries in which it was winning its triumphs, it was being profoundly modified in the direction both of the mystery-religions and of Neo-Platonism. Its conception of salvation is never wholly lost. The personality of Jesus and the realism of His Cross make that an impossibility. Yet the simplicity of the gospel and the fullness of Christian experience are at once overlaid and impoverished by alien elements. Christianity becomes a mystery-religion, and theology ever more to Plotinus than to Paul.

IV. *THE IDEA OF SALVATION IN GREEK THEOLOGY.*—Recall the Greek non-Christian philosophy, which by this time was also the religion and theology of the cultured.² There is a wide contrast between it and the Christian religion of redemption. The NT is fully aware of this contrast. In the writings of Paul, in Hebrews, and in the Fourth Gospel we have the standpoint of men who were sufficiently acquainted with Greek thought to know that it belonged to a wholly different type of religious experience. They were perfectly willing to use its characteristic forms, if by this means they could win a hearing and present their Christ as the reality after which the best of the Greeks had earnestly sought. But they must be allowed to fill the forms with their own special message. Thus the Greek forms on Christian life have little in common with the philosophy from which they are derived except

the bare terminology. The heart of the NT is not a Logos Christology, but a soteriology that is historical and experimental to the core. The case, however, is altogether different when we pass from the NT to the scientific theology which arose in the 2nd cent., grew for three hundred years to a portentous elaboration, and created a fabric of dogma within which the Church has dwelt even to this day. The authors of it did not perceive the chasm that separated Greek philosophy from Christian experience. The form of their thinking was Greek; the matter of it was Christian. Now, when form and matter are disparate and the attempt is made to bring them together, one or other of two things will happen—either the matter will break up the form and force its way towards some higher and more adequate category or the form will subdue to itself the matter and deeply alter its value and significance. The latter alternative describes the course of Greek theology. It was meant to expound and defend the faith. It is true that it did sweep from the field all intellectual rivals; but it is not true that the faith remained victorious. The faith itself was profoundly modified; and the idea of salvation that emerges is certainly not of the NT type, while it conforms closely to prevalent Greek conceptions. The ruling ideas which we have noted in Philo and Plotinus as representative of the whole movement repeat themselves in the leading Greek theologians.

1. *The idea of God.*—That conception of God with which Greek philosophy terminated, viz. the Absolute, the Transcendent, the Indeterminable, governs unquestioned in the domain of Christian thought. The Fathers fall back on this abstract notion, with which to interpret the Christian faith in God, who is known in Christ, whose children believers in Christ are. It is a metaphysical envelope, in which is enclosed a religious experience. A metaphysic, essentially dualistic, is used to express and interpret a life whose glory consists in ethical oneness with the God to whom through Christ there is direct access, and of whom in Christ there is immediate knowledge. This metaphysical conception of God prevailed in Greek theology till the Council of Chalcedon closed that epoch of constructive work. It has remained to this day in spite of the reversion to the NT which marked the Reformation, in spite of that destruction of dogmatism with which Kant inaugurated the modern age; and still it confuses the issues for men who have travelled far from the conditions of Greek thought. God, as thus described, even by men who are seeking to defend Christian monotheism—Justin Martyr, Irenaeus, Clement, Tertullian, Origen—is not, in the forms they use, the God and Father of our Lord and Saviour Jesus Christ, the God whose very essence is love, who by the inner constraint of His character must needs appear in human history and work out there in action and suffering the great salvation. Love and holiness, with the action and passion arising therefrom, are lacking to the Greek idea of God, and this defect makes that idea unsuited to act as the governing category of Christian soteriology.

2. *The idea of mediation.*—The shape which the problem of mediation will take is necessarily determined by the idea of God. With the Greek idea of God in their minds, the Greek theologians gave to the problem a distinctly cosmological character; and their solution took a predominantly metaphysical form. They have not indeed forgotten the human interest in salvation and the conviction of faith regarding the Saviour. But they have given soteriology a decidedly cosmological cast and have supposed that, if they could

¹ E. Bouanquet, *A Companion to Plato's Republic*, London, 1888, p. 248.

² See above, § II.

solve the problem of being, they had met the need of salvation.

The question, as they conceive it, is, How can God be connected with the world? In this question the whole of Greek dualism is involved, because 'God' is regarded as an entity of one kind, and the 'world' as a substance of so utterly diverse a kind that God can have no direct dealing with it, and therefore also man, as sunk in matter, can have no direct access to God. The only possible solution of such a problem is the building of a bridge between God and the world, and the question that divides the different schools, Greek and Christian, is as to the composition and structure of this bridge. Both schools indeed use one word, the bridge, or at least its central span, is the Logos. The differentia of the Christian answer is that the Logos is Christ. The main concern, therefore, of Christian theology is to contend that Christ, as Logos, is divine enough to reach the farther shore, where the Absolute dwells in the lonely splendour of His ineffable being. But by the logic of that dualism which was ineradicable in Greek philosophy it was impossible to say that the Christ Logos was quite God. Even supposing the distinction of λόγος ἐκδησάμενος and λόγος ὑποφωτιστής were adopted, and a dwelling of the Logos in God were affirmed, yet the Logos appearing in the soul of Jesus cannot be on an equality with God. Lofly as is the rank of the Christ Logos, He is still one remove from the Absolute. There must be a subordination of Christ to God in respect of being, and therefore also of value. Precisely here, however, Greek dualism, even in Christian guise, found Christian faith sensitive, alert, and armed. The common sort of believers were perfectly certain that the Logos (whatever that might be in philosophy) was Jesus, and that Jesus, as Saviour, was as divine as God. This was a 'value-judgment' of faith, whatever theology might make of it. Yet faith had this inherent weakness, when it tried to say what God is, and what by consequence the Logos-Saviour is; it had no other idea to work with than the Greek conception of the remote and lonely Absolute. By such a presupposed dualism of God and the world, of form and matter, and by such conflicting interests of head and heart, the course of Christian thought is determined, till Nicea, nominally at least, drove Greek philosophy from the field. The oft-told story runs in three chapters.

(1) *Subordinationism as symbol.*—Christ is an intermediary needed to connect God with the world. Christian faith, indeed, refused to think of Jesus as the Son and Servant of God, entering the world on a redemptive mission and carrying out the Father's will of love, in life and death, thereby securing forgiveness, reconciliation, and fellowship. But, when taken up into Greek metaphysical and dualistic philosophy, this truth of religion attested in experience is turned into a doctrine of the person of Christ, which makes Him severed from God in rank of being; and this is precisely the reverse of what faith meant to say. The Logos Christology is not the implicit faith of the NT, brought into clear consciousness by its own inherent logic. It is that faith stated, with the best intention, in a logic which did not belong to it. It is found in the apologists, to whom the Logos as a separate existence is numerically distinct from God, a second God, to be worshipped indeed, but not to be regarded as in the fullest sense God, subordinate to God, a kind of 'depotentiated God.' The point of these assertions is that they are not reached through a study of the inner life of Jesus and are not an attempt to enter into the secret of His self-consciousness. They are constructions based on an a priori conception of God which was not critically examined or experimentally evaluated. They are delusions of what the Logos must be; not a picture of the Jesus of history, who, for NT Christianity, is the Jesus of faith. Irenaeus's doctrine of the person and work of Christ displays closer contact with the NT thought and life. He is clear on the fundamental Christian convictions 'that the Creator of the world and the supreme God are one and the same' and that 'Christianity is a real redemption . . . effected by the appearance of Christ.' But the atmosphere of the day cleaves to him. He is still

operating with categories supplied to him by the last phase of Greek philosophy, with their parallel in the mystery-religion. Salvation requires participation in the being of God, and it is primarily because this being is brought within reach by the incarnation that Christ can be Saviour. Irenaeus's account of the *ἀνασφάλαιος* is poetic and suggests truth deeper than he knew; not in him did Neo-Platonic connotation and ruse well into sacramentalism and mysticism. The presuppositions are still ontological. Christ 'was made as we are in order that He might make us to be as He is.' It is still salvation by participation in divine essence, and to that extent it is Greek rather than Christian.

In the great Alexandrians we have the same combination of intense Christian conviction with the Greek metaphysics and the Logos Christology. Clement's description of God is as defective as anything in Plato or Plotinus. God is 'formless and nameless, though we conventionally give Him titles, which are not to be taken in their proper sense, the One, the Good, Intelligence, or Existence, or Father, or God, or Creator, or Lord—a truly 'appalling definition.' Appalling though it be, it is the climax of centuries of Greek thought, and when it is used as starting-point, a satisfying Christian doctrine of God and of salvation becomes impossible. It is quite true that nothing was farther from Clement's mind than to attribute to Christ a reduced divinity. He desired to bring Him as close to God as possible—as close, say, as the Nous, or Intelligible world, in Plotinus's trinity. Yet in the last resort Christ is not God Himself, in His own proper person, acting, suffering, saving on man's behalf. The Logos may be the immanent reason of the universe, and Clement is the typical 'Broad Churchman' rejoicing in a revelation of God to Greeks as well as to Christians. But this reason has always God, in His essence unknowable, behind it. Subordinationism attains on the Greek side of God, like its shadow. Thoroughly Greek, too, is Clement's conception of the work of Christ. Clement has not entered Christianity through the moral discipline of the OT. He is thoughtful and, through intellectualism, in his views at ease of need and of salvation. He 'himself had passed through no spiritual crisis; enlightenment rather than the need of forgiveness, intellectual unrest rather than an accusing conscience, drove him to the Christian faith.' The source of man's distress is ignorance; hence comes the disease of sin, and man is doomed to death. The work of Christ, therefore, though Clement employs the classic language of sacrifice, is to give knowledge. This throws the actual experience of humanity into the shade, and Clement is constantly slipping towards docetism. All that is needed, from a Greek point of view, is enough humanity to convey ideas to men. Real identification with men is not needed, though, from a Christian point of view, it is the sine qua non of salvation.

Origen's loyalty to the full divinity of Christ is beyond question, but his scheme of thought is Greek, and it is through the Greek a priori conceptions that he apprehends the statements of Scripture. He is no avowed subordinationist; and yet the all but inevitable sense of his thought is subordinationism. His God is the Absolute, whom, however, after Plato, he conceives as good with forward aims towards self-communication. Between this God and the world there are (i.) the Logos, produced by the will of God supra-temporally in an ineffable act of generation; (ii.) the Logos united with the pre-existent holy soul of Jesus; (iii.) these two inhabiting an incommensurate body, born of a virgin; (iv.) along with the Logos, but without any inherent necessity, the Spirit, an adjunct, borrowed from Scripture and subordinate with the Logos, though superior to all other holy beings. This is not the Christianity of the NT. It is Christianity stretched on the rack of Greek thought.

The logic of subordinationism becomes explicit in Arianaism. The issue of the Greek metaphysical conception of God is now made plain. Let God be conceived as the Absolute. Let Christ be regarded as the Logos, between God and the world, and the result is inevitable—a distortion of the Christian idea of salvation and an emptying of Christian experience of its rich ethical and religious contents. Clement and Origen were great believers; but they were too much under the dominance of Greek thought to do full justice to the Christian faith in Christ or to unfold and verify the Christian experience of salvation. In Ariana we have a thinker who had gone even worse than any of his predecessors. In the guise of a Christian ascetic, he is plain Greek and pagan. In him the Greek religious philosophy, in this its latest phase, is making its final stand. It understands that it must make terms with Christianity. Its terms are these: it will accept Christ as *ex* divine man and will apply to Him any honorific title that may be proposed, and set Him far above all man and all angelic beings, at the head of the whole creation, but it will not, either as a philosophy or as a religion, treat Him as Himself God, or as a real incarnation of God, or God living and working out man's redemption. He is at His greatest a *crux* still; at least, a cosmological principle, but no Saviour from sin's guilt and power. This is the old heathenism, whatever its disguise. Christianity was at the crisis of its life. To have accepted Arianaism would have meant absolute defeat, the arrest of the whole movement of the human spirit Godward.

(2) *Monarchianism, in its own defense of Christian monarchianism.*—Monarchianism (*q.v.*) takes the rise as a protest against the attempt to make Christ an *Allos*, or intermediate being, and asserts the prevailing Christian belief in the unity and

¹ Harnack, *Hist. of Dogmat.*, Eng. tr., London, 1894-99, II, 227.

⁴ Cf. art. *ARIANISM*, SUPPLEMENT.

expressions of God. It rightly sees that salvation is God's act only, and that to transfer the mighty work to any Saviour, divided, however faintly, from the only God, is to invalidate it and leave faith as security. But this Christian interest was defeated by the Greek idea of God. The Monarchians too are Greeks. They are working with Greek categories—the Absolute, the Monas, and the like. They see themselves a task which was really impossible—to combine the divinity of Christ with that Greek cosmopolitanism. A choice of paths appeared to them. They might hold the individuality of Christ and regard the divine in Him as a quality or form; or they might hold the divinity of Christ in the fullest sense, but regard it as the very presence of the absolute God. The former alternative looks at Jesus as a man inspired by God, and so, by a special line, leads round into monothelism and makes salvation a human achievement, accomplished by moral endeavour. The latter is much more fitted, in one sense, to express Christian conviction and might seem to be no more than what ailing faith will ascribe to its divine object. In point of fact, however, when traced to its Greek origin, it is an almost complete denial of the Christian verities. Here is no living God, but an expanding and contracting Monas; no Mediator between God and man, Himself man, no living Saviour and Lord. The Son has no life of His own, and, when His temporary manifestation is over, He is retracted into the Monas and lost to faith. Tertullian's vigorous protest was of value in asserting the necessity of the historic Christ for the security of the Christian salvation. But Tertullian's own Christology is still caught in the Logos scheme and assigns to Christ no more than a *persona* of the Godhead.

(3) The victory of Nicaea—the intolerable consequences of Greek dualism are met by Athanasius with a flat denial. For three centuries Greek thought has assumed that God could not be brought into direct communication with anything so low as a material universe, but needed intermediaries. Christian thought had not ventured to declare that this was *priori* impossible, but gave a religious turn to Greek philosophy by declaring that Christ was such an intermediary, who, by the logic of this movement, could not be quite what God is. Athanasius is brave enough to say that the long-accepted dualism is an necessity of thought. God can create directly. There is no need of a *tertium quid*. It is true that God uses the instrumentality of His Son in the act of creation, but this is a secondary matter. The central function of the Son is not cosmological, but redemptive. His central significance in theology, as in Christian faith, is His agency in salvation. The object of the Christian worship is not the Logos of the philosophers, but the Son of God, the historic Christ, who was born, and lived, and died, and rose again. In Him God Himself entered into humanity. Therefore no phrase must be used which shall permit Him to be thought of as a creature, however near to God, or however adorned with *symploai*. Human salvation demands that there shall be more than a bridge by which man shall pass to God; that there shall be in humanity a divine Being, in becoming one with whom man shall reach closest with God and so be saved. This, in fact, is the Christian message of salvation. 'He was not man, and then became God, but He was God and became man and that to deity and.' The Son, accordingly, is not to be thought of as an intermediary, a second God. He must be regarded as having the same substance with the Father and consubstantial with the Father a unity. The symbol of Nicaea makes this position explicit: 'Recognized from the Father as only begotten God from God, i.e. from the very being of the Father (ἐκ τοῦ αὐτοῦ οὐσιος καὶ ὁμοῦσιν, meaning one being with the Father (ὁμοουσιος ὁ υἱος)).'

Thus the long history of Greek philosophy is brought to a close by an intuition of faith discerning the value of a fact of history. Christ is the Son of God. No cosmological scheme can content the believing heart which has found in Christ, not an introduction to God, but God Himself in the fullness of the Godhead. A cosmological bridge does not meet the need of salvation. Suppose we climb to the end of the span formed by the Logos, what guarantee have we that it will really abut on God? Rather, it is certain that, if Christ be not truly God, there will still be a chasm to cross. Well might Athanasius say, 'We are fighting for our all, when he stood against an Arian world. Therefore historians and theologians of every shade of orthodoxy have sympathized with Athanasius and have admitted that a diphthong may mark the whole difference between Christianity and paganism.'

To do this, however, and even to accept as *credo* the Nicene Creed as a confession of faith, does not mean to be satisfied with it as a doctrine of God or of Christ or of salvation. The use of the word *oikos* was inconsciously and unintentionally reintroduced the very philosophy it was meant to exclude. God viewed as *oikos* is a static Deity, such an 'unmoved mover' as Aristotle reached through his dualism of matter and form, such an

Absolute as Philo or Plotinus set in immobile and immortal blessedness beyond the manifold of experience. Such a God does not really live. He never acts. He cannot suffer. He has an *oikos* all His own. The Son shares that with the Father. Thus the affirmation of faith, that Christ is as divine as God, is construed to mean that He had a divine essence which is not man's. And, as soon as this passes into common belief, we have left NT ground and are occupying the position of the mystery-religions and of Neo-Platonism, viz. that salvation means participation in the divine Being, a participation that is effected in a supra-rational manner by vision or ecstasy. The victory which faith won at Nicaea was thus in great measure nullified by the metaphysic which remained uncorrected in the language of the creed. Faith is quite sure that Christ the Lord is as divine as the Father, whose Son and Servant He is, and as human as those whom He came to save. In that assurance there is implicit a view of divinity and humanity which thinks of them not as opposites or disparate essences, but as so related that a divine Being may have a human experience and be in the fullest sense God, being in the completest sense man, while manhood is perfected in the human experience through which God attains the ends of His holy love. This view, however, was rendered impossible by the metaphysical view of God which remained in the minds even of believing theologians, wholly uncritical and uncorrected. The result was a theological *twoness*. The dualism which wrecked Greek philosophy has returned and has inserted itself in the doctrine of the person of Christ and in the conception of salvation bound up therewith. The Christological discussions of the 4th cent. represent the mind of man exhausting itself in alternative escapes from an impossible situation. Take the Apollinarian road and mutilate the humanity so that divinity may have room to act; take the pathway of Nestorius and place divinity side by side with its opposite and bind them together with a phrase; follow Eutyches and absorb the humanity in the divinity—in each case Greek dualism is driving faith wilder it would not go, and, as soon as faith becomes aware of the coexistence of logic, it revolts and, in defiance of logic, returns to its basal convictions. It cares nothing for logic; its one interest is salvation. If that be endangered, it will expel as heresy the most carefully devised Christology. This is, of course, what faith did in the symbol of Chalcedon.

The definitions of ancient creeds . . . were an attempt to state off the limits of that area which the Church had come to claim as reserved for faith and sacred to it; marking it off by certain sacred points which she believed to be guaranteed at once by the witness of Holy Scripture and by her own consciousness of salvation in Christ.¹

Our estimate of Chalcedon repeats that of Nicaea. It is a victory for faith, rendered fruitless by the employment of categories useless and misleading, if employed beyond the bare purpose of negating error. They are steeped in metaphysical dualism and are unfit to bring into clear consciousness an experience in which the supposed opposites of philosophy are held together in the grasp of a living synthesis. In the article just quoted Dykes thus sums up his review of the Chalcedonian formula:

'A Being who combines in an inarticulate fashion Divine with Human properties, and of whom consequently contradictory assertions may be made, whose single Person is Divine, while His dual nature holds an undefined relation to one another; this is not a scheme to satisfy either head or heart.'²

In point of fact, neither the head nor the heart of the Church was satisfied with the Chalcedonian orthodoxy. When divinity and humanity are placed in juxtaposition, without any real unity

¹ J. Oswald Dykes, *ExpT* vol. 1906-07, 2.

² *Id.* p. 10.

between them, both mind and heart will place the emphasis on divinity. The primal need is for God. It is God in Christ who saves. If, therefore, God be defined in terms which make a human experience for Him impossible, the inevitable result will be that the humanity of the Saviour sinks in value and reality. Cyril had the interests of salvation at heart. But he so conceived of God that salvation was imperilled, lost its distinctively Christian character, and took a specifically Greek form. Monophysitism, expelled in name, returns in power. Christ is so one with God that He shares the divine transcendence. Hence arises a double dualism: (a) within the person of Christ, between His divinity and His humanity, the latter being rendered by orthodoxy more and more unreal and ineffective; (b) in the sphere of salvation, between the divine Christ and human beings, who find it now as hard to get to Christ as ever Neo-Platonism did to reach the absolute Deity. Christianity had appealed to Greek philosophy, and it had received its reward. The God it had found in Christ was removed to an intolerable distance; and Christ, who was one with God, shared the remoteness of the Absolute. Once more the chasm yawned; once more a bridge had to be built, or, rather, the bridge reared by the speculative genius of Plotinus was still standing. This, therefore, the human spirit was constrained to use, giving it only a new facing of Christian forms and usages, not knowing or not heeding that, in so doing, it was reverting to something that lay farther back than Neo-Platonism, in the obscurities of primal religious feeling, and was transmuting Christianity into a revived mystery-religion.

3. *The idea of salvation.*—The Greek scheme works out as follows: (a) *Man and sin.*—In his innermost essence man belongs to the sphere of the divine. As in Plotinus individual souls belong to the world-soul and are one in essence with it, so in the Christian application of this thought all souls are divine in being. Their reality and their blessedness consist in their participation in the divine nature. Their separation from it would be destruction, and their salvation would be reunion with it. The whole movement is apart from ethical relationship. The goal is a good that is above moral good. The salvation, in like manner, is a process which may have morality as a stage, but reaches towards a metaphysical issue, accomplished not through rectification of moral relations, but through changes affecting essence and being. This distinction between moral values and metaphysical reality goes deep into the Greek idea of salvation and marks it off from the NT region of thought. From a pristine state of oneness with the divine nature human souls have fallen. In harmony with the Platonizing thought of his day, Origen had held the pre-existence of souls. Whether in this theory or in that of emanationism, the fall of souls is wholly unintelligible. Plotinus could not give a reason for the irrational. The descent was simply part of the working of his scheme—a far-off result of the distinction of matter and form, observable in all experience. In Christian thought the Greek regard for the determining power of reason is uppermost. Greek theology remains true to the freedom of man, conceiving it as bare power of the rational nature, a power inherent, incapable of being lost. In any case the descent has been made by Adam and is made by practically every individual soul. The descent, as in Greek thought, is into the region of matter and sense and mortality. In this position freedom cannot indeed be lost, but is considerably weakened, and the soul would need assistance of some sort in its

upward way, as it seeks its home in the imper-sensuous sphere and returns to its divine original. It is a simple and obvious situation, precisely that which Greek thought had been dealing with for centuries. Man is sunk in sense, with all its concomitant evils—mortality and subjection to demonic power. The one problem is the ascent of man. It is not the situation as the NT, with its roots in the OT, conceived it. For a mind trained in Hebraic modes of thought, for a conscience disciplined by the revelation of the divine holiness, the situation is that of man's revolt, in the pride of self-assertion, against the will of a holy, loving, and sovereign God. Greek theology is singularly lacking in its sense of the righteousness and holiness of God; and its soteriology suffers accordingly. Its captivity to Greek forms is conspicuous and disastrous.

(b) *Redemption.*—Plainly, what is needed by man, thus immersed in a region so foreign to his true being, is reinstatement in the sphere to which he belongs, i.e. the divine. The descent must be replaced by ascent, and the successful accomplishment of this process is termed 'dedication.' Man must be lifted to the place to which he belongs and become what God is in His essential nature—i.e. immortal, free from all taint of sense. The central significance of this dedication is the quality that is assigned to the divine essence. There is no rich ethical content filling the thought. Greek speculation defines God mainly by negations; and thus its conception of dedication is also mainly negative. The aspiration of the soul is set on a mode of being of which nothing can be said, save that it is at the opposite pole from matter. True, this higher state is conceived as the only reality, for matter, in genuine Platonic fashion, is conceived as non-being. But, after all, mere being is scarcely a richer thought than non-being. Dedication reaches being, and that is reckoned blessedness; but the contents of that blessedness are, like God Himself, beyond predication. Salvation, thus conceived as dedication, can be only partial, as long as the soul has any material integument. It can never therefore be a possession. It is not, as in the NT, by a paradox, both possession and inheritance. It lies to the beyond only. Its instalments are not itself. They are only steps towards it. Only when the dead lift is complete, and the soul escapes from matter, does it reach salvation. The method of this deliverance is determined by the goal. The question for Greek thought is how to get the divine nature so near to man that man can unite himself with it and share its blessedness. There is no question of atonement and reconciliation, of a moral estrangement overcome by love, and a new moral relationship entered upon in faith. Baptized into Christianity, Greek thought proclaims the Incarnation to be the method of salvation. The divine *His* is in Christ—not indeed in His flesh: He has no more relation to flesh and blood than will allow the divinity, which is His only real being, to become accessible to man. The ruling thought is transformation of man's being, till he becomes what God is. Greek theology makes everything of the Incarnation. Yet the most damaging criticism upon it is that it does not make enough of incarnation. Deity retains its transcendence and remoteness even within the veil of flesh. It is in flesh only that man may be deified. There is no thoroughgoing human experience on the part of the Logos Christ. Even the recapitulation of Irenaeus, though it brings him in some aspects close to the gospel, is at bottom Greek. It means that the incarnate One brings to actuality the divine mode of being, which is God's original plan for humanity, so that now human nature may be deified by being taken up

into it. Origen shows the real drift of the tendency, for, while recognizing rather than teaching various theories of atonement, he passes beyond them to conceive of salvation as consisting in being 'interwoven with the divine essence'—a condition reached by knowledge, revealed by Christ in His capacity as teacher and hierophant. Athanasius has rejected Greek soteriology. His profoundest concern is salvation, and this requires the full deity of the Redeemer. But, at bottom, the idea of salvation and the means of deliverance are Greek. Man's distress is his mortality. Repentance alone, therefore, cannot deliver him. Life must be brought to him, that he may partake of the very nature of the Deity. Athanasius is able to give a real place in redemption to the death and resurrection of Christ, but it is not the place assigned to them in the NT. It is still the question of deliverance from mortality with which he is dealing. In the death of Christ the law of death is abrogated, and in the resurrection of Christ incorruption is guaranteed.

¹ By death immortality has reached to all . . . for He was made man that we might be made God; and He manifested Himself by a body that we might conceive the idea of the unseen Father, and He adorned the members of men that we might inherit immortality. For while He Himself was in no way injured, being impassible and incorruptible and very Word and God, men who were suffering, and for whom sake He endured all this, He maintained and preserved in His own impassibility. . . . It is devout and very Christian in its sense of debt to Christ,² but its metaphysical, theology, Christology, and soteriology are Greek and not NT.

The condition under which salvation viewed as deification is obtained by man is necessarily union with Christ—i.e. oneness in being with His divine being. There is no question here of faith committing itself to Christ and receiving in the act His unsearchable riches. There is no union of two living personalities to be mutually possessed in love, each entering into the experience of the other. It is, in the precise sense of the age-long religion of Hellas, a mystical union, a participation not in the 'benefits of Christ,' but in His very being.

(c) *The process of salvation.*—In a way Greek theology was more dualistic, at least after the overthrow of subordinatism, than Neo-Platonism and more at a loss to produce an effective salvation. The divine in Christ has been so completely identified with the absolute Godhead that it cannot form the link between God and man. With the practical triumph of Monophysitism, the dualism is now as much between Christ and man as it ever was in Greek thought between God and the world. The chasm is still there. The question now is, How shall the divine Christ be made accessible to man? Where and how shall man find Christ and be made one with Him? The answer comes straight from the heart of Greek religion—that primitive religion which preceded and outlasted the intellectualized Olympians of the middle period of Greek development, and which in the last stage of Greek life and thought was found mingled in a confused syncretism with all manner of Oriental cults. The very word which carried the whole meaning of Greek religion with it is employed to designate the central element in the Christian salvation. Christ is brought to man in the 'mysteries,' of which the Eucharist is the chief. No theory of His presence as yet holds the field. The crudity of popular imagination, which regards the consecrated elements as the actual flesh and blood of Christ, is below the subtlety of Greek symbolism; and transubstantiation, as an attempt to make the mystery intelligible, is still far off. No theory is needed. Suffice it that

in the rite, with the aid of all well-devised circumstances, the mind of the worshipper is subdued, the emotions are stimulated, reason is silent, and the unknown Divine, too wonderful for intellectual definition, is felt to be somehow, inexplicably, there. At this point the function of the Church becomes manifest in all its soul-subduing sanctity. The Presence depends on the rite; the rite depends for its efficacy on the celebrant, and the celebrant depends for the due performance of the rite on his place in the Church. Behold the bridge between heaven and earth, the only link that can bring Christ and man together! Where is Christ? On the altar. What brought Him there? The power of the hierurge. All that Christ can do for the soul is done in the Eucharist. It is the medicine of immortality, the instrument of deification. Rapt in spirit before the altar, severed from all things of sense, in deep emotion beyond all processes of reason, almost above consciousness of self, the soul tastes salvation and almost enjoys the beatific vision, which will one day, in a moment, admit him to the immortal life and give him the object of his passionate aspiration—participation in the divine nature. This is the core of the Christian experience. Christianity stands forth confessed a mystery-religion.

It is not necessary to deny to this 'mystery' a definite religious value. Any one who has given sympathetic attention to the Russian Eucharist must have thrilled to the sense of the unseen conveyed by a ceremonial more splendid and more surcharged with inexpressible suggestion than even the Roman rite. Still it has to be noted that its ancestry is not in the NT, but in primitive Greek religion, as that was reproduced in the mystery-religions, and that its intellectual equivalent is not the teaching of Jesus or any of His apostles, but Greek philosophy, in the last stage of its development, when, as Neo-Platonism, it offered itself to every cultured intelligence as a revelation of God and a way of salvation. It is impossible also not to note the danger which haunts it—the danger that besets all mysticism—viz. the emphasis laid on the metaphysical and the reduction of the ethical to a secondary place and value. The salvation which does not find its climax in duty and virtue needs no theological acuteness to criticize it. It is condemned already.

The process of salvation, looked at from the human side, exhibits the same thoroughgoing Greek character. The question is, How shall the soul fit itself for the great moment of its deification? The answer keeps close to Neo-Platonic lines. The first step is morality. At this point Christianity presents itself as a new law; and its morality is a baptized Stoicism. The second step is knowledge. Here Christianity takes up into itself the older Greek idea of salvation by wisdom. The third step is that in which the soul goes beyond morality, and even beyond knowledge, and makes its transition from things earthly in an ecstasy. In this procedure two points of contrast with NT Christianity are to be noted. (1) There is no place for faith. The NT knows no other condition of salvation than trust in God. Whatever psychological concomitants it may have, it is a definite conscious act of the human personality in the exercise of its highest powers. A scheme which omits this trustful commitment of the sinner to the sin-bearing and sin-forgiving God is not Christian. (2) The relation of morality to salvation is inverted. Self-purification is, in Christianity, not a stage which is left behind in the final attainment; it is the issue, the consequence, and the test of the Christian salvation. A writer who has been held responsible for mysticism in Christianity declares: 'This is how we may be sure we are in Him; he

¹ On the Incarnation, Bk. 2.

² So most eloquently in §§ 4, 5.

who says he remains in Him ought to live as He lived" (1 Jn 2nd). A practical result of this inversion is seen in the two grades of Christians now recognized within the Church. The one remains in the world, to continue the race and carry on its business. The other devotes itself to the pursuit of salvation by those paths which are shut to ordinary traffic. Greek theology requires the solitary for the successful prosecution of the way of salvation devised by the Greek spirit. He alone can direct his soul, in entire withdrawal from sense, upon the divine, so as to obtain the vision of it and become one with it. And here is a strange, yet inevitable, thing. For the crowning experience the historic Christ and the actual Cross are no longer necessary. They themselves belong to time and sense and matter, and all these things are transcended. Salvation is gained in ecstatic contemplation, and that permits no object to be before it save the Absolute Deity. Unneeded, too, by the expert solitary is the Eucharist itself. Beyond all such things, linked as these are to the external, the soul passes inward and upward, till it is absorbed in God. When we have reached this point, we see that Christianity has lost all distinctiveness as a historical religion. It has ceased to have reference to persons or deeds. Even one unique Person and one astounding deed cease to have interest for it. It is manifest mysticism; and mysticism is identical in all its forms, whether Greek, Hindu, Muslim, or Christian.

V. THE IDEA OF SALVATION IN LATIN THEOLOGY.—The Western Church accorded to the East its special place and function as thinker and interpreter. In the controversies which marked the progress of dogma the West intervened, not as a rival specialist in speculation, but as a calm and just moderator. Chalcedon, though a settlement of Greek controversies, is a product of the Western mind, which is not versed in metaphysical subtleties, but is quite sure of the facts of faith and quite competent to say exactly what it stands for. The Greek conception of God, accordingly, passes over into the West uncriticized and unrevived. It lies behind Latin theology and its descendants and revives even after the Reformation has pointed out a more Biblical and more excellent way of thinking regarding God. That, moreover, which goes with the Greek idea of God—the conception, namely, of a salvation which consists in defecation and is attained in ecstasy—remains as the highest grade of religious attainment. However elaborate the dogma, however rigid and detailed the discipline, however magnificent the cultus, the ideal of the finest religious experience remains as the mystic ecstasies of the soul with God, to which, ultimately, dogma and discipline and cultus are alike secondary and even insignificant. The solitary still stands above and apart from ecclesiastical Christianity and represents the highest type of the religious soul as such.

All this being presupposed and regarded as sacrosanct, Latin theology proceeds to interpret Christianity by means of its own characteristic modes of thought. These are political and social in their nature. If Greek theology was created by Greek philosophy, Latin theology was created by the Roman empire and had for its governing category the Roman imperial idea. While the idea of God, in formal Latin orthodoxy, is the Greek Absolute, taken over without revision, this empty notion is filled with contents derived from the person and authority of the Roman emperor. God is the Emperor of the universe. This is not merely a poetic image; it is a ruling principle in theology and religion, and consequences logically derived from it are binding upon mind and conscience. God is essentially will. Will takes the

place of being as the deepest element in the idea of God; but it is will regarded as bare sovereignty. No doubt the Emperor of the universe will administer its affairs as the best type of Roman emperor managed his vast dominions, in the highest interests of His subjects; but the chief object of man's regard, as he contemplates God, is the tremendous operative force of His absolute will. If the universe, in one sense, is the sphere of God's imperial sway, in another the Church is His real and proper empire. As within the Roman empire, and there alone, peace and security prevailed, so only in the Church was there possibility of salvation from the evil forces that raged around it and from the unspeakable doom which awaited all beyond its pale. The heart of the empire grew chill at the thought of the barbarians, whose stroke, in these last days, had reached even the imperial city. In like manner the heart of the Christian was moved at the terror of a judgment that would surely befall him but for the sheltering walls of the city of God. His religion was a religion of fear; and salvation was deliverance from the power of Satan here and hereafter. The constitution of the Church, accordingly, becomes of first-rate religious importance. The Founder of the Church, its first great Emperor, could make no mistake. He fixed once for all its mighty ramparts. To touch them is not merely to cherish a wrong opinion, but to strike at the will of God and the very safeguards of salvation. The great security of the Church is the historic episcopate. The Scriptures, the cultus, the sacraments, all stand within the guardianship of the bishop and from him derive their salvation value and their spiritual effectiveness. The souls of men are his peculiar care. He is responsible for them to the great Head of the Church. They, for their part, have but one duty with respect to him, and that is obedience. The emperor has his double hierarchy—State officials from the lowliest to the lowliest, and the priests of the imperial worship duplicating the offices of government. So Christ has His hierarchy—bishops and presbyters, like the priests and Levites in the Jewish Temple, who are at once State officials in the ecclesiastical empire and the only celebrants in the action of Christian worship. Beneath stand the laity submissive and adoring.

Further developments follow inevitably. Salvation depends on obeying the laws of God, as they are administered by the Church. Sin means breach of these laws. Strictly speaking, sin is crime committed against the imperial majesty of heaven. Sin, therefore, like crime, must be punished, while obedience, at least if it reach large proportions, may be rewarded. Penalty and merit are brought into the relations of man to God. A man pays for his disobedience by the penalty he endures. A man's obedience is the price he pays for his security. Ominous phrases begin to be heard, 'satisfacere Deo,' 'placare Deum.' The whole system no doubt—the Church and its penitential discipline—has been brought into existence by the mercy of God. But within the system juridical and forensic principles and methods bear sway. Members of the Church live under a legal administration and have their spiritual state adjudged in terms of crime and penalty, good works and merit. In all this the NT does not come into consideration. Christianity has become the religion of the empire; but still more it has become an imperialism. We are moving throughout in a politico-legal atmosphere. The creator of the ecclesiastical soteriology is the heathen empire. In defence of the Latin theologians and churchmen it may be urged that they could scarcely help themselves.

*With the flood of new principles the Church acquired a constituency which could only be dealt with on legal principles; and such principles could be applied only in the way of adjusting

certain observances. That alone could be practically intelligible to the mass. The assumption followed, that when these observances were passively accepted, at least without disbelief or contradiction, they would do their work, would confer and accomplish the Christian salvation. On any other view, what most became of the mass of recognized Christians? The theory which this implied settled on men's minds like a fate. Christ has furnished us with a system of church ordinances which, if reverently complied with, do mysteriously effect salvation.¹

This way of salvation is expounded in Tertullian and Cyprian—the one a great apologist for the faith, the other a martyr; yet the scheme itself is not Christian. Gwatkin's blunt verdict on Cyprian exhibits the relation of a Church statesman to the ideas of his day:

'Salut be la, and martyr; and the Christian Church is justly proud of him; yet his general conception of religion is much more heathen than Christian. There is no sign that he ever troubled himself to think out the ideas on which it depends. Like a practical man, he takes them from the air about him, and assumes them to be not only true but self-evident, and concerns himself only with their practical applications.'²

In Latin theology proper, *forma* forms are confined to the application of salvation to the souls that need it. The provision of salvation is not yet brought under these forms. The ominous *satisfactio* is not applied to the work of Christ either by Tertullian or by Cyprian. This extension of the idea, however, lies close at hand; and, when Latin theology merges into medieval, this borrowed conception will begin its career as the key to the work of Christ.

Latin theology is systematized by St. Augustine, whose magnificence none will dispute; though, if we may adopt the expression of a much-tried Scottish king, employed by him in another connection, he has been 'a sair sanct' to the Christian Church, whether Protestant or Catholic.

In Augustine's thought we have the blending of four great influences: (i.) a deep Pauline experience, (ii.) an experimental acquaintance with the truths of Scripture, (iii.) the dominance of Neo-Platonism, (iv.) the authority of the Church. It may be predicted that a system built up under this fourfold control will be suggestive rather than satisfying and will give rise to divergent streams of thought and life. From Augustine's experience and his sympathetic reading of Paulinism there have flowed evangelical experience and evangelical theology. The appeal to experience and the grounding of salvation in the love of God may well go back to Augustine, as Augustine went back to St. Paul, and St. Paul went back to the Cross of Christ. But, when Christian experience is interpreted both through Greek dualism and through Roman imperialism, we may be certain that its characteristic features will be distorted out of knowledge.

1. **The idea of God.**—The idea of God takes on the qualities of its double origin: God is the Greek Absolute and the Roman Will, in either aspect, beyond the reach of man's knowledge. God is the only real. Things that exist do so only by 'participation' in the divine nature. Reality is not in time and space. History is not real development: it is simply the translation into time of the immutable will of God. The Augustinian 'predestination' is simply the Greek affirmation of the transcendence of God, brought *ab extra*, and imposed on Christian experience. The conviction of the NT believer that salvation does not depend on human initiative, but on the everlasting mercy, belongs to a totally different region of thought and cannot properly be interpreted through a Greek category.

2. **The idea of sin.**—Sin is explained on the old lines that go back to Plato and were ineliminable in Greek thought. Augustine was keenly aware

of the guilt of sin; but his experience and the whole bent of his disposition led him to view it mainly in the aspect of disease, defilement, and moral impotency, to connect it with the body, and to lay enormous emphasis on carnality. His agony as a sinner was that he could not sever the bonds that held him, till he 'put on the Lord Jesus Christ.' Salvation was emancipation, and is interpreted chiefly as power. His problem as a man, a pastor, and a theologian is, How shall the slave of sin be set free and brought into a freedom which consists in identity with the will of God? It is because an exercised Christian knows this true liberty of the soul that Augustine defeated Pelagius; and it is because the semi-heathen knows nothing of it that Semi-Pelagianism is the working creed of a half-Christian Christendom. Yet the problem, as Augustine put it, is not stated in its real depth, and his solution is marred by intellectual puzzles.

3. **The idea of the Church.**—The Church confronts the soul that knows by bitter experience the helplessness of its will-power and the incapacity of its intellectual faculty. Augustine is recapitulating in his own mind the history of Greek philosophy. By the logic of Greek thought, reason is incapable of reaching God and so solving the problems of life and mind. The situation thus created demands an extra-rational authority, which shall meet the mind in its impotency, lift it into participation in the divine nature, and imbue it with divine power. This authority presented itself to Augustine and to the Latin mind in the guise of the Church, Catholic and Roman. It is the authority of God. Nothing has rights over man that is not in the hands of the Church. The gospel itself meets man with the imprimatur of the Church; and all redeeming and emancipating powers reach the soul through the channel of the Church's ordinances. Such a conception may be magnificent, but it is simply Roman imperialism, adapted to a use for which it is utterly unfitted and made the key to the salvation of man. It contains, too, an inconsistency with which the common man did not need to concern himself, viz. between predestination and the idea of the Church as the sphere and instrument of salvation. Augustine himself made various attempts, by distinction of the Church invisible and the Church visible and by referring all the elect to the membership of the Church, to overcome a difficulty which is really on the premises insurmountable. Predestination and the saving power and absolute authority of the Church cannot be combined. Protestants had perfect logical right to use the one to destroy the other. In practice, however, the Church remains in the imperial position which Augustine gave it, for all who come to it with his *a priori* presuppositions.

4. **The idea of salvation.**—The way of salvation, as Augustine defined it, is plain and will be easy or hard in proportion to the seriousness and sincerity of the traveller. The principal points to be considered by him who would understand this matter of salvation are:

(a) **The idea of grace.**—This is conceived, in Greek fashion, as a divine substance or energy coming from above, descending into human nature, and working there as omnipotence in the sphere of things finite. Grace, in short, is a thing, and not a person—a thing almighty and mysterious, but still impersonal, as things are in distinction from forces personal and historic. Augustine is using a philosophical abstraction to cover the phenomena of a spiritual experience; and, in so doing, he has done all in his power to destroy it. As soon as grace is isolated in thought and regard from the historic Redeemer, the nerve of the

¹ E. Baily, *The Ancient Catholic Church*, Edinburgh, 1902, p. 221.

² *Knowledge of God*, II. 167.

Christian salvation has been cut. After that we may get an intense religious experience, bearing fruit of its own, but it will have its roots outside the NT, and its real parallel will be found in non-Christian religions.

(b) *The sacraments.*—These are taken over from Greek theology, as Greek theology took them from the mystery-religions. They are the vehicles by which the divine vivifying substance reaches the dead soul. Theologians will discuss afterwards with endless subtleties the relations between this substance and the Eucharistic elements. No ordinary man need occupy himself with these scholastic disputes. The mystic fact remains that he gets that substance, with its divine energy, into his life and somehow into his soul. The whole transaction is at once physical and supra-rational and impersonal.

(c) *Faith.*—The nature and function of faith are defined by the relation of the soul to the Church. The Church is the object with which the soul has primarily to concern itself. The redeeming powers which will effect its salvation are administered by the Church. What the soul has to do, therefore, is to commit itself to the Church. This act of self-committal is faith. Self-commitment is, indeed, the very essence of faith, as described in the NT. But in the NT the object of faith is the personal Saviour. In Latin theology it is the Church.

(d) *Love.*—When faith attaches itself to the Church and devoutly employs the sacraments, grace is infused into the soul, the process being understood under the analogy of the healing art. That thing, salvation or energy, called grace is imbibed and passes into the system with healing and renewing powers. The sum and substance of these powers is love. What faith does in the NT love does in Latin theology. It is the medicament of the soul. In the strength of it the impotent man can arise, take up his bed, and walk. Nervous before, he can now do works acceptable to God, which may properly be rewarded by the divine justice and crowned with the gift of salvation. Here is legalism to all intents and purposes. True, grace comes from without and gives power, revived from time to time in the sacraments. But the scheme itself is distinctly non-evangelical and amounts to salvation by merit.

(e) *Mysticism.*—After all, legalism is only a stage, which suffices indeed for those who are in the world and must remain there. Their salvation is looked after by the Church. Experts, however, like Augustine and Monica, may go much farther. It is strange that the Christian salvation, as Augustine outlined it, was the introduction to an experience which is taken over from the religious philosophy which was Christianity's most powerful rival. The highest reach of religion is not attained by faith, and is even ultimately independent of the sacraments. It is taken in the final step, by which the soul abandons all earthly things, and even its own characteristic powers and exercises, and is taken out of itself in rapture. Quoting the great passage in which Augustine describes his last conversation with his mother, Edward Caird comments:

"How deeply Neo-Platonism must have sunk into the spirit of St. Augustine, when, in describing the highest moments of his religious experience, he adopts almost verbatim the language in which Plotinus tries to depict the mystic ecstasy of the individual soul, as it enters into communion with the soul of the world!"

It would appear, then, that there are just two religions, properly so called, in the world. The one is mysticism, and the other is NT Christianity. The one offers a salvation which consists in mystic communion with the Absolute—salvation

by ecstasy. The other offers a salvation which consists in reconciliation to the living God and in a life of ethical harmony with Him in His character and redemptive purpose towards mankind—salvation by faith. Augustine presents the strange spectacle of a man who seeks to follow both religions and enjoy both salvations. The attempt is necessarily a failure. Evangelical faith has to be debased into legalism before the expert is free to enjoy his mystic blessedness. The common man is condemned to the one, that the religious specialist may concentrate on the other. The lamentable result is that Christianity, which was meant to reconcile men to God and to reconstitute humanity as a living organism, becomes the parent of endless dualism—the Church and the world, clergy and laity, secular clergy and the monks and solitaires. Instead of a salvation that is at once possession and inheritance, gift and task, there is presented a salvation from which the vast bulk of mankind is for ever excluded, to which those only can attain who isolate themselves from the very life which the divine purpose of mercy designed to redeem, regenerate, and restore.

From the point of view alike of mysticism and of predestination, there was no real need for a historic deed of atonement as the ground of salvation; and Augustine has not concentrated his mind on the work of Christ for men, as he has upon the operations of divine grace in man. The exigencies of the Pelagian controversy absorbed his energies. Yet, as a sincerely Christian mind, he adoringly recognized Christ as the Mediator, and attributed saving power to what He did. His deepest thought here is the humility of Christ, in which the love of God seeks to subsume to itself the pride of man. But his attempts at a theory are vague and wavering. He accepts the impossible idea that the Devil had rights over fallen men. These rights the Devil forfeited when he killed Christ. So those who believe in Christ are freed from the power of the Devil, for over Christ the Devil had no right. Along with this he treats the death of Christ forensically and attributes to it penal significance, but, like Tertullian, without constructing a 'satisfaction' theory. As an inheritor of Greek theology, he also retains the idea of the Word sharing our mortality, that we may be made to share in His divinity. Along these lines, however, his constructive thought does not travel. The way to a view of divine action in the redemption of man is blocked by his ruling ideas of predestination and miraculous grace; and these are due to the strain of Neo-Platonism which enters so deeply into his thought.¹

VI. *THE IDEA OF SALVATION IN THE MEDIEVAL CHURCH.*—The interest belonging to that great stretch of European history from Gregory I. to the close of the 15th cent. can never be exaggerated or exhausted. Nations are being born with much travail. Vast experiments in political organization and social structure are being made at enormous cost of life and suffering. The human mind is being aroused out of decadence, or awakened out of unconsciousness, and prepared for undreamed-of enterprises. The destiny of the human race is being determined amid a welter of controversy and battle, the participants in which know not the aim and guess not the issue of the conflict.

The clue, however, to these multitudinous and confused happenings is, as ever in the history of the human spirit, a religious need, together with its doctrinal expression. 'Dogmatically expressed,' says Harnack, as the story draws to its completion, 'there was a seeking for a sure doctrine of salva-

¹ *Evolution of Theology in the Greek Philosophy*, p. 228.

² Barile and Carlyle, *Christianity in History*, p. 223.

tion.¹ The records of this quest cover the whole period, and the details are innumerable. The stages or aspects of it may be classed as three: (1) the function of the Church, (2) the problem of the work of Christ, and (3) the protest of mysticism.

1. *The function of the Church.*—This is twofold, in part political and in part specifically religious, though, in its political aspirations, it was striving to reach avowedly religious ends. (a) In the first place, then, the Church succeeded to the place and work of the Roman empire. The empire had been, in a very real sense, the saviour of the world. It was the barrier behind which human life could be carried on, secure from threatening destruction at the hands of barbarism and anarchy. Its splendour, its wealth, its power, its venerable age, gave the impression of superhuman dignity and seemed to be the operation in the material world of the sovereignty of God Himself. When it began to decay, men were stricken with fear. Its impending doom hung over their souls. This doom was delayed in the East for many centuries by the founding of New Rome. Because the Eastern empire stood, there was no room or need for the Church to take its place and assume its functions. The Church was confined to its hierurgical functions, and Christianity remained no more than a mystery-religion. The State, accordingly, remained supreme over the Church—a position which it maintained in Eastern Europe till the fall of the Russian autocracy set the Church at liberty; and the problem is yet unsolved as to how it will use its unaccustomed freedom. The situation in the West was very different. The empire was manifestly passing away. The later emperors did not live in Rome. Finally, even the shadow of the Western empire passed away. Nominally, the civilized world had but one head, the emperor who lived in Constantine's capital. Really, the Western world was without political unity and had no central authority. In those centuries when the empire was on its death-bed, its prestige and power began to pass to the Church. Its spirit was born again in the Church. The key to the course of European history from Gregory the Great (pope 590-604) to the dawn of the Reformation is the doctrine of the Church. In the NT the Church is a spiritual fellowship of believers with their Lord and with one another. The Church of those long and terrible centuries is a political organization framed on the model of the banished empire, controlling men by a legal system, administered by a highly centralized government. The task before it was one of appalling magnitude. On the one hand, it had to preserve whatever was of permanent value in the culture of the ancient world, while penetrating it with new ethical and religious ideas. On the other hand, it had to face the barbarian menace, to subdue those untutored races which were breaking through the crumbling walls of empire, and make them subjects of a supreme Holy Will, which might restrain their passions and renew their natures. It was, in fact, the missionary task of every age. If we can imagine India, the seat of an immemorial civilization, ringed round with savage forces threatening its destruction—an India without any British rule to hold back the enemy beyond the frontiers and to keep the peace within them—and can picture what the work of the Christian Church would be in such circumstances, we have some conception of the situation of the Church in Western Europe when the sceptre had dropped from the nerveless hands of the last Roman emperor.

Now, if the spirit of the first missionary to Europe had shaped the missionary policy of the Church at this time, it is certain that the Church

would not have adopted the method of political supremacy, but would have trusted to that power of the gospel of Christ on which St. Paul relied absolutely. But St. Paul's method of evangelism had long been forgotten. Externalism had an increasing vogue for centuries. The Church had gone to school to the empire and had learned the imperial style. No other method was thought of than to oppose force to force—the force of Roman authority to barbarian force of terror and destruction. The only possible policy was supposed to be that of gathering the world under the dominion of Rome, binding the yoke of law more securely than ever upon Rome's old subjects, and riveting it on the new races that were occupying her domain and holding all alike for ever in bondage and tutelage. There is nothing ignoble about this dream of conquest and subjugation. The dreamers of it were among the greatest of men, noble in their devotion to an end which was power, but not selfish aggrandizement. Two remarks, however, are historically justified.

(i.) This conception of the salvation of mankind differs absolutely from that set forth in the NT: in the NT salvation by faith; in the medieval Church salvation by political domination and legal discipline; in the NT a salvation that operates from within by love and hope; in the medieval Church a salvation that acts from without by force and terror. The one is the outcome of a long religious growth in which redemption is accomplished by a God so close at hand that He can be man and bear human burdens and gather humanity to Himself in a living fellowship, of which He is the inspiration, the energy, and the unifying principle. The other has its roots in Greek dualism and Roman imperialism and is effected by a God afar off, governing, controlling, enshrining through the might of the pope, His earthly representative. We can see, by considering the course of events and the influences at work, how the one type came to be substituted for the other; but we are not warranted in concluding that the one evolves out of the other by an inherent logic, or that the medieval Church is what Christianity was bound to become as it grew out of its NT germ.

(ii.) The dream was never quite realized, and the hour of the Church's greatest triumph preceded its final downfall. From the beginning the Church realized the need of a secular instrument in dealing with the brute forces which had to be met and coerced. Accordingly, she called into existence a secular empire, to be the counterpart, on a lower level of spiritual value, of her own imperial constitution. The empire of the universe was to be governed by a world-priest and a world-king, each holding office and extending authority under God, the unseen Emperor. Ideally, these two authorities ought to have operated in harmony. Practically, they never did. The true genius of the Church required its absolute supremacy, the secular State, even though nominally holy and imperial, being no more than the instrument to carry out the divine sovereignty. Will of whose testament the Church was the depository and revealer. Such a position the empire declined to take. The Middle Ages were filled with the strife of empire and papacy. In the end victory lay with neither. The empire was destroyed by the greater skill of the papal curia. The Church lost its imperial position in less than a century after its most violent, and even grotesque, expression—if we may credit the story of Boniface VIII. with his brazened sword and his exultant cry, 'I am Caesar, I am Emperor.' The rising spirit of nationality would not permit absolutism, whether imperial or papal. The Church had preserved much of the past. It had formed the beginning of a new world. But it had not saved Europe, and it had destroyed itself. The failure of the Church, in its political and social endeavour, is to be traced to its radical misapprehension of the religious need of man. On presuppositions of dualism, religious and philosophical, nothing better, probably, could have been devised than the papal system. The Middle Ages are proof, on a large scale, of the inaccuracy of the diagnosis and of the failure of the remedy.

(3) In the second place, the Church assumed the function of mediator of salvation to the individual soul. The way of salvation, as marked out by the medieval Church, presents the curious spectacle of contact with NT ideas together with complete inversion of them. The NT Church is the communion of saints, i.e. the fellowship of believers, the individual being taken by his relation to Christ out of his isolation and made a member of a living organism, in which he finds his place and work, and is disciplined, trained, and helped in knowledge and virtue. The medieval Church is an institute of salvation, by whose machinery heathen men are made Christians, and sinners are enabled to escape eternal punishment, and even, in rare cases, to

attain sainthood. It stands, in its divinely imparted powers and its divinely designed mechanism, apart from and above the individual and proceeds to operate upon him with a view to his salvation. The NT Church summons men to yield themselves to Christ. The medieval Church summons men to yield themselves to its authority. It incorporates them in its organization, supplies them with divine grace, and legislates for them as they proceed to work out their salvation.

In the medieval Church, the individual, *qua* individual, had little or no place. His salvation was conditioned from first to last by his belonging to a corporation, in whose privileges and functions he shared, through whose sacraments his life was sustained; by whose graduated hierarchy, though but the remotest servant of the Church, he was linked to the supreme Head; whose saints shrouded him by their "merits," or helped him by their intercession. Through this corporation alone was he brought into touch with his Saviour. Outside the corporation his soul was lost.¹

In this medieval conception of salvation there is the practical and exquisitely skilful application of ideas which have occupied theologians from the days of Neo-Platonism, and of theories which have prevailed since Latin theology was constructed by Roman lawyers. The Church is the old Neo-Platonic 'bridge' over which the soul passes to the Absolute. The medieval Christian knows nothing of immediate access to God. He is confronted at every turn by the Church, the mediator. All divine influences, regenerative, educative, directive, come through the medium of the Church, with whom alone the ordinary Christian has ever directly to do. Grace is not, as in the NT, a saving, operative, love of God to sinners, but a substance, as Augustine conceived it, capable of being communicated after the analogy of food or medicine, with physical and hyperphysical results of a magical kind. With such presuppositions, the process of salvation is elaborate, but quite intelligible and workable.

(1.) Grace is infused into the soul in the sacrament of baptism and the Eucharist. In the one, life is communicational, first of all, to a soul conceived of as dead. In the other, renewed communications of life are made from those to those. Properly speaking, the celebration of Mass should be accompanied by communion. But mysticism with its own logic intervenes to make non-communicating attendance a means of grace. The mystery because one for eye and ear, for aesthetic emotion and rapt adoring contemplation, and in this the union of soul with the divine is affected. Still the Eucharist holds its own as the peculiar medium through which the divine life is maintained in the believer; the dead soul, being now quickened with divine energy, is able to perform good works. These are meritorious in the sight of God, and by their practice the sinner is transformed into a righteous person. This progressive sanctification is crowned by justification. The way of salvation stretches before the medieval Christian, arduous indeed and indefinitely prolonged, but plainly in view. Legal directions are abundant. A piously director is always available. This way, accordingly, has strong attractions for pure and earnest souls who keenly desire the blessedness of union with God, are deeply aware of their ignorance and weakness, and are glad to pay the price of a humbled reason and a surrendered will. The difficulty lay in the nature of the authority to which the soul was required to bow. It was an external authority, and the method of salvation was legal and even commercial. It ought well to happen, therefore, to an earnest and determined spirit, as to Paul in earlier days and to Luther in the following age, that despair should settle down in darkness, unless a more excellent way were found. That way had been forgotten by the theologians of the Church. As far as medievalism was concerned, the only alternative to legalism was mysticism—the way that plunges over a precipice into the depths of the unknown divine.

(2.) Grace, when it becomes exhausted through human weakness and error, has to be restored. The loss of grace is an ever recurring fact. Machinery for its recovery is a pressing need. This need was met in the sacrament of penance (*y.e.*), which, for obvious reasons, became of prime importance in this institute of salvation; and, in fact, is practically the salvation itself for all ordinary believers. Suppose, then, that a soul has fallen into mortal sin, and so has lost the grace infused into it at baptism in Eucharist, what must be done that the loss may be recovered? First, there must be sorrow of heart, preferably *medieval*, though attitude with certain conditions appended might suffice; then confession to the priest, guided by interrogatories, in which psychological skill, gained by long dealing with the secrets of human nature, aids the halting self-knowledge of the penitent; then the priestly absolution, wiping

off the guilt of sin and delivering the soul from eternal damnation; next, the 'satisfaction' (*y.e.*), or the task imposed by the priest, whereby the justice of God, pursuing sin with temporal punishments in this world or the next, is 'satisfied.' By absolution, granted in view of the satisfactions which are to follow, the soul is returned to a spiritual condition which makes it fit for further infusion of grace, and the interrupted course is resumed—grace, good works, merit, justification.

A serious complication is introduced into the scheme by the granting of 'indulgences' (*y.e.*). These are the remission of the temporal punishments by authority of the pope, to whom is committed the wondrous treasury of the merits of the saints. This addition to the scheme was necessary to make it tolerable. Indulgences express the pitiful heart of the Church, refraining from legal exactness and devising means whereby God's banished ones may be restored to Him. At the same time, an indulgence, in the midst of legalism, is freight with moral peril; and of this the practice of indulgences in the last years of the 16th cent. contains ample illustration. The mistake did not lie in the intention of the Church, but in the inevitable dualism which externalized all the relations of God and man and in the end made salvation a compromise between justice and mercy.

As the centuries rolled on, the limitations of the medieval Church became more and more evident. Profound dissatisfaction and wide-spread unrest characterized the religious life of the closing period of the Middle Ages. But deeper than discontent with the incidental features of the ecclesiastical system was the demand for a revision of the theological presuppositions on which that system rested and for a reversion to the primal redemptive forces in the midst of which Christianity from its birth-hour had gone forth conquering and to conquer.

2. The doctrine of the work of Christ. — Doctrine always follows experience, reacting upon it and giving it a stereotyped form. The medieval doctrine of salvation, accordingly, is the medieval practice rationalized, illuminated, and fixed.

The idea of God which governs medieval soteriology is that philosophical abstraction of being or substance, blent with the idea of political absolutism, which we have seen at work in Latin theology. The one element is Greek—the unconditioned and transcendent nature of God. The other is Roman—the will of an absolute monarch. A God of this character stands outside of His world, which is entirely dependent upon Him, while its coming into existence at all remains inexplicable. Its relation to Him, at any point of its career, is that of an empire to a distant, inscrutable, and almighty prince. In His regulation of the affairs of His dominion God is governed by no other considerations than His own absolute will. This He utters in the form of law, and the maintenance of law He delegates to designated ministers—i.e. the hierarchy of the Church—whom He suitably endows and equips for the unique responsibility.

Breaches of law are crimes. To meet the case of those who are guilty of breach of law but who are nevertheless the objects of the inscrutable election of the divine mercy, the penitential discipline of the Church has been divinely instituted. In the 'satisfactions' rendered by the penitent law is upheld and the conscience is awakened to a reverential sense of its demands. At the same time, this is procedure merely. It is a dealing with individuals only, and is, so to speak, empirical, and not absolute or final. Upon what does the penitential discipline rest? It must be warranted by, and be an application of, the divine dealing with the whole empire of God. That storehouse of merit, upon which the sinner ultimately depends for forgiveness and sanctification, cannot be left liable to depletion. It must be secure and inexhaustible. There must be an absolute and final vindication of the divine law and the divine honour by which God's government of the universe can be made inviolable and His preferential dealings with individuals be ratified. God, it was plain, must intervene in the history of His world so as once for all to exhibit the supremacy of His law, the unassailable dignity of His name. What

¹ Wetzstein, *Christian Thought in the Reformation*, p. 101.

is that act which possesses such momentous import! Experimental faith had always fastened on the death of Christ. Tradition enshrined the Passion of the Redeemer in the central articles of the Creed. Once this question, therefore, was raised as to the validity of the Church's procedure in granting absolution to sinners, it could be answered only in one way: The Cross is the act which vindicates the divine law and honour and validates the Church's procedure. The awaking mind of man, however, as it seeks to make faith conscious and clear, is not content with the bare fact. It presses for a theory. What gives the Cross of Christ this amazing significance? The difference between this question and that which was the central problem of Greek theology has to be carefully noted. The Greek question is: How shall man, corrupt and dying, be united to, and made partaker in, the divine nature, and so be 'deified'? The question which Latin thought made inevitable, and which now in medieval theology was asked in the most searching form, was this: How shall man, a convicted criminal, escape the doom which follows inevitably upon transgression in the court of divine inexorable justice? Putting the matter broadly, Vernon Bartlett and Carlyle say of the Latin temper:

'The typical product was not metaphysics but jurisprudence; and it was from this standpoint that man's relations even to God were regarded.'

And these writers proceed to illustrate by quotation from Sir Henry Maine:

'Almost anybody who has knowledge enough of Roman law to appreciate the Roman penal system, the Roman theory of the obligations established by Contract or Delict, the Roman view of Debauch and of the modes of incurring, extinguishing, and transmitting them, the Roman notion of the continuance of individual existence by Universal Succession, may be tempted to say whence across the frame of mind to which the problems of Western theology proved so congenial, whence came the philosophy in which these problems were stated, and whence the descriptions of remedying employed in their solution.'

With special reference to the problem of salvation, the required form lies close at hand. For offences against law there must be satisfaction. The wrong-doer must make amends. This, however, in the nature of the case is impossible. Man is finite; but his offence is infinite, for it has been committed against an infinite Being. Infinite, therefore, must be the satisfaction. The need of satisfaction is met in the person and work of Christ. He is divine, and therefore His work has the required note of infinitude. He is human, and therefore His work can be viewed as rendered to God by man. His redemptive work is His death—a deed of superabounding merit; and this, since the Son has no need of it for His own purposes, is available for those whose own merits so sorely need to be supplemented. The issue of this abounding satisfaction is twofold: Godward, it makes ample amends to the divine honour—the Lord of the whole earth has made His Name to be had in reverence of all His creatures; manward, it supplies what is needed to enable the sinner, impenitent in himself, to do good works, to obtain the reward of merit, and to become progressively sanctified and in the end justified. The death of Christ creates the treasury of grace and fills it with an inexhaustible supply of merit. Grace is a transferable quantity, which God employs for the benefit of His elect. By means of it He first starts them on the way to sanctification, in the sacrament of baptism; and then from time to time, in the sacrament of penance, He replenishes this store. Thus does the theory of satisfaction, as applied to the work of Christ, arise from and return to the centre, as observed in the Church. The one interprets the other. The medieval mind found in the satisfaction theory the very mirror of itself, a Christianity

(Christianity in History, p. 410)

intelligible to it, because it was simply the universal practice of piety, expressed in terms of thought. Precisely at this point, however, a danger threatened the theory and indeed ultimately dissolved it. Reason has undertaken to give a rationale of the work of Christ. But what are the rights of reason? It may be the handmaid of faith, or the equivalent of faith, or a power independent of faith; and, if reason be ever pitted against faith, the human spirit will be divided within itself. This is, historically, the course of scholasticism as a whole and of the satisfaction theory in particular.¹ In Anselm the satisfaction is a necessity flowing from the relation of God to the world. In Aquinas it is a method, not strictly necessary, but the most suitable for the end in view. In Duns Scotus it is grounded only in the absolute will of the Supreme Being; and the death of Christ has just the value which God chooses to put upon it. The defects of the medieval satisfaction theory are obvious. They all flow from the non-Christian idea of God which medieval thinkers took over from Greek thought. Medieval thought is penetrated by dualism and is congenitally incapable of yielding an adequate interpretation of Christian experience. Its God is the Absolute and cannot act within His world. He must have a delegate. What is achieved by this Other is presented to Him, and He enjoys the satisfaction rendered to Him. He is shut out of the sacrifice He demands. His Christ is monophysite; and incarnation is so delimited as to be made unreal. Christ is just human enough to be able to die. The sole point of interest is His death, the death of an infinite Being, from which His life falls apart, nothing giving value to the death nor receiving significance from it. This whole drama of divine redemption goes on apart from humanity. It is set in operation at the Cross and is maintained in action by the Church. The Church is the proximate object of the sinner's regard. With Christ he has nothing directly to do. Faith is directed to the Church; it is assent to an outward authority conceived as the delegated authority of God; it is not a direct relation of the soul to the Saviour. The Christian life, accordingly, is treated legally. Forgiveness is not the *primum* and the motive of the believer's experience, but its difficult and precarious goal. Union to Christ is sacramental and occasional, not abiding as inward spring and energy. It belongs only to the higher substance of which man is composed and can be reached only when the dualism of matter and form has been conquered by the suppression of the one and the sole survival of the other. So closely are medieval piety and medieval theology bound up with a philosophy which was radically alien to the spirit of Christianity.

The satisfaction theory did not pass unquestioned even in the Middle Ages. Abelard has been much praised and also severely blamed for rejecting it and substituting for it a 'subjective' or 'moral influence' theory. He has been regarded as far in advance of his time. When all is said, however, he remains medieval still. He has not critically revised the idea of God, which remains still involved in the dualism in which Aristotle, as well as Plato, left it. His God is still transcendent. It is true that Abelard reacts strongly against the idea of law. Over against law he sets love. But the function of love is simply the function of law with respect to the world. It is a device to secure the submission of men. The satisfaction theory keeps the world going by means of a legal discipline. For the legal discipline Abelard substitutes the exhibition of the divine love. An appeal is made to the tenderest emotions of the human

¹ See art. SATISFACTION, below.

heart. That appeal reaches its utmost poignancy in the *Crisis*. There is no reason to doubt the sincerity of Abelard's personal response to the love of which he disconcerts so movingly. At the same time, he is still within the sphere of medieval praxis and medieval piety. The merit of Christ—i.e. the love manifest in His death—stimulates human action and makes possible merit of the same sort. Yet, of course, such merit is never sufficient and has to be supplemented by the intercessions of the Redeemer. In truth, so long as the idea of God remains within Greek thought had placed it, the theological account of redemption must remain arbitrary and unreal.

3. The protest of mysticism.—The term 'mysticism,' commonly employed to denote any religious experience which is very intense and emotional and cannot be formulated in intellectual utterances, properly implies a dualistic metaphysic—the effort to reach a unity which shall rise high above both the elements which have been set in mutual contrast.

God, for the Mystic, is the One who is presupposed in all. God as God, as the unity above the difference of subject and object, to which everything is related and which itself is related to nothing . . . for Mysticism, the negative so decisively preponderates over the positive relation, that God and the world cannot be included in one thought.¹

The religion based on this philosophy gained classical expression in Plotinus and entered, essentially unchanged, into Christianity. It governed the theology of the Church. When, accordingly, we observe the phenomenon of mysticism arising in the Middle Ages, we are not to imagine that it is a protest against the piety of the medieval Church. It is that piety in its purest form. Every medieval Christian has before him the mystic experience of a union of substance with the divine—a union which he can never effect by any effort except the effort which is the cessation of all action; an experience which is supra-rational and supra-ethical, ineffable and incommunicable. The experience belongs to an inner region, where the soul, withdrawing from all finite things, matter, the world, the Church, and its own separate existence, finds God and is content. A mystic is out of place in any religious communion which does not ground its theology in the Neo-Platonic idea of God. Yet even that communion is not his resting-place. He will be in it and use its sacramental system. But his goal is beyond the Church and its institutions.

The medieval Church, however, was Latin as well as Greek. If its goal is a mystical salvation, it had a legal discipline to serve as a stage on the way. The exigencies of life compelled the ordinary type of believer to remain the slave of an external system. The Church, too, was bound to keep the vast majority of its subjects in this servile condition. If every soul was a solitary, how could the Church rule the world? The Church, therefore, as the institute of salvation in the midst of a lawless world, was bound to be a legal system, holding down the individual by constraint of an external authority. But such suppression of the individual is, in essence, profoundly irreligious, for it surrenders the idea of bringing the ordinary man into immediate relation to God. The protest against externalism is mysticism, which is 'religion in its most concentrated and exclusive form . . . that attitude of the mind in which all other relations are swallowed up in the relation of the soul to God.'² The medieval Church, accordingly, held within itself, side by side, legalism and mysticism—both alike the products of a non-Christian conception of God. The medieval theologian's philosophical presuppositions rendered him helpless.

² *Id.*, p. 210.

VII. THE IDEA OF SALVATION IN THE THEOLOGY OF THE REFORMATION AND IN SUBSEQUENT THOUGHT.—Scholasticism reached the height of its power in Scotism, and thence began its long decline. The history of four centuries of Christian life and thought is filled with one long endeavour to remove the static Absolute from its supremacy in philosophy and theology and to find some conception of God more adequate to the realities of religious experience. The details of this history are multitudinous. The main line, however, can be followed plainly enough; and the great epochs stand out clearly. They may be named and briefly characterized in their relation to central Christian experience as follows.

1. The return to experience.—While medieval dualism was subjecting all human interests to the control of an absolute authority, which was held to express the sovereignty of God, these interests themselves were growing in value and were demanding a more ample recognition and satisfaction. In every department of human life and action the feature of a confident and exulting appeal to experience is most marked. Nature stands out in its endless wonder and charm, with promise of amazing rewards to all who will diligently seek them. Eager explorers give the world to humanity as the sphere of action and achievement, wherein the mind of man may grow to its maturity. Human history thrills with interest, as it records the attainments and the triumphs as well as the agonies and tragedies of real men. Nations become conscious of themselves, not as pupils of Church and Empire, but as independent personalities with careers of their own. Above all and deeper than all, the human spirit seeks to break through forms which were ostensibly means of access to God, but had proved to be barriers. Formally, the movement we know as the Reformation (q.v.) was an effort to purge the Church of abuses, clear away its mythology, and rectify certain points in its theology. Really, it was something other, and more, than an intellectual, or even an ethical, demand. It was a quest for reality, and the direction of this quest was towards the New Testament. In essence the Reformation was a revival of that primitive Christianity which had, indeed, never wholly faded from the Christian consciousness. Along with the piety whose roots lay in the old mystery-religions there had come down through the ages a religion whose gospel was the Gospels, whose salvation was the historic Christ, the living Lord, whose creed centred in the redemptive facts of His life, death, and resurrection, whose piety was an immediate access to Him and an endeavour to be like Him.

When absolutism, ecclesiastical and dogmatic, proved untenable, this religion became aware of itself, found human voices in which to utter its message, and stood forth out of the wreckage of the past as essential Christianity, changeless as the unchanging love of God. Such a religion reaches back to ultimate truths of history and of experience which no dualistic logic can express. The Christianity of the NT, long overlaid by dualism, is a synthesis of elements that are intelligible only when grasped in their interrelations. Its note is always unity, the unity of life. Salvation comes to the individual when he finds himself in this unity, not absorbed or lost or suppressed, but lifted out of a false separation, and so, for the first time, justified in his individuality and guaranteed in the fullness of his personality. This salvation is seen in Christ. We find God in Christ. Christ is the incarnate love of God. He is the divine forgiveness, operating in the completeness of God's moral character amid the conditions of human sin and misery. He is this because of what He actually

was, and did, and suffered. Yet His existence and His power are not limited to a few years of time. He meets men always at the point where their need of God is deepest. Christianity is the historic Christ, but the historic Christ is timeless. The salvation thus presented in Christ is possessed in faith. What faith meant in Christian experience could not be understood by a theology governed by Greek and Latin presuppositions. In such a theology faith was only a preliminary step to a salvation carried on by a legal procedure and leading finally in the beatific vision. But faith, as it deals with the personal Redeemer, is an action, neither mainly intellectual, as in ascent, nor emotional, as in ecstasy. It is the action in which a soul, in full self-consciousness with sober self-judgment, commits itself trustfully to the everlasting mercy, conveyed in the person and work of Christ. It is the act in which a soul passes from self-assertion to self-realization, through surrender to, and identification with, the love which, in the life and death of Jesus, authenticates itself as divine redemptive efficacy. No activity of the human spirit could be more unlike surrender to a system or ecstatic plunge into a sea of being. It has no affinities with Roman legalism or Neo-Platonic mysticism. It implies a historic revelation and a personal relation to God. It permits no machinery of mediation and has no use for either hierarchy or hierarchy. In it the soul has immediate access to the Son of God and in Him finds the Father. This experience is the direct gift of God in Christ and confers on men that priestly privilege which non-Christian religions, and the medieval Church after them, had confined to a special and narrow caste. Without any apparatus of mysticism, the exercise of faith carries with it the blessing which is the eternal quest of the human spirit—union to God; and that not as an impossible blending of substances, but as a relationship in which the man who gives himself to God gains fullness of personal life, while he draws increasing wealth of knowledge and power from the communications of the divine Word and Spirit. Faith is generically distinct from passivity. It is an energy of the soul. It is the whole energy of the soul in the moral sphere, needing no supplement to make it a condition in man of the experience of salvation. Faith sets the soul on that moral enterprise whose goal is the accomplishment of the purpose of divine love, revealed and guaranteed in Christ. The relation of faith and works is not a problem for faith. There can be no faith which is not a dynamic issuing in service. There can be no gift of salvation which is not at the same time the summons to a redemptive task.

This salvation is accomplished as a life in the Spirit. Neither Greek mysticism nor Latin legalism had any room for the work of the Spirit. Theology added a *locus* regarding the Spirit, because of a clause in the baptismal formula and because of certain texts which it was impossible to ignore. But the application of dualism to Christianity made the NT idea of the Spirit, with its intensely Hebraic associations, utterly unintelligible. What philosophy ruled out and theology could not interpret Christian experience grasped as the simplest, divinest fact. To believe in Christ is to have the Spirit. The Spirit is not a proposition to be admitted; it is a power to be received and exulted in. In the reception of the Spirit the Christian apprehension of God reaches its deepest religious truth. God, and Christ, and the fellowship of believers are included in an experience of which the indwelling Spirit is the source and power. The Christian life is not lived outside of God, in a region where human effort is occasionally reinforced by infusion of grace. It is not drawn into the

divine Being or Substance, so that a unity is reached by the suppression of man's individuality. It is lived in God as the career of a personality which has a moral function in God's universe and is called on to discharge it with entire consecration, the energy for fulfillment being supplied continually by the Immanent Spirit of God. It is a life of intense and growing intimacy with God, in which self-realization becomes complete in proportion as God is discovered to be the source and sum of all moral values and powers.

The NT is full of the holdest synonyms, equivalences, and correspondences, which Greek theology could make nothing of, in which, however, Christian experience finds at once its interpretation and its nourishment. God and Christ; Christ and the Spirit; the Redeemer and the redeemed; the love which is God giving Himself to man, and faith which is man answering the approach of God; forgiveness and the new life; reconciliation and sanctification; salvation and service; salvation, present and to come—all such seeming contrasts, or even contradictions, are held together in the unity of a living experience. From the point of view of any logic known to the ancient world, Christianity was one vast paradox, an absurdity with which it was difficult to deal seriously. When, accordingly, that logic was adopted by the Church as the instrument of its self-expression, the result could not be satisfactory. The incompatibility of that logic with Christianity is registered in Chalcedon, makes Augustine the fountain-head of divergent streams, and turns the mighty structure of medieval theology into an intolerable burden. The disappointing thing in the theology of the Reformation is that this incompatibility was not discerned, and no effort was made to substitute for the older forms others more adequate. The new life which was moving in the Church of the 16th cent. 'would have required a wholly new theology to match it, but to the production of such a theology the Protestant Church was for the time unequal.'¹

3. The continuity of mediæval forms of thought.—Of the two strands of systematic thought which formed the traditional dogma it may be said, broadly, that in Lutheranism we have the continuation of Greek and Alexandrian theology, while Calvinism continues the line of Latin theology. In Lutheranism we have the mystical union of Christ and the believer, the *communicatio idiomatum* as a theory of Christ's person, the doctrine of the Real Presence in the Eucharist, all conceived in the vein of Greek theology. In Calvinism we have the governing principle of the divine sovereignty, conceived in the style of Roman imperialism. By means of this organizing idea a systematic theology was constructed which appealed to the interest of dogmatic completeness and was able to meet Roman dogma with a dogmatism as finished and masterful. In virtue of this conception also an ecclesiastical polity was devised which carried into the new age the old idea of the Church as an independent and imperial body, representing in spiritual things the supremacy of God, strong to resist aggression and insistent in its claim, not merely to be supported by the State, but to give to the State guidance and rule in all things pertaining to the Kingdom of God.

Lutheranism, with its individualistic and mystical tendencies, made the Church, as in the old Greek empire, subservient to the State, with portentous results in the history of Germany. Calvinism made men and nations strong to resist despotism and created nations whose passion is liberty. The retention by Calvinism, however, of the Latin idea of God made impossible any thorough revision of dogma. In the history of the

¹ Denney, *Christian Doctrine of Reconciliation*, p. 32.

attempt to make medieval thought serve the purposes of Reformation experience there are three leading phases.

(a) *The 'satisfaction' theory.*—This is intended to solve that central problem of soteriology which Anselm was the first to face explicitly: *Ovis Deus homo?* Particularly, why was the Cross necessary or, at least, divinely chosen, to meet the situation created by sin and form the warrant of human salvation in face of the judgments of a holy God and the sentence of an accusing conscience? The category of *satisfactio*, supplied by the old Latin theology and applied by medieval theology to the work of Christ, is taken over by Calvinism without any sense of its inadequacy to represent NT truth and life. Indeed, the Calvinistic use of it is more rigidly Latin even than that common in medieval theologians. In Anselm satisfaction is not punishment, is indeed an alternative to it. In Aquinas satisfaction is punishment of a sort. In Calvin the satisfaction made in the suffering of the Redeemer is explicitly and fully penal. The imagery is that of a court of justice—in this case divine justice—absolutely unerring and altogether inexorable in judgment. We must not allow the terror of this scheme to confuse us as to its moral quality. A Roman emperor, administering the affairs of the world in accordance with a system of law which he has ordained, is a far better God than an oriental despot whose will is caprice, or a feudal monarch punctilious as to his honour, or a pope dispensing grace for a consideration. Calvinism is making thorough work of the forensic form of thought. The real demand raised by the logical perfection of the Calvinistic scheme is for a reconsideration of the idea of God. Is the God of Jesus a magnified Roman emperor? Is this the God whom the penitent and the believing find in Christ? Is salvation purchasable by punishment or by any other device known to law? Is the Redeemer a divine Being, who is just human enough to transact business with God on a basis of strict legal satisfaction? Is justification so forensic that sanctification is only a required addendum to be carried on, out of court, by extra-legal directions and incentives? The Christian consciousness awakening to such questions will leave the scheme as such on one side, go back to the NT, live over again the experience of the first believers, and make a new discovery of Jesus, and of God in Him.

(b) *The Socinian criticism.*—Historically, the most acute and yet the most fruitless criticism of the forensic theology comes from Socinianism (q.v.). Socinianism is the continuation of medieval thought in its last stage of abstractness and formalism. Its God is the Scotist impersonation of *dominium absolutum*. His will operates in a moral vacuum. Sin is no more than a private debt. Atonement is superfluous. The Socinians are simply Scotists who have no barrier of ecclesiastical authority to prohibit them from pursuing the logic of medieval thought to its bitter end. Their system is medieval orthodoxy turned inside out. Socinian criticism of the satisfaction theory accordingly is directed from the point of view of that absolutist view of God which was behind the Latin theology, and had not been questioned in the Reformation theology, and is a formally consistent application of it. But, since that idea is not the Christian idea of God, the Socinian criticism does not touch the heart of the Christian experience. It may be formally correct to say with Socinianism that satisfaction and remission exclude one another, that grace and merit are contradictories, but no man has experienced the divine forgiveness apart from the love that suffused on the Cross; and all the redeemed grasp in the unity of experience the *gratuito* and the *propter Christum*. It may be

logically absurd to say that God made satisfaction to Himself when Christ suffered on the Cross. But the faith that receives salvation is profoundly aware that God is in that action and passion and is charging Himself with the cost of redemption. The satisfaction theory may commit the grave ethical and theological error of holding the divine attributes apart, and specially of pitting holiness and love against one another; but an experimental knowledge of God passes by all such impossible dissection and sees in Christ the whole character of God, holy in love and loving in holiness. Socinianism is individualism. Its method is that of formal logic, deducing its conclusions from assumed premises. The strength of the satisfaction theory was its sense of the necessary relations of God and man in a moral universe. Its weakness lay in its conception of that universe as an imperial realm, governed by an absolute monarch and administered by strict judicial procedure. The Christian consciousness has accepted this conception in lieu of a better, because it has felt that here, rather than in Socinianism, moral values and redemptive forces were secured.

(c) *The Grotian compromise.*—Grotius (q.v.) sets out to defend the Catholic doctrine of satisfaction against the Socinian criticism. Yet he shares with Arminianism the Scotist conception of the *dominium absolutum*. God is under no obligation to inflict punishment for breach of His law. Grotius rejects the category of private right, according to which sin was a debt which it was open to God to remit at His own discretion without satisfaction. But he remains within the circle of Latin thought in regarding God under the analogy of head of the State. The State, however, is not an empire, and God is not a feudal lord; He rules with enlightened and constant regard for the welfare and happiness of His subjects. Wisdom and benevolence determine His dealings with His people. They sin, no doubt, but their sins cannot really injure God; neither His honour nor His justice requires that He shall punish sin; but, as a beneficent ruler, He cannot allow the presence of sin in His dominion. He employs penalty, accordingly, simply as the proper means towards the end in view. That end is the preservation of order and the restraint of transgression. The whole conception exactly reproduces the ideal of statesmanship, when absolutism in politics is giving way to the modern conception of a well-ordered realm, where human life and happiness are reasonably secure. It belongs to God's surpassing wisdom that He did devise an adequate scheme, by which the benefits of penalty could be secured to His realm, without the odious necessity of inflicting the extreme penalty of the law upon law-breakers. Suppose His Son, the heir to the divine dominion, Himself guiltless of any offence, were to receive in His person, not, of course, punishment, but such pains as might be a vivid and awful symbol of punishment, would not this make such a profound impression on the mind of beholders, conscious of what was appointed them by the law of the State, that they would recoil from sin and avoid those dreadful consequences of law-breaking which had received in the passion of the Redeemer so tremendous an illustration? Faith can draw nourishment from faulty metaphors and ill-drawn pictures. But surely there never was a worse doctrine of salvation than that which represents the Cross as a triumph of administrative wisdom, securing a condition of public order in which people may live leisured and pleasant lives, undisturbed by the malign activities of criminals and revolutionaries. The worst features of the Greek and the Latin conceptions of God, with the Abelardian impressionism thrown in, are reproduced in the Grotian

reading of the satisfaction theory. Analogy for analogy, that of civil government is worse than that of the court-room. The latter suggests at least the inevitableness of a moral order. The former is coloured by the changeableness of political expediency. The obvious criticism upon both is that they are mere analogies, or metaphors, or illustrations, which do not and cannot express the whole Christian truth.

3. The disintegration of dogma.—The Grotian theory is the death-knell of scholasticism, whether medieval or Protestant. It represents the exhaustion of forms of thought which had come down through the ages uncriticized and unrevised. The great upheaval of the Reformation is beginning to tell in the region of doctrinal reflexion. At first, however, the endeavour after a new theology takes destructive form. The disintegration of the dogmatic system constructed under Greek and Latin influence proceeded along various lines of thought with intensifying force, till Kant's drastic criticism re-stated the whole problem of man's relation to God and the world and demanded a new solution. Three movements within this period are of special interest and importance.

(a) *Pietism* is a peculiarly Continental phenomenon, which has its English parallel in Revivalism. Pietism is a revolt against three forces which had oppressed the human spirit and had hindered the deepening of Christian experience: against intellectualism, which had turned faith into the acceptance of dogmatic propositions; against institutionalism, which had subjected the individual to an external authority; against professionalism, which had made theology the province of experts and had excluded the lay mind from the privileges and responsibilities of reflective thought. It demands piety as the test of Christian standing. It asserts the need of an individual relation to God and the right of the individual to the dignity of a child of God and a freeman in the realm of spiritual realities. It stands independently related to dogma and places upon it a pragmatic valuation, according as it ministers to the wealth of the soul's inner life. In all this pietism was occupying Reformation ground. At the same time, it did not occupy precisely the same position towards dogma as did the theologians of the Reformation. They believed in systematization and were consciously constructive in their efforts. The pietists disregarded system and concentrated on those doctrines which were distinctly experiential in their import and were susceptible of psychological exposition. If they had generalized this method, they would have anticipated modern thought in a remarkable degree. As it was, their chief interest lay in the experiences of the individual soul; and their main theological work was done in connexion with the fact of conversion and the process of sanctification.

The merits and defects of pietism and its English equivalents in more recent times are patent. They awoke the conscience and appealed for faith with prophetic fervour and power. They inspired insignificant evangelistic and missionary enterprises. They set in operation humanitarian work, which endured long after the special religious conceptions that attended its beginning had been forgotten. At the same time, their conception of salvation was narrowly subjective and tended to concentrate attention on states of the soul's inner experience and to erect as a standard of Christian perfection æsthetic and emotional delights rather than righteousness and truth. Such a salvation omits three-quarters of life from its purview and makes duty and virtue an annex to Christian experience rather than its product and its verifi-

tion. This subjectivism has resulted, too, in a lowered conception of the Church as the sphere and instrument of the Christian salvation and in a tendency to revert towards separatism and quietism (q.v.). The result has been to deprive the Church of its richest and most vital elements and to condemn it to barrenness and futility. Men have been repelled alike by the narrowness of an individualistic piety and by the abstractions of dogmatic theology and institutionalized Christianity.

(b) *Mysticism*.—Formalism and externalism in all ages produce mysticism, and the essence of mysticism is ever the same. Accordingly, when we note the ominous development of Protestant scholasticism, we eagerly await the appearance of the mystic protest. Nor are we disappointed. Mystics confront the Protestant ascendancy and invite elect souls to draw apart from institutional Christianity and find God in the depths of their own souls. The most interesting and influential of these intense spiritual individualists were, undoubtedly, the Quakers, who found in a Scotsman, Barclay of Ury, their ablest systematic thinker. This Abolitionist laird dared to oppose the Calvinism which held the great majority of his fellow-countrymen in what he believed to be gross darkness. He did not mean, indeed, to deny the objective ground on which the traditional orthodoxy, Roman and Reformed alike, had based the fact of salvation. But he placed alongside of the historic fact an inward mystery, whose singular value tends to make the other unnecessary.

There is a 'two-fold redemption': the first 'performed and accomplished by Christ for us in His crucified body without us,' the other 'brought by Christ to us, which we best properly to call and account a redemption than the former.' By the first 'we are put into a capacity of salvation.' By the second 'we witness this capacity brought into act.' The historically procured 'capacity,' however, is really not needed. God has given Christ as a Light which 'enlighteneth the hearts of all for a time, in order to salvation . . . and would work out the salvation of all if not resisted.' This Light is 'a spiritual substance which may be felt in the soul and apprehended.' This Light is seen in the historic Christ, yet the history and the mystery of Christ fall apart. 'The history is profitable and comfortable with the mystery and never without it; but the mystery is and may be profitable without the explicit and outward knowledge of the history.' 'In regard Christ is in all as in a seed, yea, and that he never is nor can be separate from that pure and holy seed and light which is in all men, therefore may it be said in a larger sense, that he is in all.' Salvation, therefore, is not bound up with any historic facts; and Christ becomes other than the *Jesus* of history. He is the *Mysterion* of old Greek thought. 'As many as resist not this light, but receive the same, it becomes in them an holy, pure and spiritual birth, bringing forth holiness, righteousness, purity, and all those other blessed truths which are acceptable to God.' 'This inward birth of Christ in man is that by which we are "made just" and so justified; for justification means "making one just, and not reputing one merely such, and is all one with sanctification."'

The good laird's interest in righteousness is deep and true, and his protest against the 'satisfaction' theory is intelligible. But the background of his thought is none other than Neo-Platonism. His conception of salvation would be as black and empty as the mystic plunge into the Absolute, were it not for the accident that Barclay was a devout believer in Christ, deeply exercised in Christian experience. Quakerism has lovely fruits and has a strong fascination for all who have felt the fruitlessness of intellectualism. But in itself it has the inflexibility and incommunicableness of the mystic rapture. The Christian salvation cannot be separated from the redemptive action of God in history. Mystics abound throughout Christendom during the 17th and 18th centuries. They provide a refuge in the midst of that dogmatism which their influence tended to destroy. They are intensely interesting personalities. But there is no advance in their thought beyond the point reached

¹ *An Apology for the True Christian Divinity*, London, 1698, pp. vii, 421.

by Plotinus, and the differences between them do not obscure the identity of their central positions.¹

(c) *Rationalism*. — Reflective thought has a necessary function in reference to religious experience. This function it does not exercise alone, but always in conjunction with conscience, feeling, and will.

Knowledge in the NT is 'not an abstractly intellectual view of Christianity . . . not only a deeper comprehension of the Christian revelation itself, but a deeper insight into its practical significance and obligations. . . . Some such thing—was in the sense of a speculation *a priori*, without ethical inspiration, but by the sense of an expanded and interpretation of Christian faith, which shall be pervaded throughout by the spiritual virtues of that faith—seems to be set before us by the NT writers as the ideal of "knowledge."²

Suppose, however, the intellectual element in this complex function of the mind were isolated from all other elements and erected into a standard of the truth and value of a living religious experience. It is plain that the result would be defective. The tendency to such false isolation and elevation of intellect lies close at hand, and theology in all ages has felt it as a temptation. When the temptation is yielded to, the result is rationalism (*q.v.*). Practically, it means 'salvation by wisdom.' Religion is cast into propositional form. The acceptance of this form is treated as the condition of salvation. Salvation is intellectualized and thereby, of course, emptied of its vital force. In post-Reformation thought prior to Kant rationalism reigned supreme. On the one side, it assumed the form of dogmatic orthodoxy and professed to be a formal and systematic presentation of saving truth. The more rigorously the logic of the understanding was applied to the fullness of religious life, the more elaborate the system became, and the less able it was to sustain its own weight. Controversies broke out, sects multiplied, weapons of mutual exclusion were employed, and salvation was disfigured by the very process that was meant to defend it. On the other side, rationalism appears as criticism of dogma. At first the movement is not directed against the content of the Christian revelation. Men like Baxter among the Nonconformists or the Cambridge Platonists among the Anglicans are in full sympathy with evangelical Christianity. But they are repelled by the Protestant scholasticism. The Cambridge men, in particular, occupied the position of the Alexandrian theologians. They are seeking to do a genuinely constructive work in theology. They have borrowed their ruling principles, however, from the Alexandrians—just as the Alexandrians borrowed from prevalent Greek modes of thought. They did not estimate correctly the nature and issues of the principles they were thus assuming, and they were brought near the result that ever haunts Greek thought, viz. the undervaluing of the historical basis of redemption and the relapse into mysticism. Their Platonism is really Neo-Platonism. Their chief value is that they created an atmosphere in which the Christian soul might grow in sweetness of spirit and tolerance of judgment. After all, however, there was a closed virtue. They were not able to interpret Christianity afresh to a generation under the control of dogmatism. The critical process took further and more aggressive shape in the movement of which English Deism (*q.v.*) is the best-known representative. This movement is as intellectualist as the orthodoxy it combated. Its aim is not to dispense with dogma, but to reduce the dogmatic system to an easier compass. Christianity is still *gnosis*; but its propositions can be cut down to a few brief statements. Salvation is still by wisdom; but the opinions offered for acceptance

are such as will find the minimum of opposition from the human understanding. Such reduction of dogma has no religious value. Rather, it accentuates the essential evil of all dogma. It accentuates that 'mortification of the understanding' which makes rationalism so strong in its attack on orthodoxy and so useless as a contribution to the higher life of the spirit. Further, a rationalism that cleaves to a few dogmas is powerless against an application of its own rigorous method, which discards all dogma and delivers the human mind once for all from all bondage to external authority. Christianity was never so near extinction as in the period which began with the Protestant dogmatism and ended with dogmatic atheism. The root of all the evil is plain. Theology has lost touch with life. It has ceased to be a real soteriology. It has betaken itself to system-building and has forgotten its true task, the interpretation of the Christian salvation as an actual experience of living men.

4. *The movement towards reconstruction*.—In place of decadent scholasticism there came a great return to experience. In every department of thought there is an abandonment of scholastic methods and a recurrence to the facts of life. Physical science enters confidently into its kingdom. The historical method of study, critical in its approaches, constructive in its aim, governs procedure in philosophy and theology. Literature emerges out of pedantry and formalism and becomes vivid, human, free, and varied. Social and economic forces gain increasing practical and scientific recognition. Deeper and more influential than all these efforts after reality is the revival of religion which characterized the second half of the 18th cent., continued during most of the 19th cent., and spread through all lands occupied by daughter churches of the Reformation. As in that century when Christianity was born and in that which saw the collapse of mediævalism, so now men became deeply penetrated by a sense of the need of divine redemptive power to deliver them from the moral evils which afflicted them. All problems of life and thought were seen to run back to the ultimate problem of man's relation to God. Salvation, as in the 1st cent. and in the 16th, was an imperious demand of the human spirit. As in those two great epochs of religious history, the response to this need came in a new proclamation of the love of God, manifested in the life and suffering of the historic Redeemer. Christianity was, as it were, reborn in the consciousness of men, and something of the gladness and power of NT days re-visited the fainting Church.

Theology and philosophy in this period alike address themselves to constructive work. In such an endeavour the activities and results of the past could not be forgotten. All the greater forms of ancient thought are reproduced. Yet there are deep lines of demarcation which separate modern thought from those typical forms which, after eighteen centuries of dominance, perished under the criticism of Hume and the yet more thoroughgoing criticism of Kant. The broad distinction consists in this: that, whereas ancient thought, in its Greek and Latin forms and in its mediæval continuation, is governed by metaphysical dualism, modern thought, in all its forms, has abandoned the attempt to construct a universe out of two opposed elements. The Greek idea of an Absolute, out of relation to the finite, to be reached by a supra-rational endeavour of soul, is finally surrendered. The Absolute, however defined, must be conceived as manifesting itself in the fullness of life, to be apprehended, therefore, not by going outside of experience, but by penetrating to the heart of experience and reaching that which is at once the highest value and the supreme reality.

² *Dunsey, H.D.P.*, art. 'Knowledge.'

The problem, in one word, is reconciliation. How is man to discern and appropriate the fundamental unity through which all human interests are to be reconciled and harmonised? It is the underlying problem of economics, of social and political science, as well as of philosophy in its broadest range and of theology in its specific task. Salvation is conceived as essentially functional and organic. The effort is made to combine two aspects of salvation which had been often held apart. The one is the objective and historic: the unifying of life cannot take place in idea merely; it must be wrought out for man in a history, if it is ever to be appropriated by men as an inspiration and a power. The other is the subjective and experiential: the action in which reconciliation is achieved cannot be an isolated historic incident. Salvation is not a transaction. It is an action indeed, but such an action as is continued in the experience of men and does really organize human life into a living unity. The 19th cent. is remarkable for its interest in history. It is the period of 'lives of Christ'; so confident is it that what it needs is to be found in Him, if only He were properly understood. It is remarkable, also, for its intense concern with human welfare. The constant political upheavals which mark its course are subordinate in importance to the goal of social improvement which they are supposed, often mistakenly, to attain. No way of salvation which does not issue in the moral uplift of the individual and of society can make successful appeal to the modern mind. Atonement must be real at-onement, of man and God, and of man with man. When from the standpoint of our own day we survey the field and note the many volumes and all their plans and schemes, we perceive that, amid this bewildering variety, there is one controlling quest, viz. for a secure doctrine of salvation. This does not mean that the modern mind will ever bind upon itself the intolerable yoke of a dogmatic system. Still, as it surveys a century of varied and intense activity, as it finds all gains and values imperilled in the great disaster of a world war, as it looks forward to an era of reconstruction, it does require that the forces of redemption shall be understood, so that humanity shall be saved with a salvation which shall atone for unspeakable wrong, repair intolerable waste and injury, and comprehend all nations in mutual service and helpfulness.

Success in the effort to reach a truly organic idea of salvation has been very varied. Certain types of doctrine may be distinguished in the leading thinkers of the period. Affinities with past conceptions may be noted, with a constant reaching out after more concrete modes of thought.

(a) *Salvation by wisdom.*—The old Greek intellectualism has its modern representatives in Hegel and the great English thinkers who carry on the idealist tradition. Let the idea of God be conceived as that of a self-differentiating unity. Let the element of difference appear in the individual's intense consciousness of himself, with separate rights and claims. It is plain, then, what sin and salvation mean. Sin is the turning of the self against the unity which alone gives it meaning. Salvation will be the dying to this selfish self and the affirmation by the self of its oneness with the universal Self, in whose completeness all elements of difference lose their separateness and are reconciled to one another. 'Die to live' is the gospel which each individual must preach to himself. In the act in which he thus dies he enters a new life. In the life thus reached by death his sin is seen to be lifted from him. It has been already borne by the universal consciousness, of which he is by nature a partaker, to which he owes both the possibility of sin and the power of redemption.

Historic Christianity sees this unity with the divine exhibited supremely in the consciousness of Christ. The ordinary man will do well to attach himself to that great discoverer of the way of salvation. For the salvation is not dependent on Jesus; and there is no need or room for trust in Him. The salvation is the discovery by the individual of his oneness with God; and it is made by sheer force of thought.

No philosophy was ever more religious. It is Neo-Platonism purged of dualism. It is Platonism interpreted, corrected, enriched. But it is not Christianity. The dualism it supposes itself to have transcended is sunk too deep in human nature to be exorcised by a formula. God is more than an idea, even than 'the Idea.' Christ is more than an illustration of a process of thought. Salvation by wisdom is for an intellectual elite. It is neither universal, final, nor effective.

(b) *Salvation by feeling.*—Intellectualism never fails to produce the protest of feeling. Over against the makers of systems and the keen-witted destroyers of systems stand continually the great company of the mystics. Jacobi, stirred both by the success and by the failure of Kant's critical philosophy, maintains that the mere understanding can indeed bring us only to phenomena. The realities of God and the spiritual life are inaccessible to its procedure. They are not, however, on that account out of reach. Another faculty, which sometimes he calls 'faith' and sometimes 'reason,' conducts us to the supreme realities and gives us a direct perception of them. The same mystical vein is present in Schleiermacher (q.v.), combined with a strong sense of the value of the historic redemption in Christ and of the organic fullness of the Christian life. Religion is neither philosophy, nor theology, nor ethics. Its source is deep beneath intellect and will. It consists in a state of soul wherein ordinary activities are suppressed and the whole being is surrendered to the overwhelming sense of the presence of the Infinite. This condition is the very essence of salvation. The Christian religion owes its supremacy to the fact that in it this sense of the Infinite and the soul's absolute dependence upon it is evoked, and maintained, in a unique degree. Christ holds the central place in this religion because He lived habitually in this consciousness of God's presence. The Church, as the fellowship of those who trace their new life to the spirit of Jesus, is the organ whereby Christ's consciousness of God is to be disseminated throughout humanity. In Ritschl's words:

'Redemption is the actual liberation of believers from the sin that prevails in them, by communication of that power of His consciousness of God, which the individual receives in the fellowship of those who resemble Him.'

Schleiermacher's message was life from the dead to a Church dying of intellectualism. It was pietism lifted out of a narrow groove and applied to the widest problems of philosophy and religion. It communicated an impulse to theology which has never ceased to act, recalling it to its real function as interpreter of the Church's life. It was a determined effort to deliver mysticism from the twin errors which continually haunt it—the undervaluing of history and the isolation of the individual. Christ and the Church are brought within the scope of the mystic experience and are made essential to it. Yet, after all, religion, as Schleiermacher conceives it, is essentially mysticism. It implies the dualism which is the presupposition of Neo-Platonism and which recurs even in Spinozism. The Infinite does in effect absorb the finite. Salvation does mean the dissolution of the soul in the rapture of its sense of

1 A Critical Hist. of the Christian Doctrine of Justification and Reconciliation, Eng. tr., Edinburgh, 1873, p. 467.

the Infinite and the Eternal. The power in virtue of which man reaches the Infinite is not the intellect or the will; neither is it faith, in the NT and Reformation sense of *fides*. Religion is not action, nor does it urge men to activity. It is the soul feeling itself as one with God. God, in such an experience, is not viewed as personal. Schleiermacher, like all mystics, shrinks from the popular language which makes of God an individual like all other individuals, only bigger and stronger. But he carries this reverence to the characteristic mystical position that 'omnis determinatio est negatio'; and in this denial of predicates to God personality too is lost. With it there is lost also the conception of a divine end, and a divine historic action, and a redemption which is an achievement of love. In spite of the Christian doctrinal construction and the beautifully Christian spirit, we are still at the point where mysticism resolutely abides, at which salvation is an ineffable and incommunicable experience of the individual soul, not merely immediate, but unmediated by any Saviour or any saving deed. At this point mysticism and Christianity part company. It is significant that in the exhaustion which attended the close of the 18th cent., and the destruction of all institutional forms of life which has marked the second decade of the 20th cent., there has prevailed a deep and wide-spread interest in mysticism. Its historic representatives are being sympathetically studied. Its psychological elements are being analyzed. To it, as to the essence of religion, men are being recalled, and in it, it is hoped, they will unite in a community of soul which disregards divergences of ecclesiastical connexion. Sects are springing up in which—e.g., 'Christian Science' (q.v.)—in spite of the protean ignorance they display, we can see that a mystic influence is at work, giving them any real value they may possess. The net result is the same as in any other era in which mysticism has arisen. Its value lies in its protest. Its weakness lies in its dualism and individualism. Its presuppositions are not those of Christianity, and its salvation is radically distinct from that with which Christianity meets the need of man—in the 1st cent., in the 16th, or the 20th.

(c) *Salvation by power of will.*—Stoicism, like mysticism, stands strong in a period of intellectual impoverishment and moral anarchy. It differs, at least in its primary form, by being the assertion, and not the despair, of self. Mysticism carries the denial of things finite one degree farther than Stoicism and denies the sufficiency of the finite subject. The lesson of the history of thought is that mysticism diagnoses the need of man more thoroughly than Stoicism. It is precisely within the self that the root evil lies. The self cannot be its own redeemer. Yet Stoicism has a nobility and valour of spirit lacking to mysticism. It acts as a moral tonic, when destructive criticism is rampant and religious feeling seems to have no cure for the wounds inflicted by a ruthless logic. In the heart of the 18th cent. Butler proclaimed the autonomy and supremacy of conscience. Conscience is like a king issuing commands to turbulent and ill-conditioned subjects. Unfortunately, its authority is not combined with power. Any individual who chooses, however, may make conscience supreme in his own life, and, if he does, virtue will follow and be his reward. This idea of conscience is crossed in Butler with other ethical conceptions, as self-interest and the love of God. His attempt to combine them, however, would have required another psychology than was at his disposal and a different reading than he attained to of man's need and of divine redemption. As it is, he stands, a lonely figure, amid the crowd

of destructive thinkers. The world of his day honoured him with a bishopric, but left his message severely alone. Not to him, but to John Wesley, on whom, it is to be feared, he looked with some degree of contempt, was the moral uplift of his generation to be due. Stoicism has no gospel, bids each man be his own Saviour, permits no objective mediation of salvation, stands erect, great, somewhat grim, and a total failure.

In Kant (q.v.) the destructive criticism of the 18th cent. is carried to its most drastic issues.¹ The whole structure of dogmatism crumbles beneath his blows. He had finally demonstrated that that power of the mere understanding and that method of logical process by which the great dogmatic systems had been reared are incompetent to reach the sphere of things real. By the same right criticism he also demonstrated that the attack upon dogmatism is open to the same condemnation as dogmatism itself. If dogmatism is incompetent, so also is scepticism. Never was so great a destroyer. But, with him, destruction is only a preliminary step. In heart he is a builder. He belongs in intention to the period not of disintegration, but of reconstruction. He himself, however, scarcely advances beyond Stoicism: nothing is more interesting in him than his attempt to make Stoicism Christian, though, in effect, all that he does accomplish is to turn Christianity into a Stoic philosophy. Above the world of phenomena, to which alone the intellect confines us, there is the region of ethical values, which is the sphere of reality. In the former man is an empirical object, and therefore not free. In the latter he is free, because freedom means the determination of the self by its own law; and the noumenal self gives the law to itself. Suppose, however (what is indeed the case) that man has ceased to be his real noumenal self and, by an act which on Kantian principles is really inexplicable, has allowed himself to be determined, not by the law of his real being, but by things sensuous and empirical, how shall he deliver himself? What shall he do to be saved? Kant has no answer to give except, 'Obey the moral law.' It is the law of the moral subject as noumenon. But it is his law only as an individual. It is not the revelation of God in him and in mankind. It has no regenerative force.

¹ Because he stops short of this latter conception, Kant necessarily rejects as Mysticism, or as involving the negation of moral freedom, that very idea which gives its great moral power to Christianity, viz. the idea of a real objective mediation, by which the individual is raised above himself.

It is deeply interesting to note how Kant employs Christian phraseology, 'Son of God,' 'substitute,' 'Redeemer.' But, with his presuppositions, all this is picture language only. There is no God but the good will, no gospel but the categorical imperative, no salvation save man's obedience to law, no Saviour but his own unaided power.

Kant's view of salvation suffers from his dualism, which involved a really unintelligible distinction between man noumenal and man phenomenal. It shuts man up to his subjectivity and makes impossible any real reconciliation of man to God and of man to man. Ritoch's view of Christianity is Kantian in its thoroughly ethical quality; but it seeks to get above the Kantian dualism in these two respects: it seeks to ground man's salvation in a work of God; and it exhibits salvation as fulfilment of a social task.² (a) God has before Him one purpose in His dealings with men—the creation of a Kingdom, which is the Kantian 'realm of ends,' treated not as a deliverance of the moral law, but as a fact of religious experience, and filled with the positive content of

¹ E. Kant, *The Critical Philosophy of Kant*, Glasgow, 1885, p. 412.

² See art. *RECONCILIATION*.

mutual relationships and service. (b) This Kingdom is constituted by obedience to the divine will. It is, accordingly, a synonym for salvation. Salvation, or justification, or adoption means moral harmony with God. (c) This Kingdom has a history, inasmuch as God does in all ages labour for its realization. In that history Christ has a unique place. He perfectly obeyed God, was entirely faithful to His calling as Son and Servant of God, and carried His obedience to the point of death rather than forgo His oneness of will with God. On His fidelity the Kingdom depended. It is due to Christ that it exists. Salvation is a fact in human experience, which owes its permanence to Christ's loyalty to His Father. Therefore humanity is in debt to Christ and is saved only through the grace of Christ—i.e. through Christ's perseverance in His vocation. (d) The individual is saved in and through His place in the Kingdom. Salvation is membership in the community which Christ gathered about Him, and which has existed ever since, the members of which share Christ's relation to God. The Kingdom, or salvation, is prior to the individual and is a gift to him. But it is his only as he makes it his task and devotes himself to doing the will of God, which will include serving his neighbour. Unquestionably, all this is moralism of a very noble kind. Its recoil from a hard, forensic, or transactional view of the work of Christ and of man's salvation is entirely intelligible and has proved most fruitful in all subsequent soteriology. When all is said, however, it remains moralism still. It does not view sin in the aspect which it has always borne for the Christian consciousness, as a fact of such overwhelming magnitude that it involved God in the unpeppable anguish of enduring it as a load upon His heart. For Ritschl 'the sin of the world is a separable accident of the mission of Jesus.'¹ Faith, accordingly, has not the note of trustful self-commitment to the mercy of God to Christ which is struck in the NT and re-echoed in the praises of the Church in every age. It becomes 'the persistent direction of the will to the final purpose of God and Christ which the believer for his own sake maintains.' A. E. Garvie, who quotes this passage, adds, 'Individual faith is social loyalty.'² Thus has Ritschl separated fruit from root. Or, rather, the fruit of character grows from the root of individual moral capacity and owes to Christ and His Church no more than indirect assistance. It is an unpleasant issue of Ritschlianism that a salvation, thus received as moral task, seems open only to those nations which inherit Western culture. What becomes of the rest of the world does not appear; and missionary enterprise does not seem to be one of the ministries of the Kingdom.

It is significant, too, that Ritschl has omitted any place or function of the Holy Spirit in the salvation of man. Yet so deep-seated an element in the experience of the NT Church ought surely to have been embraced in a theory which turns upon the fact of the Christian community. Where, however, the work of Christ for us, and upon us, or in us, is inadequately interpreted, because of invincible subjectivism, there can be no occasion for the idea of divine power operating directly within the human spirit. Ultimately man is self-sufficient in salvation.

(f) *Salvation by process.*—Throughout the whole movement towards reconstruction one characteristic is most marked, the recoil from the static view of God, which had reigned unquestioned in Greek and Latin theology. Even Hegelism did not intend to present for acceptance a motionless

and impassible God, but did desire to bring the facts of life and movement into the idea of the Absolute.

Two phases of recent thought have given voice to this reaction from a static view of God. One is the magnificent activity of science in unfolding the facts of development in the universe. The other is the emphasis which is increasingly laid on social facts, forces, and ideals. The governing idea of evolution, and the prevailing social emphasis, could not fail to have profound effects on theology and to produce far-reaching influence upon older conceptions of God and of salvation. When the first shock was over, it was thought that no great harm was done. It was hoped that theology could take into itself the evolutionary view of nature and yet retain all the advantages of the old absolutist view. In like manner, theology, it was considered, could be democratized and socialized, while God would still be worshipped in His solitary supremacy. Of late, however, it has become apparent that the theological revolution cannot be accomplished so smoothly. The static Absolute is not to be so easily transmuted. If the static view goes back to Parmenides, some of the leaders of the revolution are inclined to go back to Heraclitus. Instead of a universe rigid and fixed, we are invited to behold a growing universe and to discern at its heart a growing God.³ Instead of a God conceived as an omniscient Planner and an omnipotent Doer, we are offered a finite God, not omnipotent, but doing the best He can to overcome forces hostile to Him and gradually, very gradually, with toil and pain, winning satisfactory results. A God of this kind, we are assured, is quite intelligible and much more adorable than the distant Divinity of older thought. Human salvation, accordingly, takes on a wholly different cast from anything we have believed in hitherto. It is not a victory of divine love already won, which we appropriate and carry out into lives which God had in view when He undertook the making of the world. It is a process in which God and man are both engaged, the issue of which is by no means a certainty either for God or for man. On the whole, there is reason for hope. If we cannot be optimists, we can at least be meliorists. Things are moving; and God has grown so wise and strong, and has increased so much in moral intuition and moral power, that we are reasonably sure He will win in the end, provided He gets the help of all high-minded persons. There can be no doubt that the intellectual atmosphere is charged with ideas like these. Even before the war men like William James and Hastings Rashdall were insisting on the worthiness of the conception of a finite or limited God, who is not the Absolute. To Ward the Absolute is 'God and the world.'⁴ McTaggart's Absolute is a society conceived after the analogy of a College.⁵ H. G. Wells harks back to the analogy of a hero King, 'a young and energetic God, an Invisible Prince growing in strength and wisdom, who calls men and women to his service, and who gives salvation from self and mortality only through self-abandonment to his service.'⁶ The idea of a 'young God' suggests obvious questions. Did he then come into existence, and when and how? Is his present rate of progress fixed, or, with added experience, will he be able to increase his speed?

The difficulty of attributing growth to God is intensified, if we are meant to include in it development of character.

* It is not clear," says Pringle-Pattison, "whether this God is morally perfect to begin with—in which case the development and progress would consist simply in the moral enlightenment and betterment of human beings and similar races in other regions of the universe—or whether the finite God is himself conceived as growing in insight and in moral wisdom through the lessons of experience, and working out his own character as he proceeds with his beneficent work. In the latter case, one is at a loss to see why the title of God should be bestowed on an individual essentially of the human type, though, no doubt, on a larger scale and at a higher stage of development; and one is bound to conclude that such a developing demigod would give the same account of his own development as the moral and religious man among ourselves. He would describe it as a new insight into the nature of things, due to the leading of a higher God, who would be God indeed. It seems to me impossible to override the testimony of the religious consciousness on this point."¹

That testimony is unquestionably that God is the source of salvation, which is with Him an accomplished victory, which man presupposes in all their own moral warfare. Commenting on William James's description of his position as "moralistic religion," Pringle-Pattison says:

"However it may be with popular religion, the deeper experience of religious faith and emotion—the utterances of the saints, the religious experts—appear quite irreconcilable with the pluralistic conception of a finite God, an unfinished world, and a dubious fight. In fact, it is not too much to say, with Mr. Bradley, that "to make the moral point of view absolute" is to leave "broken with every considerable religion." The victory for which morality fights is not religion already, or rather eternally, won; and it is the assurance of this victory which inspires the finite subject with courage and confidence in his individual struggle. . . . As experience abundantly shows, the assurance of victory won and reconciliation achieved is the most powerful dynamo that can be supplied to morality."²

The motives which prompt this hypothesis of a finite God are no doubt altogether admirable—the desire to give reality to man's moral history, and to God's sympathy with him in it, as well as the hope of clearing God's character in view of the miseries of mankind. And it may very well be that those ends cannot be served so long as we hold a static view of the Absolute. But is there no alternative to such a static Absolute except a finite growing God? It is certain that the alternative did not present itself to the saints and seers of the OT or NT. They believed profoundly in the sympathy of God with man and included suffering in the divine experience. But the background of this thought was not a demigod, fighting his way to a dubious issue. Rather it was a God of omnipotent love, realizing in time a purpose that is eternal, and doing so by Himself entering into human experience and achieving once for all the redemption of the world. Men enter on this redemption as a possession—they fulfil it in an experience of toil and suffering, in which they have the presence and sympathy of their Redeemer, and they inherit it as a completed salvation, a Kingdom that cannot be shaken.

Speculatively, the doctrine of the finite God depends on the success of Bergson's philosophy; and that stands or falls by his theory of time. It may be permitted to doubt whether that theory will hold the field against criticism. It seems as though, in his view of the future, Bergson himself has fallen a victim to the metaphor of space, and is thinking of time in the old way as a prolongation of a line into an unknown region where nothing is certain and anything may happen. Such, in any case, is the speculative implication in the theological idea of a young and energetic God, whose success is quite unpredictable. Suppose he were to fail! In that case he would himself need a Saviour, like any other beaten soul. In allowing that such a fate is thinkable we have abandoned the point of view of religion altogether and have arrived at a profound and comprehensive scepticism.

² *Ib.* p. 206 f.

work among the crowd of expert scholars and eager students, or to hope for such a comprehensive statement of results as shall express the Christian verities in a form adequate to the needs of men in this new age. The significant fact is that, within the generation which has not yet passed from the arena of conflict and endeavour there has been a prevailing Biblical idea of salvation, presented with careful exegetical work and with ample ethical and psychological emphasis.

Salvation is conceived broadly and deeply as personal and moral, including fellowship with God, the elevation of individual character, and the service of men in righteousness and love. This salvation, inestimable in redemptive and restorative power, is recognized as due to God's action in the historic Christ. The debt of humanity to Christ is regarded as unique and incomparable. By writers and preachers of every variety of theological opinion men are being summoned to Christ as the fountain-head of the influences which are to renew humanity at its centre and inaugurate, after the discipline of war, an era penitential, humble, and at the same time more wisely ordered and more hopeful. It is being perceived also, even more clearly, that God's revealing action in Christ must be accompanied by suffering. Any view of Christ which omits the element of suffering as essential to His vocation and to His abiding influence is recognized to be less than Christian. There is a growing impression that the suffering of love is the mightiest redemptive influence known to man, and that, in the winning of salvation by divine act, suffering must have the central place.

The doctrine of atonement, which modern intellectualism had neglected, is attracting earnest attention, and Christian thought is concentrating upon the Cross of Christ.

As we survey the work of Christian thinkers of the latter part of the 19th cent., to the verge of the Great War, we find that the death of Christ has been presented mainly in three aspects.

(a) *As a transaction.*—From this point of view, "the atoning Christ acts on God for man."¹ Hitherto this transaction has been described after commercial or forensic analogies. Grotius had led the way to a view of the work of Christ coloured by the idea of a modern State administered by a just and wise prince. This last type of thought harmonized with much that was burning in the hearts of Englishmen. The political revolution was proceeding. Democratic ideals were being realized. The conception of a State in which every citizen has his place and function guaranteed in law was being made the goal of practical politics. No man wrought harder in the cause of ordered liberty than H. W. Dale of Birmingham. It was natural, therefore, that his theological thinking should be controlled by the ideas which inspired his social and political action. His governing category is law, not made by man or exploited in the interest of individuals or classes, but a law of righteousness, without caprice or variability, untouched by time or change. The Kingdom of Heaven is an eternal order. Human welfare depends on the maintenance of this order. "In this kingdom Christ is the Moral Ruler. . . . His voice is the voice of the eternal Law of Righteousness."² Law, however, is threatened by the uprising of human pride and arrogance, which would upset the order and make life intolerable. Law must be vindicated, and there is no way of vindicating it save by the sequence in which suffering inevitably follows law-breaking. It belongs to the Moral Ruler in the Kingdom of Heaven to vindicate the

¹ J. E. Modley, *The Doctrine of the Atonement*, p. 173.

² *The Atonement*, London, 1878, p. xxiii.

law which is His own voice. He has done so, not, however, in the person of the offenders, but in His own, 'not by inflicting suffering on the sinner, but by enduring suffering Himself.'¹ This is the gospel. When we lie under conviction of sin's sinfulness and are feeling the pressure of the divine judgments, we are enabled to rest on the death of Christ as 'the perfect expression and fulfilment of that submission which we know ought to be manifested by ourselves.' He endured the penalties of sin,² and so made an actual submission to the authority and righteousness of the principle which those penalties express.³ The redemption of man rests on the endurance by the Moral Ruler of the actual penalty of sin. The fact of sin is as real and terrible that only a fact as tragic in its agony and as measureless in its significance as the Cross of Christ can meet it. But whether the value of that death is adequately or even fittingly expressed in terms of law and penalty, and whether Christ's relation to the Kingdom of Heaven is properly stated where He is described as its Moral Ruler, may gravely be questioned. Dale himself strove earnestly to avoid the hardness of these forms by dwelling on the unity of Christ with God and His relation to men as their representatives. But surely, if these true and great thoughts are to be present in a doctrine of the Atonement, they ought to be regulative; and, if they are made so, legal categories must not be treated as determinative. Something of the old dualism remains when the love of God is confronted by His law as a power to be reckoned with. Love does not break into an order constituted by law. It is itself the basis of the order and is supreme within it.

(b) *As a demonstration.*—From this standpoint 'the atoning Christ acts on man for God.'⁴ If the 19th cent. was marked by a great movement towards political emancipation and the reconstitution of society, it was also characterized by an intense humanitarian instinct. Love, no less than justice, was its passion. Men were becoming imbued with the spirit of pity. The hapless lot of multitudes 'damned into this world' moved noble and self-denying souls to life-long ministries of compassion. Legislation was devoted to the improvement of the position of the less favoured masses. Criminals were regarded not merely as wrong-doers, but as unfortunate in the conditions of their birth, inheritance, and social environment, or even as themselves grievously wronged by the conditions of their life. The idea of punishment was reconsidered, and prison management was revolutionized. Discipline, and not penalty, became the regulative principle for society's dealing with its outcasts; and the great end was definitely conceived as the restoration of the offender to the ranks of citizenship. Political science, the system of education, church machinery and enterprise, were controlled by moral and social ends. Internationalism was scarcely yet born; but the ideal of an organized world was growing in the minds of statesmen and political thinkers. Thoughts like these could not fail to have a profound effect on theology. They are really coupled with the redemption of men; and that is the heart of the Christian faith. The Christian salvation can be nothing, if it is not ethical and social. The great doctrine of the Atonement, admittedly the very core of Christian thought, must be thoroughly moralized and must be interpreted through that spirit of love which has awakened to such glorious efficiency in modern society. The moral theory of the Atonement, accordingly, which had never ceased as a protest against legalism and particular-

ism, was revived in richer form than could be found in Abelard or the Socinians.

What does the world need—so the argument runs—in its sorrows, agonies, sins, but a demonstration that God loves His wayward children to the uttermost? Once a soul is convinced of this, its hardness will melt; it will turn from its sins in penitence; it will respond in love to the appealing love of God. But what can produce this conviction? The answer is: The presence of Christ in the world, in the character that was His, in the life He lived, and the death He died.⁵ The sight of Christ crucified produces in the beholder repentance; and repentance is regeneration. The Atonement is 'a moral atonement, offered to repentance.'⁶ This state of soul, in which the sinner's heart is broken because of sin, 'is not a condition precedent to being forgiven; it is itself forgiveness—forgiveness which separates the sinner from his past self as far as the east is from the west.'⁷ It is on the basis of this state of mind being genuine that God proceeds in forgiveness.⁸ The Christian life, having been thus inaugurated, is carried forward under redemptive influences, which stream from the exalted Lord. Deeply Christian as this statement is, it does not seem to have made any doctrinal advance upon Abelard.⁹ The question recurs: How does the death of Christ demonstrate the love of God? Surely the force of that demonstration must lie in itself, prior to, and independent of, our response to it; and that independent value can attach to it only if in the death of Christ the love of God deals effectively and finally with the fact of sin.

(c) *As an experience.*—Mosley's phrase in this connexion is: 'The atoning Christ acts on God as man.'¹⁰ Deepest of all interests in the 19th cent. was the sacred mystery of personality. A dualistic philosophy was never able to do justice to the idea of personality, either in God or in man. It translated personality by individuality, concentrated selfhood in the bare act of self-assertion, arrayed the divine Self against the human self, and viewed the relations of God and man as those of two self-centred individuals. Proceeding upon individualistic presuppositions, theology could make no more of salvation than an arrangement between two individuals—one very great and powerful, the other very small and helpless—carried through by a third, who is externally related to each of these. The Atonement is a transaction in which God inflicts suffering on Christ, and Christ endures it, the result being assigned to man, or to some men, by divine decrees. Plainly this is wholly inadequate to the Christian experience of redemption through Christ and leads to such perversities of thought as that God inflicted punishment on the Son of His love, and that there was a quantitative equivalence between the sufferings of Christ and the pains which sinners would otherwise have to endure. Individualism ran its course in the French Revolution and in the commercialism which exploited the idea of individual liberty. Most of 19th cent. thought has been an effort to get away from individualism. Much of it has been vague. The study of personality has not yet reached conclusions. Two points, however, may be regarded as fixed in modern thought, turned against individualism and absolutism respectively. The one is the individual's power of sympathetic self-identification with selves other than his own, making their concerns his, with an appropriating energy to which experience presents no limits. Individuality and kinship are only margins, which fade for ever before

VOL. XL—46

the impulse of self-communicating love. This is the essence of personality. The other is the self-realization of the individual through this continuous surrender. He is not 'lost' in the process. He finds himself and reaches a fullness of being which is his own, an indefeasible possession, gained and retained in self-surrender. The self that is thus surrendered is inseparable from that to which, and for which, the surrender is made. Alone, it is a fragment whose existence is its doom. In union, it lives its own true life in power and joy. This idea of the personal life could not fail to be applied to the person and work of Christ. We need not apply to Greek or Latin theology to supply explanatory forms of thought. Love is its own interpreter. Within the experience of Jesus are to be found at once the fact and the interpretation of atonement. The key to the problem is as simple and as mysterious as sympathy—a perfect sympathy with God, and a perfect sympathy with man. This sympathy is found in Christ. This, in its manifestation and exercise, is the Christian salvation. There has been born into the heart of humanity One who gathered into His own soul the guilt of man and felt it as no sinner can, and at the same time held inviolate the holiness of God. His experience is the Atonement—a veritable sin-bearing, in which the whole character of God is at once expressed and satisfied, and through which the love of God moves triumphant over sin to its goal in the great redemption. The situation created by sin has been fully met. God in Christ has reconciled the world to Himself; and this accomplished reconciliation is offered to the acceptance of faith. The old distinction of objective and subjective, as descriptive of theories of atonement, no longer holds good. This is demonstration of love, by love's deed; but the deed is the experience of Jesus.

The often quoted language of McLeod Campbell is the classical expression of this theory of the Atonement, which, in the mind of its chief exponent, is not so much a theory as a reverent entrance into, and a devout valuation of, the experience of Him who passed through deepening pain to the supreme sacrifice of the Cross.

Christ, in His experience, endured "a perfect Atonement in humanity to the judgment of God on the sin of man. . . . He who so responds to the divine wrath against sin, saying, "Thou art righteous, O Lord, who judgest us," (a man) is receiving the full appreciation and realization of that wrath, as well as of that sin against which it comes forth into His soul and spirit, into the bosom of the divine humanity, and, so receiving it, He responds to it with a perfect response,—a response from the depths of His divine humanity,—and in that perfect response He absorbs it. . . . By that perfect response in Atonement to the mind of God in relation to sin is the wrath of God rightly met, and that is accorded to divine justice which it is due, and could alone satisfy it."¹

With this insight into the conditions of redemption the history of the doctrine of salvation has reached its climax as far as our generation is concerned. Nothing of fundamental importance has been added to the ideas which McLeod Campbell suggested in his epoch-making book. Criticism attaches mainly to his description of the experience of Jesus as 'repentance'; but a defective phrase does not invalidate the truth of the description itself.

Commenting on this phrase, Denney, while admitting that it is an unhappy one, maintains the soundness of McLeod Campbell's central position:

"It is a description of facts in the experience of the Saviour, and of facts on which His power to reconcile us to God is completely dependent. If He had not thus seen and felt what sin is to God, if He had not thus acknowledged God's justice in condemning it, we could never have been brought through Him to the same insight and sorrow, to the same confusion and acknowledgment, apart from which the reconciliation of sinners to God is self-evidently an impossibility. For to be reconciled to God means at all events that God's mind about

sin, which is revealed to us in Christ, through Christ becomes our own."²

Later writers have supplemented McLeod Campbell at certain points: Moberley, by including the work of the Holy Spirit in the winning of the Christian salvation; Forsyth, by emphasizing Christ's confession of God's holiness as the element in His experience which gives it atoning value; Denney, by extending the experience of Jesus to include the act of dying, because short of this 'we do not get to that in the experience of Jesus which, as the most unfathomable proof of love, has both supreme value to God and supreme influence with men.'³ All of them, however, are at one in their point of view. They hold all they conceive to have been valid in the older 'objective' theories, but they are seeking the ground of atonement, not in anything that happened to Jesus by mandate of an external power, but in the experience wherein He embraced the whole fact of sin and held fast the mighty and inseparable interests of the divine love and holiness. They are at one in seeking to get rid of the last remains of dualism and to exhibit the vital connexion between what was wrought for man on the Cross and what is wrought in man by the Spirit. They all vindicate the Christian salvation as being far more than the rescue of individuals, as being indeed the constitution of a redeemed humanity, in which, through the service and sacrifice of faith, individuals advance in fellowship with God and in likeness to Him. Together they express a universal human intuition that the sorrow of the world can be healed only by the infinitely greater sorrow of God.

VIII. CONCLUSION.—The impulse of Christian thought in every stage of its evolution has been the need of a secure doctrine of salvation. Theologians of the East and of the West, medieval schoolmen, and men of the modern period have had no other task than to interpret the Christian experience of salvation through the eternal principles which make it valid, and so to vindicate its value and power in the redemption of humanity.

The broad lessons of this long history can scarcely be missed: a steady distrust both of intellectualism and of emotionalism; a constant return to experience and an earnest evaluation of its ethical significance; a confident appeal to Christ as the standard and test of the faith which He Himself awakens; the value to be ascribed to Scripture, because it presents a record of God's saving acts and searchingly exhibits both human need and the principles on which divine love proceeds in dealing with it; the validity of the historical method in the study of Christian doctrine for the correction of inadequacies and as an instrument of advance; and to these we may add the guidance to be got from a comparison between the Christianity of the NT and the religions which, in all places whither it has come, have met it as its rivals, and in part also its anticipations and its heralds.

In particular, it is plain that, in order to win a satisfying doctrine of salvation, thought will need to deal afresh with its great determining conception, viz. the Christian idea of God. Philosophy thought has been much concerned with the Absolute, the ultimate Unity, which may be conceived as holding together the manifold differences which appear in human experience. It has had before it, in constructing its idea of the Absolute, an ideal of logical simplicity; and so, in bold speculative adventure, it has conceived God as bare transcendence or as barren immanence—a Being so utterly above the finite that, in com-

¹ *Christian Doctrine of Reconciliation*, p. 239 f.

² *Ib.*, p. 270 f.

³ *The Nature of the Atonement*, London, 1873, p. 110 ff.

parison with it, the finite loses all meaning and value; or so completely unified with the finite that, in this identification, the infinite loses all significance and power. In revenge upon these cold abstractions pluralism mocks at the Absolute and gives us a God who is frankly finite and growing. Christianity has suffered many things at the hands of philosophers and has been far too docile when they insisted on presenting to faith a ready-made idea of God. Its own primary concern has not been with the Absolute at all. Its own special problem is neither logical nor ontological; and it cannot afford to wait till speculative discussion has come to an end before proclaiming its remedy for the abiding distress of man. Yet it may well be that its own problem is the ultimate problem of the universe, and that its own salvation contains implicitly a philosophy of God's relation to the world.

Christianity begins with human experience in its concrete fullness. It does not separate elements supposed to be incompatible and then painfully put them together again. It starts with the fact of life. It asks: What is the meaning of life? What is the direction and goal of its endeavours? What is its inherent value? What hinders, and what may achieve, its consummation? If we care to call it a philosophy, it is a philosophy of value; and, in realizing ultimate values, it believes itself to have attained ultimate reality. Christianity is human experience interpreted and reproduced through the supremacy of its highest value. What is that value? Christianity has one clear and definite answer: The Cross of Christ—life won through death. The Cross is the sum of Christianity. It is the Christian salvation, as message, as experience, as doctrine.

Christianity does not seek for proofs that God is. Its vital interest is the character of God. It is confident that it can recognize God when it sees Him; and then proof of His existence will pass aside as needless. God, seen in the Cross, is recognized as love. God is, in His inmost character, One who lives in the energy of self-giving. Christianity has never entangled itself in precarious discussions as to time and its relation to eternity. But it is perfectly certain that, in the Cross, it has touched the eternal—yes, the absolute—being of God. God is love. What He does and endures in time is the outcome of the inexhaustible fountain of the divine love. Human life is the exploration of the divine being. Time is deeply significant, therefore, and history is a real movement. It is, on the one side, the progressive revelation of God and, on the other, the progressive discovery by man of the wealth of the divine character. In either aspect time is real; but in neither does it move away from God towards an unknown beyond His ken and man's. It lies within God and is comprehended by Him in its completeness in a manner untranslatable by us whose transient lives are part of its flow. But at any point, and in any experience, we touch the Eternal whose 'moving image' time is. Supremely in the Cross we reach God and know what He is in His eternal being. The epithets 'immanent' and 'transcendent' are a foreign language to Christianity. Yet, if 'immanent' means that God is always giving Himself to His world, and thereby sustaining it in whatever degree of reality belongs to its successive stages, then the God of Christianity is 'immanent,' with an intensity and seriousness which leaves Spinozism far behind. And, if 'transcendent' means, in plain words, that God knows what He is about, that He is preparing a world capable of receiving His perfect self-communication, then the God of Christianity is 'transcendent,' with a glory that belongs not to

the Greek Absolute or the Roman Emperor. 'Personality,' in like manner, is a term which Christianity has not needed to express its thought of God; not because it was too concrete to apply to Him, but because it was not concrete enough. But, if by 'personality' we indicate a capacity, which men possess only in degree, of making each moment a stage towards the realization of the organic fullness of life, then the God of Christianity is personal, in a measure far above what is competent to any individual member of our race. God, understood through the Cross, is a Being capable of a human experience. His 'immanence' and 'transcendence' make Him capable of a human experience immeasurably richer and deeper than that of any individual man can possibly be. He can know what is in man as no man can know it. He can be man as no man can be. His progressive revelation is the fullness of His own inner life unfolded in and to the world. This revelation, in the very action of which God lives, makes possible, and requires for its completion, an experience of the life of man in its central depths. Incarnation is a divine necessity. Theology has never had, in connexion with this great mystery of love, the courage of its convictions. Through fear of Sabellianism it has ascribed the Incarnation to a Being who, after all is said, is not quite the same as God, and has excluded the Father, the very fountain of Godhead, from the possibility of love's supreme manifestation. Faith sees God in Jesus, 'the whole of God, who has kept nothing back which He could have given us.' It is very doubtful whether the framers of the old creed ever grasped this thought. The great expounder of the old theology, Augustine, certainly did not. The failure to enter into it showed itself not merely in the doctrine of God, but also in the theories of grace.¹ The doctrines of God, of the person of Christ, and of salvation come together at this point. The Atonement is God's experience of what sin is and of what it has wrought in His universe. This experience, which is the salvation of the world, He purchased on the Cross. In His pain, the agony of sin-bearing, the condemnation of sin is absorbed, and love flows uninterrupted to the sinner. This is God, the very God, God manifest in flesh, Himself making atonement, offering Himself a sacrifice, commending His own love, reconciling the world to Himself. Here are not two, dealing with one another across the prostrate figure of the sinner. Here is One only, the living and true God, who is love, who is wholly in Jesus.

God who thus bore the Cross did not, even in that supreme action, exhaust the possibilities of His love or cease from His immanence and retire into motionless transcendence. The same vein of thought as separated God and Christ removed the Spirit a degree farther away and made this third article in the creed an appendix rather than a climax. Yet, if we trust the NT as the classic of Christian faith, the Spirit is not separable from God. The Spirit is God in His deepest immanence and His most glorious transcendence. It is strange that to many minds the work of the Spirit is a superfluity of feeble piety, whereas in the NT writings 'the reception of the Spirit is the whole of Christianity.'² The blame must lie with those who sought to make the Greek Absolute do duty for the Christian idea of God. The moral universe, constituted in the love which achieved a final victory on the Cross, is sustained by the same divine energy. As God is in Christ, so God-in-Christ is in the Spirit. This is not a subtlety of the analytic Greek mind. It is the synthetic

¹ T. M. Lindsay, *A History of the Reformation*, Edinburgh, 1897, I, 372.

² See esp. 'Holy Spirit,' in *DOG*.

utterance of faith, which knows in one experience 'the grace of the Lord Jesus Christ, and the love of God, and the fellowship of the Holy Spirit.'

To this idea of God as love there corresponds in man the function of faith. The idea of the Absolute drives religion into mysticism. The idea of God-in-Christ centres religion in the act of faith. Between the mystic state and the act of faith there is this radical distinction—that the former presupposes a God transcendent, incapable of incarnation; while the latter has for its object a God immanent, who, to be Himself, must needs enter human history and, in a sinful world, must needs be a suffering Saviour and hang upon a Cross. To speak of 'Christian mysticism' is, strictly speaking, to confuse that confusion of Christianity and Neo-Platonism which has diverted Christian experience from its real fountain-head and given the Christian salvation a definitely non-Christian character.

If we are to keep to the Christian standpoint, we must regard the divine love in its action towards man and faith in its action towards God as being in the deepest sense correlative. All of God's saving action is concentrated in Christ. Upon Christ, accordingly, is concentrated the whole action of man in faith. All of Christianity, as the disclosure of God's being and character, is in Christ. All of Christianity, as a human experience, is in faith. Faith is fundamentally action, and is not to be defined through intellect or through feeling. The act of faith takes place when man meets God in Christ. In that supreme moment of life's discipline the love of God is revealed in Christ as the crown of all that is highest in human aspiration and the remedy of all that is deepest in human need. Man on his part makes reply by committing himself, in the fullness of his personal being, absolutely, and for ever to this redeeming and perfecting love. This action is entirely simple. The analysis which resolves it into a complex of state and feelings disguises its true nature. It cannot be dissected because it is the man in action—the man in that action which sums up the full value of life. It is also all-inclusive, and underlies and comprehends the whole experience of salvation. Medieval dualism had to add works to faith, if it was to make up the compound which was all it could think of as salvation. Protestant theologians even have anxiously explained that the faith that saves is a faith that 'works by love.' Of course it does! Not, however, as though the faith that works by love, and therefore is saving in its quality, were one among several forms of faith. It is faith itself, in the only sense which is possible in view of the saving action of God.

It saves because it carries the man from the standpoint of an individuality which strove to maintain itself apart from God to a position in which the individual, responding to the love of God, finds his need met, his nature satisfied, and the self which he has surrendered restored to him in fullness of power and certainty of victory. Faith is therefore an act which unites the man to Christ, in a sense deeper than mysticism can ever know. A union of being or substance, so far from being the loftiest and most religious of ideas, is one of the simplest and least significant. The vital union is that of will and character, when man shares with God His thought, purpose, and power. And this union takes place, and can take place only, in faith. God gives Himself to man in Christ. Man gives himself to God in faith. Christ is the point of union.

The language of the NT outdoes mysticism in the daring with which it affirms the continuity of the divine saving action. Love saved the world once for all in sacrifice. Love saves the world still by

the same sacrificial ministry. Faith never swerves from its acknowledgment of the finality of the Cross. But it never hesitates to declare that, in believing, the soul is united to the dying and undying Christ. The man who has given himself to Christ has been crucified with Him, and therefore he lives, with a life which is really the presence of the indwelling love. Therefore also he has this rank and function, that through him the redemption of the world is proceeding still towards its assured consummation. Love never loses its vocation. It is always redemptive, always vicarious and sacrificial. The salvation of the world is the sacrificial ministry of Jesus continued in those who in their persons 'make up the full sum of all that Christ had to suffer.'

The confidence that that divine sacrifice will be crowned by the fulfilment of God's eternal will of salvation is the religious ground of the hope of immortality and the expectation of the Parousia.

This idea of God and this function of faith are not forms of thought imposed by theology on the Christian salvation. They lie within it, as the very secret of Christianity. They came into the world in Christ. They created Christian experience in the 1st cent. and are renewing it in the 20th. The Great War, amid all its darkness and agony, illumines the eternal being of God and verifies the abiding conditions of man's salvation. The love of God, sealed in sacrifice and reproduced in sacrificial service, is the redemption of the world.

The deepening experience of the Church requires a new effort of thought to express its vital meanings. A new theology must be the issue of the growing experimental knowledge of God.

The theology of the Cross requires a reconstruction of doctrine, in which the great Christian ideas of God, Christ, the Spirit, the Atonement, Salvation, Grace, Faith, the Church, and the Last Things shall be re-stated under the governance of one principle—the love that lives in sacrifice. The reign of the Greek Absolute is over. The unity which is the perpetual problem of thought and the abiding demand of the heart is given in Christ, in whom God is present in His fullness. Through Him, also, there is open to man that union with God which is the abiding demand of the human heart, and the realization of which is the act of faith in the Christian salvation, as a present possession, an unfailing energy, and a sure and certain hope.

LITERATURE.—The student must consult the primary sources, dictionary articles, and monographs dealing with outstanding names. On the leading aspects of the themes the following will be found helpful:

(1.) On the contact of Christianity with the religious of the Hellenic-Roman world.—P. Lagarde, *Forerunners and Roots of Christianity*, 2 vols., Cambridge, 1911; Gilbert Murray, *Four Stages of Greek Religion*, London and New York, 1912; C. H. Moore, *The Religious Thought of the Greeks from Homer to the Triumph of Christianity*, London, 1910; W. Warde Fowler, *The Religious Experience of the Roman People*, 2 vols., 1911; T. R. Glover, *The Conflict of Religions in the Early Roman Empire*, do. 1909; A. Harnack, *The Mission and Expansion of Christianity in the First Three Centuries*, Eng. tr., 2 vols., do. 1906; J. SOUL (Primitive).—The English word 'soul' (and its equivalent in cognate European languages), in its primary meaning, designates an entity conceived as the cause or vehicle of the bodily life and psychical activities of the individual person. The soul is assumed to exist as a spiritual substance, in rather sharp antithesis to material substances, thus giving form to the contrast of soul and body (as constituents of man) and the assumption of their separability. This is, of course, a metaphysical conception, for which, in the range of primitive culture, there is no precise equivalent. Nevertheless, there are among primitive men forms of belief (so nearly universal in occurrence that they may be said to exist by a kind of instinct of the human intelligence) closely analogous to the metaphysical conception of the soul. The contrast under regard, in the more primitive intention, is not that of material and spiritual substances (for neither of these categories is recognized), but it is very near to the reflective distinction between form and energy; the primitive man everywhere makes a quick discrimination between the perceptual aspects of things and their powers or strengths: of the former he is suspicious; the latter he fears or strives to control by magical suggestion, by persuasion, by his own occult force; everywhere his interest centres in the hidden powers of things, which are for him their prime realities, and it is no marvel to find that everywhere he figures these powers under some avanescent analogy of the senses (the blood, the breath, the shade). It is these analogic figures of the primitive imagination that bear the names usually transcribed by the word 'soul'—itself, doubtless, originally, like *anima* and other classical equivalents, a term of the same class. Nor is it surprising that beliefs so bodied forth should assume various and fantastic guises, somewhat distorting their real identity.

1. **Animism.**—In the animistic *fond* of human thought there is recognised in nature no aristocratic class of soul-possessing beings: everything dignified by thinghood has its own power or function—however insignificant—and therefore its own soul. Indeed, what is designated by the name of a thing, as distinguished from the perceptual image or sense-object, is in a fair sense always its soul; for the foundation of naming is the discrimination of characteristic functions or powers; so that, in the broad truth, the nouns of a language represent the congregation of those souls in nature which the people speaking it has come to recognize. This is no merely primitive trait, but is true of all practi-

cal thinking, as distinguished from speculative analysis.

There is nevertheless, even for the raw animist, a certain position of privilege for human souls. They are by no means the most powerful in nature, either for good or for bad; but they are distinctly of the most concern and the most precious to their possessors. Moreover, they are the measures of the qualities of all other souls. It is true that, in a degree, they are distorted by fantasy; but, if the essence of primitive thought be disengaged from its figures, it will invariably be found that the measures of all other spiritual activities are human psychical activities, which are in the very truest sense the substantial powers of the human soul. One might fairly say that the primitive interpretation of nature (perhaps the mature interpretation also) is best represented by a harmonic proportion in which three terms are known and one is deduced; of the known terms, the first extreme is man's mind (chiefly his emotions), while the means are first his own body, as the instrument of desire, and second other bodies, or sense-objects, viewed as the instruments of those animating desires of all nature which form the inferred extreme. Indeed, it is in direct harmony with all that we know of human psychology to affirm that the immediate foundation of belief in souls is the disparity between desire and realization: the 'I' which wants what it has not is distinct from the 'I' which is engrossed in what is, and, if the latter is a physical reality, the former must be a spiritual. If the desires of the covetous 'I' were never balked or obstructed, probably there would arise no conceptions of other than human souls—which, when they do arise, naturally take on the colour of what they oppose. The body itself, in its weakness, assumes something of this obstructive character, and thus tends to sharpen its own fusion from the animating desires and identities which define themselves as its soul, while, again, in a sort of fantastic by-play, it becomes, as it were, the host of a whole group of disharmonious spirits—animal, passionial, intellectual—each striving with no small malice, for the mastery.

2. **Idea of the soul.**—The distinction of embodied soul and disembodied is no easy one. Even in speculative philosophies there is usually involved change of quality with the change of state—a distinction preserved, in general, by the differing connotations of the English words 'soul' and 'spirit.' There are, in fact, three groups of conceptions of the soul, differing in relation to the body. The embodied soul—variously imaged—forms the key to the first

group, the disembodied soul, or spirit, to the second, while intermediate between these is the twofold group, comprising the idols, or doubles, of living bodies and the ghosts, or hauntings, of dead ones. All three are common to the most primitive stages of human thinking—among living races of men, at least. For the sake of convenience, and as having a natural priority, the embodied soul, which is in some sense the body's life, may be treated first, and primarily with reference to the figures by which it is most commonly imaged.

(a) *The life*.—Fundamentally, the soul is the 'life' of the body. In primitive thought this is shown in custom rather than in expression, and more particularly in those customs which show an inability to conceive soul and body in disjunction. South America, Africa, and Australia contain the world's most primitive populations and most utter savages. Cannibalism is found in all three continents, and in all three it is associated with the conviction that he who eats of another man's body receives into himself the life or strength of his victim. The yet more repulsive custom of devouring the bodies of dead kinsmen (also found, sporadically, in the same continents) is based upon a similar notion, namely, that the life of the kindred is thus transmitted without loss from generation to generation. Innumerable funeral customs illustrate the primitive man's inability to separate in thought the visible body from its invisible life—indeed, the whole fact of burial or other funeral honours rests upon this confusion. John Fraser's monograph¹ gives a number of striking illustrations: a son was found supporting the body of his dead father on his chest and abdomen, for the purpose, as he explained, of keeping him warm; a mother bore the mummy of her son about with her for four years; another carried the dead body of her child until it fell into decay. These are but illustrations, at the savage extreme, of that feeling that the dead body is still not inanimate which must have underlain the burial impulses of palaeolithic man, as it certainly did the elaborate rites of Egyptian funerals, and in some vague sense survives in modern consciousness.

(b) *The life-blood*.—One of the most natural of the tropes by which the 'life' is represented is the blood (q.v.), the 'fountain of life'. 'But flesh with the life thereof, which is the blood thereof, shall ye not eat' (Gn 9)²—only, in most primitive societies, the command is the reverse, and for a sacramental reason: he who partakes of the blood, be it of man or of animal, thereby imbibes the life and the strength, and the enemy whose blood is drunk is totally conquered. It is the blood, again, that 'cries for vengeance,' and, according to the old belief, gushes from the murdered corpse at the approach of the murderer. Finally, exanguinate shades from the world below and gods in the heavens above alike delight in the odours of blood—in good sooth a spirit, which serves to invigorate their paler being. This is the blood of sacrifice and the blood of atonement, which is, in fact, the blood of life. The most astonishing of all developments of this idea was that of the Aztec, who believed that the sun is maintained in its course and the world in its order solely by the unceasing effluvia of human blood drenching altars and shrines. Nor is there any idea more ubiquitous in literature than that of blood symbolism.

(c) *The heart*.—Probably closely related to the preceding trope, and equally physical, is the conception of the heart as the seat of life. Whether this is because it is the 'bleeding heart' or the throbbing heart is difficult to determine. Certainly in aboriginal American rites, where the ritual use

of the heart attained its greatest extravagance, the association with the blood is very close. The burial customs of the Egyptians, with a special vessel for the heart, are only an example of a widespread custom which has survived down into civilized Europe. Of course, in later times, the added symbolism of the heart, as the seat of the higher emotions (courage, love), may be partially related to classical psychology; but the foundation of the image is certainly primitive and many-sourced. The heart is sometimes conceived as having a special soul of its own: the American Indian prophet Keokuk commanded from his followers prayers for the heart, along with others for the family, name, life, etc.

J. F. Cunningham³ could find among the Manyema little trace of a belief in souls. 'All the Manyema would admit was: "We know there is something living in a man during his life, because we can hear it beat. If that something is the soul, we know it no longer exists in a man when he dies. That is all we know." Walter Roth,⁴ reporting on the Gikara Indians, says that among them 'originally, not only the shadow, but also the heart, the hand, and the more perceptible of all the parts of the body where there is a pulsation of the arteries, as well as perhaps the blood, the epistle, the footprint, and the bone were each regarded in the light of a Spirit or something that was part and parcel of the body, and took its departure at the material death. . . . The Warren expression for the shadow is *umukwaka*, while *ak-waka* is their word for "heart" or for the heart's Spirit which, leaving the body at death, becomes their *Hebe*, or Bush Spirit. . . . The Island Caribs . . . held strong beliefs in a connection between spirits and an individual's heart and pulse-beat: "they talked of the latter as the Spirit of the Heart; they spoke of the Spirit-something near the heart as *Gouzan* or *Lanloah*." This one at the heart was the principal one, which after death went to the sky in company with its *Icheli*, or *Chemin*, to live there with other Familiar Spirits, and change into a young and new body. . . . Koch-Grünberg makes the interesting suggestion that certain procedures connected with some of the death festival point to a belief in the bones constituting the rest and final resting-place of the Spirit after the dismemberment (*Zerstückung*) of the body.' But the skeleton is more intimately connected with ghost-lore than with vital souls.

(d) *The breath*.—'And the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul' (Gn 2). That the conception of the life as the breath is one of the most universal is attested by the great number of terms (e.g., *psuchē*, *psyche*, *anima*, *spiritus*—to cite Hebrew and classical examples) for the soul having 'breath' or 'wind' as their primary meaning. 'To breathe' and 'to live' are virtually literary synonyms. The Roman custom of a kinsman catching the last breath of his dying kin is doubtless but a more refined form of the superstition which causes a number of groups of savages to devour sacramentally the bodies, or parts of the bodies, of dead kindred. The wind-like character of liberated souls is expressed everywhere in ghostly literature. Job 7, 'Oh remember that my life is wind,' amply has a double intention: as also Ezk 37, 'Prophecy unto the wind, prophecy, son of man, and say to the wind, Thus saith the Lord God: Come from the four winds, O breath, and breathe upon these slain, that they may live.' Primitive equivalents are not far to seek. In many American rites the aspirate, as an element in ejaculation, appears to symbolize an intensification of the 'breathing life' which it represents. 'Heru! Hutoru. He!' is a Pawnee appeal to the winds. *Hutoru* is not the ordinary word for winds, but refers to them as supernatural powers.

'They are,' say the priests, 'from the breath of Tin-wa (Father Heaven) and they give life to man . . . they bring to man the breath by which he lives.'⁵

Even the universe, in some early philosophies, is conceived as having a windy soul.

The Tepehuanes, according to G. Lemhiote,⁶ place the seat of the soul between the stomach and the chest, and regard its

nature as breath. This is an interesting psycho-physiological belief for a primitive tribe. A Navaho legend tells of the creation of man and woman: "It was the wind that gave them life. It is the wind that comes out of our mouths now that gives us life. When this ceases to blow, we die. In the skin at the tips of our fingers we see the trail of the wind; it shows us where the wind blew when our ancestors were created." Another legend tells of the death of a woman; the body was buried, but "they all wondered what had become of her breath; they went in various directions to seek for its trail, but could find it nowhere."¹ One of the most interesting passages in this connection is in the myth of 'Isis and Yamilin's Daughters.' This is told that his first child is dead. "I don't want to live in this world. Bring me the other boy," he says. When the younger wife brought her child, Isis took it in his arms, put the top of his head to his mouth and drew a long breath. He took the breath out of the child and it was dead. He put the second child by the first, and said: "These children are half man, and half woman. The breath is mine, the body is yours. I have taken the breath into myself. You can have the bodies."² Very curious, for the suggestion of introspection, is an image in a Pima myth which likens arrow to "a wind four times twisting" about its subject.³

These American examples might be paralleled from the lore of other races.

(e) *Flames*.—That the living body is warm and the corpse cold is a fact which in itself is sufficient to suggest that the 'life' is of the nature of fire.

"The life in your body and the fire in your lodge are the same and of the same date," said the Shawnee prophet to his followers: "if you suffer your fire to be extinguished, at that moment your life will be at its end."⁴

The brand of Meleager is a Greek analogue, as, no doubt, is the sanctity of the hearth and its fire everywhere. Swamp-fire and other phosphorescences are almost universally objects of superstitious dread, being regarded as released souls. In sacred act the flammula, nimbus, and halo all come back to the notion that spirit is luminous; while the body lives, we speak of 'the firm of life' as burning, but the freed soul is as a tongue of flame. The Zulu say of a death that the man's 'light is cut off.'

(f) *The shade or phantom*.—Considered as the body's life, life-blood, breath, or vital flame, the soul is not readily thought of as enduring in separation from its physical host; but, viewed (as almost universally it is) as the body's shadow (*exilis, umbra*) or as its phantasmal likeness (*effluvia, simulacrum*), it is with difficulty that it is conceived except in some degree of separation, as the body's friendly companion (*haecque comitatus corporis*) or as its bloodless and boneless shade, after death. In myth and in literature, from the classical onwards, such visualized images of the soul naturally play a large rôle, but there are multitudes of instances in superstition and in nomenclature indicating the like ideas among the most savage peoples. Tylor⁵ gives Tasmanian, Algonquin, Quiché, Arawak, Abipone, Zulu, Bambo, and Old Calabar examples of identifications of 'soul' with 'shadow,' and this list might be far extended.

The Zulus, explaining, say that people have souls which are not entirely confined to the body; they may occupy the roof of a man's hut, and if he changes his abode his soul flies also. The people often use the word *simamisa* (from *simisa*, 'shadow') to express their ideas of human spirits.⁶

Superstitions about shadows cast by the body in sunlight (noon is a particularly perilous hour, when the shadow is small) and reflexion shown in the water are common, and figure frequently in myth. Probably, also, superstitions about the eyes—the evil eye of the living, the glassy eye of the dead—are intimately associated with the notion that the images caught or reflected therein are souls. It is only a developed phase of this belief

which leads to veneration for crystals and the practice of mantie crystal-gazing, as well as to dread of the mechanical eye of the camera, or to pictured representation of one's form and features.

"Women assure me that on looking at a mountain for the first time the eyes are shut to prevent the person gazing at drawing the shadow of the spirit toward him. When one person looks at another, the former draws or drags the latter's shadow toward him, a principle on which these Indians explain the taking of a photograph. The dead Carib corpse is laid out with two weights on the eyes, that he may not see his parents, thus making them ill. Chitin gives an amusing instance among the Quichos of the Amazon of the local medicine-man preventing him painting any more portraits by advising the tribesman as follows: "These things are a great mystery, but these you are, my friends, with your eyes open all night—they never shut: this is all wrong and you are very foolish to allow it. You never will be happy afterwards if you allow these things to be always awake at night. My friends, this is only a cunning way this man has to get your skins; and the next thing they will have glass eyes, and be placed among the skins of the wild beasts and birds and snakes." (The medicine-man had been to Lima or some other place where he had seen the stuffed skins in a museum.) For a pregnant woman to look at the face of a corpse will draw syphilis on her unborn child. It is possible that, perhaps on principle analogous to some of the preceding, most European races have adopted the practice of closing the eyes when in the attitude of prayer." Curtis gives a Modoc myth describing the resurrection of a dead man: "All the bones were dead but the eyes were living"—and from this life the whole man reanimated.

(g) *The name*.—Superstitions about names and name-souls are as wide-spread as any. It should be observed that the name is quite as physical a thing for the unlettered as is the phantasm; it is an auditory or motor-auditory image, just as the phantasm is a visual image, and it possesses a perceptual reality quite different from that of the lettered symbol of book-learned peoples; *latius vocis* is a nominalist phrase for a word, but it is just the vocal breath (above all in the chant) which is to the primitive one of the most powerful and compelling of all agents. Says J. W. Fowler:

"When a Tsimyan priest addresses a supernatural being of his mythology he believes he must do so through the medium of some object as a prayer bearer; he breathes his wish on that and thence this goes to the god. The prayer bearer is thought to have a spiritless double or breath body which carries his wishes."⁷

So the name is a kind of breath-body, though not so intimately joined to the man as the breath itself. Le Jeune⁸ says that the Indians sometimes change their name on recovering from a severe sickness, and the Dollacoola believes that only receive a new name, and speak a new language, when they reach the next world. Normally, children are not truly named until they reach a certain age and are capable of discretion. V. Stefansson⁹ gives a most interesting explanation of Eskimo beliefs connected with this custom:

"As the child grows up the soul with which he was born (the *supernus*) gradually develops in strength, experience, and wisdom, so that after the age of ten or twelve years it is fairly competent to look after the child and begin to do so; at that age it therefore becomes of 'too vital moment to place the guardian spirit (soul), and accordingly it is customary to begin forbidding children and punishing them."

The guardian-spirit which controls the child previous to this age is supposed to be some ancestral soul, and all the child's words are the utterance of this soul up to the age when its own soul assumes sway, and it is called after a name of its own. Frequently it is supposed that the name of the guardian is known, and the young child is called by this name. One of Curtis's¹⁰ Modoc myths tells of a babe that cried continuously until addressed by its true name. These beliefs are, of course, associated with the almost universal primitive belief in rebirth, especially of very young

¹³ *Id.*

children (the Aztecs, e.g., had a special limbo for souls of babes, who alone can be born anew). Ancestor-worship is naturally closely associated with name-souls. Probably this was what was meant by the Indian who told Le Jeune¹ that 'the body has a soul of its own which some call the soul of their Nation.' In the far Orient the Annamites at least address prayers to the clan ancestor, to the spirits of parents and grandparents to three generations, and then collectively to the soul of the family as a whole.² Naturally all worship of the *omens* tends to become associated with the clan name. See artt. NAMES.

3. **Psychology.**—The course of historic psychology has been from a psycho-physiological (such as Aristotle's) to a predominantly psychological type of theory; older speculations on the constitution of man distinguished a group of souls (nutritive, passions, intellective, and the like) associated with the several parts of the body; later theories came to assert the unity of the spiritual substance and to make of psychology, not a description of the several souls for which the body acts as a single host, but an account of the several powers or 'faculties' of the single soul. Primitive theories belong to the older type: the whole man is looked upon as composed of a group of entities, physical and psychical, which disperse with the dissolution of his body. Death is rarely regarded as the liberation of an imprisoned spirit to a more glorified existence; rather the future existence of the immortal parts is at best a kind of mutilated existence, and not even Elysium is a fair compensation for the loss of that completer manhood which is truly realized only in the flesh. The very ancient and wide-spread notion that the souls of the departed await in a kind of neutral limbo the day of their reincarnation as men is surely a reflexion of the feeling that the disembodied is somehow dismembered, while the equally common conception of the ghost as vengeful and malicious but pictures its own dissatisfaction with its unhappy state. To the primitive mind the normal man is the physical man, whose souls (for he commonly owns several) are in the nature of more or less dispensable baggage—something that he *has*, rather than is.

In the passage cited from Both's account of Guinea Indian beliefs³ it is pointed out that along with the shadow there are souls for head, heart, blood, spirit, and even footprint. Indeed, there is hardly a part of the body that is not somewhere believed to own a spiritual double, which is its life, so that the whole bodily life may be said to be possessed, as it were, in severalty. The bones, the marrow of the bones, the eyes, the hair, the belly—all are parts with which a residential soul is found associated in primitive thinking. An interesting Iroquoian conception, recorded by J. N. B. Hewitt,⁴ regards the brain as the seat of the soul, and death by braining is held to render the soul stupid, replaceable, and capable of committing excesses. The Maoris of New Zealand are a Polynesian instance of a primitive people vesting the soul in the head. Le Jeune⁵ says of the Canadian Indians: 'They distinguish several souls in one and the same body. An old man told us some time ago that some savages had as many as two or three souls; that his own had left him more than two years before, to go away with his dead relatives—that he no longer had any but the soul of his own body, which would go down into the grave with him'—one is it difficult to imagine that, to a desolate old man whose kindred and friends were gone, his life should mean but the soul-less shadow of what it had been.

Belief in a plurality of souls, as associated with the one body or forming the one person, is very wide-spread, and is, indeed, a natural consequence of the variety of tropes employed to designate the spiritual entity. The heart, the flesh, the life, the name, the family, were distinguished by Keokuk. The Iroquois have separate words for the mind, soul, ghost, life, strength, brain-soul. The Haida distinguish mind, ghost, incarnate soul, and have

two words for embodied soul. These are sporadic American examples. Some of the Melanesians believe that a man possesses as many as seven souls, of differing types; and belief in the possession of two or more is frequent among the primitive. An amusing instance is the Bagobo notion that man has two souls, a good and a bad, which respectively pass to paradise and hell in the hereafter; we may suspect that this moral terminus comes as a result of foreign influence. Such ideas endure into higher cultural stages. The Egyptian is notable, with its distinction of *ka* (genius), *khaibit* (shadow), *khv* (life or intelligence), *ba* (soul proper), *ren* (name), together with something like animistic personification of the mummy, heart, strength, form. But hardly less complex is the old Persian spiritual dissection of a man into body, life, form, soul, and *fravashi* (genius); or the Roman, which in addition to the *genius* of a man (fem. *juno*), distinguished the tomb-haunting *umbra*, the *manes*, descending to Orcus, and the *spiritus*, climbing to its ethereal element above, and more or less identified with the mind-soul, *anima*. Even for near moderns 'the constitution of the soul . . . is a conflate of the mind, spirit and animal soul, or idolum';⁶ while there is to-day a degree of separation of psychic entities implied in the meanings of 'soul,' 'spirit,' 'mind,' 'consciousness.'

The converse of the idea of the possession of multiple souls is the notion of the existence of soulless men. This is by no means an uncommon primitive notion. There are tribes, especially in Africa, apparently with no belief in souls, at any rate as in any sense separable from the body; while in numerous African and Polynesian instances women and lower-caste people are regarded as soulless. Cunningham gives a humorous incident:

'A chief pointed at a poor peasant and said: "He has an immortal soul!" I cannot believe it; but I will admit that perhaps Wakoli or Laha had a soul. Wakoli had four hundred wives!"'

Obviously, in cases of reported disbelief in souls among primitive men, what is commonly meant is disbelief in a separable entity endowed with immortal life; and as to this dogma primitive men are hardly men in agreement than are civilized. On the other hand, some discrimination of body and soul, or, more exactly, of the body and its indwelling life, is as universal as is the animistic apprehension of nature. Even among peoples like the Fuegian Yaghans, among whom there is no clear evidence of a belief in the existence of gods of any sort, there is still a lively apprehension of the wandering (and more or less physical) simulacra of men.

4. **Discarnate souls.**—It has been remarked above that the phantasmic soul, or double, is less intimately bound to the body than are other forms. Even during the life of the body it may journey abroad, appearing to those gifted with the second sight as the co-walker (fetch, wraith, double-ganger, idolum) of the living, and visiting in dreams those for whom its master has a message or upon whom he meditates inimical action. Shamans make great use of their souls as messengers, to seek information from places remote, while prophets use them for the similar purpose of visiting the abodes of the dead or the homes of the gods. It is even advisable at times for a man setting out on a perilous task to have his soul extracted by a competent shaman and kept at home to ensure his own safe return; while sickness is caused not only by the body's becoming the host of unwelcome foreign spirits (which the shaman must extract), but often by the inconsiderate *Wonderlust* of the patient's soul, which the medicine-man's own spirit must

hale home in order to ensure a cure. Sometimes, even, there are stationed on the road to the home of the dead, wardens whose business it is to turn back souls which are leaving the body before the appointed hour; while, again, a man may, by desperate effort, recover his own departing soul.

De Smet¹ gives a striking Chippewa story to this effect. A chief, left on the battle-field for slain, accompanies the war-lord home, trying to make himself known to them, but all his solicitations and commands are unheeded. Arrived at the home camp, he finds his wife in mourning; he shouts in her ear, 'I am hungry! I am thirsty!' She thinks she hears a rumbling sound, but she sees no one. Frustrated in his attempt, he turns back to the battle-field, but, as he nears it, he finds a fire in his path, which moves as he moves, ever thwarting his approach. In despair he cries: 'I also am a spirit; I am seeking to return into my body; I will accomplish my design. Thou wilt purify me, but thou shalt not hinder the realization of my project. This day I will triumph over thee, Spirit of Fire!' And with a desperate effort he darts into the flame, to awake, as from a long trance, in his own weakened body.

But death itself does not result in a complete separation of soul and body—or perhaps it would be truer to say that the errant soul and the body-soul, or ghost, pursue different destinies. De Smet² says that many of the Indians believe in two souls, one of which is admitted to their paradise, while the other, the body-soul, hovers near the burial-place; and in another connexion he remarks that 'nothing but the hope of gain could ever induce an Indian to go alone to a burying-ground at night.'³ Probably the original of the Ragobo belief in dual souls was of this nature—which is, in fact, the popular belief of uneducated Europeans. As among Europeans, too, it is common everywhere to find the ghost associated with the skeleton, or as wearing the pale or mutilated aspect of the dead body. Numerous tales have for their motive accounts of the commerce of the living with their dead kindred, who are skeletons by day but phantasmal ghosts by night. Not only do men meet and converse with these departed beings, but there are marriages between the dead and the living, and children are born to them, though never normal children. A Bellacoola tale of such a child describes it as a bodiless head which must never touch the ground; when it does so, it disappears into the under world. One of the most enlightening of these tales is recorded by F. Boas.⁴

A man visits the bones of the dead, which at night assume the form of his kinsmen; their boats are full of holes and covered with moss, and they take in their nets dead leaves and twigs, which to them are fish. The man discovers that by speaking aloud to the spirits all speak in low voices—he can reduce them to the condition of skeletons. This he does, to their annoyance, so that they send him back to the land of the living. But, disobeying their commands, he dies; and now, coming as a shade into the land of the dead, he finds that the ghosts, their voices, and the fish that they take are like the full-bodied beings of the life that he has left.

This is an interesting effort, on the part of the aboriginals, to imagine the state of the dead, which to themselves is altogether like that of the living, and only from the standpoint of the latter is seen as a form of mutilated existence.

The notions that ghosts speak in whistling voices, that they nibble feebly at food left for them, that in stature they are nanikins or doll-like, and that generally they are given to a kind of panic fear of embodied men are all found, not merely in Homer, but throughout the primitive world. Sometimes these ghosts are corpse-like in appearance; and this is especially true if the body has been mutilated. In such cases the ghost is usually vengeful, ready to wreak ill where it can. Often, however, the ghosts simply reflect the bodily condition, without any necessary malice.

⁴ 'Doctrine of Souls among the Chinook Indians,' *J.A.P.L.* vi. [1899] pp. 39-43.

The Pawnee have a special class of ghosts of scalped men, who avoid the abode of the happy dead and the eyes of the living for the same reason—shame of their condition. They form a sort of society of disconsolates, and address one another by terms descriptive of their estate as 'One-Hair,' 'Forehead Hair,' etc. The Zuni, more humanly, expect to see their ancestral spirits in their natural guise.

'The old man too feeble to walk will come leaning on a cane, the mother with her son walking before her, her child led by the hand, her younger child carried on her back, the infant in her arms, and her unborn child'—all out in the flesh, but in the great-soul, just as he nature.

Sometimes the ghost, or body-soul, hovers near the burial-place in the form of a bird, an insect, or a small animal. It is interesting to find the butterfly occurring as such an embodied soul in the lore of N.W. America.⁵ The same insect is common in Aztec art as a symbol of the breath, or breath-soul, shown on the lips of goddesses. From such a notion to the conception of reincarnation in animal form is but a step—a step which has been taken by primitive men the world over. Nocturnal creatures, like owls and bats, or earth-dwelling animals, such as beetles, serpents, and even worms, are forms in which souls are likely to be re-embodied. In not a few tribes these re-embodiments go progressively down in the animal scale, and may end by final departure from the earth or utter obliteration. Here, however, we are encroaching upon the field of beliefs in the future state of souls, for which the reader is referred to the art. BLEST (ANOTHER OF THE), ESCHATOLOGY, INCARNATION, STATE OF THE DEAD, TRANSMIGRATION.

5. The powers of souls.—The primary function of the soul is, of course, to keep the body in life; the soul is the life of the body; and, although soul and body may be temporarily separated, as in sleep or trance or even with the body still wakeful and active, with no damage incurred, none the less their lasting separation is death. Further, it would appear from a considerable variety of beliefs that the soul's comfort and the fullest exercise of its powers depend upon its connexion with some sort of body. Souls haunt, in ghostly forms, even mutilated and decaying bodies; they strive, in the form of familiars or demons, to obtain an entrance into and a partial control of the bodies of the living, from which they sometimes succeed in ejecting the native owner (for the plight in which Dante pictures Friar Alberigo—soul in hell while his devil-activated body still moves in the world of men—is no marvel to the primitive imagination); while, finally, discarnate existence in the other world is commonly represented as a kind of limbo in which the spirits await rebirth as full-bodied men; or, if it be an Elysium, there is in its pallid joys always an element of dissolvent illusion. Even artificial and substitute bodies which men supply—carven blocks and the like—are attractive to the unhoused spirits, who may be lured or charmed into them, there finding a new contact with the life of men, whose idols or tutelars they become. The Indians of the N. Pacific Coast occasionally carve portraits of deceased persons, as mortuary or other memorials;⁶ and they are not without legends of spirits of the deceased taking possession of these. One such legend, truly affecting, is recorded by J. R. Swanton.⁷

A young chief had lost his wife, but kept by him, dressed in her clothing, a portrait image which, out of pity for his sorrow,

a carving had made for him. "One day, while he sat musing very close to the image, he felt it move. . . . As that he thought that the movement was only his imagination, yet he examined it every day, for he thought that at some time it would come to life. . . . One day, after the chief had had it for a long, long time, he examined the body and found it just like that of a human being. Still, although it was alive, it could not move or speak. . . . The woman moved around very little and never got to talk, but her husband dreamed what she wanted to tell him. It was through his dreams that he knew she was talking to him."

This incident is surely illuminating, both as to the motives which lead to art among primitive peoples and as to those which lead to idolatry. Here it is clearly the power of love which lures the departed soul to the man-wrought body; the complementary form, where magical compulsion is the force employed, is best illustrated by the account given by R. E. Dennett¹ of the W. African making of a 'Fetich into which Nails are Driven':

'A palaver is held, and it is then decided whose Kulu (soul) it is that is to enter into the Mumbo tree and to posside over the fetich to be made. A boy of great spirit, or else, above all, a great and daring hunter, is chosen. Then they go into the bush and cut his name. The Ngonzo priest cuts down the tree, and blood is said to gush forth. A fowl is killed and its blood is mingled with the blood that they say comes from the tree. The man cut then dies, certainly within ten days. His life has been sacrificed for what the Ngonzo consider the welfare of the people. They say that the named one never fails to die. . . . People pass before these fetiches (Zikidi Mbow), calling on them to kill them if they do, or have done, such and such a thing. Others go to them and insist upon their killing so and so, who has done or is about to do some fearful injury. And as they swear or make their demand, a nail is driven into the fetich, and the palaver is settled so far as they are concerned. The Kulu of the man whose life was sacrificed upon the cutting of the tree goes to the rest.'

Mediumistic powers are nearly akin to the soul's yearning for embodiment. Virtually all primitive men believe in such powers, though it is commonly supposed that they come by special endowment and preparation—the latter often strenuous to a degree—in many instances through death and resurrection, as is assumed. Primitive mythology abounds in tales of men acquiring supernatural strength by the thorny road of bodily destruction and restoration. By such means the soul of the medium, or shaman, is supposed to acquire the faculty of direct intercourse with the world of spirits, and usually to have as his especial agent or 'control' a genius, tutelary, or familiar spirit, whose powers reinforce his own. Indeed, it is not a little remarkable to discover virtually all the phenomena of modern spiritualism (if it be modern) among savage peoples, remote in time and place. Le Jeune's description of a Montagnais shamanistic performance, written in 1634,² would hold, *mutatis mutandis*, for a spiritualistic séance in central New York: there is the medium's cabinet, the darkened room, the singing, the winds, voices, and 'physical phenomena,' and along with these prophecies of life and death. The shaman (although Le Jeune believed him to be a great rogue) was obviously sincere. 'Enter then thyself into the tent,' he said, 'and thou wilt see that thy body will remain below, and thy soul will mount on high.' The Seneca Indians of New York State still continue similar practices,³ as do the Chippewa tribes in their Midé society.⁴ The Zulu have a curious belief that in the old times the souls of the dead used to return in the flesh to converse with the living; but their presence caused a great mortality; now they come as spirits, and only those gifted with a superior sight, their mediums, can see them.⁵

Apart from preserving the body in life, the important powers of the soul are curative and

clairvoyant. As clairvoyant, the soul is a kind of scout, able to penetrate times, places, and substances closed to the body.

A curious Cree tale, narrated by de Smet,⁶ tells of a war party being guided on its course by a girl with blindfold eyes; 'the mansion of war was supposed to guide her.' The Chippewa have an interesting legend of having once numbered among them a flying man, a powerful magician whose 'medicine' was a feather which he could cause to enter his body, thereby enabling him to fly and spy out the enemy.⁷

Crystal-gazing is suggested in numerous rites and myths.

The N.W. Coast Indian tale of a man to whom a serpent gave a transparent stone which he took through all lands; the Spanish chronicler's tale of an Arabian mirror in which Montezuma saw ominous images; the Cakchiquel employed a similar stone in testing the guilt or innocence of accused men; the Inca Yupanqui is said to have been given a crystal by the sun, in which he saw whatever he desired to discover—these are widely separated American examples.

Belief in telepathy is evidenced in many tales: 'All spoke with their hearts; hearts spoke to hearts, and lips did not move,' is a Zulu expression.⁸ Stories of 'veridical hallucinations' and prophetic visions are numerous. Of the former J. S. Pollock⁹ gives a number of examples—but the account of savage instances of this phenomenon would be bulky. Prophecies by shamans or mediums are still more numerous in primitive lore: there is a whole group of legendary American Indian prophecies of the coming of white men and of disaster to the native life recorded in the Spanish annals; much of this may be supposed to be apocryphal, but it is at least striking that Cortes should have been discovered by watchers posted on the coast at Montezuma's orders, on the look-out for the coming of the prophesied god, and that the first presents which the emperor of the Aztecs sent to the new-comer were mainly the appropriate apparel of this god, Quetzalcoatl. Gifted souls, however, see not only into the future, but also into the past; it is thus, at least, that Mohave shamans explain their knowledge of creation; they were present at the beginning of the world, as to a dream. This belief is, of course, entirely consonant with the theory of transmigration. Naturally, in the main, clairvoyant powers are called into play to satisfy more immediate interests: to discover the fate of the absent, to recover stolen property, to find food or treasure. Dreams are regarded as great aids in all this (for the soul journeys in dreams—this is the common explanation), but, when the search is difficult, the shaman is called into service, with his more potent or active faculties.

A striking example, where the seeker was a white man consulting a Zulu doctor, is given by David Leslie:¹⁰

The white man's eight hunters were oxen, having been long gone on an elephant hunt, and at the solicitation of his native servants he consulted the doctor. 'The doctor made eight little fires—each being the number of my hunters; on each he cast some roots, which emitted a curious sickly odour and thick smoke: (note each, he cast a small stone, asserting, as he did so, the name to which the stone was dedicated; then he ate some "medicine," and fell over into what appeared to be a trance for about ten minutes, during all which time his hands kept moving. They he seemed to wake, went to one of the fires, rubbed the ashes about, looked at the spots attentively, described the man faithfully, and said: "This man died of fever and your gun is lost." In the next fire he before: "This man" (correctly described) "has killed four elephants," and thus he described the rest. The next: "This man" (again describing him) "has been killed by an elephant, but your gun is coming home," and so on through the whole, the men being minutely and correctly described; their success or non-success being equally so. I was told where the survivors were, and what they were doing, and that in three months they would come out, but as they would not expect to find me waiting on

these there so long after the time appointed, they would not pass that way. I took particular note of all this information at the time, and to my utter amazement it turned out correct in every particular. It was scarcely within the bounds of possibility that this man could have had ordinary intelligence of the hunters; they were scattered about in a country two hundred miles away.

If this narrative is to be trusted, it certainly outdoes all that is ascribed to the tested clairvoyants of the civilized world.

The curative or psycho-therapeutic powers of such appear in every variety of use of suggestion and hypnosis, and amid practically all peoples. These functions have their obvious use in the power to inflict disease, or even death, upon an absent or unconscious victim. All such practices are interlarded with ritual and magical observances; and, indeed, they can hardly be dealt with except in connexion with such customs. See ART, DISEASE AND MEDICINE, DIVINATION, MANA, PSYCHO-THERAPEUTICS, SHAMANISM, SPIRITISM.

LITERATURE.—The literature dealing with primitive conceptions of the soul is enormous, being co-extensive with the study of primitive religion and superstition. In general, it may be said to fall into three classes: (a) reports on the beliefs and myths of particular tribes, from travellers, missionaries, and anthropological field-workers—abundant both in book form and in the ethnological journals (notably *JAT* [*JRAT*], *FL*, *JAPL*, *RHA*, *ES*, and *Antropos*); (b) critical and comparative studies of primitive religious ideas, of which the most important, probably in any language, are E. H. Tylor, *Prig. Evol.*, London, 1891; A. Lang, *Myth, Ritual and Religion*, 2 vols., do. 1898; and J. G. Frazer, *Golden Bough*, 12 vols., do. 1893-19; with these should be named H. Durkheim, *Les Formes élémentaires de la vie religieuse*, Paris, 1912, Eng. tr., London and New York, 1915; (c) broader visions of the subject in works on comparative religion and descriptive or comparative ethnology, few being better conceived than the introductory lecture of S. Reinach, *Origines: Hist. générale des religions*, Paris, 1908, Eng. tr., London and New York, 1908. See also the 'Literature' and bibliographical references of the art. cited in this art.; also 'Literature' at art. ANIMAS, GEN. (Primitive and Savage), FAUNA, QUANTITIES WITH GERT. Probably the most comprehensive study since Tylor's *Prig.* covering upon the idea of soul in primitive religion, is A. E. Crawley, *The Idea of the Soul*, London, 1909, containing much bibliography. The volumes of *The Mystique of All Races* (Boston, 1914 ff.) will be found of use as giving conceptions classified by racial groups.

H. B. ALEXANDER.

SOUL (Buddhist).—Few words are more ambiguous than 'soul,' as any dictionary will testify. Nor is there any one word in the religious literature of Buddhism which can be said to coincide with it in either extension or intension. The principal terms in the canonical literature which translators have rendered, sometimes or always, by 'soul' are *jīva*, *ātman*, *attā*, and in the Abhidhamma section *puggala*. In the somewhat later *Questions of King Milinda*, *jīva* is preferred, and with it the rare word *vedagā* ('sentient one'). The other three terms are used, in connexion with their contexts, only when canonical passages are quoted.

Jīva is literally 'living thing.' It is a term imported from the staple terms of religious schools opposed to Buddhism, and occurs only¹ in the title of one among many debatable propositions classed as *orattā* or heretical:

¹ Is the *jīva* the same as . . . (or) . . . a different thing from the bodily frame (*aññāṭṭa jīvaṃ aññāṇa sarīraṃ?*)²

It may thus be fairly rendered by 'soul' in the Hebrew sense—'and man became a living soul.' But the Buddhist canonical books do not select

¹ The *Questions of King Milinda*, tr. Rhys Davids (*SBH* xxxv.), Oxford, 1890; on pp. 41, 43, 50, 122, *jīva* is used; on pp. 86, 111, *vedagā*; on p. 43, *attā* ('being'); on p. 67, *attā*; on p. 40, *puggala*. Three centuries or so later Buddhism has reverted to the use of *ātman* (cf. *Samyutta Sūtra*, I, 1041). The need for protest mentioned below may no longer have been pressing—he wrote in Ceylon—but he was commenting on canonical arguments. He also uses *śāśāka*, *śāśāka* ('leader', 'agent'), for the soul or self-entity (*Vimāṇa Sūtra*, xvii, 22).

² Rhys Davids, *Dialogues of the Buddha*, Oxford, 1890-1910, II, 309 f., uses *jīva*, but the Buddhist origin of this *Jīva* (*Payas*) is doubtful. Cf. the term in Jainism (see art. JAINISM, 4, 1 (b)).

³ *Dialogues*, I, 204, 224; *Samyutta Sūtra*, 218, 303, etc.

the term *jīva* when they are uttering doctrines concerning man's spiritual nature as contrasted with his bodily and sensuous faculties. They choose one of the other three terms—*ātman* (nom. case, *attā*), *attā*, *puggala*. The last two mean a (living, intelligent) being, a person, and are used in ordinary discourse simply to represent any fellow-being.³ The first is also closely connected with 'living thing' in that it means breath (*Skt. ātman*; cf. *prāṇa*, 'spirit'). In ordinary discourse it means self,⁴ and in the Abhidhamma *Piṭaka*, the *Milinda*, and the *Netti* it rarely occurs in any philosophical argument. But the earlier *Sutta*-literature uses *attā* repeatedly in controversial discourse concerning a right conception of what we should call soul or spirit. At the same time, the *Suttas* show an unhesitating acceptance of the term wherever we should say 'self.'⁵ These contexts lead us to infer that such discourses were uttered at a period when the speakers were making a strong protest, not against man's spiritual nature, but against a certain religious or philosophical attitude in vogue in their time, concerning that nature viewed as *attā* or *ātman*. It needs but a glance into Vedic literature—e.g., the *Upanishads*, notably those reckoned to be pre-Buddhist, and the *Bhagavad-Gītā*—to find everywhere a unique cult of *ātman* (called also *Brahman*). It was regarded as divinity: universally immanent, but especially so in the human organism. Conceived materialistically as a fine substance, located in the heart, and compared as to size and shape to a variety of small objects,⁶ this microcosm was held to possess, like the macrocosmic divinity, the essential qualities of permanence (quitting the impermanent body at death), immutability, bliss, and omnipotence. And to discern the essential identity of microcosm and macrocosm was to attain true insight.

E.g., 'In that subtle essence . . . all that exists has its self. It is the true. It is the self, and then art it . . . The subtlest in this . . . is the self. He who loves the self . . . becomes a self-ruler; lord and master in all the world. The self is without decay, death, grief.'⁷ 'The embodied one which is eternal . . . is not born, nor does it ever die . . . unchangeable, primordial . . . all-pervading, stable, free.'⁸

It is on this point of soul or spirit or self, as a thing different in kind from the rest of the individual, that Buddhism joins issue with Vedantism. To such a dualism it is in fundamental antithesis. Its philosophy of life may be said to be based on the axioms, *sabbam aniccaṃ*, *sabbam dukkhaṃ* ('all is impermanent', 'all is [liable to] suffering'). In no constituent of the living being was any exception to this rule of nature to be found. And, since *attā*, as currently taught, was essentially permanent, unchanging, blissful, powerful, there could be none of *attā* so conceived in the living being:

'What think ye then? Is body, is mind permanent or impermanent?' 'Impermanent, sir.' 'Is that which is impermanent liable to suffering or not?' 'It is liable, sir.' 'But is it proper to say of that which is impermanent, liable to suffering and to change, This is of me; I see this; this is the soul (self) of me?'⁹

The individual is entirely phenomenal, governed by the laws of life. Were there in him a microcosmic emanation of the superphenomenal *ātman* or *Brahman*, he would have the power of deity to remould himself 'nearer to the heart's desire,' and thus at will to transcend those laws—

¹ Animals are never so referred to. They would be included under the yet wider name *pāṇa* ('something living'). But *devas* (spirits, deities, who are for Buddhists reborn mankind), would be included.

² See art. *BHAVA* (Buddhist).

³ E.g., as prefix to compound, and in oblique cases.

⁴ Cf. Rhys Davids, 'Theory of Soul in the Upanishads,' *JRAS*, Jan. 1909.

⁵ *SBH* I, [1906] 1011, 1232 (*Abhidhamma-Piṭakopaniṣad*, II, 81, vii, 23 ff.).

⁶ *SBH* viii, (1908) 43 (*Bhagavad-Gītā*, II, 20 ff.).

⁷ *Maṇḍala Sūtra*, III, 14 f., and elsewhere.

¹ If the body . . . if any of the four mental factors were the soul (self), the body . . . the mind would not be subject to disease, and we should be able to say: Let my body . . . my mind be, or not be, as and so.²

Into a complex or congeries of these five varieties of functionings or faculties called *khandhas* (Skr. *skandhas*), or groups, the individual can be analyzed without residuum. In fact, according to Buddhaghosa,³ it was in order to effect an exhaustive analysis for the rejection of atomistic dualism that the teaching at its outset adopted this fivefold classification. And, living personality being thus resolved, the teaching proceeded to repudiate any identification or coincidence of an extra-phenomenal self or soul with any one of the five. Immanence was equally rejected:

⁴ The well-taught disciple . . . regards not the bodily qualities as *atta*, nor that they have *atta*, nor are in *atta*, nor that *atta* is in them. Neither does he hold any of those views regarding the *khandhas* of feeling, nor of perception, nor of mental activities, nor of consciousness. For him: each one of those *khandhas* changes, becomes other; he does not get thoughts [which 'hang about'] a recurrence of changing *khandhas*.⁵

The *khandhas*, bodily and mental, were thus declared to be 'empty' (*suñña*) of any unchanging essence.⁶ That which was wholly impermanent and liable to suffering was also inevitably *an-atta*, 'soulless,' or, as we should prefer to say, 'without *Atman*.'

It should not for a moment be inferred, on this account, that Buddhist teaching countenanced any belief in a total annihilation of body and mind at death. Beside the error of eternalism (*sassatavāda*), or indwelling immutable entity, it set the error of annihilationism (*uccheda-vāda*).⁷ Beside the doctrine of *anicca* it set that of *khanna*, or the transmitted force of the act, bodily and mental.⁸ The self or soul is the *khandha* complex, ever changing but ever determined by its (or their) antecedent character. Hence the long-drawn-out line of life is a fluctuating curve of evolving and degenerating experiences, into which it is logically unthinkable to intrude an immutable factor. But annihilationism was not as prevalent an error as was eternalism. Had it been so, we may feel confident that, to the oft-repeated trio, *anicca*, *dukkha*, *an-atta*, Buddhist teaching would have added a fourth, such as *panibbhaṣa* ('renewed becoming'), or the like. The future state of the living is constantly referred to, but the teaching is not so much that there will be rebirth as of what kind, because of the present life, it is likely to be. And the *an-atta* doctrine is logically so much a corollary of *anicca* that, had it not been for the exaggerated eternalism of the *Atman* doctrine, we should scarcely have found *an-atta* in the rank it occupies. It would have been overshadowed by, and taken up into, *anicca-vāda* and *khanna-vāda*. We may even venture to affirm that Buddhism, in the emphasis with which it combats a tendency at once mythological and mystical in the land of its birth, has weakened itself as a doctrine for all lands and all times by not building up a more positive teaching on the spiritual nature of man.

Be this as it may, Buddhism had no quarrel with any term for the living person as a whole—*atta*, *satta*, *puggala*—so long as in these terms we see labels, binding concepts, conventions in language, holding together, for economy in thought and word, the compound that a living person at any given moment, past, present, or future, is.

³ *Sanghata*, iii. 171.

⁴ *Dialogues of the Buddha*, i. 371, 372; *Sanghata Nāgārjuna*, ii. 20 f.

⁵ 12. e.g., *Sanghata Nāgārjuna*, iv. 123 f. 'Kammāp' with the three following *Suttas*.

⁶ 'Being' (*atta*) Why does thou hang upon that word?

More bundle of conditioned factors, this. No "being" can be here discerned to be. For just as when the parts are rightly set, The word "chariot" arises in our minds, So too our usage consent to say.

⁷ A being? when the aggregates (*khandhas*) are there.⁸

⁸ For these, *Chitta*, are merely names, expressions, terms of speech, designations in common use in the world.⁹

In this way all these terms are frequently used in the *Suttas*. Wherever the individual was living, unless it was in the very dimly conceived spheres called the unconscious and the immaterial, he or she was still and was always a compound of *khandhas*, the body-factor varying in grossness or refinement and other qualities according to the sphere inhabited and the mental factors no less. Thus, if you were in the *Brahmā* heaven, you had to assume a grosser body before you could pass into and act in the lower heavens.¹⁰ Ever the 'soul' was the compound, always changing, growing out from, and the inevitable result of the souls (or selves) that had been. And, so long as the earnest inquirer bore in mind this distinction between self, soul, spirit as the mutable, growing organism, revealed by philosophic truth (*paramattha-sacca*), and the name-label, suggestive of a fictitious immutable entity, as used in the social convention of language (conventional truth, *sammuti-sacca*),¹¹ he thought in conformity with the mother-tradition of his religion. The *Suttas* show no hesitation in using conventional language in connexion with man as surviving not one death only, but any number of dyings. Available words, in fact, were so utterly inadequate, during the early centuries of Buddhism (as they are still), to discourse of what is commonly called transmigration that practically no choice was left. Survival was spoken of, by *Brahman* and Buddhist alike, in terms of bodily acts and states. We are at a loss to conclude which was the more remarkable—the reaching out by the mind of Gotama Buddha to ideas which it needed the philosophic growth of a later period to make more clearly articulate by new terms, or the apparent failure of his opponents to discern how very badly the current terms of transmigration, such as they used, applied to an immanent being who was eternal and immutable. In the latest book of the canon, the *Kathā-vatthu*, in the great opening discussion on the soul (*puggala-kathā*),¹² we find the materially conceived views of transmigration criticized with a mainly negative emphasis. Terms for a constructive theory seem to be still lacking.

E.g., after much discourse to show dialectically that it is impossible to find, among the ultimates of our conscious experience, a soul or person (*puggala*) apprehended as 'a real and ultimate fact,' the argument proceeds to reject any such ultimate in the mysterious but accepted procedure of rebirth:

¹ *Heterodox Op.*—Then is it wrong to say, "A soul (*puggala*) transmigrates from this world to another world, and from another world to this?"

Orthodox Ans.—Yes.

The latter member having elicited the admission that there is neither an identical soul that is reborn, nor a different (i.e. quite other) soul, nor both, nor neither.¹³

Passing on to the *Milinda*, we find there the germ-doctrine of the founder—viz. that man, in his entirety, is never the same, yet ever the resultant of his fore-existing self,¹⁴ stated with a growing maturity in thought and diction.

But it is not till the times of Buddhaghosa¹⁵ and his successors that we find, grown out of the too negative conception of *anicca*, a positive view, made articulate by certain newly applied terms, of

the ever-changing being of man conceived as a causally determined series of forces and resultants, and as a growing series, in which the now passing moment is wrought up into the coming moment.

Even then, discussion on a subject so inaccessible and mysterious is still stiff and halting. Further knowledge of medieval Fall literature may reveal further advances in theory. But we know enough to show that Buddhist doctrine as to soul and survival has logically reconciled *anicca* and *kamma*. My 'self,' as changing constantly, undergoes at death but a relatively deeper change; my new 'body' (*nāpa-khandha*), determined by my *kamma*, becomes one fitted to that new sphere, wherever it be, in which my past thought and will have determined that my new thought, call it soul or spirit or mind, be renewed.

SOUL (Christian).—I. INTRODUCTION.—(a) The term 'soul' is, in this article, taken in its most comprehensive sense, as denoting the whole 'self' or personality, the essential principle of human nature, the basis of conscious, continuous, individual existence. It is clear that study of the Christian idea of the soul in this broad sense involves the psychological interpretation of all characteristic data of Christian experience. We may speak of this study as 'Christian psychology,' because there are particular groups of phenomena at different periods with which Christianity is specially concerned (notably those of the NT period), and because there are certain real or alleged aspects of human nature in which Christianity is specially interested. But the method of the study must be that of psychology in general, i.e. purely historical and scientific, without dogmatic presuppositions, though the ultimate problems of all psychology pass into the realm of metaphysics.

(b) The psychological terminology and ideas of the NT are, as we might expect, largely continuous with those of the OT and the subsequent Jewish literature. The relevant ideas of the OT may be summarized as follows:

'The idea of human nature implies a unity, not a dualism. There is no contrast between the body and the soul, such as the terms instinctively suggest to us. The shades of the dead in Sheol . . . are not called "souls" or "spirits" in the Old Testament; nor does the Old Testament contain any distinct word for "body," as it surely would have done, had this idea been sharply differentiated from that of "soul." Man's nature is a product of the two factors—the breath-soul (*nephesh*) which is life principle of life, and the complex of physical organs which this animates. Separate them, and the man ceases to be, in any real sense of personality; nothing but a "shade" remains, which is neither body nor soul. If this seems but a poor idea of human nature, we must set our eyes against the great redeeming feature, that there is an aspect of this nature (*nephesh*) which relates man to God, and makes man amenable to God.'

The non-canonical literature of Jewish thought shows that this fundamental idea was subsequently modified in two primary ways, chiefly in relation to the new eschatological emphasis. One was the accentuation of individualism; the detachment of the individual from the corporate personality of his social group, already declared by Jeremiah and Ezekiel, was more sharply presented against the new eschatological background of moral retribution in the life after death. The other, closely related, was a clearer recognition of the ethical problems of human nature, such as those arising from the tendency to evil which is in all men as it was in Adam. On the other hand, the OT doctrine of the Spirit of God fell into practical neglect, to the great impoverishment of the doctrine of

H. W. Robinson, *The Religious Ideas of the Old Testament*, London, 1912, p. 22.

man. It is, in fact, through the recovery of this doctrine that the most characteristic advance of the NT anthropology is made (i.e. in the Pauline interpretation of Christian experience).

(c) It is necessary to emphasize the fact that the NT psychology is, in general, continuous with that of the OT and the Apocrypha, because some scholars (e.g., Holtzmann, Lüdemann, Sokolowski) have tended to exaggerate the Hellenistic influences, especially in regard to the Pauline contrast of the inner and outer man. They interpret the contrast as a dualism, though this is essentially untrue to the Hebrew basis of Pauline thought. It is, of course, true that the reproduction of the Hebrew psychological terms through their Greek equivalents gave easier access to the Hellenistic influences of the age. But the resultant modification has been, in fact, much less than we might have expected. The Greek terms of the NT are filled with an essentially Hebrew content; the two new terms, *psuchē* and *ennoia*, are really specializations from the psychological usage of 'heart' in the OT, and are not used with a Greek connotation.

II. NEW TESTAMENT.—1. The psychological terms.—The group of writings known as the NT, though emanating from a single generation, presents at least three types of psychological usage, viz. the Synoptic, approximating most closely of all to the OT; the Pauline, offering the most important and original development of the OT conceptions; and the Johannine, apparently dependent on the Pauline usage, but moving in a circle of its own. We may conveniently review the use of the chief terms in each group separately, reserving for a fourth class other noticeable occurrences in the NT. The chief terms to be considered, in order to reach the general NT idea of human personality, are four, viz. *ψυχή*, *πνεῦμα*, *σὰρξ*, and *καρδιά*, corresponding respectively to *נֶפֶשׁ*, *רוּחַ*, *בָּשָׂר*, *לֵב* in the OT.

(The attached numbers signify the approximate number of cases of each usage.)

(a) *Synoptic*.—*ψυχή* (27) denotes physical life (Mt 10⁴), or the subject of emotional states (Mt 10⁴), as in the OT, but in eleven cases (as Mt 10⁴) it refers to the continuance of life after death, a usage to which there is nothing corresponding in the use of *נֶפֶשׁ*. *πνεῦμα* (78) is used chiefly of the Holy Spirit (Mt 3¹⁹), and of demonic influences (Mt 8¹⁰), but in three instances it denotes the principle of life (Mt 27⁴⁶, Lk 23⁴⁶), and in seven the physical side of life (Mt 23³⁵, Mk 2²⁶, Lk 14²⁶), though on a higher level than that denoted by *ψυχή*. *καρδιά* (10) is used especially of personality, inner life, and character (Lk 24⁴⁷), also of emotional (Lk 24⁴⁷), intellectual (Lk 24⁴⁷), volitional (Lk 24⁴⁷) life. *σὰρξ* (11) is used of the physical part of human nature, with the suggestion of weakness and limitation (Mt 16¹⁷; cf. Lk 24⁴⁷), and thus in contrast with divine power (Mt 16¹⁷). Except for the use of *ψυχή* in reference to life after death, all these usages could be directly classified under the corresponding OT terms, the connotation of which they continue, though the Christian emphasis on the inner life in contrast with the outer (cf. *καρδιά*) is naturally marked in NT teaching.

(b) *Pauline*.—*ψυχή* (15) is a term very little used by Paul; of the four instances with psychological content three denote 'desires' (Eph 2³, Ph 1¹³, Col 3¹⁰), and one denotes simply the emotional side of consciousness (1 Th 5²³). His use of the adjective *ψυχικός* (1 Co 14¹⁴⁻¹⁵) shows that for him the *ψυχή* is no more than the animating principle of the body of flesh, and the basis of his emotional experience. *πνεῦμα* (146) is the most important word in his psychological vocabulary, whether as denoting supernatural influences (118, as Ro 15¹⁹), or the higher nature of a Christian man under the influence of the Spirit of God (14, as Ph 3), or a normal element in human nature (18, as 1 Co 15). This distinction of *ψυχή* and *πνεῦμα* further develops the tendencies already noticeable in the later OT usage of *נֶפֶשׁ* and *רוּחַ*. *καρδιά* (22) denotes the inner life (Lk 24⁴⁷), the seat of emotional (Lk 24⁴⁷), intellectual (Lk 24⁴⁷), and volitional (Lk 24⁴⁷) phenomena, continuing directly the usage of *לֵב* in the OT, except that the two Greek terms *νοῦς* (11, as Ph 3) and *ennoia* (20, as Ro 2¹⁰), denoting 'mind' and 'conscience' (ethical judgment), never *καρδιά* which the OT would have expressed through *לֵב*. *σὰρξ* (91) is used to imply physical or intellectual weakness, or some limitation in value (19; see 2 Co 7⁵, Ro 7⁵, Ph 3¹⁰); in 18 instances there is some ethical reference to the connotation of 'flesh' and sin

(the *ψυχή*), though not as to involve a fundamental ethical dualism of 'soul' and 'spirit'.

(c) *Johannine (Gospel and Epistles)*.—Here the usage of *πνεῦμα* (23) differs no marked difference from that of the Synoptics, except that it once includes the inner life on the higher side (2 Jo 1, as *πνεῦμα* also in 1 Jo 10). *πνεῦμα* (34) is almost confined to supernatural influences, which never used of demons. In one instance it is used of the principle of life (2 Jo 12), and in two psychically of anger (1 Jo 1, 2 Jo 1), and of wrath (1 Jo 1). *καρδιά* (11) follows the Synoptic usage, in the usage of *καρδιά* (10) the Synoptic contrast with *πνεῦμα* is further emphasized in the Pauline usage (1 Jo 1, 2 Jo 1), in accordance with the Johannine balance for antithesis; the spiritual birth of the believer means the supersession of a principle of new life.

(d) Among other NT usages calling for notice, Pauline psychology (17) is interesting by its contrast with the Pauline. For Peter, *πνεῦμα* (6) denotes the whole personality, including its highest aspects (12:13); *πνεῦμα* (8) is used of the soul or spirit after death (12:14); in one instance *πνεῦμα* denotes a weak and feeble 'disposition' (28), as imparted by the Holy Spirit, but never a normal element in human nature, as it does in Paul's usage. *καρδιά* (3) follows the usual Hebrew and Pauline usage, with reference to the inner life as contrasted with the outer; *καρδιά* (7) is used in a purely physical and non-ethical sense, while the Pauline characteristic connotation. The usage of terms in James follows that of the OT. In Hebrew *לֵב* and *רוּחַ* are taken together as normal elements of human nature (1:1; cf. 1:10), and *רוּחַ* is used of 'spirits' (Gentiles, 1:14, 1:15; cf. 1:19). The psychology of the Acts, like that of the Synoptics, shows clearly the general continuance of the OT thought and usage, apart from the use of *πνεῦμα* in the sense of a disembodied spirit (1:15; cf. 1:19). *πνεῦμα* represents the more substantial (1:15), *καρδιά* the more relational (1:15; cf. 1:19 for both) aspect of personality, while *πνεῦμα* is used like *πνεῦμα* of the special 'energies' of personality (1:15; 1:19; 1:20).

From this survey it will be clear that the fundamental ideas of personality in the NT are derived from the OT; the most important advance is in the belief that essential personality, whether called *ψυχή* or *πνεῦμα*, survives bodily death. This continued personality, however, still implies a body (cf. the Greek idea of the immortality of the soul), whether the present body (its ghostly counterpart? Mt 5:29-30) or the 'pneumatic' body of Pauline anticipation (1 Co 15:44), more adapted to the needs of the spirit (cf. the body of the risen Christ, which possesses new powers). The body is conceived as an integral part of the personality, whose consciousness is diffused throughout it, and differentiated into the local consciousness of its particular members (1 Co 12:27), as in Hebrew psychology. Thus the eye, hand, mouth, etc., have psychical and ethical qualities of their own; since the writers of the NT, like those of the OT, knew nothing of the nervous system, they could not link up sensory and motor phenomena with a central organ, as we do, or assign to the brain its true function. In regard to the psychical side of this unified life of body and soul, the survey shows that no hard and fast division was made by the NT writers; the inner life might be called *ψυχή*, *πνεῦμα*, or *καρδιά*, though usually, and on the basis of Hebrew usage, with more or less suggestion of emotional, 'spiritual,' and volitional activity respectively. We are not warranted, therefore, in speaking of a 'trichotomy' of body, soul, and spirit, or even a 'dichotomy' of soul (spirit) and body; a soul (spirit) may be temporarily disembodied, but full personality ultimately involves the union of body and soul, here and hereafter.²

2. *Spiritual influences*.—Further light is thrown on the NT idea of the soul by relating it to its environment of general and Christian belief. First in importance ranks the belief that the soul is accessible to 'spiritual' influences of the widest range, from those implied in the crudest demonology up to the Holy Spirit as conceived in the Pauline doctrine. The cosmic environment of the soul is constituted by hosts of demonic powers, which seek to make it their battleground.³ Christ

has entered the world armed with spiritual powers (Ac 10:19, 1 Jo 3:8), to overthrow Satan and his hosts—'I, by the Spirit of God, cast out demons.' In fact, Origen ascribes the progress of Christianity up to his time to the decrease in the number of demons, owing to their defeat by Christ.⁴ To an extent that we can hardly realize, the soul was conceived by the early Christian as the arena of opposing spiritual forces, so that the doctrine of the Holy Spirit claims a unique and primary place among the ideas of early Christian anthropology. We owe to Paul the fullest elaboration of this doctrine, though it is more or less common ground to the NT writers. In the Pauline anthropology the crude demonology of the time is replaced by 'sin,' conceived as an objective and almost personalized force, enabled to enter the human personality through the relatively weaker resistance of the 'flesh.'⁵ This is not conceived dualistically, as the source of evil, but as the 'base of operation' of sin (*ἀπάται*) (Ro 7:5; cf. vv. 15-19). The full significance of this idea is apparent only when we remember the fact indicated already, viz. that the 'flesh,' including all the members of the body, is an essential part of the personality, possessed of a quasi-consciousness of its own. Against sin, then, operating through the flesh, the Holy Spirit wages unceasing war, working from the higher side of personality, whose essential spirituality (Ro 7:5) it successfully reinforces (8:9). The whole course of the victorious campaign in the arena of the soul, whose higher nature is linked with God through faith, produces Christian experience in regeneration and sanctification. Paul has thus lifted the function of the Spirit from the popular level of tongues and miracles of healing to the ethical plane, as is seen in his recapitulation of the 'fruit of the Spirit' (Gal 5:22). He is not concerned with the ethical and metaphysical problems of this moral development; it is enough for him that all is of God and all is of man (1 Th 5:23); as Deissmann says:

'Demonicists and indeterminists can (both) appeal to him; Paul himself was neither one nor the other: to him the one meant as much as the other.'⁶

The entrance of the soul into this higher experience is by its faith, accompanied as this is by the baptism of the Holy Spirit outwardly enacted in, or accompanied by, water-baptism. But this baptism implies a new relation to all baptized believers, who are thereby constituted the unity of the Church. In the 'corporate personality' of the Church, forcibly depicted in the Pauline parable of the human body (1 Co 12:27), the old social consciousness of Israel re-appears. This corporate personality, whose vital energy is the Spirit of God, forms an essential factor in the NT conception of individual personality; the soul of the baptized believer is what it is by virtue of its relation to the whole, though the complementary truth must not be forgotten, that there is direct individual access to, and fellowship with, God through Christ in one Spirit (Eph 2:8; cf. 1 Jo 1:9).

3. *Summary*.—We may distinguish the essential features of the NT idea of the soul from the local and temporary forms of its expression by saying that this idea assumes the unity of human nature in its material and immaterial elements, which it does not so clearly distinguish as we are inclined to do; that it emphasizes the worth of human personality, especially by the appeal to its eternal destiny; and that it finds the realization of this worth in the moral values of a society (1908, bk. 1, ch. III; J. Weiss, 'Dämonologie,' in *FEST* 10, 411-418).

constituted through the corporate and individual surrender of personality to the Spirit of God (or Christ). The NT characteristically shows little consciousness of the problems inevitably arising within the circle of this idea of the soul, such as the method of the soul's origin, the relation of the soul's activity to God's (freedom and grace), the degree of moral development required for membership in the Church, the mediation of spiritual energies to the soul by institutions or texts respectively. The gradual emergence of these problems in the subsequent course of Christian thought has profoundly affected the history of the Church.¹

III. PATRISTIC AND MEDIEVAL.—When the Christian gospel passed out through the gate of the Jewish synagogue into the arena of the Roman Empire, an idea of the soul fundamentally Hebrew was transferred into an environment of Greek thought, with no slight consequences in the process of adaptation. Patristic thinkers were usually men trained in Greek philosophy, and they could make their apologetic and reconstructive work intelligible to a Greek-thinking world only through the established terms and conceptions of Greek psychology. The fundamental difference of outlook has been clearly stated by Siebeck:²

'For the Greeks, the soul is a product of the world, and the rational soul primarily exists to know the world as it is, and actively shape it; the soul was consequently the means to an end or ends assigned to it by the world. To the Christian, on the contrary, the world is a means for the end of salvation, which springs from the independence and characteristic essence of the soul; for him, accordingly, the soul is not a product of the world, but a creation of the transcendent God, conceived after the analogy of spirit.'

The transference brought both gain and loss—gain, in that a more scientific analysis of the Christian consciousness became possible; loss, in that some of the religious values conserved by the more primitive Hebrew and NT idea of the soul were more likely to be obscured. One general result was the development of a distinction between soul and body in marked contrast with the unity of the Hebrew idea (cf. Philo's dualism owing to similar influences), though this was usually accompanied by the retention of the Jewish doctrine of the resurrection of the body, which became an established Christian tenet.

1. Tertullian and Origen.—The influence of the Stoic and Platonic psychology on Patristic writers may be illustrated from Tertullian and Origen respectively. Tertullian (160–220), whilst naturally ascribing the soul of the first man to the divine inbreathing, follows Stoic teachers in asserting that the human soul is corporeal, and is handed on from parent to child, being begotten with the body (Traducianism). But the unity of the soul, with *ratio* as its highest function, stands over against the body, so that Tertullian is a 'dichotomist.' When the soul is seen in vision, it has the shape of the body, and even a certain tangibility. His formal definition may be quoted:

'The soul, then, we define to be sprung from the breath of God, immortal, possessing body, having form, simple in its substance, intelligent in its own nature, developing its powers in various ways, free in its determinations, subject to growth by opportunity, in its faculties mutable, rational, supreme, endowed with an instinct of providence, evolved out of one (originally).'³

Origen (185–254), like the Alexandrians generally, follows the Platonic idea of the soul as incorporeal and eternal; he regards it as pre-existent to the present life. From Platonic influence comes also that 'trichotomy' which Greek thought could so easily, though without warrant, read into the NT reference to 'body, soul, and spirit' (1 Th 5⁷). A third Patristic theory of the origin of the soul, which became dominant from the time of Jerome

onwards, is creationism, according to which 'God is daily making souls,'⁴ whilst bodies alone come by human generation.

2. Augustine.—Augustine (354–430), whilst deeply influenced by Neo-Platonism, claims a unique place in Patristic psychology by the originality and importance of his work. He is the first to realize fully and adequately that the inner life is *sui generis*, with its own intrinsic claims to introspective study; in his analysis of the mind as memory, intellect, and will he gives the primary place to the will, instead of to the intellect; his deep conception of the freedom realized through divine grace stands in sharp contrast with the superficiality of contemporary Pelagianism. His influence is supreme through the subsequent centuries until Scholasticism brings in the reign of Aristotle, and 'the Aristotelian conception of the soul as life-energy mingles with the Platonic idea of the body as the instrument of the soul.'⁵

3. Aquinas.—Aquinas (1224–75), the foremost representative of Scholasticism, combined the Augustinian anthropology with Aristotle's general idea of the soul⁶ and rejected the Platonic dualism, but 'ecclesiastical dogma demanded such transformation of the Aristotelian distinctions as amounted to a religious dualism.'⁷ In the elaborate system of Thomas man became a central point of contact between the two great realms of 'form' and 'matter'—the microcosm which unites them both.⁸ Metaphysics thus gave support to the Christian doctrine of the soul's worth, though its formalism failed to do justice to the soul's content.

4. Eckhart.—Side by side, however, with the more rationalistic view of Scholasticism there is an approach to the realities of the soul made by mystical religion, which is of great significance for Christian thought. Thus Eckhart (1260–1327), gathering up the soul's powers into unity with God, holds that 'there is something in the soul uncreated and uncreatable,' through which the divine birth within man takes place (cf. the *synthesis* of Scholastic psychology).⁹ In this return to God, involving, on the negative side, the withdrawal from sensual life, the soul's salvation consists. A natural outcome of such views would be pantheism, though Eckhart perhaps saves himself from this.¹⁰ The insistence on the surrender of the soul to God as the source and unity (*unitas*) of its life is characteristic of mysticism (q.v.), and may be studied in the *Theologia Germanica*, which so profoundly influenced Luther. In fact, medieval mysticism forms one of the principal tributaries of the Protestant Reformation, with its new emphasis on the experience of the individual soul and on the work of the Holy Spirit.

IV. MODERN.—1. Lines of approach.—From the Renaissance and Reformation onwards the characteristic feature of inquiry into the nature of the soul has been its specialisation along different lines, pursued more or less independently; Christian thought tends more and more to concentrate on the religious significance of the soul.

(a) *Religious.*—The new emphasis on religious experience which characterized the Reformation illustrates the more subjective spirit of Protestant religion in general. The necessary objective complement of this was found in the doctrine of the Holy Spirit as the supernatural basis of the soul's experience, though usually in intimate relation to

the canon of Scripture.¹ A wider application of the doctrine of the Spirit is to be found in the Quaker doctrine of the 'Inner Light,' which Barclay defines as 'a real spiritual substance, which the soul of man is capable to feel and apprehend, from which that real, spiritual inward birth in believers arises, called the new creature, the new man in the heart.'² From the teaching of George Fox³ we can see that this meant the religious evaluation of the moral consciousness—a most suggestive contribution to modern apologetic.* At the other end of the scale of spiritual experience we find Wesley's doctrine of the 'witness of the Spirit.'⁵ Between these two experiences—the sense of morality on the one side and the glow of Christian certainty on the other—are to be found the distinctive interests of Protestantism and the tribunal of its doctrines, to whatever degree the Scriptural record of similar experience remains the formal court of appeal. A new era in the study of the soul in its religious interests was initiated when Schleiermacher (q.v.) recognized this. The consequent emphasis on religious experience as the basis of inquiry into the soul is one of the most significant features of present-day theology, in full agreement with the contemporary scientific interest in the psychology of religion.

(b) *Psychological*.—The scientific interests of 17th cent. thought, seen in the philosophy of Descartes (1596-1650), Spinoza (1632-77), and Leibniz (1646-1716), and culminating in Locke (1632-1704), involved the differentiation of physiology from psychology, and of both from the religious or metaphysical ideas of the soul. Psychology acquired the character of a distinct science, and has tended more and more in recent times to confine itself as such to the study of the actual phenomena of consciousness, whilst remitting to the theologian and the metaphysician all theories of an alleged substratum or 'soul.' No objection can be raised to this limitation, provided that it be not construed as a denial of soul or personality, in the sense of the theological or ontological postulate of the states of consciousness which the psychologist studies. In this connexion it should be noted that the assumption by Locke of a 'closed consciousness,' accessible through the physical senses alone, still tends to create a prejudice against those spiritual influences which the Christian idea of the soul essentially maintains. Against this prejudice the modern study of telepathy has exerted a useful influence, by showing the possibility of mind influencing mind, apart from the normal link of sensational knowledge. Indeed, the study of abnormal psychology (hypnosis, multiple personality, dreams and visions) may still have important contributions to render to our knowledge of personality. The modern recognition of the 'sub-consciousness' has done much to clear up certain phenomena of normal life, quite apart from the further question of a subliminal self.⁶

(c) *Historical*.—In our own generation a further line of approach has been opened up by the comparative study of anthropology and religion. Australian totemism, African fetishism, the psycho-physiological ideas and practices of the ancient Egyptians, the demonology of Babylonia, the metaphysical ideas of the soul current in Indian religion—all these can contribute to a clearer knowledge of the Christian idea of the soul, if only by throwing into contrast its distinctive features. Before the rise of this modern study

we were more or less confined to a Gracized approach to Biblical ideas, and, in particular, the psychology of the Hebrews was misunderstood. We can now see the alien origin of 'trichotomies' and other assumptions, and recognize the essential unity of man's nature in the Hebrew-Christian idea, and its contrast with Greek and other dualisms (Chinese, Zoroastrian); the emphasis of this idea on man's dependence on God, for creation, preservation, and salvation, in contrast with the scientific or philosophical interests of Greek thought; the fundamental Christian assumption of individuality, in contrast with the ultimate denial of this by Buddhism.

(d) *Philosophical*.—The history of philosophy in all periods shows how intimately its progress affects the theological ideas of God and man. In the modern period we may trace a growing approximation to, or recognition of, the demands of Christian faith, as seen in the rejection of materialism and naturalism, and the recognition of the reality of 'spirit.' The decline of absolute idealism, largely through its inadequate account of individuality, and the rise of personal idealism and of various forms of pluralism show that the Christian insistence on the value of the individual soul is not without its philosophic basis. The importance of the idea of 'personality' is more fully recognized in modern philosophy, and the Kantian emphasis on the essential reality of ethical experience harmonizes with the Christian claim that the moral side of personality is its highest development and supreme 'value.'

2. *Values and problems*.—The essential features of Christian anthropology—the religious data or 'values' which any system of thought is called on to interpret—are 'its emphasis on the worth of man to God as spiritual personality, its practical recognition of an individual self, possessing moral freedom and responsibility, its condemnation of sin as that which ought not to be, its assertion of human dependence on divine aid for the realization of spiritual possibilities, its definition of personal development in terms of social relationship.'⁷ The problems of the Christian idea of the soul gather chiefly around the primary postulate of the soul's reality, its relation to the body, and its relation to God.

(a) The term 'soul' must be taken to mean, not the unknown substratum of certain phenomena, but the spiritual entity which is in its distinctive activities and qualities. Such are its possession of a unique individuality, of the freedom of real initiative, of non-material content. Its development in time is part of its reality, though its ultimate nature may be conceived as timeless. Total human personality is obviously more than the self of self-consciousness at any moment; if only because of the fact of memory. Moreover, the relation of the Christian self-consciousness to other selves and to God may suggest that the soul is an entity larger than past or present experience exhibits.

(b) The relation of soul to body in the Christian conception of personality involves the rejection of dualism and the recognition of the body as integral to human nature, at least in the sense that the powers of the body belong to and are finally gathered up into the life of the soul. This, of course, does not mean that the soul depends on the body for its ultimate being, or dies in the physical dissolution of death, but simply that the connexion of soul and body is not artificial, temporary, and alien. The historic Christian conception of life beyond death has accordingly

⁸ H. W. Robinson, *The Christian Doctrine of Man*, p. 344.

been based on the Hebrew doctrine of resurrection, rather than on the Greek doctrine of immortality. The non-Hebraic idea of pre-existence (g.w.) has failed to find a genuine home in Christian thought; as a speculation in regard to what lies beyond all experience, it hardly admits of proof or disproof. Christian emphasis falls on the theistic idea that soul and body alike owe their creation to God; the fact that they are in present experience so intimately interwoven suggests that they have been brought into existence together, and are complementary expressions (on different planes) of the one entity of personality. Such a view implies no surrender of the faith that the soul survives bodily death; the apparent cessation of intercourse with other embodied selves on earth would find sufficient explanation if the present relation of brain to mind be one of permissive or transmissive, not productive, function.² This view of the body as an integral factor, though not, in its present form, a permanent element, in the slowly-evolved self of personality, would agree with the whole evolutionary history of the world, in which human personality offers the highest value attained, and gathers up so many factors of the process. Philosophically, this implies the spiritualization of the body, as against the materialization of the soul; but both elements, body and soul, are real, and form a unity for Christian anthropology and ethics.

(c) The relation of the soul to God in Christian thought demands the rejection of any form of monistic absorption, as clearly as of naturalistic degradation. Notwithstanding the quasi-panteism of some forms of Christian mysticism, and the adoption of quasi-panteistic systems by some Christian thinkers, the normal testimony of the Christian consciousness is to a clear-cut individuality, carrying with it a real freedom, in upward as well as downward relations. On the other hand, the deeper experiences of Christian fellowship with God point to a relation of the soul to Him so intimate that the complete surrender of the soul to its Creator and Redeemer, the fuller and richer is the soul's individual life. Whilst the process of salvation may be defined as 'God in us, its goal is 'we in God.' The doctrine of the Holy Spirit (g.w.) here becomes of cardinal importance for Christian anthropology. Through 'the law of the Spirit of life in Christ Jesus' human personality realizes its larger life by voluntary surrender to God.

Psychologically, it is the setting of the mind on Christ, in the revelation of His graciousness and of the infinite love of God in it, that makes it possible for the Spirit of Christ to enter into the soul's complete deliverance.³

The reported discovery is made by the Christian that the true life of the soul is hid with Christ in God—i.e., that it is waiting for personal appropriation. This truth of experience shows the significance of fellowship, human and divine; in practice and in theory corporate fellowship must be held to be fundamental to the life of the soul.

The Christian idea of the soul, whilst always implying a metaphysic, is not dependent on any particular system of metaphysics, past, present, or future. All that we are entitled to say is that a metaphysic of personality adequate to explain the Christian experience must, on the one hand, do justice to the moral freedom which alone gives reality to sin and guilt, and significance to the soul's surrender to God, and, on the other hand, show the soul's kinship with God, and its constant relation to the 'Father of spirits,' so that its whole development in time becomes at once a divine as well as a human activity. To develop such a

metaphysic obviously lies beyond the scope of the present article.

H. WHEELER ROBINSON.

SOUL (Greek).—When we attempt to understand the development of Greek ideas about the soul (ψυχή), we are faced at once by the difficulty that there appears to be no bridge leading from the views implied in our earliest literary record, the Homeric poems, to the religious practices and beliefs of later ages. There are in many respects much more primitive, though it is also true that popular beliefs were much affected by Homer, since most Greeks were brought up on him from childhood. On the other hand, we find that the clearest thinkers among the Greeks, while they naturally rejected popular superstitions about 'souls,' were even more emphatic in their condemnation of the Homeric doctrine. In fact, the Homeric poems appear to be an intrusive and disturbing factor in the normal development of Greek belief. That is why, so long as the *Iliad* and the *Odyssey* were regarded as primitive popular poetry, it seemed impossible to account for later Greek ideas about the soul except on some hypothesis of Oriental influences. At the present day, however, it is generally agreed that the *Iliad* and *Odyssey* are not popular poetry, but court poetry, and it is perfectly certain that they are not in any way primitive. Archaeological research has shown that there was a highly developed civilization in the Aegean at least 2000 years before Homer, and it has also shown that the people to whom this civilization belonged were conquered, some centuries before Homer, by invaders who probably came from the north. The civilization which Homer describes is not the old Aegean civilization even in its latest period. The Mycenaean unearthed by Schliemann is not the Mycenaean of Agamemnon, but that of his predecessors of the older race. What Homer does

² Cf. W. James, *Human Immortality*, London, 1902, p. 32.

³ Cf. Steffen, *Psychology of the Christian Soul*, p. 364.

describe is the civilization of the new-comers, whom he usually calls Achaeans, and of these only after they had already settled themselves firmly in the chief seats of the old Aegean kingdoms. It is clear, however, that these Achaeans did not occupy the whole of what was afterwards called Hellas or Greece, and we may also assume that the new-comers would be numerically inferior to the older inhabitants almost everywhere, and would be gradually assimilated and absorbed. That is why, as becomes clearer every day, the later Greek civilization was in the main a revival and continuation of that which existed before the coming of the Achaeans, though it was profoundly modified by Achaean influences. Hesiod was still conscious of the break. In his account of the ages of man¹ he interpolates a fifth age, that of the heroes who fought at Thebes and Troy, between the bronze age and the iron age, to which he himself belonged. That is the age with which Homer deals, and, if we remember that the heroic age is an interlude which stands by itself, it will be much easier for us to understand the development of Greek ideas about the soul. It has also to be borne in mind that Homer knows nothing of the Doric conquest of the Peloponnese, and that, in the time of which he sings, the region later called Ionia was still in the hands of 'barbarians.'

1. Early beliefs and practices.—It is, of course, obvious that we cannot know with any certainty what the old Aegean population thought of the soul, so long as their writing remains undeciphered. We can only draw inferences from the remains of tombs, etc., that have come to light, and these may easily be misleading. Even if the inscriptions could be read, we might make mistakes. It would not be safe to infer from the inscriptions in a Christian churchyard what is really believed about the soul to-day. Still, there are certain broad statements which may be regarded as assured. The kings of Cnossus and Mycenae were buried in elaborate state, not cremated like the Achaeans of Homer; and, in early times at least, that generally points to a difference of belief about the soul. The great distinction between such beliefs depends on the answer given to the question whether the soul remains attached to the body after death or goes to a place of its own. If this question is answered in the first way, we naturally find that the body is buried in such a manner as to secure it against corruption as long as possible, and that along with it are buried weapons, implements, etc., which may be of use to the soul in its life below the ground. There will also be a mortuary cult of some kind, the main purpose of which will be to provide the soul with appropriate nourishment. All these features are met with in the Mycenaean tombs,² and we may fairly infer that, in those days, the 'soul' was supposed to dwell in the tomb. This is the belief we know best from Egypt, where it was carried out with rigorous logic, and where great precautions were taken to secure the preservation of the body after death. At Mycenae the face was covered with a thin gold mask, so that we still know the features of some of the old kings; and the Egyptians also tried to make their mummies life-like. It seems to have been felt that the outward appearance of the man was the essential thing, and, so long as that was preserved, the soul could still enjoy the offerings brought to the grave. In Egypt this idea was still further developed when the image of the *ka*, or 'double,' was placed in the tomb, but we have no clear indication of that in the Aegean. The sarcophagus of Hagia Triada does, however,

furnish us with a representation of the mortuary cult, which seems to prove that a belief similar to the Egyptian prevailed in Crete, and we shall see that the later Greek practices and beliefs must have been developed from some such origin.

2. Homer.—When we come to Homer, everything is changed. The 'soul' is called *ψυχή* and is identified with the last breath, the 'ghost' which a man 'gives up.' That is obviously separated from the body at death, so there can be no question of trying to preserve the body or its likeness, or of a mortuary cult. On the contrary, it is desirable that the body should be destroyed as soon as possible, so that the 'soul' may be quite free to depart. It seems to be feared that, so long as the body is there, the soul will be in a measure bound to it. Cremation is an obvious corollary of this view, and there can be no thought of offerings at the grave.

It was not to be expected, however, that this belief should be developed to its logical conclusions in those early days, and there are a good many survivals in Homer of something more primitive. Above all, the soul is still thought of as in some sense a 'double' of the self, and the self is frankly identified with the body. The soul, however, must somehow retain the outward appearance of the man 'himself,' since it is obviously possible to dream of the dead. This comes out best in *Il.* xiii. 106, where we are told that the soul (*ψυχή*) of Patroclus stood over Achilles all night long, 'and it was marvellously like himself' (*ὥστε δὲ Πάτροκλος ἀνὴρ*). Indeed, the whole funeral of Patroclus as here described, with its human sacrifices and libations, is quite unlike anything else in Homer and reads like a survival from earlier times, with this great difference, however, that it is not to be repeated, and that no mortuary cult is to be instituted, after Patroclus 'himself' has once been burned.

It is important to observe, in the next place, that the soul (*ψυχή*) is not of the slightest importance during life. Homer has many descriptions of conscious processes, whether of the nature of thought, will, or desire, and he has an unusually large psychological vocabulary, as we should call it. He uses words like *φρονέω* (*phronéō*), *φρέω*, *ἔχω νόον*, *βουλόμην*, *αἰδέομαι*, *ἔχω θέλησιν* with considerable precision, but these things are all parts or functions of the body. There is not a single passage where any conscious process whatever is ascribed to the soul (*ψυχή*) of a living man. No doubt there are places where we may translate the word by 'life,' but even then it only means life regarded as a thing to be lost.³

As the soul is not the seat of consciousness in life, it follows that it can have no consciousness when it has left the body, and that is the normal Homeric view. The departed soul has no midriff (*φρέν*) and no heart, so it is impossible for it to be conscious. It is only real enough to be capable of appearing in the dream of a living man. The souls of the dead depart to a barren, gloomy region, called 'the house of Aides' (i.e. 'the unseen one'), which is thought of as lying in the far West, and there they have only a dream-like simulacrum of life. As Apollodorus put it in his work on the gods:

Homer 'assumes that souls resemble the images appearing in mirrors and arising in water, which are made in our likeness and imitate our movements, but have no solid substance to be grasped or touched.'

That is why the departed souls are called 'shades' (*εἴδωλ*) or 'images' (*εἰκόνες*).⁴

¹ Cf. *Il.* xii. 1611 *καὶ ψυχὴν ἦεν*, *Od.* xiii. 813: *καὶ καὶ ψυχὴν ἀνέστη*, *Il.* xiii. 763: *ψυχὴν ἀνέστη*. A Homeric hero fights for his *ψυχή*, or risks it or loses it, but he does not live by it. In *Il.* ix. 601 *αὐτὴν ψυχὴν ἀνέστη* means 'an compensation for the loss of life.'

² The *ka* is mentioned in *Il.* xiii. 104: *ὅς μ' ἐνὶ νύκτι καὶ αἴθερ ἵκοντο* (*καὶ αἴθερ καὶ αἴθερ*), and in *Od.* xiii. 104: *ὅς μ' ἐνὶ νύκτι καὶ αἴθερ ἵκοντο* (*καὶ αἴθερ καὶ αἴθερ*).

³ Words and Days, 118 f.

⁴ See art. *Ποῦς* vol. xix. *Dict.*, vol. vi. p. 26.

All apparent exceptions to this normal Homeric doctrine of the soul are of the kind that prove the rule, since they are clearly attempts to adapt certain older ideas to it. The most remarkable is that of the seer Tiresias, whose departed soul is said to retain its consciousness. That, we are told,¹ however, was a gift of Persephone, who 'granted him a mind (*phronē*) even though he was dead.' It is, therefore, a special miracle, which only confirms the general rule. The whole story of the Nekyia in *Od.* xi. depends on the view that the souls must drink blood before they can become comensals. The blood gives them, as it were, a temporary body while it lasts; and therefore they can speak with Odysseus. Obviously, however, as Rohde says, the poet would hardly have thought of putting the matter in that way, if it had not been for the memory of the old blood-offering to the dead (*atracoria*). The most startling survival is the promise which Odysseus makes on the instructions of Circe² to offer a sacrifice to the dead when he gets back to Ithaca. According to the usual Homeric view, such a sacrifice would be altogether meaningless. We see, then, that even in Homer there are traces of an older theory of the soul than that which prevails in the poems.

The few favourites of heaven who are carried away to the Elysian field and the few great sinners who are punished in Tartarus form, on the other hand, no exception to the rule. They have been made immortal; but for Homer that means that they retain their bodies. They have become like the gods; but a god for the Greek is an 'animal' (*zōon*) and has a body. Neither the punishment of Tantalus, Tityos, or Sisyphus nor the delights of the Elysian field would be possible for disembodied souls. Immortality consists just in exemption from the separation of soul and body.

3. Hesiod.—In Hesiod we find, as might be expected, still more numerous survivals of earlier ideas. The men of the golden age became *daemones* after death, while those of the silver age are called 'the subterranean blessed,' and we are expressly told³ that they too 'are attended by honour' (*timē*). We are apparently to think of an earlier time, when men might become gods upon earth, and of a later time, when they might become chthonian divinities like Amphiaraios and Trophonias. All that, however, was very long ago, and no such lot is possible for souls now. The souls of the bronze age men went 'nameless to the dark house of chill Hades.'⁴ Some of the souls of the next age, that of the heroes, share the same fate, while others are carried away to the 'isles of the blessed,' which correspond to Homer's Elysian field.⁵ So far as the present race is concerned, there seems to be no hope of any real life after death.

4. The cult of heroes.—When we come to times of which there is any real historical memory, we find everywhere a cult of 'heroes' subsisting alongside of the worship of the gods. These heroes are plainly souls which have their dwelling in the grave. It is impossible to believe that this is an innovation, or that the name 'hero' (*hērōs*) has been adopted from Homer, who often uses it merely in the sense of 'free man.' It seems rather that the word has been secularized, as it were, by

the Achaeans, and that the cult had survived among the older population to emerge once more into the light of day when the invading Achaeans had been absorbed. This view is confirmed by what we learn from Hesiod. As we saw, he knows that in distant days there were departed souls which received a cult, but he uses the word 'hero' in the Homeric sense, and therefore he cannot apply it to the 'subterranean blessed ones,' to whom it properly belongs. However that may be, the cult was always sharply distinguished from the worship of the gods. To sacrifice (*thysan*) to the gods on an altar (*buthos*) was to send the sweet savour (*olura*) upwards, while to sacrifice (*deuofthēn*) to the heroes on an *oxypeta* was to permit the blood and libations to sink into the earth. The archaeological evidence shows that the latter practice was known at pre-Homeric Mycenae. It is quite plain that the heroes were regarded as the souls of departed men, though only a few of the departed become heroes. It is also clear that the cult of the heroes is localized at their graves, which implies that their souls dwell there. That is why the bones of heroes are transported from one place to another. The cult can take place only where they are.⁶

5. Conflicting ideas.—(1) At Athens, in historical times, we find great confusion of ideas about the soul. Attica had not been overrun by the invading northerners, and the older ideas had never been displaced by such theories as are implied in Homer. Accordingly, burial and not cremation was the orthodox Athenian method of disposing of the dead. It was prescribed and regulated in the laws of Solon, and it is the only practice strictly consistent with the due observance of the 'customary uses' (*nē nomothēseis*), i.e. the mortuary cult. On the other hand, all Athenians were brought up on Homer and necessarily had the Homeric beliefs impressed on their minds. That may be the explanation of the fact that cremation was quite common at one period (7th cent. B.C.) and was always regarded as a possible and proper method of disposing of the dead. There was, in fact, a divergence between the things an Athenian did in connexion with departed souls and the things he believed about them. The mortuary cult implied that the souls were in the grave with the body; and we know from Plato's *Phaedo*⁷ that ghosts were believed to have been seen in the neighbourhood of tombs. At the feast of the Anthesteria departed souls or ghosts (*ekphrōi*) were supposed to be released from their graves and to revisit the houses in which they had dwelt. They were solemnly dismissed at the end of the festival with the words, 'Out, ghosts, the Anthesteria is over!' (*thēphrōi, ekphrōi, ekphrōi! Anthēstērion*). All that is quite primitive; but, if an ordinary Athenian had been asked what he believed about the soul, he would doubtless have answered by talking of its departure 'to Hades' (*eis Aidēs*) and of Charon and the Styx—things which imply quite a different belief. This confusion is well marked by the representation of Charon and his boat, much as he is depicted in Lucian and Virgil, on a piece of black-figured pottery which must belong to the 6th cent. B.C. This piece of pottery was evidently intended for use in the mortuary cult, and yet it is ornamented with a scene quite inconsistent with the necessary presuppositions of that cult.⁸ The fact is that we should have very little knowledge of the mortuary cult at all, if it had

⁸ *Phaedo*, 113c.

⁹ *Phaedo*, 113c.

¹ The point of view is well brought out by the account of the bringing of the bones of Orestes from Tegea to Sparta in Herodotus (2. 171). At late as 476 B.C. the bones of Orestes were brought from Sparta to Athens (*Phaed.* 113c, 114c).

² *Phaedo*, 113c.

³ See A. Partridge, 'Charon, vint' *Antiquarian Magazine*, 1888, p. 101.

⁴ *Antiquarian Magazine*, 1888, p. 101.

not born of ignorance in cases of inheritance, so that orators like Ismaea had to mention it. The Athenian acquired such beliefs about the soul as he had from Homer, but he continued to honour his dead 'after the manner of his fathers' (*κατὰ τὰ πατέρα*).

(2) The Eleusinian mysteries were another source of confusion. It is not at all probable that any particular doctrine about the soul was originally implied in these; but, as Demeter and the Maid were both chthonian goddesses, it seemed natural that they should be able to secure for their votaries a more satisfactory existence in the under world than that of a Homeric 'shade.' We find that idea already in the Homeric *Hymn to Demeter*, and it was obviously capable of development. On the whole, however, it does not appear that there was any mysticism in the 'mysteries,' and the nature of the life to come which they promised was clearly modelled on Homer's Elysian field. It will be seen that, strictly speaking, this would imply that the initiated retained their bodies after death, but it is not necessary to suppose that the average Athenian troubled himself on this point.

(3) So far, we have come to nothing that can rightly be called an immortal soul. The gods alone are immortal, and that is because they have immortal bodies. It was only with the spread of the worship of Dionysus that a new idea of the soul as essentially divine, though fallen, gradually emerged. The worship of Dionysus was distinguished by its insistence on divine 'possession' (*καρσυσμός, ἐκθεσμός*) and 'ecstasy' (*ἔκστασις, ἑκστασις*), 'stepping out' of the body. In that there is nothing startling or beyond the range of primitive peoples. What was new was that it suggested to some Greeks an entirely new view of the soul and its relation to God. We know from the Orphic gold plates discovered at Thurii and Pelesia that the soul of the departed Orphic saint (*Σείρ, εὐφροσύνη*) claimed actually to be a god and to have won release (*ἀλῆσι*) from the 'grivous wheel' of birth by strict observance of the precepts of piety. From this point of view it followed that what we call life is really death, and that the body is the prison or tomb of the soul. Now, the followers of Orpheus were certainly numerous at Athens from the time of Pisistratus onwards, and we have always to take account of their influence. It is not clear, however, that they really went much farther than primitive spiritism in their theory of the soul. At any rate, Pindar, who was certainly influenced by the doctrine and insists that the soul alone is 'from the gods,' also calls it 'an image of life' (*αἶμαρ εἰδωλόν*) which survives death—a thing Homer might quite well have said—and he expressly lays down that it 'sleeps when the limbs are active' (*αἰεὶ δὲ σπασσόμενα καλῶν*).¹ It is only in dreams that it shows its true nature during life, and it appears to be quite dissociated from the normal waking consciousness. It is not clear that an Orphic believer would naturally speak of his soul as 'I' before he died. It is rather a supernatural guest whom he entertains. The Orphic doctrine, then, is more important in this connexion for what it suggested to philosophers than for itself.

(4) Another influence, which began to make itself felt at Athens early in the 5th cent. B.C., was that of Ionian science. It must be remembered that Ionia was, comparatively speaking, a country without a past. There was no 'usage of the fathers,' as there was at Athens, to keep up the memory of old beliefs. The traditional doctrine of the soul was obviously unsatisfactory from the scientific point of view. It is true that the

Ionians were led by a natural human impulse, which seems to have given rise both to science and to religion, to seek for something 'ageless and deathless' (a Homeric phrase adopted by Anaximander), but they looked for it in the world around them. Their central belief was that all the changing things of this world must be forms of one undying substance, which they called 'god'—a word which they had completely secularized. In its developed form Ionian science held that this primary substance was 'air' (i.e. vapour), and the soul was regarded simply as a portion of the boundless air which happened for the time being to be enclosed in a human, animal, or vegetable body. This is not, of course, to be identified with the dream-consciousness like the Orphic soul. Diogenes of Apollonia regarded the 'internal air,' which was 'a small portion of the god,' as the seat of our ordinary consciousness, and Heraclitus (who regarded the soul as fire) insisted specially on its identity with our waking life. On the other hand, it has no permanent reality of its own; it is nothing that can be called 'I' or even 'this.' It is introduced into the body by respiration, and, if it is called immortal, that merely means that it returns at death to the undying air outside us.²

(5) Neither the Orphic 'soul' nor the 'soul' of Ionian science was a *self* any more than the Homeric. So far as we can judge, it was Pythagoras who first regarded the soul in this way. If we are right in referring to him the doctrine of reminiscence (*ἀνάμνησις*) and connecting it with that of reincarnation (*μετεμψύχωσις*), it seems to follow that he must have regarded the soul, which is the seat of knowledge, as something with a permanent individuality of its own. If so, however, his followers were not very faithful to their master's teaching. Those of them who emphasized its scientific side soon came to regard the soul as an 'attunement' (*ἁρμονία*) of the elements constituting the body, and of course such a theory is wholly inconsistent with its immortality, or even its individuality. The soul is simply a function of the body. Pythagoreanism, then, only added to the existing confusion of ideas.

In these circumstances, it is easy to see how it was that the Athenians of the Periclean age had no definite views about the soul at all. They continued to perform the customary rites of the mortuary cult, and they continued to use the wholly inconsistent language of Homer. Down to the very end of the century the word *ψυχή* is hardly found in any but its Homeric sense of life as a thing to be lost. Even in the passages where it seems to be used of the seat of feeling—what we call the 'heart'—the feelings attributed to it are always of the inarticulate kind which belong rather to the dream-consciousness than to the waking life. The idea of a real life of the soul after death is quite unknown. The orators sometimes use such phrases as 'if the departed have any consciousness of the things in this world'; but they speak very doubtfully, and it is obvious that they are thinking chiefly of the souls in the grave which were the objects of the mortuary cult. In the funeral orations delivered over those who had fallen in battle it was customary to introduce a 'consolation' for their parents, but it is never suggested to them that the souls of their sons have perhaps departed to a better life. Under the influences which have been described above, the only formula that seemed satisfactory was 'Earth to earth and air to air,' and that this was considered quite orthodox is proved by the fact that it was

¹ Cf. Theophrastus, *de Sensu* 42 (of Diogenes of Apollonia); *Ser. 24* & *Ser. 25* and elsewhere, perhaps *de animis* 120, 121, 122, 123. For Heraclitus sleep was just being out of from the surrounding fire.

² Frag. 131 (96), quoted by Plutarch, *Conviv. ad Apoll.* p. 129 D.

employed in the epitaph on those who fell at Potidea in 432 B.C. Plato, therefore, is historically justified when he represents the companions of Socrates as startled when they hear that their master believes the individual soul to be immortal. To them the very idea was quite unfamiliar.¹

6. **Socrates and Plato.**—In the 4th cent. all this is changed. *Laocertes* speaks of the soul very much as we do, and it is freely identified with the normal consciousness. It is the seat of knowledge and ignorance, and it is the seat of character. It seems, then, that some one must have set forth a new view of the soul in the latter half of the 5th cent. B.C., and it is hard to think of any one who is likely to have done so except Socrates. Now it is certain from the jokes of Aristophanes that Socrates was well known in 423 B.C. as a man who taught strange doctrine about the soul (*ψυχή*). His disciples are referred to in derision as *ψυχαι* in the *Clouds*,² and he himself is said to practise *ψυχεργεῖν* in the *Birds*.³ It is improbable that *ψυχεργεῖν* at this date can mean anything else than 'call spirits' from the other world; and unless the joke is to be regarded as intolerably frigid, we must suppose that Socrates was commonly known at this date (413 B.C.) to teach the immortality of the soul. Now, in the *Apology*, Plato makes Socrates state twice over⁴ with great emphasis that the purpose of his mission was to get men 'to care for their soul' (*ἐνθυσιάζειν τῇ ψυχῇ*) and to make it as good as they can. It does not seem possible that he could have made Socrates say this unless the fact had been well known, and it is certain that if Socrates did any this, he was using the word 'soul' (*ψυχή*) in a sense it had not hitherto borne. We gather that he described it as 'that in us which has knowledge and goodness' or their opposites,⁵ and that he insisted that it was our true self and demanded our best care (*ἐνθυσιάζειν*), 'not only for the time of this life, but for all time.'⁶

Such, at any rate, is the doctrine which Plato always ascribes to Socrates and which even Xenophon has tried to express in his own way. Plato himself adopted it and gave it a scientific form. For him 'soul' was above all the source of motion (*ἀνὰ κίνησιν*). It was the only thing which could move itself and other things without being itself moved by anything else. It was, therefore, 'prior to the body' (*πρὸ σώματος τοῦ σώματος*), and the efficient cause of everything good and bad. There are, as a matter of fact, bad things as well as good, and therefore there must be more souls than one. It is not easy to dis-

linguish in Plato's dialogues those parts of the doctrine of soul which he inherited from the Pythagoreans and Socrates and those which reveal his own convictions, but the teaching of his immediate successors and the criticisms of Aristotle prove that the point chiefly emphasized by him was that the soul is the only 'self-mover.'

It is especially to be noted that the doctrine of the 'self-mover' does not occur in the *Phaedo*, and this seems to indicate that it is Platonic rather than Socratic. On the other hand, Socrates is made to expound it in the *Phaedrus* with perfect clearness and precision. That, however, it is a strongly Pythagorean doctrine seems plain, since the Pythagoreans had to postulate an immortal, unchangeable 'Plato's' theory. That seems to be suggested by the fact that we know of the doctrine of Alcmaeon, a younger contemporary of Pythagoras, who taught that the soul was immortal because it resembled immortal things, such as fire, in motion like the heavenly bodies. Plato implies in the *Phaedo* that Socrates had been interested in Alcmaeon's view that the brain, rather than the heart, was the seat of sensation, so he must certainly have known his theory of the soul. We may infer, however, from the silence of the *Phaedo* that this aspect of it did not appeal to him as strongly as it did to Plato. It is important also to notice that in *Plato* the soul is always distinguished from the 'forms' (*eide*, *idéa*). It is not the substance of souls that makes it possible for the 'saurus' to enter into the world of becoming.

If these views are correct, it follows that what is called the soul from the religious and ethical point of view was clearly apprehended for the first time by Socrates, and that it became the central thing in Plato's system. To him the existence of souls was the only possible explanation of the existence of a world. The movements of the heavenly bodies implied that there was a soul of the world, which was an animate creature (*ψῆα*), and God could be understood only if He were regarded as a soul. The soul of the world, the souls of the heavenly bodies, and the souls of men, animals, and plants were all created by God; but, once created, they would never be destroyed, because that would be inconsistent with the goodness of God, who can only desire that they should become as like Himself as may be. That is, in brief, the doctrine of the soul which we owe to Greece.

7. **Aristotle.**—It only remains for us to say something of the reaction which followed at first on the proclamation of this doctrine. It begins at once with Aristotle, though, as usual, we can distinguish two conflicting strains in his thought. He is, in the first place, an Ionian, and he therefore rebels against the spiritual interpretation of nature. On the other hand, he had been carried away, in spite of himself, by the teaching of Plato; and the beliefs he really cares about are just those which cannot be reconciled with the rest of his system or expressed in terms of it. He begins with the body, to which the soul is related as form to matter. It is not, however, a mere function of the body, and Aristotle will have nothing to do with the doctrine that it is an 'attainment' (*ἀπώροια*). On the contrary, the body is the instrument (*ὄργανον*) of the soul; for matter is only a potency and exists only in so far as it is necessary for the realization of a form. Even so, however, soul is inseparably bound up with body, and can have no life apart from it. So far it is easy to follow, but then we are told, without any real explanation at all, that, while the most developed form of soul is mind (*νοῦς*), this mind is purely passive. There is another sense of mind in which it is 'separable from matter,' and this alone is 'immortal and everlasting.' The conflicting interpretations of this doctrine given by Alexander of Aphrodisias, Averroes, and St. Thomas do not concern us here. The fact remains that Aristotle himself gives no intelligible account of the matter, and that he puts us off with a metaphor, as he usually does when he has gone as far as his own system will take him without coming to the beliefs that he really cherished. Even the metaphor is instructive. He tells us that this

3 For the restoration of the AMB errors on the subject of the soul see H. Meier, 'Die Vorstellungen vom Dasein nach dem Tode bei den antiken Römern' (*Zeits. für Klass. Philologie*, v. [1880] 30) ff. The usual phrase is 'if in any way the dead should acquire a consciousness of what is now happening' (cf. *utrum post mortem animae spiritus sui sui in corpore experiantur aliquid*). This explains also the doubtful way in which Plato makes Socrates refer to the subject in the *Apology*. In this, as in other matters, he outwardly respects the conventions of the Athenian law-courts. No inference may be drawn as to his real beliefs about the soul, and in the *Apology* itself these are made sufficiently clear, as we shall see. The allusion of all reference to a future life in the consolatory passages of the *tertium Aeneas* was pointed out by G. Lehrs (*Prolegomena Aeneidis*, Leipzig, 1856, p. 331). The epithet on those who fall at Potidaea was simply (*ΟΙ ΛΑΛΕΙΝ*) *οὐκ ἔχοντες δουλοειδέα, οὐκ ἔχοντες δὲ γυναικας*, with which we may compare Eur. *Suppl.* 681: *οὐκ ἔχοντες ἄνθρωπον, τὰ γυναικας δὲ γυναικας*. For the epithet with which the companions of Socrates receive the announcement of his doctrine of soul, see, *Rep.* x. 608 D: *Οὐκ ἔχοντες δὲ γυναικας, οὐκ ἔχοντες γυναικας καὶ πόλιν καὶ οὐκ ἔχοντες οὐδὲν ἄλλο* — *καὶ ἐκτετακότες* (i.e. 'bearing at one') *καὶ ἀνδραγαθὸν* (cf. *Μ. A.* 102 *ἐκτετακτοὶ δὲ ἄνθρωποι ἀνδραγαθόν*). It is particularly to be noted that, in the *Phaedo* (98 C, 99 A, 99 D), even the Pythagorean associates of Socrates are represented as quite incredulous. That is because they had adopted the view that the soul is the measure of the body.

mind comes 'from outside' (*ἐξωθεν*), which is a thoroughly Ionian way of speaking and is apparently derived from Anaxagoras. On the other hand, this doctrine finds Aristotle in a dualism which neither Anaxagoras nor Plato would have admitted. It is quite wrong to say, as Rohde does, that it is 'a mythological element derived from Plato's dogmatic system.' Even in his most mythological moods Plato never lost sight of the unity of the individual soul.

This point is frequently obscured by the stress laid on the doctrine of the 'tripartite soul,' which is used for dialectical purposes in the *Republic* and for mythological purposes elsewhere. It is almost certainly Pythagorean, and connected with the doctrine of the *aporiai*. The three 'parts' of the soul were identified with the three intervals of the scale, the fourth, the fifth, and the octave. Even in the *Republic*, however, we are left in no doubt that the soul is really one. It is only when it is claimed that the three 'parts' seem to be independent of each other.

8. Stoic and Epicurean doctrines.—The Stoic and Epicurean doctrines are still more obviously reverent to the standpoint of early Ionian science, though they too admit inconsistent elements from other sources, such, e.g., as the Stoic belief that individual souls (which were regarded as corporeal) survived till the next world-conflagration (*ἐκσέπσις*). That was denied by Panætius, but reasserted by Posidonius, who adopted Platonic views wholesale. He is the source of the popular orthodoxy on the subject, as we find it represented in Cicero. For the Epicureans the atoms which composed the soul were blown away 'like smoke' at death, though Epicurus left careful directions for the observation of his mortuary cult. Such is the strength of inherited tradition.

As a matter of fact this cult was kept up more assiduously than ever, and the number of 'heroes' increased daily. The teaching of the Orphics and others had left its mark, and there were parts of Greece where almost every one seems to have been promoted to heroic honours after death. That, however, need not mean a real belief in the soul's immortality. Nor did the religious revival of the 3rd and 4th centuries A.D. really bring anything new, except the worship of strange gods. The ideas about the soul which these brought with them had long been familiar in Greece. On the other hand, there arose a strong feeling of dissatisfaction with traditional views, which the revival of Pythagoreanism did little to meet.

9. Neo-Platonism and its influence on Christianity.—It was only when the doctrine of Plato was again preached in its integrity by Plotinus that it once more became possible to hold a coherent doctrine of the soul. Neo-Platonism at its best owed nothing to exotic religions or popular superstition, and there is no reason to believe that Plato would have disavowed his later followers. At the end it was only the Academy among the schools of Greece that retained any vitality, and it was through the Platonists that the true Greek doctrine of the soul was passed on to Christian theology. Clement of Alexandria, Origen, and Augustine all learned in the school of Plato, and the direct influence of Aristotle was not to be felt for centuries yet. That was not what the Platonists designed. Plotinus ignored Christianity, and most of his followers were bitterly hostile to it. Nevertheless, it was on their teaching that the Catholic doctrine was based, and their teaching goes back, through Plato, to Socrates, Pythagoras, and the Orphics, who represent the genuine Greek doctrine of the soul far more than Homer or the Attic tragedians do. There are two sides of this which are essential to it. In the first place, the soul is immortal, and that is the Platonic contribution to the doctrine. In the second place, this immortal soul is just our ordinary consciousness; it is the seat of knowledge and error, of goodness and

badness. That is the Ionian contribution. The two views were fused into one at Athens, the place where western and eastern influences met and reacted on one another, and this must have happened in the 5th cent. B.C.; for it was only then that the necessary conditions for such a fusion existed. The practical inference was that the soul which we know in our everyday waking life requires as much care (*ἐμελεῖν*) as any Orphic votary had ever bestowed on the fallen divinity within him. Plato represents this as the burden of the mission of Socrates, and there does not seem to be any good ground for disbelieving him.

LITERATURE.—E. Rohde, *Psyche*, 2 vols., Tübingen, 1910 (this work supercedes all the earlier literature of the subject; its only defect is that it overlooks the importance of Socrates altogether, with the result that it fails to distinguish the Pythagorean and Socratic element in Plato's writings from his own scientific teaching on the subject); A. Dieterich, *Psyche*, Leipzig, 1889; J. Adam, in *Cambridge University Publications delivered before the Senate*, Cambridge, 1900, p. 25 ff.; *The Religious Teachers of Greece*, Edinburgh, 1906; J. Burnet, *Plato's Phædo*, Oxford, 1911; *The Socratic Doctrine of the Soul*, London, 1916, reprinted from the *Proceedings of the British Academy*, vii. (1915-16) 238 ff.

JOHN BURNET

SOUL (Hindu).—From the very earliest moment at which we can trace the Aryan race which invaded India (perhaps in the second millennium B.C.), and became there the nucleus of the Hindu people, they already distinguished the soul from the body and believed that it survived death. The evidence is their ancestor-worship,¹ in which they laid out food for the souls of their dead ancestors to eat. The character of the food is sufficient proof that, at the time when the rite was formed, they still thought of the soul as being of the same nature as the body.

As in the case of other primitive races, their idea of survival was for long undefined; they had no conviction that the soul lasted for ever. But a change came after the rise of the heavenly gods (*devas*) among them:² they began to believe that the souls of their ancestors lived with or near these gods; and that was followed by the idea that some god conferred immortality on them, at least on those who had lived good lives on earth.³ From that faith there would naturally spring the conviction that the soul was of such a nature as to be fit to live for ever.

At an unknown date, perhaps in the 7th or 8th cent. B.C., the belief in transmigration and *karma* (*qq.v.*) was formed among a small group of thinking men in N. India and gradually spread from them to the whole Hindu people.⁴ The central idea of this doctrine is that of moral retribution: man's soul lives many lives on earth, and reaps in a later the moral harvest which he has sown in an earlier life. As the happiness and misery of each existence are proof that the soul lived before and did good and evil actions, the theory compels the belief that the process of life and death can have had no beginning; and, as the actions of every life that is lived demand another life for their expiation, there is no escape from the conclusion that the process of repeated birth can have no end. The souls of men are thus eternal, have had no beginning, and can have no end. Each is an *indestructible eternal entity*. This is the first important idea in the Hindu concept of soul.

One element in the theory of retribution is that a man who has lived a very good life may be born in his next life as a royal personage, a petty godling, or even one of the greatest gods, while, if he has lived a very evil life, he may be born in the very lowest grade of society, as a devil, an

animal, or even a plant. Clearly this implies that all souls, whether now living as gods, devils, men, or plants, are essentially the same, the differences between them being only elements of their temporary status, which have come on them as a result of their actions. This is the second characteristic element in the Hindu concept of soul.

The contemporaneous Hindu polytheism is clearly reflected in this notable idea. There can be no doubt that the men who formed the theory of transmigration and *karma* were polytheists. If they had been theists, the concept of the Supreme, high above all men and ordinary gods, would have exercised an influence in several directions. The process of requital would have been conceived as under his control, and the idea of the human spirit would inevitably have been formed in relation to him, while the fact is that, from the beginning, the process of *karma* was regarded as automatic, and there was no thought of a soul of a higher order, all being conceived as on a single plane.

Yet it seems to be true that at the very time when the theory of transmigration and *karma* was formed, or even earlier, another concept, which was destined to produce immeasurable results in India, was gradually taking shape in a small intellectual circle in N. India—the philosophic concept of the *Brahman-Atman*, the earliest germ of the Vedānta philosophy. At first the idea seems to have been that within, behind, and beyond the whole visible and invisible universe of man's experiences and beliefs there is a spiritual existence of the most exalted order, free, intelligent, joyful. It was called the *Brahman*, the *Atman*, or the *Brahman-Atman*. It was sometimes said to be the source of all gods and men and the universe; at another time it was identified with the all. One of the commonest statements about it is that it alone exists: 'One there is and there is no second.'

But it was not long before the theory of rebirth and *karma* provoked a reaction.¹ While the idea of just requital was felt to be a great gain, the finer spirits soon began to regard the prospect of an endless series of births and deaths as intolerable. The question was asked, Is there no means whereby one may be released from the necessity of rebirth? In response to this desire of the spirit, a whole series of philosophic theories, each one a theory of release, sprang into being. The earliest and most significant of these theories springs from the belief in the ever free and joyful *Atman*. Some thinkers reached the conviction that his own soul was the *Atman*—not a product of it, nor a portion of it, but the whole; and he began to teach that he who knows that his own spirit is the *Atman* is thereby released from all bonds, and therefore from the bondage of rebirth.

This theory of the identity of the divine and the human spirit is the root of the Vedānta philosophy and first finds expression in the early *Upanishads*. As the source of the conception lies in the original contrast between man, bound in the toils of rebirth and *karma*, on the one hand, and God, ever free and joyful, on the other, the contrast is very clearly developed in these writings. The idea that the *Atman* has nothing to do with *karma* and rebirth is especially prominent. Since the *Atman* is not burdened with *karma*, it must be completely inactive—completely apart from all the temptations and toils of the sense-world. Hence, although no definite system is taught in the *Upanishads*, there is a broad and very general tendency to describe the *Atman* as being not only inactive but also (1) abstract intelligence rather than an

intelligent personality, (2) thought rather than will, (3) above the petty distinctions of morality. Therefore, since this was the teaching of the earliest system of release (a system which has had an immeasurable influence in India), and since it taught the identity of man's soul with this abstract impersonal intelligence, the great stream of Hindu thought has always tended to conceive the human spirit as being essentially intelligence, to regard personality, will, and emotion as belonging to the lower reaches of human nature, because they are involved in action, which leads to *karma*, and to think of morality as a set of rules belonging merely to the social life of men and therefore having little or no relation to the nature of the soul.

This tendency has produced momentous results in Indian thought and religion. The almost total neglect of the will and the extreme weakness of ethics in Hindu philosophy, and the great emphasis laid on ritualism, or on knowledge, rather than on ethical change as the way of salvation in Hinduism, are all attributable to this cause.

In spite of this broad general tendency, the teaching of the *Upanishads* is by no means uniform. Lines of thought running in many directions may be found, from which divergent systems sprang at later dates. One of these is the Sākhya (q.v.) philosophy, which is a realistic dualism. There are two eternal existences, original nature (*prakṛti*) and an infinite number of individual spirits (*puruṣa*); there is no God. Each spirit is intelligent, but no more, merely a solitary, passive spectator of the operations of nature. This concept has clearly been formed from the common idea of the human soul already spoken of. But for our purpose the most interesting point is this—that in this philosophy there took shape a psychological theory which, with modifications, has been held in all forms of Indian religion. From *prakṛti*, besides the visible things of the world, there issues a series of subtle substances—*buddhi*, *aśokāra*, *manas*, 'intellect,' 'egoism,' 'mind,'—and also the *saṁskāra*, by means of which the functions of perception, generalization, and decision are carried out. In this physical series we have the fact made plain that, according to the Hindu idea, the human spirit is not an active power which thinks and feels and wills, but is the pure light of consciousness.

At a later date another philosophy was formed known as the Vaiśeṣika (q.v.), which recognizes the existence of many souls and the reality of the world. In this philosophy the concept of the soul is richer and fuller than in any earlier system. Feeling and will as well as thought are recognized as its functions.²

The central school of the Vedānta, with which the great name of Śaṅkarāchārya (q.v.) is linked, is monistic, *advaita*. It interprets with strictness both the leading declarations of the *Upanishads*, viz. that the *Atman* alone exists, and that the human spirit is the *Atman*. Consequently, its doctrine of the human soul is in accordance with these standards. In Deussen's words:

'To it are applicable all those negative characterizations whose purpose is to secure the conception of Brahman from all ideas by which the Being might seem to be limited. Therefore the soul is, like Brahman, (1) unproduced, or, as we should say, spaceless, (2) uncombined and unimpeded, (3) neither agent nor enjoyer (or sufferer, as the case may be).'³

In the theistic sects, which were formed in the early Christian centuries, the central ideas of the Vedānta philosophy—that the *Atman* alone exists, and that the human spirit is the *Atman*—are held, but they are not interpreted so strictly as in the monistic Vedānta. These systems vary amongst

¹ Oldenberg, pp. 36-104; P. Deussen, *Allgemeine Geschichte der Philosophie*, Leipzig, 1904, i. l. 169 ff.

² Oldenberg, pp. 123-147.

³ J. O. Chatterji, *The Hindu Realism*, Allahabad, 1917, p. 102.

⁴ *The Systems of the Vedānta*, Eng. tr., Chicago, 1912, p. viii.

themselves in some degree in their statement of the relation of the soul to God, four forms of theory being held, as follows: (1) *buddhadvaita*: pure monism; this, though called 'pure monism', is not so strictly monistic as the *advaita*; (2) *viśiṣṭadvaita*: modified monism, identity with a difference; this is the commonest point of view; (3) *bhēdabhēda* or *dvaitadvaita*: the relation is both monistic and dualistic; (4) *bhēda*, or *dvaita*: dualism.

Yet these differences are not of much practical import, except in so far as they modify the conception of the state of the soul after release. In the monistic Vedānta, the identity of the soul with God being held in the strictest possible way, the seeming individuality of the soul in life is interpreted as an illusion, and release means the disappearance of the illusion, the complete absorption of the man in God.¹ Of the theistic sects, on the other hand, while a few teach absorption, the mass believe in the actual reality of the soul, and teach that in release the soul either enters into a mystical union with God in which individuality is not lost or spends eternity in a fellowship with God which does not in the slightest impair personality. In their account of the nature of the soul they vary between the Sāṅkhya conviction that it is a spectator, but in no sense an agent or an enjoyer, and the Vaiśeṣika theory that it wills and feels as well as acts. Yet, even if they declare the soul an agent, all the active psychological functions are still ascribed to *buddhi*, *aśvakāra*, and *manas*—the triple physical concomitant of the soul in Hinduism. Most of them teach that after release the soul is omnipresent and omniscient, but they differ in their account of its size, some declaring that it is atomic, others that it is infinite. The Śrī-Vaiṣṇava, e.g., the sect of Rāmānuja, teach that the soul is consciousness, but is also an agent, that it is atomic in size, and that in release it is omniscient, unrestricted in movement, and able to realize all its wishes.²

LITERATURE.—See the works cited in the footnotes.

J. N. FARQUHAR.

SOUL (Iranian).—Little need be added under this heading to what has been said in the art. **PHILOSOPHY (Iranian)**, especially under § 1 (d) and (e), and the latter part of § 2, concerning the psychological analysis of the human compound—so favourite a topic in both Avestan and later literature. Of the terms *urvan*, *ahū*, *daēdā*, *daēna*, *fravast*, and in later times *khraf*, *vir*, *hōd*, which express various spiritual faculties or constituents of man's non-material nature, the first named, *urvan* (gen. *urvanō*), is generally taken as expressing most closely what we mean by our word 'soul' in the widest sense. Its form and meaning seem to have come down practically unaltered from the *Gāthās* to the Pahlavi *rubān* and modern Persian *ruḥān*. It is generally admitted that it is that element of man which remains immortal after death and bears the responsibility of reward or punishment for his actions in this life. Hence it is commonly employed in contrast to *tanū*, the body. And in a broader sense the two opposed terms are used, at least in the later literature, to indicate the spiritual and the material worlds respectively. Thus in the curious diagram of the *Dinkart* reproduced in art. **DUALISM (Iranian)** the whole of being (*yshēda*) is carefully divided into two opposed parts, *rubān* and *tanū*. It is not only of men that *urvan* is predicated, but also, though rarely, in both *Gāthās* and later Avesta, of animals.³

³ E.g., *Yasna* xxxv. 3 (of cattle) and 4 (of wild animals); *Vendidad*, xii. 15 (of the oxen), and *Fast* xiii. 74 (of all

The soul of the primeval ox (*gāuš urvan*) was taken up into heaven after its slaughter and became the well-known tutelary genius of cattle.

After a man's death, according to the famous description of *Vendidad*, xix., and the *Hadhōst-Nask*, the soul hovers above his head for three days, but on the fourth morning sets out on its journey towards the Chinvat Bridge, which leads to the next world, and on its way meets the strange female figure, the creation and personification of the man's deeds, words, and thoughts in this life—an exquisitely beautiful damsel in the case of the virtuous soul, a horrible hag in that of the sinful soul—who ushers it either to eternal happiness or to misery and punishment.

The relationship of the *urvan* to the *fravast* (q.v.), in spite of all that has been written on the subject, still remains very obscure, and probably was never very clearly defined. The etymology of *urvan* is also uncertain. It is almost certainly from *√var*, 'to choose,' indicating the faculty of free will.

LITERATURE.—The art. 'Urvan' in C. Bartholomae, *Altiranische Wörterbuch*, Strassburg, 1904 (concise and full of useful information); all the ordinary translators and commentators; C. de Harlez, *J. Darmesteter*, etc.

L. C. CASARTELLI.

SOUL (Muslim).—1. In the Qur'ān and in popular belief.—According to the Qur'ān,¹ Allah, when He created the first man, breathed into him the soul (*nafs*) or the spirit of life (*ruh*). In Adam's soul were created the souls of all his descendants, and the act of endowing with life the embryo in the womb is thus a second creation.² The soul has its seat in the heart, and is accordingly often described in the Qur'ān by the phrase 'heart, hearing, and sight,' or 'hearing, sight, and heart.'³ In particular, the heart is the abode of religious knowledge and of faith or unbelief. Should Allah see good to leave a man in unbelief, He seals up or narrows his heart, closes his ears, and puts a veil upon his eyes!⁴ On the other hand, He enlarges the heart of believers, and opens their ears to the divine revelation. As is usually the case in religious psychology, hearing is of more importance than sight, and as a rule precedes it in any mention of the two. Thus Allah Himself hears and sees;⁵ He is the hearer, the knower.⁶ He expresses Himself by the eternal Word. By unanimous Muslim tradition, Muhammad received his revelation by the ear. It is by means of hearing that faith is imparted to the heart.

Besides heart, hearing, and sight, however, Allah at the creation endowed the soul with two fundamental propensities, viz. wickedness and piety⁷—an impulse towards evil and an impulse towards good. Originally this may have implied simply that every soul has these two impulses, and that it was Muhammad's part to address his admonitions to the good impulse, the good side of the will. Gradually, however, the preaching of the Prophet comes to ignore the human will. Allah alone has a will in the proper sense; man is a being who knows and acts, but has no volition of his own, and his whole duty is to be prudent, to give heed to God's word, and to obey it.

Moreover, as Allah breathes the soul into the body from without, He can also separate the two, as in sleeping and dreaming or at death.⁸ Of the soul's continued existence after death the Qur'ān says little to which we can attach a definite

quadrupeds, aquatic and winged animals, etc. (though here the *urvan* seem identified with the *fravast*).

meaning. When the pious die, Allah brings their souls near Himself, and keeps them there until He unites them again with their risen bodies at the day of judgment.¹

These notices have been considerably amplified by the Tradition, and many elements have been added also by popular belief in the various Muslim lands. As it is impossible here to enter fully into details, we restrict ourselves to a few of the main features reflected in the popular theology.

As regards the pre-existence of souls, the Tradition supplies the following particulars. Between the first creation of souls in the soul of Adam and the second in the mother's womb they are kept by Allah in His treasure-house or in a shrine attached to His throne. When their time has come, He transmits them from His heavenly realm into the human embryos. It is true that God creates a far larger number of non-human souls or spirits—those of animals, demons, angels, and devils—but it is naturally the human soul and its destiny that engage the supreme interest of man. Nor is the soul's pre-existence a subject of anything like so much concern as its future, its life after death. Here the dreams of eschatological fantasy are lavishly drawn upon. Just as here and now man is surrounded and attended by angels and spirits, so the souls of the dying are taken in charge by the angel of death, who conveys those of believers to blessedness and those of unbelievers to perdition. The soul departs from the body (on the most widely current view) by way of the mouth, while some hold that it leaves by the back of the head. Another very common belief is that the soul which at death has been carried to heaven is sent back again by God, and that it sojourns for a longer or shorter period beside the body in the grave. It is there subjected to an examination by the angels Munkir and Nakir. If it asserts its belief in Islam—the great test is the creed, good works being of minor importance—the angels carry it aloft to heaven and set it upon a candlestick by the throne of God. The evil soul, the soul that does not know its Lord, is, on the other hand, tormented there and then, and also afterwards in hell. The souls of believers who have done evil pass into purgatory. A fairly prevalent idea is that the departed soul survives till the day of judgment in the form of a bird—the soul of the believer living in a green bird, that of the unbeliever in a black one. The souls of those who have been murdered sit beside their graves in the form of owls and cry for vengeance.

It is popularly believed that the departed soul has severed itself from the body greatly against its will; and it accordingly remains near the corpse as long as the latter is not wholly decomposed. This again affords grounds for the belief that intercourse may continue for a time between the dead and their surviving relatives. The prayers, alms, and good works of the living benefit the souls of the dead.

The synthesis of body and soul during man's earthly life is regarded as relatively loose. There is a great variety of belief as to the seat of the soul. There is no doubt, however, that the soul can leave the body during sleep. In its real nature it is known to God alone, and, as the Qur'an says,² man knows but little about it. Nevertheless popular thought usually conceives of the soul as a material entity, and with this idea it conjoins speculations regarding the various classes of spirits—spirits or souls of the prophets, the angels, the *jinn*, the devils, human beings, and animals, and these in all their species and varieties. On the day of resurrection the souls of men, as belonging to their bodies, return, and enter into their re-

novated material frame, and thereupon Allah assigns them for all eternity to paradise or hell, the joys or pains of which are represented, alike in the Qur'an and in popular belief, as being of a physical rather than a spiritual character. The wicked are to burn for ever in hell without being consumed, while the good are to eat and drink for ever in paradise, and live there with beautiful youths and maidens, without weariness or satiety. The delights of paradise are accordingly those of men. As regards the blessedness that women are to expect in the beyond, the Tradition is altogether silent.

2. In the theologians and the mystics.—The rudimentary notions of the Qur'an and popular thought regarding the soul are found again in the conceptions of the theologians and mystics, there assuming, however, a number of forms varying from the grossest materialism of the masses to the extreme spiritualism of allegorical interpretation, and in part modified by the influence of Christian theology and philosophical speculation. In the theological systems too, as in ordinary thinking, the doctrine of the soul is concerned mainly with subjects like the hereafter, resurrection, hell, purgatory, and paradise. The theologians, however, are more interested than either the Qur'an or the Tradition in the soul as a fact of experience, though they do not deal with it empirically. Their speculations regarding the nature of the soul, its properties and capacities, and its connexion with the material body are coloured throughout by views already current.

The earliest groups of Muslim theologians (*Mutakallimîn*)³—those of all schools, orthodox or heterodox—take a more or less material view of the soul. All that exists, from the divine spirit to the animal soul, is body or of bodily nature. With many of them this is simply the popular view, but in some thinkers—e.g., Hishâm—we probably must trace it to Stoic influence. Those who do not actually regard the soul as matter define it as an accident of material substance. We find this conception in the Muslim atomists,⁴ according to whom the whole world consists of atoms and their accidents, and among these accidents they place souls, or the manifestations and activities of souls. Like the atoms, souls come into being and pass away again every instant. This denial of the independence and continuity of their essential nature does not impugn their immortality, but merely does away with the nexus of natural causality. It thus presents no analogy to the modern theory of actuality (Wundt, etc.). It might be more aptly compared with the Buddhist conception, though the element of causality, which is the essential characteristic of the latter, is not recognized by the Muslim atomists. According to these thinkers, Allah creates anew every moment the soul, or its phenomena and activities, as accidents of bodily substances (i.e. atoms), whether of the body as a whole, or of a number of atoms, or even of a single atom in the heart. Among those who stood apart from popular beliefs, among free-thinkers, and especially among physicians, the accidentalistic theory assumes a form in which the soul is regarded as a combination or a combining ratio of the bodily elements. On the other hand, the conception of the soul as a substance was very frequently conjoined with the doctrine of metempsychosis.

The doctrine of the soul as a purely spiritual substance constituting the essential nature of man was held by only a few of the earlier theologians—

¹ From about the 12th cent. most theologians adhere either to a mystical doctrine or spiritualism, or, on the one hand, or, on the other, to a psychology that had developed under the influence of Aristotle.

² Cf. art. *Amor* *Tasawwuf* (Muhammadian), vol. II, p. 502 f.

³ *Ibid.* 7.

⁴ *Ibid.* 27.

e.g., by Naẓām and his school. These regarded the connexion between soul and body as being effected by the spirit of life (rūḥ, *spiritus*); it was only by the mediation of that spirit that the soul could operate upon the body. The body is a product of the soul, or is at all events dependent upon it. The soul, in its essential nature, is simply pure knowledge and pure volition. Naẓām and his school usually define the soul as inward volitional action—a view which must not be identified with voluntarism in the modern sense. What they mean is, on the one hand, that the external actions of human beings are all in the stream of natural causality, and, on the other, that the soul manifests its freedom in its inner volition, and is therefore not determined directly (as most theologians held) by the supreme will of God.

The spiritualistic tendencies of the view that the soul is a substance distinct from the body are found in many of the mystics, and, somewhat tempered in form, among the theologians who were influenced by mysticism. Al-Ghazālī¹ and al-Araḍī² may be mentioned as two of the most prominent representatives of this view. The mystics, in the first place, have a peculiar terminology, which, while showing affinity to the usage of the Qurʾān, has been coloured even more decidedly by Hellenistic *gēnēra* and Christian theology. Thus *saḥā*, the ordinary Arabic equivalent of *psyche*, they bring down to the sphere of physical life, giving it the sense of 'sensual desire' (*ἐπιθυμία*, *appetitus*). Conversely, they exalt the *rūḥ* (*spiritus*, *spiritus*) by making it the immaterial psychic principle. They give a meaning identical with that of *rūḥ* to the term *qalb*, 'heart.' But, when they use *rūḥ* in the sense given to it in the philosophical and medical tradition,³ they attach an adjective—e.g., *rūḥ ḥayawānī*, 'spiritus animalis.' As regards the actual facts of the mystical psychology, again, the more salient features may be summarized as follows. The soul (*rūḥ* or *qalb*) is an immaterial substance of divine or god-like nature; it is God's image in man, light of His light. The body is a thing of inferior worth—a view found in many varieties of form. It is the soul, however, that constitutes the essential nature of man, his distinctive character. Having been created by God, through the agency either of angels or of the world-soul, it seeks the way back to God with ardent yearning. The stages of this return, leading at last to ecstasy or the union mystica, are very variously enumerated.⁴ The individual soul can prepare itself for union with the Supreme Essence by pious exercises, meditation, absorption in the inner life—asceticism and good works are of secondary importance, or belong to one of the lower stages. The real union, however, the ecstatic state, the illumination, the revelation of divine mysteries—all this comes in a moment, not as the reward of human merit, but as Allah's hostile gift of grace to the soul. While the psychology of the mystics assigns a large place to the emotional factor in religion—the affective states of the soul—yet the supreme end of man's life is always represented as a form of knowledge (*ʿilm*) won by immediate experience of the divine. This crowning intuition is reached by way of self-knowledge, for 'he who knows himself knows also his Lord.'⁵

3. In the philosophers and the physicians.—The spiritual or mystical psychology described above is found also in many Muslim philosophers, though in a different context of thought and with some differ-

ence in expression. In point of fact, mysticism had felt the influence of philosophy, while, again, both philosopher and mystic were indebted to the same sources. The philosophers most closely related to the mystics are the so-called philosophers of illumination or revelation, who derive their doctrine from Hermes, etc. In their numerous devotional or hortatory works they inculcate the soul's withdrawal from the material world and its return to God. Even the more typical Peripatetics of Islām, however, import mystical elements into their doctrine of the soul, or crown the Aristotelian psychology with mysticism. In so doing, nevertheless, they differ in two respects from the theologians and the pure mystics: they speak more of the powers or faculties of the human soul than of creation, God's grace, or resurrection, and they allow greater scope to the empirical investigation of the soul. The latter is especially true of the medical savants. Taken as a whole, the philosophico-medical psychology is a syncretism of Platonic and Aristotelian views, and here a factor of the utmost importance was the influence of Galen. The earliest document typical of this school is a little work by Qusṭā ibn Lūqā, a Syrian Christian (c. A.D. 835), dealing with the difference between spirit (*rūḥ*, *spiritus*, *spiritus*) and soul. We are here told that the spirit spreads outwards from the heart as a subtle body and controls the functions of the organic frame. It is the breath, the spirit of life, animating the whole body, and ceasing to be when the body dies. It is likewise this spirit of life which, in a more refined form, affects the conservation, combination, and recollection of sense-perceptions in the ventricles of the brain. Thus the gathering together of sense-impressions (*general sensation*) and the process of representation or conception (*passivitas*) are localized in the fore-brain; the appraisement of what is represented—reflexion and association—in the mid-brain; the faculties of memory (including recollection) and movement in the hind-brain. This spirit is quite distinct from the soul, the difference being one not of degree, but rather like that between matter and form. The soul is an incorporeal substance—the entelechy of the body conjoined with it; and, as simple substance, it is immortal. The *spiritus* is its instrument, by means of which it animates the body and renders it capable of motion and perception.

These views were adopted, and even elaborated, by the Muslim philosophers of the 11th or 12th and later centuries, as well as by many theologians. Here we find in particular two characteristic developments, viz. the doctrine of the inner senses, and the doctrine of the *qalb* (*qalb*). As regards the former, while Galen had distinguished three inner powers of the soul as localized in the three cerebral chambers, Muslim philosophers enumerate these powers as three, four, or even five, and in the last case they find five inner senses corresponding to our five external senses. According to the dualism of the mystics and the philosophers of revelation,⁶ the inner senses are to be regarded as higher spiritual faculties of the immaterial soul, while, according to the so-called Aristotelians of Islām (al-Fārābī [q.v.], Avicenna [q.v.], etc.), they stand midway between the external senses and the purely spiritual intellect (*ʿaql*). Schematically, the doctrine might be set forth as follows. The fore-brain is the seat of (1) general perception (*zawṭ al-ḥayawān*) and (2) the faculty of sense-presentation (Aristotle's *phantasia*); the mid-brain that of (3) reflexion, which is not only reproductive, but capable of moulding the elements of perception and presentation into new forms by discrimination and combination (and therefore corresponding

⁴ Cf. art. *ʿIlm*.

⁵ This saying is the intention of an idea found in pseudo-Plotinus, *Enchiridion*, 129 ff.; it reached the Arabs through the medium of Neo-Platonism, and so passed into the general tradition.

⁶ Cf. p. 4.

partly to Aristotle's *poetria* and partly to Galen's *diagnostic*); in the hind-brain are localized (4) the faculty of sensuous judgment (*hēkē*), which deals with the particulars of perception and conception; and (5) memory, together with the faculty of recollection (i.e. Galen's *physiognostike*). Some philosophers regard (2) as recollection of the sensuous forms, and (3) as recollection of the meanings associated with these forms.

The intelligence or rational soul (*nabî*) is an immaterial principle, towering above the vegetative and animal soul, as above external and internal senses. The speculations of Muslim philosophers regarding it are almost entirely metaphysical or epistemological, and provide no fresh material for psychology. In the hands of Muslim thinkers the Peripatetic system becomes purely intellectualistic, and their doctrine of the soul virtually ignores the emotional and volitional aspects of human life. Their psychology as a whole shows little originality. Certain fresh developments, however, are found in the works of al-Haitham († 1038), who had an inkling of certain important results of modern experimental psychology (e.g., laws of colour-mixture, Weber's law), and also knew something of the duration of perception and mental assimilation. His principal work deals with optics, and contains scattered observations on psychological points. He had unfortunately no successor in Muslim thought.

SOUL (Roman).—It is difficult to form any definite or consistent idea of the way in which the early Romans thought of the soul of man either during life or after it; this is owing to the want of an early Roman literature and to the uncertainty of archaeological evidence up to the present time. There are, however, certain ascertained facts of the later period of kingly government (which is also the period of the earliest religious calendar) which help us in determining the Roman idea of the condition of the soul after death, and these may possibly be taken as some evidence for the idea of the soul in the living man. The words which in this literary or Græco-Roman age were used for the soul, such as *anima*, 'breath,' cannot with certainty be considered primitive. It is quite probable that, being under the influence of an organising priesthood and communal religion, the early Romans did not trouble themselves much about their own souls or routine as vividly as many peoples have done that they possessed such a thing; the soul was of slight importance during life. There is no trace of any speculation about the soul of the living man until we come to the

last century of the Republic and the introduction of Greek philosophy.

The oldest evidence for the souls of the dead is a so-called *lex regia* attributed to Serrius Tullius,¹ which enacts that the son who strikes his parent must be made *exer* to the *di parentum*, where the word *di*, as in other similar expressions, evidently means spirits, while the word *parentum* is explained in another passage of Festus² as meaning, according to the lawyers, three generations of ancestors, beyond which apparently the memory was not expected to go.³ The fact that the son who strikes a parent is made over as an offering to the spirits of his immediate ancestors shows that these are conceived as (1) active, (2) conscious of morality, (3) in some degree capable of receiving sacrifice, like fully developed *dei*. But how far they reflected the status of the soul in the living man is by no means clear. We only know that these *di parentum* were the subject of an organized festival in the month of February, which has been described in the art. ROMAN RELIGION.⁴ This worship, if we may call it so, of the dead (whether burnt or buried, for both practices undoubtedly existed)⁵ outside the walls in the resting-places of the family suggests a pleasant idea of the survival of the soul, which, if properly cared for, could no longer take human shape or return to trouble its human relatives. As in the case of *dei* reclaimed from wild life by settlement in farm or city, the spirits of the departed might be effectually 'laid' by yearly renewed ceremonies, and need do no harm to the survivors; and, so far as we can discover, this belief remained unaltered throughout the republican period.

But in the oldest calendar⁴ we find a festival of three days (May 9, 11, 13) called *Lemuria*, of which the object seems to have been to get rid of ghosts from the house; the only information which we have about it includes no public ceremony outside the private dwelling of a family.⁵ How we are to interpret this festival of the dead, or even the word *Lemur* which gave it its name, is extremely doubtful. It is safer not to attribute it to a pre-Roman race. The present writer has always inclined to the belief that, if we consider the kind of life led by the various tribes of early Italy, in which death on the battle-field or far from home must have been at least as common as death in the peace of family life, the most likely interpretation is that by *Lemures* is meant the host of the *unburied dead* whose souls were always liable to endeavour to return to the house familiar to them.⁶ It was not impossible to forget and ignore entirely relatives lost in this way, who had never been subjected to the processes which insured their peace and goodwill towards the living; and these three days gave the survivors an opportunity of getting rid of them and forgetting them for the rest of the year. Thus they were thought of as hostile. True, Ovid, in the passage where he describes the father of the family expelling them from the house,⁷ calls them *monstræ paternæ*, and *monstræ* no doubt meant 'superstitions'; 'the good

ones'; but the house-father may be supposed to be anxious not to irritate them. Here we may note a belief that the great host of souls (*manes*) dwell in some doubtful sense within the earth, under the guardianship of a deity *Orcus*,¹ and were permitted to return to the upper world only on three days in the year, August 24, October 5, November 8. But it may be doubted whether this is really a primitive Roman belief;² and in any case it seems hardly possible to co-ordinate it in this form with the other beliefs which we have been considering.

From what has been said it will have been noticed that the Romans always spoke of his dead in the plural; and this is significant as showing how hard it was for him to think of the concept soul otherwise than collectively or to realize a soul in himself as an individual entity. There was, however, one exception to this, in the *genius* of the *paterfamilias*, which must be as old as the family itself. That the *genius* was in some sort a soul is not to be doubted;³ and its peculiarity among the Latins is that it represents the mysterious power of the *paterfamilias* to continue the life of the family.

The soul of a man is often conceived as the cause of his, but not often as the preceptive power itself; and that this latter was the Latin idea is certain, both from the etymology of the word and from the fact that the marriage-bed was called *lectus genialis*.⁴

This singularity is probably to be explained by the very early development of the idea of fatherhood, both physical and social, in close connexion with that of the continuity which the father alone could contribute to the family. Creative power was the function of the soul of the living man, if he were the head of the household; and it is possible that his wife too had a soul of the same kind, if her *Juno* is a primitive idea.⁵ The connexion of snakes, both in the house and in the tomb, with the idea of *genius* need not be explained here.⁶

In what little survives of the earliest Roman literature we find no trace of thought about the soul till we come to Ennius († 169 B.C.). Ennius was a Greek of Calabria and well acquainted with Greek literature in general and with Pythagoreanism in particular; and, as in literature, so in thought, he revolutionized Rome, suggesting subjects of inquiry about which the Romans had never yet troubled themselves. One of these subjects was the nature of the soul, as Lucretius tells us:

Ignorant enim quae sit natura Animae;
Nata sit, an coepta nascentibus hominibus;
Et simul interest pulcherrime coram disce
An lecturae Oris erat, varisque lammis
An peccatae albae divinitus insinuetur,
Ennius ut coeter coemittit, qui primas amono
Detulit ex Helicone perenni fropide coronam,
Per genios Italiae hominum grae clara claret;
Eod. praeterea lammis esse Acherontis templa
Ennius aeterna exponit veribus edena,
Quae neque permanent animas, neque corpora nostra.
Sed quoniam abundante modo palliatia nitra.⁷

Here the first reference to Ennius seems to allude to his Pythagorean idea of re-incarnation, the second to some exposition of the Homeric idea of the shades in the nether world, which are neither souls nor bodies, but are best described in the memorable words⁸ which Lucretius took from

¹ Cf. *Orti Sacrorum* in the epistle of Nertius (E. Bachstein, *Frugianum Postarum Romanorum*, Leipzig, 1890, p. 296).

² See *JES* II. (1912) 251.

³ In art. *Roman Religion*, vol. x. p. 345, it is called the *numen* of the man rather than his soul; but this is simply because the Romans had no word of their own for soul in primitive times, so far as we can discover.

⁴ Fowler, *Religious Experience*, p. 74; some parallel conceptions may be found in art. *AKTIAN RELIGION*, vol. II. p. 24; A. E. Crooker, *The Mystical Rome*, London, 1902, p. 206; L. Lévy-Bruhl, *Les Fonctions mystiques dans les sociétés inférieures*, Paris, 1910, p. 90.

⁸ Line 123.

Ennius and passed on to Virgil. The inference perhaps is that Ennius had no very definite belief himself, and infected the so far unthinking Roman mind with his own agnosticism. What did he mean when he wrote the famous couplet:

¹ Nemo me lacrimis decoret, nec Funus ulla
Pach. Our? velle vive per ora circum?²

Does he mean simply that his literary reputation will survive in the mouths of men who will repeat his verses, or, as James Henry insists,³ that he will actually sit before men's faces like one of the Homeric shades? Without a better knowledge of Ennius than we possess, it is impossible to say. However this may be, it is certain that from this time onwards the educated class at Rome, if they troubled themselves at all on the subject, held Greek ideas of the soul, the masses retaining the primitive notions as explained above. During a century and a half of war and money-getting the Roman educated man lapsed into a condition of mind mainly indifferent but partly sceptical about the soul, as also about the gods. If he took an interest at all in such questions, it was in the Stoic idea of the soul as a part of the universal Reason, which appealed to his legal and practical instincts⁴ and did not trouble him with speculations about his soul and its fortunes after death.

From this indifference and scepticism there came a reaction in the age of Cicero, which took the form of a revival of Pythagoreanism, i.e. a fresh interest in the soul and its fate. This is first seen in the *Somnium Scipionis* of Cicero, in which we find the beginning of the belief that the good and great man's soul lies upwards at death—a belief afterwards more fully expounded in the *Tusculan Disputations*, bk. I. So far there had been no sign of a view of the soul as individual: the tombs of the Scipios are monumental only, preserving the memory of the man and his deeds. But just at this time we have the first occurrence of a sepulchral inscription 'Dis Manibus'—still in the plural, but commemorating an individual person; and Cicero's apotheosis (so it must be called) of his daughter Tullia points plainly in the same direction.⁵

Yet, in spite of this reaction, the spirit of agnosticism continued, and is a marked feature of the next two or three centuries. Cicero himself was normally a doubter;⁶ Caesar was believed to be so, though he was *pontifex maximus*;⁷ Catullus wrote of death as 'not . . . perpetua . . . dormienda';⁸ Lucretius in his third book glories in the Epicurean doctrine that the soul is a material thing which is put an end to at death. So too under the Empire Tacitus expresses the general feeling in *Agricola*, 46:

¹ Si quis storum manibus locum: et, ut agnoscitur placet, non cum corpore exstinguatur magne animae, pleneque quiescat.

If we read through the chapter, it becomes fairly clear that what Tacitus really cared for was an immortality of good or great deeds. And a little earlier the elder Pliny had written of death⁹ as the relapsing into the same nothingness in which we were before birth. In the sepulchral inscriptions of the Empire the note of doubt and melancholy is sounded again and again.¹⁰

² The literary inscriptions have the impression that, down to the final triumph of the Church, the feeling of the Romans about death was still in the main the feeling of their remote ancestors of the Samnite and Punic wars. It was a moral feeling, in the prospect of a dim life dependent on the memory

of the living, a horror of loneliness and desertion, the longing for a passing prayer even from a stranger.¹

This horror of being forgotten by the living, though it does not give us any direct evidence of what was popularly thought about the soul, is worth consideration here, and may be illustrated in two ways. (1) It appears in the Augustan literature and especially in Horace—e.g., in the last ode of bk. iii., where in 'Non oiauis moriar, multaque pars mei vitalis Liliuinan,' etc., he is plainly thinking of a literary immortality.² (2) the primary object of a multitude of *collegia* in the first three centuries of the Empire was undoubtedly to preserve the memory of their members after death.

It is pathetic to see how universal is the craving to be remembered felt even by slaves, by man plying the most despised or unmanly crafts.³

Here the one thing we should like to know constantly eludes us—whether the soul was thought of as in any real sense surviving, whether the survivors could hope to meet their loved ones after death. The truth is that the inscriptions betray a great variety of ideas, and most of these are dim and vague, or conventionally expressed. It remained for Christianity to shape these ideas into a definite belief.

The dedication of the soul of an emperor after death implies a belief in the survival of the souls of great men; but this, though we meet with it here and there in the poets, especially in Virgil, is not rooted in Roman ideas.⁴ What an emperor could himself think about his soul one may see in Hadrian's well-known lines, 'Animula vagula blandula,' etc., which express rather 'regret for the sunlight left behind than any hope in entering on a dim journey into the unknown.'⁵

W. WARDE FOWLER.

SOUL (Semitic and Egyptian).—The ancient Semites recognized that man consists of two parts, an outer frame of flesh and bones and an inner impalpable part. This inner part they connected with the breath. Only gradually did they come to think of it as an entity that could exist apart from the body. In all the Semitic dialects the soul was designated by a noun derived from a root meaning 'breathe.'

Thus, in Akkadian-Assyrian, *nepištu* = 'be wide, breathe'; *nepištu* = 'breath, life, soul.' In Hebrew *nephesh* = 'take breath, refresh oneself'; *nephesh* = 'breath, soul, life, person.' In Arabic *nafas* = 'to inhale by breathing open, to feel a deep breath'; *nafas* = 'breath of life, soul, self.' In Aramaic *nepšān* = 'soul'; *erhānān* = 'breathe.' In Ethiopic *nepšān* = 'breathe'; *nepšān* = 'soul.'

To what extent the soul was, in course of time, differentiated from the breath may be ascertained by reviewing the conceptions entertained by the different Semitic peoples concerning the soul and its survival after death.

1. **Babylonian and Assyrian.**—In ancient Babylonian Semitic conceptions are inextricably interwoven with Sumerian. While it is probable that the Semites were first in the Tigris-Euphrates valley, the earliest literature is in Sumerian.

¹ Dill, *Roman Society from Nero to Marcus Aurelius*, p. 188; the whole of the chapter (bk. iv, ch. ii.) will be found instructive.

² Cf. iv, ix, 10 ff.; 'omnes illacrimabiles urgentes, ignotissime longa nocte, cunctis gemitibus moris'; cf. Virg. *Æn.* ix, 440 ff., Georg. iii, 5, where there is a reminiscence of Horace's epigram.

³ Dill, p. 258 ff.

⁴ It is fully discussed in art. *DECEASED* (Greek and Roman).

⁵ Dill, p. 321.

In Sumerian there are two equivalents of *nepištu*—*zi* and *še*; the one most commonly employed, is written by an ideogram which originally pictured a reed growing by running water. This expressed life—vigorous, abundant life. The ideogram for *še* was the picture of an eye. The brilliance and flash of the eye suitably expressed the vigour of one's life.

While it may be that the reasons which led to the employment of these ideograms were phonetic, it seems probable that the appropriateness of the symbols to suggest life had something to do with it. The words *zi*, *še*, and *nepištu* are, in the literature, employed as the equivalents of 'life'; it is not necessary to render them 'soul.' 'Life' was distinguished from the 'body' or 'carcass' (*šalamtu*), and was apparently conceived as having after death an independent existence apart from the *šalamtu*.

In none of the Semitic languages is the root for 'life,' 'soul,' employed as the verb 'to live.' This is expressed in Hebrew by the verb *hayah*; in Arabic, *hayy*; in Syriac, *hayy*; in Ethiopic, *hayyān*. It is the root from which in Hebrew the word for 'animal' is derived. The Akkadian and Assyrian dialects of Mesopotamia, on the other hand, employ as the verb 'to live' the root *balādu*—a root which in Jewish Aramaic signifies 'stand forth, project'; in Syriac, 'show the eyes, turn the gate, or, breed worms'; in Arabic, 'spread or pave a house with flagstones' (the noun *balad* meaning 'ground, smooth ground, surface of the ground'); in Ethiopic the only occurrence of the root known to the present writer, *balān*, means 'calk.' The Mesopotamian *balādu*, 'to live,' seems to have closer affinities with the Arabic root *balada*, 'remain, abide, dwell,' than with the Arabic *hayy*.

The idea involved in the Babylonian conception of living would, accordingly, seem to have been, not the possession of a soul, but the ability to stand forth as a distinct being and to occupy a habitation.

We can best ascertain the Babylonian conceptions of the soul by studying their conceptions of the life after death.¹ In common with many other peoples who buried their dead, the Babylonians believed that those who had departed this life dragged out a miserable existence in a subterranean cavern. In this cheerless abode the departed were thought to assume the forms of partially decomposed bodies; this we learn from representations of certain demons from whom Babylonians thought it necessary to guard themselves and who were, as the texts which describe them clearly show, human beings who had died. It is easy to see how early men should think of the departed as assuming the forms of skeletons or partially decomposed bodies. The fact that they did so conceive them is proof that they did not think of the soul as an entity which was altogether independent of the body. The dead, living in the earth, were thought to long for the food and drink of living beings; the dust and clay of the lower world did not satisfy them. In order to so satisfy them that they should not haunt the living and afflict them with disease, the Babylonians from the earliest times presented offerings of food and drink to the dead. The technical term for this was *ŠA-SAK*, 'pouring water on the ground.' In addition to this, an initial supply of food and drink was placed at the time of burial in the tomb with the body. Records of such offerings to the dead are found in practically all periods of Babylonian history. Their object was to keep the dead contented with their lot, so that they would not return to torment the living. When dissatisfied departed spirits did so return, they were believed to form demons and to harm the living. The spirits that came forth from the under world to trouble men were (1) those whose bodies lay unburied, (2) those who had none to present offerings for them, and (3) spirits who had, while living, never been able to satisfy their normal human desires.

The first of these classes is in the Gilgamesh epic described by Engidur, after Gilgamesh had had him called forth from the under world, thus:

¹ See art. *STATE OF THE DEAD* (Babylonian).

'He whose body is thrown on the plain,
Thou hast seen, I see;
His spirit seems not in the earth;
Whose spirit has no care,
Thou hast seen, I see;
The loadings of the diet, the remains of the food,
What is thrown into the street, he sees.'

The second class is alluded to in an incantation which apostrophizes many kinds of spirits, thus:

'Or a spirit that has no care,
Or a spirit with nous to make food-offerings,
Or a spirit with nous to make libations.'

The third class is described in the following:

'Or a demon that has no resting-place,
Or a man that died a virgin,
Or a man that died unmarried.'

'A hired-servant who has died of pestilence,
A woman who has died in travail,
A waiting woman who has died in travail.'

'He who from hunger in prison died,
He who from thirst in prison died,
The hungry man who in his hunger
His odour stifled not,
He was the dyke of a canal
Opened and was drowned,
He who on plain or marsh-land died,
He who on the plain a storm overwhelmed,
The spirit-maid that has no husband,
The spirit-man who embraced no wife.'

All these, whose deaths were accidental or so untimely that the natural functions of life were not fulfilled or its legitimate desires satisfied, roamed the world and were dangerous to the living.

In general, then, we may say of the Babylonian conceptions of the soul that they were vague and for the most part ill-defined. It was recognized that each man possessed an impalpable something that made him a living being, but, so long as he lived, little attention was paid to this. After death this indefinable part of man demanded food and drink. If this were not given, it might return to annoy the living. This fear of the dead led to the conception of the soul as a form of wind—whirlwind or storm-wind. Such satisfactions as the soul received were to be obtained in this life only. If they were not attained before death, the spirit would come back seeking them. It was this in part that constituted the spirits of the departed a menace to the living.

2. Hebrew.—Among the Hebrews the word for 'soul,' *nephesh*, passed through a considerable development which gave it different shades of meaning at different times.

It is employed (1) to denote the principle of life—the thing that constitutes a living being. Thus it is said (Gen 27) that Jehovah breathed into man's nostrils the breath of life and man became a 'living soul' (*nephesh* *chayah*), a 'living being.' As denoting a living being, *nephesh* was applied to animals as well as man, and was believed to have its residence in the blood. Thus the Hebrews were prohibited from eating the meat of sacrifices until the blood of the animal had been poured out on the ground to God, for 'the blood is the life' (*nephesh*) (Lev 17:11-14; cf. also Lev 17:14, Gen 9:4). In 1 K 17:22 'soul' is employed to denote this principle of life, when it is said that the 'soul' of the child came into him again after Elijah had stretched himself upon him three times.

(2) 'Soul' (*nephesh*) is employed to designate the seat of the physical appetites. Thus in De 12:15, 22, 23 it is the seat of the appetite for meat; in De 22:4 for grapes; in Nu 21:4, Job 23:6, for bread; in Ps 78:10, 107:17, Ec 3:2, for food in general; and in Mic 7:2 for figs.

(3) The 'soul' was also regarded as the seat of all kinds of emotion—joy for the poor (Job 30:25), joy (Ps 34:1), love (De 10:17), hate (Is 1:4), courage (Ps 139:5), purpose (De 30:19).

(4) It was also the seat of moral action and of the will. Thus in Gen 49:4 a poet sings:

'O my soul, come not thou into their council;

For in their anger they slew a man,
And in their selfwill they heaped up sin.'

1 E. Schröder, *Kleinasiatische Mittheilungen*, vi., Berlin, 1900, p. 254 f.

3 *Cuneiform Texts*, loc. cit.; Thompson, p. 28 f.

4 F. Haupt, *Abrahamische und semitische Keilschrifttexte*, Leipzig, 1885, p. 86 f.

5 *Cuneiform Texts*, vol. 12; Thompson, p. 24 f.

In De 49:4 the 'soul' is the seat of the will to seek God; in Job 7:13, of the purpose to die; in Ps 24:4, of deceit and fraud; in Ps 26:1, of trust in God; in Ps 119:103, of obedience to law; in Jer 32:4, of the will to perform a beneficent act; in Mic 6:7, of sin; and in Hab 2:1, of pride. In some cases the 'soul' seems to be regarded as the seat of mental activity also; see Job 28:4, Ec 4:12, Ps 139.

(5) 'Soul' was also employed by the Hebrews to designate an individual man or person. Thus in Gen 14:13 the king of Sodom said to Abraham: 'Give me the souls (persons), and take the goods thyself'; also in Lev 17:12: 'No soul of you shall eat blood'; Ec 1:14: 'The soul that sinneth, he shall die.' From this usage it came to be employed in enumerations, as in Gen 48:2, where it is said that all the 'souls' of Jacob's descendants at a certain time were 33. Another result of the employment of 'soul' in the sense of 'person' was that with a pronominal suffix it came to denote 'self'; thus 'my soul,' 'thy soul,' 'his soul,' meant 'myself,' 'yourself,' 'himself.' By a various extension of the use of 'soul' for 'person,' it came in time to denote also a person once living but now dead. This usage is found in the OT only in Leviticus, Numbers, and Kings (see, e.g., Lev 19:28, Nu 26:56, and Hag 2:23). Although the *nephesh* had clearly gone from the body, its long use in the sense of 'person' led to this curious application of it to a dead body.

Closely connected in usage with the term *nephesh* were the terms 'spirit' (*ruah*) and 'heart' (*leb*). Indeed some writers have held that the Hebrew conception of human nature was a trichotomy, consisting of body, soul, and spirit. This position, as the best scholars have pointed out, cannot be maintained; for, however different from 'soul' the terms 'spirit' and 'heart' may have been originally, they came in time, like the term 'soul,' to designate the whole inner, impalpable nature of man. Thus *ruah* originally meant 'wind,' as in Ps 1:1; then it was employed to denote the 'Spirit of God,' as in Gen 1:2, and is extensively used in this sense throughout the OT; it was then applied to the inner life of man, and is often employed as a synonym for 'soul.' Thus the 'spirit' is the seat of various emotions—in Gen 26:28, of grief; in Gen 41:8, Ec 6:2, of anxiety; in De 28:28, of obduracy; in Jg 3:2, of hate; in Ps 32:2, of deceit; in Ps 18:2, of a lack of courage; in Jer 31:13, of courage; in Ec 3:1, of anger; in Zec 6:2, of peace. Like 'soul,' 'spirit' is also regarded as the seat of moral and religious attributes or qualities: thus in Ps 34:18 it is the seat of contrition; in Ps 51:12, of willingness; in Ps 51:17, of humility; in Is 26:9, of the will to find God; in Ec 11:12, of teachableness; in Hag 1:4, of the will to work.

In late writers only *ruah* ('spirit') is also employed of the seat of morality; cf. Job 24:1, Gen 24:2, Ec 1:12, 2:12. It thus becomes clear that the use of 'soul' and 'spirit' overlap one another. The Hebrews did not have a clear-cut psychology of the inner life of man with a well-defined terminology, but held a very simple view of the constitution of human nature and employed terms with a vagueness and an overlapping characteristic of popular scientific thought.

The inner life of man was also by the Hebrews often designated the 'heart' (*leb*). 'Heart' was more often employed to denote the seat of the mind or intelligence than either 'soul' or 'spirit' was; cf. Nu 16:22-24, Pr 6:27, etc. The heart is sometimes described as wise (1 K 3:12, Pr 16:2, Ec 8:1), sometimes as intelligent (Pr 14:12, 15:14). It is also employed to designate the seat of emotions and of moral purpose; thus in Jg 16:2 the heart is the seat of joy; in Neh 2:10, of sorrow; in Am 2:8, Ps 27:1, of courage; in Job 34:2, of godlessness; in Pr 11:2, of perversity; in Jer 14:1, of deceit; and in Pr 21:4, of pride. It is, therefore, like spirit, often but another name for soul.

As to the fate of the soul after death, the views of the Hebrews were akin to those of the Babylonians. The soul went with the body into the underworld or Sheol, where the Hebrews before the Greek period believed that it dragged out a wretched existence (Is 14:9-11). It is implied that in Sheol the dead perform much the same functions as when alive. At least kings are represented as still sitting on their thrones, though worms cover them and are spread under them. The last idea is derived from the putrefaction of the body.

Similarly in *Ezk* 32²⁷⁻²⁸ Sheol is portrayed as a great subterranean region where the dead of all the nations are collected. They lie in helplessness and gloom, though their kings are still kings and their princes still princes. The inhabitants of Sheol were called *ephraim*, i.e. 'helpless' (or 'powerless') ones. After a century or more of contact with the Greeks the conception of a longer and happier life, bordering on the idea of the immortality of the soul, was entertained in some sections of the nation. The earliest approximation to this idea appears in *Enoch* 10⁶ (before 170 B.C.), where it is said of certain wicked ones: 'They hope that they will live an eternal life, and that each one of them will live five hundred years.' The author of *Enoch* evidently regarded such a hope as presumptuous, for he declares in substance that this hope was vain. The author of *Daniel*, however, a few years later accepted the view which the author of *Enoch* repudiated, and definitely predicted a resurrection (*Dn* 12²). Later writers who came under Greek influence accepted it also (cf. *Wis* 2²), and it became the faith of the Pharisees, but nevertheless some of the later Psalmists adhered to the old view. One of them declares:

The dead praise not Jehovah,
Neither any that go down into silence' (*Ps* 115¹⁷).

A similar idea is expressed in *Ps* 89⁴⁸:

Will thou show neediness to the dead?
Shall the studies arise and praise thee?

This view the Sadducees still held at the beginning of the Christian era. Jews who accepted the idea of a resurrection were not, however, able as a rule to dissociate the soul from the body; they held to the resurrection of the body.

Like the Babylonians, the early Hebrews believed that certain persons had the power of bringing the dead up from the grave. Such persons were said to be master or mistress of an *obol*, though just what this was is unknown. It was probably a name for a departed spirit.

The classical instance of this sort of necromancy is the witch of Endor who was consulted by King Saul the night before he fell on Mount Gilboa. She brought Samuel from the earth, and when she saw him she said: 'I see a god (*elohim*) coming up out of the earth.' Saul asked her: 'What form is he of?' She answered: 'An old man couching up; and he is covered with a robe.' Saul then perceived that it was Samuel (*1 S* 28¹⁴⁻¹⁵).

From this it appears that the Hebrews did not dissociate the soul from the body as much as the Babylonians did. Samuel is still in the form of an old man wearing his mantle. He is not, like Engidu, a whirlwind.

Such necromancy was practised in Israel down to the time of the Exile or later. Masters of 'oboth or guldéons' (another term for departed spirits) practised it. They are mentioned in *Is* 8¹⁹, *2 K* 21²³, *Le* 19³¹, *2 S* 2²⁷, *Dn* 14¹¹, and *2 Ch* 33⁶. King Saul had during his reign prohibited the practice of such necromancy, and Isaiah and the author of *Deuteronomy* protested against it, substituting prophecy for it as a means of ascertaining the future. While the Hebrew conceptions of the soul are somewhat more clearly defined than the Babylonian, especially on the moral and religious side, they are nevertheless vague and are not for the most part clearly distinguished from the mind and other aspects of the inner life.

3. *Jewish*.—In post-Biblical Judaism conceptions of the soul have varied according to the environment and intellectual outlook of Jewish thinkers. They may, however, be grouped in three classes: the Hellenistic, the Rabbinic, and the philosophical.

(a) *Hellenistic*.—In Jewish Hellenism the conceptions of the soul were shaped by Platonic ideas. Plato's doctrine of the pre-existence of souls was accepted by the author of the *Secrets of Enoch* (2²) and by his contemporary, Philo Judaeus.

Philo accepted also Plato's tripartite division of the soul, holding that one part is rational, the second spiritual, the third the seat of desire. This tripartite division relates in Philo's usage solely to the functions of the soul. When he speaks of its composition, he regards it as dual, composed of a rational and an irrational part. The rational soul (*noûs*) was divine; the irrational, corruptible. Not all souls created by God became incarnate; the purest of them inhabited the air and were never entangled in the corruptions of the flesh. The mind or rational soul, which dwelt in the head, was, Philo believed, akin to the incorruptible 'citizens of the air.' Like them, it was incorruptible and immortal. It is the instrument by which man comes into contact with the various objects of creation and makes his way to God Himself. It sends out its streams like a fountain, and pervades the whole body. The spiritual, he believed, inhabited the chest; the soul of the desires, the abdomen. When Philo treats of immortality, it is the rational soul only that occupies his thought. The mind of man came from God and, of course, would return to God. By implication this would be true of the spiritual soul also, but apparently not of the seat of desire. We must not, however, look for logical consistency in Philo; his twofold system of classifying souls and their powers, the dualistic and the tripartite, led him to inextricable confusion.

(b) *Rabbinic*.—Rabbinic Judaism, as represented by the Talmud and the related literature, retained the Biblical view of the dualism of human nature, consisting of body and soul.¹ Probably on account of the influence of Platonism, the Rabbis, although they rejected Philonism, believed in the pre-existence of souls.² They held, however, that it was taught in *Gen* 2⁷, and consequently believed that their view was due to Biblical teaching rather than to philosophy. At the time of conception God, so the Rabbis taught, commanded an angel to bring Him such-and-such a spirit, and the spirit or soul entered the embryo by the head.³ The spirits which were to descend to earth to inhabit bodies were said to be kept in Aramoth, the lowest of the seven heavens.⁴ The spirits of the righteous dead, on the other hand, were beneath the throne of God. There was a difference of opinion as to whether the soul descended from heaven at the moment of conception or after the embryo was formed.⁵ Some held that God gave the Jew a new soul every Friday and took it back again at the end of the Sabbath.⁶ The Talmud seems to consider the inner nature of man as consisting of soul and spirit, but there was in the thought of the Rabbis no clear division between the two. In their opinion the power by which man distinguishes between right and wrong and his inclination to one or the other are two distinct essences which God places in the soul. They are the *yeger tob*, or 'inclination to good,' and *yeger ra*, or 'evil propensities.'⁷ Over these the soul has control, and it is thus responsible for moral action. The connexion between body and soul was held to be of the slightest. In sleep the soul was believed to ascend to its heavenly abode, where it often learned important truths. It was this belief that gave dreams their oracular significance. Nevertheless some Rabbis believed that dreams were due to psychological suggestion.⁸

(c) *Philosophical*.—The Jewish philosophers, who were the pupils of Arabian masters, who had in

¹ Cf. *Brilliant*, 104, 122; *Shabbath*, 112b, 122b; *Yoma*, 94b; *Nedarim*, 70a; *Sabbath*, 91a, 100, 110a.

² *Sifra*, 122b. ³ *Niddah*, 20a.

⁴ *Hagigah*, 12a. ⁵ *Sabbath*, 100a.

⁶ *Erub*, 106a.

⁷ *Sifra*, 222; *Shabbath*, 61a; *Sabbath*, 211a.

⁸ *Brilliant*, 100a.

turn learned their philosophy from the Greeks, thought of the soul in more scientific fashion. Sēdīah (q.v.), who died in Babylonia in A.D. 942, denied the Platonic doctrine of the pre-existence of the soul, claiming that each soul was created at the time of the creation of its body. The substance of souls resembled that of the 'spheres,' but was of finer quality, since it has the power to think and discern, which the 'spheres' lacked. The soul needs the body as its instrument or medium of activity. By its union with the body three powers latent in the soul are set free—intelligence, passion, and desire. These are not three separate parts of the soul, each having a seat in a different part of the body, but are powers of the indivisible spirit which has its seat in the heart. Without its union with the body the soul could not attain to eternal bliss, because this reward is granted it only as a recompense for obedience to the will of God, an obedience impossible without a body.

Notwithstanding the work of Sēdīah, *Sefer Emunoth ve De'oth*, 'Book of the Articles of Faith and the Doctrines of Dogma,' in the sixth chapter of which his views on the soul are set forth, the Platonic views prevailed in a debased form in most of the Jewish schools during the 10th and 11th centuries. According to a work of this period attributed to Ibn Fakudā, man has three souls—the vegetative, the animal, and the rational. The first two are derived from matter. The vegetative soul creates the body. The attribute of the vegetative soul is chastity; of the animal soul, energy; of the rational soul, wisdom. These views were accepted with variations by Ibn Gabirol and Ibn Ziddik.

Maimonides (q.v.), who had come under the influence of Aristotle, fashioned his conception of the soul after that Greek master. According to him, the soul is a unit possessing five faculties—the nutritive; the sensitive, by which one perceives; the imaginative, by which it has the power to form images of the things impressed on it by the senses; the appetitive, or the ability to feel either desire or aversion; and the rational, by which it acquires knowledge and discerns right and wrong. Maimonides held that the soul is indissolubly bound up with the body and at death ceases to exist. Maimonides and Levi ben Gershon (q.v.) held that, in addition to the soul possessed by every one, it was possible to develop, as was done by some, an acquired intellect. These views were strenuously opposed by others.

In *Zohār*, the most psychological of the treatises of the Kabbala, the Neo-Platonic theories of the soul asserted themselves.

4. Arabian.—See art. ARABS (Ancient), vol. I. p. 671f.

5. Muhammadan.—See art. SOUL (Muslim).

6. Other Semitic races.—Our information concerning the conceptions of the soul entertained by the other Semitic nations is very fragmentary, but what there is of it goes to show that their ideas were practically identical with those of the early Hebrews and Arabs. A Phœnician inscription employs *naphash* in the sense of 'person.'¹ The Nabateans used the word in the same way, for there is a survival in one of their inscriptions of its employment to express the idea of self.² Another extension of this meaning, already traced in Arabia, was the employment of *naphasha* in the sense of 'memorial monument' or 'gravestone.' This is quite frequent.³ It is also found among the Palmyrenes.⁴ *Naphasha* had also, in the Nabatean

dialect, the meaning 'life.'⁵ Of a deeper or more psychological meaning to the word among these peoples the sources reveal no trace.

The Syriac literature from the region of Edessa and the Ethiopic literature from Abyssinia are both Christian. The conceptions of the soul formally presented in these literatures are accordingly Christian. Nevertheless the usages of the languages in which the literatures are written testify that the heathen ancestors of these two sections of the Semitic race shared the views of the soul already traced in Israel and among the Arabs. In Syriac a verb formed from the root *n'phash* meant 'to breathe,' also 'to desire.' Forms of this root were also employed in the meaning of 'natural life,' 'soul,' and 'self.'

In general the same is true of Ethiopic. *Nafsu* means 'breath,' 'blow'; *nafs*, 'soul,' 'living thing,' 'wind,' 'air'; *nafet*, 'body,' 'pudenda'; and *manfas*, 'spirit,' 'soul.' The methods of reasoning employed above enable us to deduce from these facts that the word stood for 'breath,' 'life,' 'soul,' 'person,' and 'self,' as among the other Semitic peoples.

7. Egyptian.—The Egyptian beliefs concerning the soul differed considerably from those of the Semitic peoples. It is generally held that they thought a concrete entity, invisible during life, had its residence in the human body. They called this *ba*, a word which never means 'life.' Life was denoted by quite a different word, *ankh*. There is a verb *ba*, which means 'to cut in pieces,' and, if it had any connexion with the word for soul, the connexion is not apparent. There is also a denominative verb *ba*, 'to become a *ba*.' The *ba*, according to the usual Egyptian belief, dwelt in the body during life, but departed from it at death.⁶ Some texts indicate that in parts the belief prevailed that only at death one became a *ba*. The Egyptians never developed philosophical ability; they did not form theories as to the inner composition or structure of the soul, such as were given to the world by Plato and Aristotle and were entertained by the peoples who came under the influence of these philosophers. In Egypt interest centred in the future fortunes of the soul. The conceptions on this subject at the beginning were bound up with myths which differed in different nomes. As time advanced and the establishment of the monarchy created syncretism, these myths and theories blended. They also in the lapse of time underwent development. Many of these views found expression in that medley of myths of the hereafter known as *The Book of the Dead*. Gods as well as men were thought to possess souls. The soul was the seat of strength, courage, and power in both gods and men. The favourite method of picturing the soul was in the form of a heron; in later times it was represented as a bird with a human face. Such representations on tombs enabled the survivors to place a portrait of the deceased over his grave.

In early times it was thought that, though the soul wandered abroad during the day through the under world or through the desert, on the borders of which cemeteries lay, it needed to return to the body at night or in moments of danger, as when attacked by hostile spirits. It was probably for this reason that such pains were taken to mummify and preserve the body. Departed souls were supposed to need the same kind of sustenance as in life; hence quantities of food were placed in the tomb. If a man had possessed wealth and servants in this world, he would need them in the after life. Hence, from the Vth dynasty onward, numerous servants preparing food and making all

that was useful during life are pictured on the walls of the tombs. *Usabti* figures were later introduced for the same purpose.

The Pyramid Texts, our oldest source of information, deal with the posthumous destiny of the king. The souls of other men were thought to remain in the under world or to wander in the desert; the king was, like Osiris, transferred to the skies and placed among the gods. The reception given him there is vividly portrayed. Feasts of geese, bread, and all delicious viands are provided for him; quantities of beer are furnished for him to drink; concubines for the gratification of his desires are not lacking. Sometimes, as he was, on his arrival in the sky, but a babe to the new life, he is represented as suckled at the breast of a goddess. Later the heaven of the sky was democratized, and it was believed that all good men went thither. Old beliefs that the dead returned to the tomb or revisited his former abode survived side by side with the beliefs in the soul's celestial destiny. Sometimes a little ladder or a boat was pictured, by which the soul could climb or sail away to the stars.

In course of time it came to be believed that on its arrival in the under world the soul must undergo an examination to see whether it was fit to go to heaven. While Osiris was believed to be the great judge, he was attended by 42 assessors—one for each of Egypt's nomes. These bore such terrifying names as 'Blood-drinker,' 'Bone-breaker,' 'Shadow-swallower.' Those who successfully passed the examination and could say at the end, 'I am pure,' were transferred to the sky, where they enjoyed a material paradise such as was, in the Pyramid Texts, the lot of kings. These promises were only for the worthy. The wicked were doomed to destruction by the myriads of demons who inhabited the under world. They might be torn in pieces by the 42 terrible judges, burned in furnaces, or drowned in the abyss. These souls might themselves become demons and return to torment the living with disease and death. Against them, as against other demons, magic spells were necessary.

It has often been stated that in addition to the soul (*ka*) the Egyptians believed that a man possessed another invisible entity or double, called a *ka*. The existence of the *ka* is beyond question, but its function has until recently been misunderstood. The *ka* was a man's double. On the walls of the temple of Luxor a sculpture of the 15th cent. B.C. depicts the birth of Amenophis III. By his side is another child of the same size and appearance.¹ This was the *ka*, which accompanied him through life. The *ka* was a corporeal comrade, though an invisible one. He accompanied a man through life, as a sort of guardian genius. The *ka* preceded a man to the realm of Osiris and prepared for his reception there. When a man died, therefore, it was said, 'He goes to his *ka*.' Lest the *ka* should mistake his *protégé*, the dead was given a peculiar garment by which the *ka* might identify him. The *ka*, united with the individual whom it had protected, lived a common life with him in the hereafter. Often it was said of the dead: 'How beautiful it is in the company of the *ka*!'

GEORGE A. BARTON.

SOUL (Teutonic).—I. The personal soul.—(a)

In life.—The conception of a personal soul inherent in man during life and distinct from his body can be traced in popular beliefs of to-day in Germany, but the only evidence for it among the early Teutonic peoples comes from Scandinavia, and is singularly uniform in character. The mind (*hugr*) of a man is seen, on occasion, in the form of some animal usually thought to share the characteristics of the individual; thus a gallant chief will be represented by a bear, an eagle, or a bull, a blood-thirsty man by a wolf, a cunning man by a fox, a fair woman by a swan, and so on. This 'animal familiar' is called *fylgja* (fem. sing.; pl. *fylgjur*), 'something accompanying,' which we may render 'companion' or 'associate.' It can be seen (except in dreams) only by persons with second sight, but it appears to have an objective existence.

Thus in an Icelandic story a boy shudders over some omens unnoticed by him which an old man present sees to be the lad's own *fylgja*, a bear-cub (*þorsteinn þetta málfr*). After killing an enemy Eyríkr fell off his horse and was lamed for life; a wise man tells him that the reason of his fall was that he could not withstand the *fylgjur* of the slain man's kinsmen, whereas Eyríkr asks: 'Do you think that their *fylgjur* are more powerful than mine and those of my friends?' In another saga certain brothers are said to be awkward to contend against, as they have 'strong *fylgjur*.'

The *fylgja* has thus a protective character, and it precedes its owner on all critical occasions. Hence dreams of encounters with wild animals are taken as portending a fight with the individuals whose *fylgjur* the animals are supposed to be, and an alternative name for the *fylgjur* is 'man's mind' (*manns hugir*).

Thus a hero dreams that he is attacked by wolves, of which he kills two; the dream is interpreted next day: 'It is easy to see that there are man's minds hostile to thee,' and in the ensuing encounter he actually kills two of his opponents.² In *Njáls Saga* a man dreams of a great white bear entering his brother's house; he says on waking that the animal had no year and must therefore be the *fylgja* of the poorest Gíslinn.³

The close connexion of this belief with that of shape-changing is obvious. When we are told that Bövarr Bjarki fought as a bear while he sat inert in the king's hall,⁴ it would seem that his *fylgja*, or animal-soul, was fighting for him; but, when the Icelandic chief Kveldúlf, of the 9th cent., is said to become a wolf at night, this appears to be rather a case of shape-changing.

So also in the case of Lára, who flew in the form of a swan above her lover in battle, chanting magic incantations so that none could wound him, until in swinging his sword he cut off the leg of the swan, and Lára dropped dead to the ground.⁵

In one essential point the conception of the external soul, or *fylgja*, follows closely that of the belief in shape-changing. The life of the *fylgja* depends on that of the individual, and dies when he dies. Though it is called his *hugr*, 'mind,' it is not the part of a man which continues a life after death, his death is the portent of the death of its owner, and this not only when its death is seen in dreams. The freedman Thórr in *Njáls Saga*⁶ sees a dead

goat, which is realized to be his *fylgja*, and he is killed the same day.

The animal-soul, or *fylgja*, which dies or disappears on the death of the body, must certainly be distinct from the *hamingja*, occasionally called *fylgjakona*, which is a kind of female tutelary genius, who on the death of one member of the family passes on to another. In an Eddic poem these are described as 'wise maidens'.¹ The practice of naming a child after a recently deceased grandparent appears to have originated in a desire to attach the family *hamingja* to his fortunes.² In one or two passages there is a confusion of terms, and this tutelary genius is called *fylgja*, but, as the word only means 'companion', it is really as applicable to the *hamingja* as to the animal-soul. The *fylgja* proper, the animal-soul, is never called *hamingja*. A similar distinction between the ancestral soul and the personal soul is found in various notes.

The Kattes believe in the *lithorst*, an individual soul unable to leave the corpse after death, and the *stonga*, a corporate soul, shared by various members of a family and making the home permanently with their descendants.³ So among the *Helönd* (the individual soul of a child is distinct from the family guardian-spirit (*staba*), which is permanent in it in childhood.⁴

Ancient Teutonic literature has thus preserved to us no conception of the soul as a shade, or as a miniature, or as present in the breath or heart or blood. In modern popular superstition it is generally thought of as a butterfly, mouse, or other small creature, which issues from the mouth of a sleeper. This does not, however, resemble the Northern *fylgja*, for it survives the death of its human associate. In folk-tales it is often seen leaving its human habitation on the death of its owner.

(6) *After-death*.—As we have seen, these *fylgjur*, or 'men's minds,' are not 'souls' in the sense of being that part of the individual which continues an existence beyond the grave. There is absolutely no mention of them in the realms of the dead, nor is there any hint that any particular part of man, such as the breath, is the seat of life both before and after death. Yet the popular belief in the Wild Huntsman and his companions, who are undoubtedly spirits of the dead, and the association of Odin (originally a god of the dead) with the wind,⁵ must be connected with the idea that the spirit of man was breath or wind. Other conceptions of the realm of the dead show less consciousness of any difference between spirit and matter. It is true that the realm of *Hæl*, the goddess of death, seems to have been somewhat shadow-like, since its guardian chides the living *Hermóð* for making more noise than five battalions of the dead, but, when the dead *Baldur* gives *Hermóð* the ring which was burnt on his pyre, as a gift to Odin, and his dead wife sends a shift to *Frigg*, these articles are apparently still material enough to give satisfaction in the world of the living.⁶ The practice of cremation must have originated in some definite belief about the soul's departure to another world, but Teutonic thought, like Chinese, seems to have been averse from admitting the dualism of spirit and matter, and literature gives us no hint that they can be separated. Moreover, the beliefs connected with cremation may have early crystallized into meaningless custom. When the German peasants in *Volgeland* put an umbrella and galoshes into the coffin of a departed friend; it is not to be supposed that they really believe these articles to be required in heaven, but merely that they have become part of the Sunday outfit in which it has always been customary to inter the body.

Constant references in ecclesiastical prohibitions

show that the dead were still thought to require food and drink, and in some parts of Sweden the peasants still continue to lay such offerings in the saucer-shaped depressions on the rock slabs of ancient tombs. Neither the idea of *Hæl* nor that of *Valhöll* could oust from the popular mind the older and more widely spread belief that the dead man lived on in his grave-mound. Icelandic sources show that certain families believed that they 'died into' hills, which they regarded as sacred, and a reference in *Landnám* suggests that the young men of the family were conducted to this hill for the ceremonies associated with the attainment of manhood.⁷ When continuing an existence in the neighbourhood of their burial-place, the dead seem to have been thought of as *álfar*, 'elves,' in Scandinavia, N. Germany, and the Netherlands. Sacrifice to these beings seems to have been practiced in Sweden,⁸ and it is once mentioned in Iceland.⁹ That the continuance of the prosperity due to some fortunate king depended on the actual presence of his corpse is clear from the eagerness which different portions of his kingdom evinced for some part of the body of King *Halfráðr* the Black,¹⁰ and also from the story of *Fródo*, who was embalmed after death and taken round his kingdom in a carriage.¹¹ In Norway the *Amphs*, or dwellers in the grave-mound, is still regarded with veneration. In these cases, if the soul is thought of as separate from the body at all, it is evidently in close dependence on it. The importance of the corpse rather than the spirit is seen in the belief that dead bodies could be made by spells to utter prophecies, whereas there is no reference to calling up spirits to foretell the future. The refusal to distinguish between the corpse and its spirit is seen even more clearly in the beliefs about persistent ghosts—dead men who were evil in life. The ghost, if we may call it so, still possesses great physical power and can kill men; and its activities can equally well be put an end to by burning the corpse and scattering the ashes in the sea¹² or by preoccupying the ghost and cutting off its head.¹³

If, as has been suggested, *Jötunheim*, the world of the giants, is originally a realm of the dead, and the word *jötunn* really means 'devourer,' it seems as if Teutonic thought had contemplated a world in which the dead are nothing but corpses, devoured by ogres.¹⁴ This is a more crudely materialistic conception than most savages could boast of.

In *Valhöll*, which is probably a creation of the North, the *einherjar*, or warriors slain in battle and now living a new life under almost the same conditions as the old, must evidently be thought of as re-incarnated, since their dead bodies are not in *Valhöll*. But there is nothing spiritual about their fare of pork and ale, and their life after death is not an immortality, since they are doomed to fall again, with no further hope of renewed life, in the battle between gods and giants. We find the perpetual fighting dissociated from the belief in *Valhöll* in the story of *Hild*, who by her spells raised up the slain combatants in a great battle. At night they and their weapons turn into boulders, but every day they revive and fight, and so it shall continue till the end of the world.¹⁵ This excessive activity on the part of the dead probably reflects the superabundant energy of the Viking age, and

¹⁵ *Saur's Edda*, *Östfyrirsmál*, ch. 67.

is perhaps also the foundation of the belief that persons pre-eminent in their life are reborn.

It will be seen from the above that the early Teutonic peoples were less speculative about the relations of matter and spirit than many savages. No doubt, if they had been questioned as savages are to-day, they would have produced a philosophy, but in their literature as it stands there is no recognition of any distinction between body and soul. It is, however, possible that their perception of this dualism had been clearer in the pre-literary time, and had become blurred in the Viking age owing to its intense interest in this life, to its materialism, and, above all, to its acquaintance with different forms of burial and with conflicting beliefs as to the destiny of the dead. Whereas the conception 'spirit' is not expressed in heathen Teutonic literature, the traces of animistic belief still left from a more primitive age may perhaps justify us in believing that the idea had once been more clearly formulated. Only the more enlightened classes seem wholly to have abandoned animistic beliefs, in which 'souls' are attributed not only to living beings, but also to inanimate objects.

2. Animism.—The worship of waterfalls, springs, and rocks, common all over Scandinavia, England, and N. Germany, had probably an animistic basis, as also probably had the cult of the *landvaettir*, spirits of the soil. Where literature fails, archaeology may serve to show that in the period immediately preceding the Viking age the distinction between matter and spirit was more clearly realized. The intentional damaging of weapons and other objects before interment with their owners, practised in the 5th and 6th centuries, suggests that souls were sacrificed to the objects as well as to their owners, and that it was believed that these souls could be set free to follow their dead owner only if they too were 'killed' in some way. So the sword of the Frankish king Childeric († 481) lay broken in the grave. Perhaps the most interesting illustration of this belief is given by such S. Scandinavian bog-finds as that at Vimose in Denmark, where some 4000 objects, mostly weapons and gear, are found to have been carefully damaged before being abandoned. The same idea of setting free the spiritual counterparts of objects can be traced in certain finds in Bornholm. These contain no corpses, but consist merely of a heap of intentionally damaged objects, the personal effects of some man whose body, probably because he fell at a distance, was not available for interment.¹

LITERATURE.—Besides the literature mentioned in the footnotes, reference should be made to the section on souls in E. Mack's art. 'Teutonic Religion,' in H. Paul *Grundriss der german. Philologie*, Strassburg, 1888-1913, III, 349 ff., and to other works on Teutonic religion and folk-lore mentioned in that art.; also to Rieger, 'Über den nordischen Fylgten gaben,' *EDA* XLII, (1886) 271 ff.; G. Storm, 'Vore Fylgtes Trope Skjoldvending og dæres Onkelvæsen,' *Afsl. for nordisk Filologi*, IX, (1883) 119 ff.; R. Cleasby and G. Vigfusson, *Islenzka-Norr. Diet.*, London, 1874; J. Frisner, *Ordgloss over det gamle norske Språk*, Christiania, 1887, s.v. 'Fylgia,' 'Hannvile'; J. Hult, *Glossarium Sæviatium*, Uppsala, 1769, s.v. 'Fylgia'.

B. S. PHILLIPPS.

SOUL-HOUSE.—This name is only a recent one for reference, as no original name is known. The Egyptians, like many other peoples, habitually placed food-offerings with the dead, from the time of the earliest pre-historic graves down to the present. Before the 1st dynasty it became usual to place additional food-offerings—probably at festivals—on one side of the surface mound, or *mastaba*, opposite to the slit where the soul was supposed to go in and out. The heaps of offering pottery still remain in place.² In other cases a

mat was laid down to keep back the dust, and a pan of flour was placed on it; this was the origin of the sign *Asap* for any offering, satisfaction, or peace, a sign which appears among the earliest hieroglyphs, at the beginning of the 1st dynasty.³ Next, a stone altar appears with a tank to hold a drink-offering (IVth dynasty), and, as sculptured offerings would never decay, the forms of cakes and other food were carved beside the tank. By the Vth dynasty the tank was looked on as a model of the living-home tank; one in the Cairo Museum has the months of high and low Nile marked on different steps. Various foreign influences came in at the collapse of IVth-VIth dynasty civilization, and it is not unlikely that African custom (see below) modified the altar of offering by providing a shelter for the soul, when it came out to feed at the tank-altar. Some time between the VIth and IXth dynasties various stages of shelters are found, modelled in pottery, about a foot across. At first it was like a Bedawi tent, a cover propped up with two sticks in front, and closed at the back and sides; in front of it is a courtyard, with a tank in the middle, and lying round this are the offerings of an ox head and haunch, round loaves, and bundles of vegetables. The tanks sometimes have holes at each corner, in which to set up poles for supporting a mat-shelter, to keep the water cool. The tent type soon passed into a colonnade with four columns, forming a verandah. Then a little box-shelter was added in the verandah, which soon developed into a back chamber. Steps were placed at the side to give access to the roof, and wind-openings to keep the interior cool. This point was reached at about the Xth dynasty.

The development continued by adding more back chambers; then small chambers on the roof, which grew into a complete second storey. The steps were continued up to reach the roof of the upper storey. Furniture was added—a chair, a couch with head-rest, an easel-stand. A servant grinding corn, and a recess for worship, are also represented. In short, we learn the exact arrangement of the peasants' houses of the XIIIth and XIVth dynasties. The details of construction were shown—elliptic brick-arch roofing, floors of poles and matting, mud-plastered, as at present, a flying staircase winding round curves, drip-hoodings over the windows, and crenellated walls exactly like those of the modern tombs in the same region.⁴ A series of 150 examples giving every variety of development was found at Rifeh, south of Asyut. A few rather more elaborate are known elsewhere, but, as they have been imitated very skillfully by forgers, the further detail cannot be trusted.

The regular position of these soul-houses was on the surface of the ground, at the side of the grave, facing towards it, and most often at the north end. The period is from soon after the VIth dynasty, mainly about the Xth and XIth, and dying out in the XIIIth dynasty. The region is at Gebelays, Erment, Thebes, Denderah, and Rifeh, all south of Asyut, in the Thebaid. The most complete series of soul-houses is in the Manchester Museum.

Modern African parallels suggest that this idea came into Egypt from the south.

¹ Chieftains had been a person of importance . . . a ceremony was to take place for the purpose of propitiating the old chief's spirit . . . People were lined about a group of stout miniature huts, made of grass, about two feet high. The roofs of these huts, which had been enriched separately, were not yet put on, and I could see that a couple of warthogs had been sunk in the

⁴ W. M. F. Petrie, *Tomb II*, (British School of Arch. in Egypt), London, 1914, pls. xli-xlv.

ground inside each. These jars were now filled with beer, and then the roof was fitted on.¹ 'Of things which the stranger can see for himself in passing through the villages, the most noticeable are the little spirit-houses . . . where sacrifices are presented from time to time.'²

'Homeless Gnomes [souls] remain in the air and haunt the neighbourhood of the village. . . . It is to provide accommodation for the demons that small huts are built over graves, and a clever device to keep them from wandering at night is to kindle small fires in the huts, for, if this is done, the *gnomes* will remain there and warm themselves.'³

Lastly, what is the motive for such offerings? Three attitudes toward the dead are found in different countries: (1) fear, as with the Troglodyte, who bound the body as tightly as possible, or in the various means of breaking connexion between the house and the grave; (2) comfort of the dead, as by giving food and drink; (3) honour of the dead, as in placing on the grave a light (as in Egypt) or flowers (Europe) in the present time. There seems no trace of fear of the dead in Egypt; in all ages weapons were placed with them, or models of weapons, and also sandals (or models in a pre-historic grave) to enable the dead to travel; and in Greco-Roman times the mummy was kept in the house for twenty or thirty years and there honoured, like the present African's offering to his father's head kept in the family circle. It seems therefore only consistent to regard the soul-house as being placed by the grave to comfort the soul when it came out, and provide shelter, food, and rest for it.

W. M. FLINDERS PETRIE.

SOUTHCOTTIANS.—The Southcottians are the followers of Joanna Southcott (1750-1814), a Devonian. One of her followers, herself claiming to be divinely directed to write, describes her in 1807 in these words:

'(i) She was a woman chosen by God to stand at the end of the ages in perfect obedience to Him. (ii) She was to claim the Promise made in the Fall to the Woman, that her seed (Christ) should bruise the Serpent's head and thus put an end to evil. (iii) She was in a special sense to be the bride of Christ, not the only one, but set as a type until all become brides—both men and women—and give their supreme love to Him, standing in perfect obedience as His Church.'⁴

The same authority continues that the Holy Spirit revealed to Joanna things to come, and showed her plainly of the Father; that, as the woman's hand brought the evil fruit to man, so her hand is to bring to man the good; that woman is to be saved through child-bearing; that Joanna perfectly fulfilled Rev 12 in the spiritual birth of the man child; that the Church is finally to be the man child when filled with His Spirit.

Joanna, who was of Wesleyan extraction, began prophesying in 1792, and many of her predictions were fulfilled within a few months, as was verified by a local inquiry. Publications from 1800 onwards introduced her to a wider circle, and in 1801 Thomas P. Foley, rector of Old Swinford, brought friends who conducted a systematic trial of her gifts at Exeter, and, being convinced, were hailed as the 'Seven Stars.' In Aug. 1802 she retired for a seven-day dispute with Satan, which she published. Further trials ensued in 1803 and 1804, each widening her fame. She organized her adherents, enjoining on them the observance of certain Jewish laws, notably as to the Sabbath and as to clean meats. They were presented with a signed paper, 'The Sealed of the Lord—the Elect Precious Man's Redemption—To Inherit the Tree of Life—To be made Heirs of God and Joint-Heirs with Jesus Christ. Joanna Southcott.' This was bestowed only on those who had read and accepted

at least two of her major works; within five years about 14,000 persons were 'sealed.' She then challenged attention by a personal letter to every bishop, peer, and member of the House of Commons, and by letters to the *Times* and the *Morning Herald* in 1813. Next spring she announced that she was pregnant with Shiloh, and much excitement was evinced, even in medical circles, fourteen doctors being invited to examine her. But she passed away two days after Christmas.

Samuel Sibley and John Ward sought to rally her followers, the latter being believed in as late as 1892. But George Turner, himself owned by Joanna as inspired, joined with Jane Townley, her most intimate friend, in holding together the main body. Between 1840 and 1850 a controversy broke out, leading to much publication, on the question whether a spiritual child was born at the end of 1814, or whether Joanna will return, complete the year foretold, and bear a literal child. Forty years ago the London adherents were but a handful in Walsworth; but a revival has taken place. With 1902 Alice Seymour, deeply impressed by the annual service on New Year's Day 1901 (Old Style), the 'lifting up of hands,' near Manchester, felt drawn to renewed study, and came to the conclusion that the prophecies 'for ten years from the fourth of the century' applied to the 20th cent., not the 19th. She therefore published two volumes in 1909 which are the foundation for same study, and thus prompted renewed interest. The coincidences in the five years since are certainly remarkable.

Two other movements have sprung out of the original. John Wroe of Bowling, near Bradford, was accepted as successor to George Turner of Leeds in 1892, and his new revelations broke fresh ground, so that the Christian Israelites, as his followers are called, are not to be classed as Southcottians. They hold that the Ten Tribes are dispersed throughout the nations, and are to gather on the basis of the four books of Moses and the four Gospels. Perfect obedience to the Mosaic Law will procure immortality, the body not seeing death. There is no ordained ministry; propaganda is carried on especially in the open air, with a large brass band rendering plaintive music; adherents may be recognized by their long unshorn hair. They reached New York in 1844, and have excited some curiosity in Australia.

In 1875 the Chatham group of Southcottians was joined by a soldier, James White, who, after his period of service in India, returned and took the lead locally, developing further the doctrines of Joanna and of Wroe, with a communitistic tinge. The name 'New and Latter House of Israel' was assumed. Though he died in 1885, his widow continued the work, and an enormous mass of brickwork at Gillingham, strong as a fort, marks the house of Jerreel. Her death three years later caused financial chaos and a cessation of work. But adherents still exist in the United States, Canada, and Australia.

LITERATURE.—The sources are pamphlets by Joanna Southcott, complete sets of which are in the British Museum, the Bodleian, and the John Rylands Library, Manchester, totalling 4500 pages. Twice as much remains of her MSS, some in a peculiar shorthand, most sealed in a large case corded up till the next crisis of world-history. Her correspondence books are also preserved. The only long studies of her which are not caricatures are: Alice Seymour, *The Express, containing the Life and Divine Writings of Joanna Southcott*, 2 vols., London, 1909; Charles Lane, *Life and Subjuration of Joanna Southcott*, Exeter, 1912.

W. T. WHITLEY.

SOVEREIGNTY (Divine).—1. Definition.—There are three senses in which the term 'divine sovereignty' may be used, two of which need little more than mention, as they are dealt with else-

where; the third alone claims further treatment. (1) In polytheism (q.v.) we may speak of the divine sovereignty of the one god who is more or less exalted above the other gods. In Chinese religion Tien or Shang Ti possesses an absolute pre-eminence over all gods and spirits. In Vedic religion the gods in succession are exalted by the worshippers in the type of piety which Max Müller¹ has called henotheism or kathenotheism.² Some of the hymns almost rise to the height of monotheism (q.v.). Of Varuna it is said:

¹ The mighty Varuna, who rises above, looks down
Upon these worlds, his kingdom, as if close at hand.³

Even in Zoroastrian dualism Ahura Mazda, despite his conflict with Angra Mainyu, is assured of final triumph. It is questioned now whether Dyaush pitā, 'Heaven-Father,' in spite of the linguistic equivalence, ever held the same place in the Vedic pantheon as Zeus *pater* in the Greek, or Jupiter in the Latin,⁴ although the monarchy of these deities was very much limited by the wayward wills of the other gods. A similar position was attained among the Babylonian gods by Marduk, and the Assyrian by Ashur. The composite deity Amen-Ré was in like manner exalted in Egyptian theology, and the attempt of Amenhotep IV. to de throne him in favour of Aten failed. This tendency to raise one god over others may be regarded as the movement from polytheism towards monotheism.

(2) In the monotheistic religions the divine sovereignty means not exaltation above other gods, but complete power over nature and man, though in the OT we can trace the process by which monotheism—the exclusive worship of Jahweh along with a recognition of other gods—passed into monotheism. In Am 1 and 2 Jahweh is Judge and Ruler of all nations even as of His people Israel. Assyria is the rod of His anger (Is 10²). Cyrus is His anointed to fulfil His purpose (45¹). Monotheism was never as confident or challenging as in Is 40¹⁻³⁰. The omnipotence of God is the prevailing doctrine of the OT.⁵ The same doctrine is assumed in the NT, as indeed it must be in any monotheistic religion. Into any details it is not necessary here to enter.

(3) It is the third sense of the term—the exercise of the will of God absolutely, unconditioned by the will of man—that claims special attention, since this view has been challenged and defended in the history of Christian theology, as the omnipotence of God has not been, unless in dualistic systems of thought.⁶ Before dealing with the doctrine of divine sovereignty in this narrower sense in Christian theology, we must note the unqualified and unreserved assertion of God's sole sovereignty in Islam.

¹ There is no god but God—are words simply synonymous in English to the negation of any deity save one alone; and this much they certainly mean in Arabic, but they imply much more also. Their full sense is, not only to deny absolutely and unreservedly all plurality, whether of nature or of person, in the Supreme Being, not only to establish the Unity of the Unbegotten and Unbegot, in all its simple and uncommunicable oneness, but besides this the words, in Arabic and among Arabs, imply that this one Supreme Being is also the only Agent, the only Force, the only Act existing throughout the universe, and leave to all beings else, matter or spirit, instance or intelligence, physical or moral, nothing but pure unconditional passiveness, alike in movement as in quiescence, in action or in capacity. The sole power, the sole motor, movement, energy, and deed is God; the rest is downright inertia and mere instrumentality, from the highest archangel down to the simplest atom of creation. Hence it is this one sentence,

¹ 'La ilah illa Allah,' is summed up a system which, for want of a better name, I may be permitted to call the Pantheon of Force, or of Act, thus exclusively assigned to God, who alone is all, excludes all else, and to whom alone it can be ascribed, whether for preserving or for destroying, for relative evil or for equally relative good.²

This doctrine is obtruded very frequently in its most offensive form in the Qur'an:

³ 'God misleadeth whom He pleaseth, and guideth whom He pleaseth aright.' 'We created man upright, and then caused him to be the worst of the vile.' 'The fate of every man have we bound about his neck.'⁴

Such statements of the doctrine without reserve or restraint might have served as warnings to Christian theologians.

2. The Pauline doctrine.—While it is in the NT that the divine sovereignty is first dealt with controversially, the unconditionality of God's action is already asserted in the OT: God's work shall not return to Him void, but it shall accomplish that which He pleases, and it shall prosper in the thing whereto He sends it (Is 55¹¹). In contrast to other gods, He is in the heavens, and 'hath done whatsoever he pleased' (Ps 135⁶). He does good and evil, and creates darkness and light (Is 41¹⁰ 45⁷ 54¹⁸, Am 3⁶). For Him 'the nations are as a drop of a bucket, and are counted as the small dust of the balance' (Is 40¹⁵). None can hinder His work, and from Him none can deliver (43¹⁴). The impossible to man is possible to God (Zec 8³). The relation of God's action to man's activity was a subject of controversy in the Jewish schools, although it is probable that Josephus was accommodating himself to Gentile readers in the account that he gives of the difference on this question:

⁵ The Essenes taught an absolute fate, the Sadducees utterly denied fate, and the Pharisees struck out a middle path between the two. For 'the very expression *stomach*, which is utterly impossible to any Jewish consciousness, proves that we have at least to deal with a strongly Hellenized colouring of Jewish views.'⁶

For fate the Jew would put the will of God. Paul, in his argument in Ro 9-11, takes the middle path in asserting both divine sovereignty and human freedom; as an *argumentum ad hominem* he assumes that his opponents grant the divine sovereignty while maintaining human freedom. Had Christian theologians recognized that Paul was fighting Jewish arrogance and exclusiveness with its own weapons, that the argument is to be treated as a whole, and a dogma must not be built upon its separate statements, and that the distinctively Christian contribution is the hope of a universal mercy, they would not have given to the doctrine of divine sovereignty the place that in their systems they have assigned to it, disproportionate to the teaching of the NT as a whole, and even inconsistent with the general trend of Paul's theology.

⁷ The argument consists of three main propositions: (1) God is absolutely free to elect or reject individuals or nations according to His own will (Is. 1-25); (2) the Jewish people, by the unbelief, has deserved its present exclusion from the blessings of the gospel (Is. 50-55, 61); (3) this exclusion is partial and temporary, as it is God's purpose ultimately to include both Jew and Gentile in His grace (X.).⁸

In dealing with the first proposition he shows how in the history of the chosen people the principle of God's unconditional election has been again and again asserted, and repeats the charge of injustice by appealing to God's own words, in which He claims freedom in all His acts. While revivifying the accusations of the creature in questioning the acts of the Creator, he blunts the edge of his argument somewhat by showing that God has used His freedom to show mercy rather than judgment. The force of the argument is not beyond criticism; Paul's exegesis cannot be accepted as strictly historical.⁹ But, as regards the substance, we cannot escape the difficulty by say-

ing that Paul has in view only the historical fate of a nation, for he asserts unequivocally God's freedom in electing or rejecting individuals. We must insist that 'it is not the Christian conception of God which dominates the discussion'; that Paul does not carry out his principle with rigorous logic, since 'he shrinks from affirming that God fitted the vessels of wrath unto destruction, and admits that God endured them with much long-suffering,' and that 'the metaphor of the potter itself cancels the argument,' for 'the potter does not use the clay willfully, but makes of each lump what it is fitted to become.'¹ Apart from this argument in Ro. 9-11, there are passages in which Paul asserts 'a doctrine of election as regards Christian believers (Ro. 8:29, Eph. 1:4, etc.). The aim of this teaching is, however, to give the believer assurance that his relation to God does not begin in time with his faith in God's grace, but is deeply rooted, firmly fixed, in the eternal will of God. . . . Paul does not teach that God foreknows, foreordains, or decrees any man unto eternal death. The responsibility for that he throws on the man himself.'²

We must not ascribe to Paul the deductions of a too ruthless logic, which infers that whom God does not elect He rejects, as he was concerned not with the speculative problem of the relation of divine sovereignty and human freedom, but solely with the practical assurance of God's unchanging grace.

3. Augustinianism.—Neither Paul's theology nor even his personal experience accounts wholly for Augustine's position; his previous philosophical training must be taken into our reckoning. While, as with Paul, it is man's entire dependence on God's grace that He seeks to magnify, yet he, in his controversy with Pelagianism, develops this practical assurance into a speculative doctrine which virtually denies man all freedom, and even transforms constraining grace into compelling force, fixing man's destiny solely by the eternal will of God.

'Sinful man depends,' says B. D. Warfield, 'for his recovery to good and to God, entirely on the free grace of God; this grace is therefore indispensable, prevenient, irresistible, inflexible; and, being thus the free grace of God, must have lain, in all the details of its conference and working, in the intention of God from all eternity.'³
